ADMITS PART IN "MASSACRE"

PERMIAN BASIN PAGE IN BOOK OF 1934 FILLED WITH A RECORD OF OUTSTANDING ACCOMPLISHMENTS

BY PAUL OSBORNE
Crawling from his cradle of meager activity in 1934, the Permian basin looked wondrously and grew steadily and restlessly to the page of his record book, adorned with accomplishments in the Permian Basin.

74th Congress To Concentrate On "Recovery"

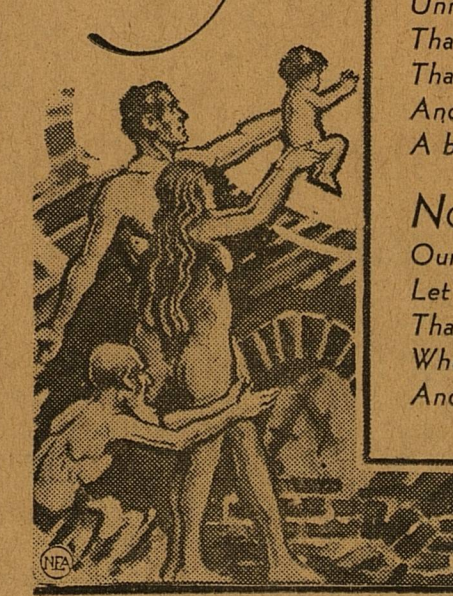

Legislators in the 74th congress which opens January 3 will center their efforts on one outstanding task—Recovery, according to Rodney Dutcher, Washington correspondent for the NEA feature service used by The Reporter-Telegram.

The NEW YEAR

By BRUCE CATTON

WHY greet the New Year, if it is to be
A copy of the years that went before—
A tale of wrongs unrighted, golden ore
Unmined and songs unsung, of victory
That infirm hands let slip, of children's tears
That no one tried to dry? How dare we write
Another page, unless it set alight
A beacon for the marchers down the years?

NOW, by our vision of a brighter day,
Our hope of dawn in everlasting night,
Let this year see us farther on the way
That winds through darkness to the sun-crowned height
Where gleams a shining city. Ah, be bold—
And make the new year better than the old!

Midland Emerges From 1934 With Much Improvement

Midland emerged from 1934 in much better condition than when the epochal year began, although so smoothly did the improvement come about that the citizens scarcely realized when the transition was made.

WOMAN CONFESSES CONSPIRACY TO LIBERATE NASH

KANSAS CITY, Dec. 31. (AP)—Mrs. Vivian Mathis tonight pleaded guilty to a charge of conspiracy to liberate Frank Nash in the Union Station massacre eighteen months ago, when machine gunners killed four officers and Nash.

Cost of Maintaining Texas Wards Less

AUSTIN (AP)—Sharp decreases in the per capita cost to Texas of maintaining its wards were revealed by the board of control in its annual report on eleemosynary institutions.

Most Important News Events, at Home and Abroad, for 1934 Listed

In a year filled with violence and a swift parade of highly important events, the foremost events have been listed by the NEA feature service for The Reporter-Telegram, ten for America and ten for foreign countries.

Committees Argue Their Importance

Chairmen of the four major committees of the Midland Rotary club will debate Thursday on the question as to which is most important, the club service, community service, vocational service or international service committee.

ALL THOROUGHBRED HORSES YEAR OLDER IMPORTED IN 1934

All 11 Thoroughbred horses of Midland are having a birthday today, not because all were foaled on January 1 but because from time immemorial "year horses" have been counted a year older on the first day of the calendar year.

1933 DECEMBER 1935
LAST WINTER NATURE PROVIDED ONLY 20 DAYS OF PROPER REFRIGERATION

Nature is a poor substitute for an electric refrigerator in this part of Texas. If you are tempted to disconnect your refrigerator when cool weather comes, check over the weather records which show how few days are really cold enough to protect food from spoilage, even if it is kept on an open porch.

A temperature of 50 degrees has been accepted as the top limit for proper refrigeration, but last year there were only about 20 days in all of December, January, February and March during which the temperature stayed below 50 degrees. In January last year the temperature stayed below 50 degrees only 5 days.

See You

Disaster Jinx Downs Plane in Blizzard

All four occupants of the 16-passenger Curtis Condor plane that crashed in the Adirondack mountains during a blinding storm, apparently escaped injury in the second disaster that has overtaken the big ship. It is pictured above after it had been wrecked in a forced landing at Tottenville, Staten Island, last May. The most recent disaster to the plane was complicated by severe cold and waist-deep snow, which marooned the quartet on an isolated peak believed to be in the vicinity of Fish Mountain near Gloversville, N. Y. Three of those aboard the transport are pictured here, left to right: copilot Dale Dryer, Ernest Dryer at the controls when the plane crashed, and Robert Hambrook, an official of the Federal Bureau of Education and the only passenger.

AERIAL SUPREMACY ALL ALABAMA NEEDED TO WIN ROSE BOWL 29-13

ROSE BOWL, PASADENA, Cal., Jan. 2. (P)—Aerial sleight of hand met football power on the ground Tuesday and 85,000 excited spectators saw Alabama defeat Stanford 29-13.

The visitors from the South put on the greatest exhibition of forward passing seen in the history of the annual competition in the Rose Bowl. The winners had nothing to match the tremendous drive of the losers, but they tossed the ball with an accuracy that left the record-breaking crowd—and Stanford players—gasping for breath. The Crimson compiled the amazing record of completing 10 out of 13 attempted passes for a 77-yard drive.

With the exception of one 67-yard sprint for a touchdown by Millard (Dixie) Howell, all the counters were scored by means of the astonishingly effective overhead attack.

New Record Crowd

The capacity crowd, a new record for the Rose Bowl, and the largest attendance of the current football season, first marveled and then cheered as Howell threw pass after pass right into the hands of his receivers, principally Don Hutson, Paul Bryant and Jim Angelich.

Howell scored two touchdowns, half of his team's total, but it is not merely as a runner, he will be remembered in the Rose Bowl. Every Stanford supporter will think of him as a menace, a ball of fire and sudden football death when he stood with a ball poised for flight. There was nothing Stanford could do about Howell's deadly pitching as he threw strikes most of the afternoon. Not until late in the fourth period was one intercepted and then the passer was rushed. His receivers caught many of the passes on the run but the ball waltzed for them 99 per cent of the time.

To complete a busy day, Howell did some sensational punting.

Loaded Second Period

Alabama won the game in a load-laden second period, a quarter packed with enough action for a dozen football games. Stanford led, by virtue of a first period touchdown when without warning the game exploded into the Indians' faces. In 14 minutes the lads from Tuscaloosa piled up 22 points—three touchdowns and a field goal.

Bobby Grayson's driving power was the big cog in Stanford's offensive and the visitors never were able to stop the big boy with the piston like legs. They slowed the Portland, Ore., youth up from time to time, but they did not stop him. Stanford showed that the old football adage that touchdowns can not be made on running plays the length of the field was all wrong. The Redskins did it once and almost repeated.

The island of Martinique, in the West Indies, was the birthplace of Empress Josephine, wife of Napoleon Bonaparte.

A man must not speak to his mother-in-law among the Yarure Indians of Venezuela. They must sit facing opposite directions when in camp.

Census-- (Continued from page 1)

"Due to the splendid cooperation of newspapers, farm publications, radio broadcasting stations, state and county farm agencies and organizations and educational institutions in disseminating information concerning the importance of this farm census, more than a million copies of the sample schedule have been distributed to farmers. Those who do not have sample schedules are urged to write, phone or call at the farm census headquarters in their district, procure a copy, study the questions and have their records ready when the enumerator calls.

"The headquarters for the first district of Texas is in the federal building at Amarillo; the second district is in the federal building at Lubbock; the sixth district is in the chamber of commerce building at El Paso. The first district of New Mexico is in the court house at Albuquerque; and the second district of New Mexico is in the federal building at Clovis.

"The bureau desires to call attention to the law which provides that the individual return made by each farmer is an absolutely confidential government report and to emphasize the fact that no individual figures will be used for taxation purposes nor given to any tax official. Enumerators, as well as all census employees, are sworn to secrecy and are required to read the law and the severe penalties established for any disclosure of information. Only sworn employees of the census bureau have access to the files. Section 9 of the Fifteenth Decennial Census Act provides penalties for failure to answer questions asked by enumerators or for giving false information.

"Enumerators are legal residents of the districts which they canvass. Some if not all of the farmers residing in an enumeration district will know the enumerator personally and they will do well to see that an accurate report is returned

for their district. With the program carried on by the government to assist agriculture in accurate reports might very readily react to the disadvantages of the farmers in that particular district.

FEDERAL AID IN WATER PROGRAMS SOUGHT BY BOARD

By JOHN A. NORRIS
Chairman, Board of Water Engineers

AUSTIN, (P).—The State Board of Water Engineers has been engaged in addition to its regular duties, during the past year in attempting, in cooperation with various other State agencies and political subdivisions, to secure from the Federal Government funds for the development of our water resources in a large way, and thus to make large scale use of some of the natural resources that State appropriations have enabled us to gather all of the past years.

We have known ever since the intensive hydrographic and topographic survey of 1925 that there are feasible dam and reservoir sites in Texas for the storage of practically all of the State's flood waters, and there has been much interest in building the works that would be required to store these waters; in fact, hardly any possibility for storage of natural resources that the Texas streams will come in for a reasonable share of the funds that are being made available by the Federal Government.

During the past year the work of the Board of Water Engineers has been devoted in large measure to the study of the possibilities for development in Texas, and in this effort we have worked in close cooperation with various municipalities and agencies in the State.

The largest of the above mentioned projects is on the Brazos watershed; in 1926, the Board of Water Engineers proposed the plan of development embracing the whole of the watershed of the Brazos main stream and its tributaries, and consisting essentially of a series of major dams that will store approximately three and one half million acre-feet of water. It is estimated that this storage capacity would control the major floods in this watershed and would provide ample water for irrigation, industrial, municipal and domestic purposes, and generate a considerable quantity of hydro-electric energy. The Directors of the Brazos District are attempting to secure fifty million dollars from the Federal Government to pay for construction, and at this time they are hopeful of the success of their effort in this respect.

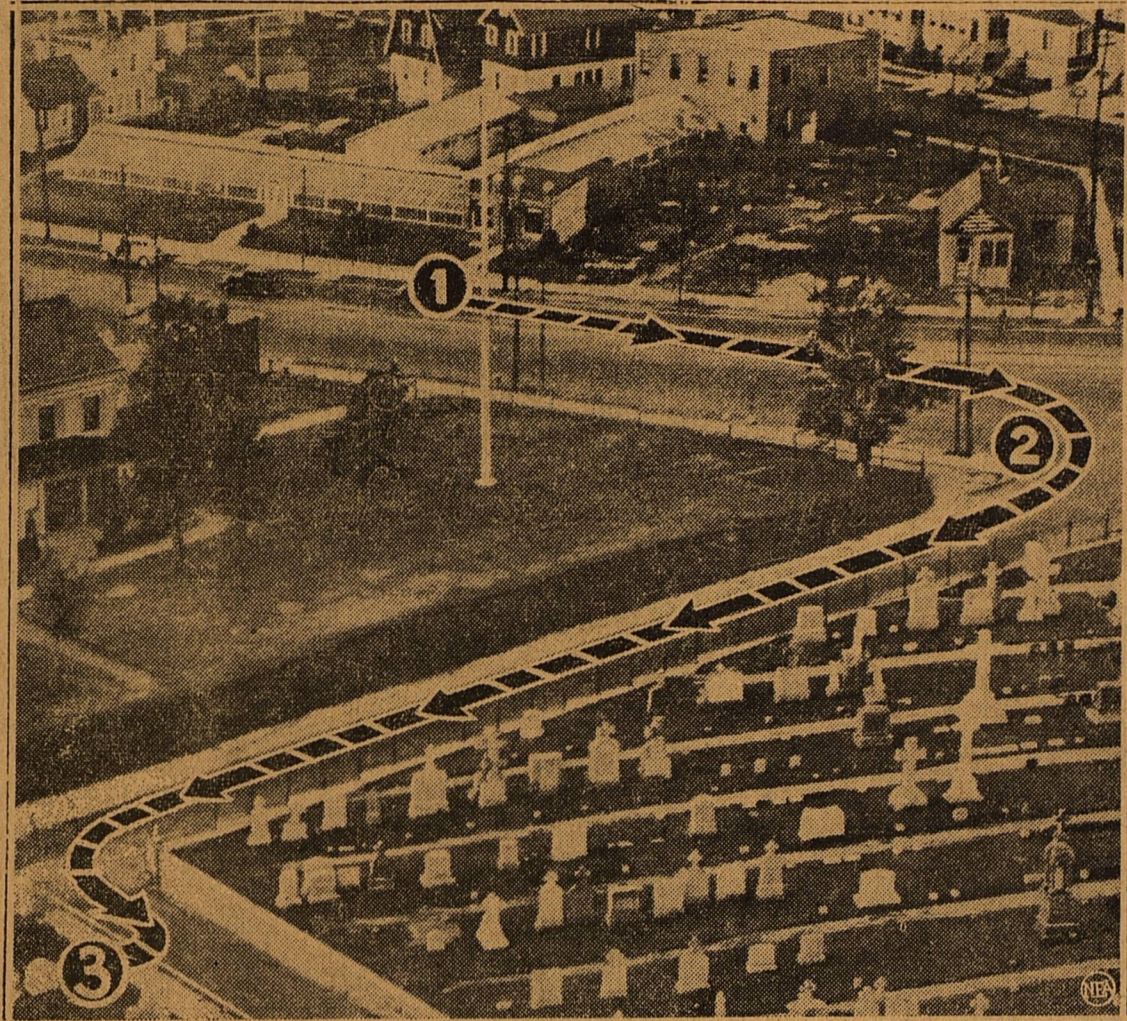

The second in size of the projects which the Board of Water Engineers is helping to develop is that on the Colorado River. This also is a storage project, and will have for its major purpose flood control, irrigation, and the development of hydro-electric power. It is proposed first to complete the partly completed Buchanan Dam, and then to build about five additional dams between the Buchanan Dam and Austin Dam, the whole series to utilize the complete fall in the river from approximately 500

feet between the upper and lower points. The estimated cost of this completed work will be about twenty million dollars.

The Red Bluff Water Power Control District, on the Pecos River has had the cooperation of the Board in securing a loan of two million six hundred thousand dollars for the construction of a dam and reservoir for the storage of about 800,000 acre-feet of water. This project will generate about ten million kilowatt hours per year, and will furnish ample supply of water for about 40,000 acres of land in the Pecos Valley.

The Lower Nueces Valley Authority project, near Rockland, in Tyler County, Texas, has been encouraged and furthered in its efforts to secure moneys from the Federal Government to construct a dam, reservoir and a canal system, to cost about seven and one-half million dollars. This water will be used for

Scene of Mysterious "Jafsie" Ransom Deal

What happened on the night of April 2, 1932, in the vicinity of St. Raymond's Cemetery in Bronx Borough, New York, comes out of the most controverted points in the trial of Bruno Hauptmann on the charge of murdering Charles Augustus Lindbergh, Jr. The diagram imposed on a photograph of the cemetery vicinity illustrates the story of the \$50,000 ransom payment, told by Dr. John F. Condon (Jafsie). After dark Colonel Lind-

bergh, driving his own coupe, took Condon to the greenhouse (1) at 3225 Tremont St., to which he had been directed by a note; under a stone beneath a table in front of the greenhouse, Condon found a second note instructing him to follow the course marked by the dotted line. Lindbergh remained in the car. Condon approached the intersection and looked for a street sign; a woman at (2) assured him he was at Whittemore Avenue. When he reached the

entrance of the cemetery a voice called out of the darkness: "Here I am, doctor." A colloquy ensued over the amount of the ransom to be paid, \$50,000 being agreed upon. Condon returned to the car, where Lindbergh was awaiting, got the package of \$50,000 in bills, took it back to the point (3) where he passed it through the hedge to the man identified only as "John," in return for a receipt and instructions for recovering the baby. The instructions proved to be false.

control and use by storage and pumping facilities. The other three hundred and forty million acre-feet sink into the ground, or are consumed by evaporation or transpiration by plant life. The Board of Water Engineers, in cooperation with the United States Geological Survey, has during the past year been making extensive surveys to determine just where and in what quantities this underground water is located. We deem this phase of our work one of the highest importance, particularly because of the vast volumes of water involved, and because of the fact that many communities will have to depend on underground water due to their distance from adequate surface streams. In fact, we think it would be safe to say that underground water is our greatest and most valuable mineral resource. We have been and are now publishing, as fast as practicable, the results

of our investigations of the sub-surface water.

The Board has been instrumental in furthering the work of the State Park Board by cooperating with that agency in the building of dams and in securing the approval of the Federal Government for the location of CCC camps in the several parts of the State.

The Board, in addition, has cooperated with counties and other local organizations in the building of low water dams and in other ways.

During the coming year we expect to continue our cooperation with all of the projects that are now underway and proposed, and to encourage storage of water on Texas streams wherever practicable, and to enlarge our underground water surveys as fast as possible.

The most eminent need exists for a complete air map of the State, accurately made, and based on proper ground controls, both as to vertical and horizontal positions, and this map to be followed by proper ground topographic sheets that would enable the engineer interested in water conservation, as well as the geologist, the highway engineer, or anyone else interested in the development of our land and other natural resources, properly to plan his work and at the minimum of expense. The Board of Water Engineers in addition to its other various activities proposes to work for the complete mapping of the State of Texas, as above outlined. Such a map would be of incalculable value to us in planning our surface and underground water development, and equally valuable to countless other agencies within and without the State.

Personals

Mr. and Mrs. J. W. Campbell have returned from Wright City and Ariz. where they attended the funeral of his father, John Campbell, former Midland man.

J. G. Arnett returned Monday night from a visit to relatives in Alabama. He had been gone about 10 days.

Miss Alma Lee Hankins is visiting friends here. She returned Tuesday night from Lubbock, where she visited her brother, R. C. Hankins.

Mr. and Mrs. O. A. Colville and daughter Nora Ruth, and J. D. Parks of Hillsboro are visiting Mr. and Mrs. F. H. Wilmoth.

Misses Vera Heffner and Helen Riley returned last night from Austin.

Mrs. John Dunagan and Mrs. Dona Dunagan went to Abilene Monday to take Miss Roberta Dunagan and Miss Helen Dunagan back to McMurry College and Hardin-Simmons University respectively. The Meses, Dunagan returned to Midland Tuesday.

Hopper-infested states of the midwest received 31,000 tons of mixed grasshopper bait this year.

Robins sing in their sleep, mackerel swim while asleep, elephants sleep standing up, and ants yawn and stretch like human beings on awakening, according to a French naturalist.

There are many known deposits of minerals in Canada, some of them of immense value. Amber, mica, graphite, feldspar, corundum, diatomite, phosphate rock, and bentonite are among these.

Did you ever notice . . . in a roomful of people . . . the difference between one cigarette and another . . . and wonder why Chesterfields have such a pleasing aroma

Many things have to do with the aroma of a cigarette . . . the kind of tobaccos they are made of . . . the way the tobaccos are blended . . . the quality of the cigarette paper.

IT takes good things to make good things.

Someone said that to get the right aroma in a cigarette, you must have the right quantity of Turkish tobacco—and that's right.

But it is also true that you get a pleasing aroma from the home-grown tobaccos . . . tobaccos filled with Southern Sunshine, sweet and ripe.

When these tobaccos are all blended and cross-blended the Chesterfield way, balanced one against the other, you get a flavor and fragrance that's different from other cigarettes.
