PRICE TEN CENTS

TRAIL DUST

By DOUGLAS MEADOR

The advice to hitch your wagon to a star is sound provided the vehicle is sturdy and equipped with brakes of dignity and enduring determination.

The absence of television in pioneer days was perhaps partly responsible for the conquest of the West. The spirit of adventure is a part of human nature and wagons rolling into a vast, new land gave it expression.

The shock waves of truth frequently continue vibrating long after the original disturbance has become silent.

Love is the greatest force in the world and the raw material from which it is created, is plentiful. It is tragic that so many lives thirst for its substance without learning the secret that it is something to give instead of receive.

The saddle sores of time have left marks on some of our backs until we are reluctant to do any more than is required to remove the impression that we have become senile.

Doctors have advanced proof that young people are becoming deaf as a result of so much loud music. This, of course, is nature's method of protecting the body from things it cannot bear. Unfortunately many of us who believed music to be something soothing, can still hear the noise.

A modern miracle is the regularly reoccurring Spirit of Christmas with the transformation of even encrusted hearts to some degree of rejoicing.

Lasting friendships are heated and tempered many times in the course of a lifetime. Once they reach a satisfactory degree of quality the strength will remain to the portal of eternity.

Green is about as difficult to conceal as the vapor trail of a jet in the expanse of blue sky.

Chsst Drive Is Short of Goal

ANNUAL fund drive of the Matador Community Chest is short of its goal of \$2,500. Yesterday afternoon the total contributions amounted to \$1,614.39.

The drive has been made by mail in order to save time of the volunteer solicitors. The response has been good but short of 1968.

Mrs. Lois Smart, secretary, said that 82 residents who gave in 1968, have not responded to the 1969 appeal by mail. These contributors gave \$577 which would bring the total to over \$2,000.

Community Chest is sponsored by the Matador Lions Club. Douglas Meador, president of the Chest, declared it is probable that a "mopping up" personal drive may be necessary.

Dickens-Motley Grazing Area Loan is Approved for \$560,000

PADUCAH — Approval of a \$560,000 Farmers Home Administration insured loan to 16 Cottle County ranchers for the development of a grazing area in Dickcens and Motley counties has been announced by Milton F. Wilfong, local FHA county supervisor.

The loan funds and an additional \$8,000 contributed by members of the Tongue River Grazing Association will enable the association to purchase 8,709 acres of land on the Rolling Plains previously owned by the Texas Presbyterian Foundation.

Wilfong said developing the grazing area is expected to add about \$16,000 yearly to the area's economy along with strengthening family ranches of association members who will share use of grazing land to improve their livestock production. As added income, the group will offer day lease to hunters.

Sportsmen may hunt deer, turkey and quail by calling Benny Dillard, overseer who lives on the ranch nine miles east of Roaring Springs, said Howard Smith, president of the association.

Development will include the spraying of 2,500 acres of mesquite and 5,500 acres for shinnery oak control. Grass seeding on 314 acres will be cost-shared under the Great Plains Conservation Program and all the practices are recommended and approved by the Agricultural Stabilization and Conservation Service and the Soil Conservation Service representatives of the area.

The loan will be made for a period of 40 years at five per cent interest.

A. L. Beauchamp is vice president of the TGRA, Billy Ray Harrison is secretary-treasurer and board members of the executive committee are Don Hutchinson and Donald Smith. Others of the farm-ranchers banded together in the venture are Bill Hoffman, Leon Thompson, Larry Thompson, Charles Havins, Buddy Liedtke, W. D. Brady, Warren Smith, Ralph Tipton, Bob Chaney, Sid Sexton and Billy Kinney.

Same Name Cause Of Embarrassment

William Thomas Evans was arrested in Lubbock in January for the theft of 22 head of cattle from the Zachary and Lawson Feed Lots. The theft and arrest was reported in the May issue of Cattleman Magazine.

The report said the cattle had been sold by Bill Evans. At the same time Billy Ray Evans was working for the same feed lot and he also went by the name Bill Evans. He is the son of Mr. and Mrs. John Evans who have lived on the Willie Ranch in Cottle County for 11 years. The two men did not know each other and are no relation.

The report has resulted in embarrassment for Billy Ray Evans who is well known among cattlemen in this area, having worked for the Rock Island, Swenson and Pitchfork Ranches. He did not know about the arrest of William Thomas Evans, until someone told him he had been erroneously identified as the man arrested.

Record Crowd Here Sees Santa Parade

FAVORABLE weather contributed to the success Friday of the Lions Club's annual Christmas parade where the principal attraction for little children was Santa in person.

Many observers said a record

crowd attended. While Santa was the star for children, many adults came to see the colorful Patton Springs High School Band and hear the music. The outstanding band is directed by Mrs. Ralph Marshall. A new feature of the parade was the color guard of local ex-servicemen. The Matador Drum and Bugle Corps under the leadership of Mrs. John V. Stevens marched in the parade, which was more than half a mile in length.

A number of outstanding floats were entered, with three from Patton Springs. Top winner in the float was awarded the Matador Boy Scout Troop 360. Second place went to the Patton Springs "Peace on Earth" float. Third place was awarded Ben Charles Grundy for his entry as a clown.

The weather, which was threatening, was favorable, warm and balmy until about dark when the wind changed and rain began falling, accompanied by lightning and some hail. The mercury dropped rapidly and snow was predicted but failed to materialize.

Hundreds Meet Santa

Hundreds of small children met Santa in person. Some of the smaller children were afraid, but in most instances the youngsters confided in the bewiskered gentleman from the North Pole, their hopes for Christmas presents. Each child was presented with a bag of candy, nuts and fruit. Approximately 500 bags were distributed.

LASTING TRIBUTE to the former Whiteflat Methodist Church is expressed on the bronze plaque at the right of Rev. John Fitzgerald, pastor of the First Methodist Church of Matador. The plaque was erected on the education building this fall. The Whiteflat Church was first established in 1889 and later discontinued for some time. It was re-established in 1908 and continued until 1966, when a change in population caused the church to decide to disband, with part of the membership moving to Matador. It was also decided to sell the church building and apply the money on the Matador Education Building indebtedness. The building was sold for \$4,000 in 1967 and has been paid for, including interest. The plaque reads, "In memory and in Honor of Former Members of the Whiteflat Methodist Church." —Tribune Photo

Freshmen Have Farewell Party

By Lance Jameson
 The freshman class had a pre-Thanksgiving and farewell party for Deborah Halford, November 26 at the V.F.W. Hut. Pumpkins and turkeys decorated the building. Orange punch, fancy cookies, fritoes, potato chips and dips were served on the refreshment table.
 The party was spent in relay races, a human jigsaw puzzle, and a balloon battle with Butch McKelvey the winner. Before going home, the class presented Deborah with a gift and sang "For She's a Jolly Good Fella."
 Chaperones for the get-together were: Mrs. Lewis Bostick, Mrs. Henry Martin, Mrs. Glenn Woodruff, Mrs. H. R. Jameson, and Mr. and Mrs. Bill Smallwood.

FHA FOREIGN FOODS SUPPER

By Mary Ann Woosley
 The annual Foreign Foods Supper was held November 25, in the high school. A function of the F. H. A., the supper served the faculty of the Matador schools. Each class chose a country

from which they prepared a representative meal, table and then presented a skit. Classes and countries represented included: seniors, Holland; juniors, Ireland; sophomores, Mexico; and freshmen, Russia. The faculty voted for the best table and skit, giving both awards to the sophomores. Characters in the sophomore skit had the unique names of Waylendo Moorigas, (Mr. Wayland Moore); Jolite Ellithorpe, (Mrs. Joy Ellithorp); Irvine Stanzalos, (Mr. Stan Irvine); Rita Grovales, (Mrs. Rita Groves).

The supper and skits were enjoyed as much by the participants as by the audience. Mr. Johnson summed up the evening when he exclaimed, "I don't know when I've laughed so much!"

Beginners Spotlight

By Debra Garrison
 Linda Elliott, daughter of Mr. and Mrs. J. D. Elliott, has learned to take care of herself early since she has three older brothers and two sisters.
 Linda has beautiful blond hair and blue eyes. She hopes these will help her get cheerleader in high school. Her cute smile will help too.

Linda's favorite color is red, sticking to school colors. She likes to play on the monkey bars at recess.

HEARD'S FIRST: Along with making Christmas trees the children are learning to sing Christmas songs as they work. The class has begun to write stories and Mrs. Heard has discovered some of her pupils have very big imaginations.

GILBREATH'S FIRST: It takes a great imagination to keep different art classes going through-out grade school and Mrs. Bennie Keltz certainly deserves some credit. I thought I had seen everything until I saw these first graders make Christmas trees out of cupcake cups. Even with each child arranging his cup in a different order, they all turned out beautifully.

SECOND GRADE: The second grade has been working on Christmas decorations and Mrs. Marshall came up with the idea of using Christmas trees in connection with conduct... good luck.

THIRD GRADE: The third graders helped Terri Fish celebrate her birthday, Dec. 1, when Mrs. Don West, Terri's mother, brought cup cakes and Cokes for the class.

FOURTH GRADE: The fourth graders are celebrating the approach of Christmas by a study of Christmas in different lands. They begin each day with a Christmas song and then pick another to discuss.

SEVENTH GRADE: Tragedy struck the science aquarium again, this time during the Thanksgiving holidays. All the baby guppies froze to death. Although they were replaced with five new fish, you can still see a few students walking around with tears in their eyes.

EIGHTH GRADE: The eighth grade lost Barbara Halford last week as she and her family moved to Denton.

ACCENT ON HEALTH

During the fall and winter months, news reports frequently tell of someone being killed by carbon monoxide poisoning.
Hundreds of Americans—Texans included—are poisoned or die every year from the odorless, tasteless and colorless killer, says the Texas State Department of Health. As in most cases, these deaths are preventable.
Just last week four persons died in Canada of carbon monoxide poisoning when the exhaust of an automobile was piped under a house in an effort to kill skunks. Several persons recently in San Antonio were treated after being overcome by fumes at a charcoal plant, largely due to carbon monoxide.

Carbon monoxide poisoning can occur anytime, but it generally is thought of as a cold weather threat since homes, automobiles and business establishments are "buttoned up" against the cold. Texans begin using more fuel to heat their homes, offices and cars when fall arrives.
Every time a person burns gasoline, kerosene, wood, natural or manufactured gas, coal, coke or oil—anywhere—in a heater, car, appliance, bonfire or grill, he has started a potential carbon monoxide factory. Hibachi grills, used with charcoal, are dangerous in closed-up areas. A car engine, running in an average sized garage approximately five minutes, can produce a lethal concentration of carbon monoxide.

The poison slowly gets into a person's bloodstream, rendering him weak and groggy and finally results in death unless the exposed person is moved to fresh air before it is too late. Hospitalization often is necessary for victims lucky enough to live.
How can you avoid poisoning? Check automobiles regularly for leaks in exhaust pipes, mufflers and their connections.
Have your heating systems checked thoroughly.

DEGREE HOURS IN EXCESS OF 85° MAXIMUM TEMPERATURE FOR 30 DAYS ENDING

TEMPERATURES HIGHER — Despite cool temperatures during the first two weeks of June, this summer proved to be one of the hottest on record. June 1969 showed an increase over last year to 90.8 degrees from 89.6 degrees for average high maximum temperatures. July was the big month however as the average highs moved from 90.4 degrees to 97.6; August figures show a jump from 91.5 degrees to 96.2. Twenty-one 100 degree plus days and 46 days with the mercury climbing to at least the 97 degree mark underscored the fact that it was hot during the summer of 1969.

Tribune, Matador, Motley County, Texas, Thurs., December 11, 1969

SWPCO Records Reveal Extent Of Long Hot Summer

With the passage of the calendar from August into September and summer 1969 now over, it is interesting to note just how hot this summer has been.

Weather statistics quickly reveal that the three months of June, July and August 1969 were the hottest three month period we have experienced during the decade of the 1960's. We sat through 21 days when the mercury climbed to 100 degrees or higher, something that had not occurred in 15 years. We also experienced more degree hours of temperature in excess of 85 degrees than we had at any time in the past 10 years.

The total number of degree hours above the 85 degree mark reached a fantastic 6,059 as compared to only 2,240 last year. This represents an increase of 170.5 percent over 1968 figures. The degree hours are equal to the total number of hours per day above the 85 degree mark multiplied by the number of degrees above 85 degrees. For example, if the temperature between 3 p.m. and 5 p.m. remains at 95 degrees the number of degree hours would be 20.

The only year during the past ten that comes close to matching the heat of this season is 1963 when 4,995 degree hours above 85 degrees were noted—this figure is still much lower than the current one.

These hot days may also be measured in terms of electrical energy consumed. Southwestern Electric Power Co. reports that almost one billion, 900 million kilowatt hours of energy were utilized throughout its system

during the three-month period, a 20 per cent jump over the 1968 summer season. During July alone there was an increase of 31 percent in energy usage.

SWPCO officials report this giant jump in energy consumption over last year is further reflected in the fact that there was 63 hours in excess of the estimated peak kilowatt hourly demand of 1,230,000 kilowatts. The system high in hourly kilowatt demand was 1,309,000 kilowatts set on July 14.

A daily average for the three month period shows that 20,997, 322 kilowatts were consumed. This would light the street lights in the entire city of Shreveport for approximately 382 nights. Total consumption of energy for the summer would light the street lights every night for 95 years.

The increased usage of electrical energy can be attributed directly to the increased use of air conditioning, an item that became a necessity during this "long hot summer."

COUNTY AGENT PALLMEYER SAYS:

From a quality standpoint, the basic objective of cotton harvesting is to keep moisture and trash content to a minimum.

Their removal at the gin creates a major preservation problem. Excessive moisture and the presence of green leaves also cause quality losses in storage. The moisture and trash content

factor in seed cotton is related to the prevailing weather, plant condition and machine adjustment and operation.

For a quality product, follow these guidelines for harvesting: Moisture of seed cotton in the field should be 10% or less.

Machines must be conditioned prior to harvesting and kept in adjustment as dictated by plant and field conditions.

Operators must be trained and supervised.

A specific service program should be followed.

Excessive lubrication should be removed.

Seed cotton of varying trash and moisture content should not be mixed in the same trailer.

Getting cotton to the gin in the best possible condition makes it possible for the ginner to do the kind of ginning job his plant was designed and engineered to do. Helping to take a quality product to the gin will make you money, so give yourself every chance for a quality product.

The use of good "housekeeping" practices in the backyard or orchard at this time of the year will pay big dividends.

Peaches and other fruit which were discarded or dropped from the trees during the harvest season should either be picked up or plowed under to a depth sufficient to prevent their being returned to the soil surface next spring. This cleanup is important since disease organisms can carry over in this fruit.

Brown rot, for example, causes a disease of peaches and plums which is characterized by a rapid decay of fruit at harvest time. Decayed fruit left on the tree or underneath the tree can serve as a source of the disease-causing spores next spring.

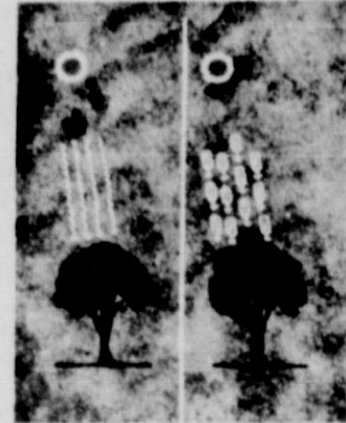

Leaflets are available in my office for both disease and insect control for fruit producers.

Well, What Do You Know? fun, games and knowledge

What is quantum theory?

Waves on a pond are motions of the water. Sound waves are motions of the air through which they travel. A hundred years ago scientists believed that light waves, too, must be the motion of "something." They called that something ether. They believed it existed because waves, they said, must have something in which to travel. Today scientists have tried to understand the nature of radiation itself. One generally accepted theory is called quantum theory.

SOLAR RADIATION (ETHER THEORY) SOLAR RADIATION (QUANTUM THEORY)

Scientists believe that radiation is emitted in the form of tiny quantities, or quanta, of energy. ("Quanta" is the plural of "quantum.") Quanta travel in the form of packets, or bundles, of waves. Thus, the tiny quantities of energy are believed to be wave packets. Quantum theory has been very successful in leading scientists to a fuller understanding of the nature of

radiation and of the many ways in which radiation can be used by mankind.

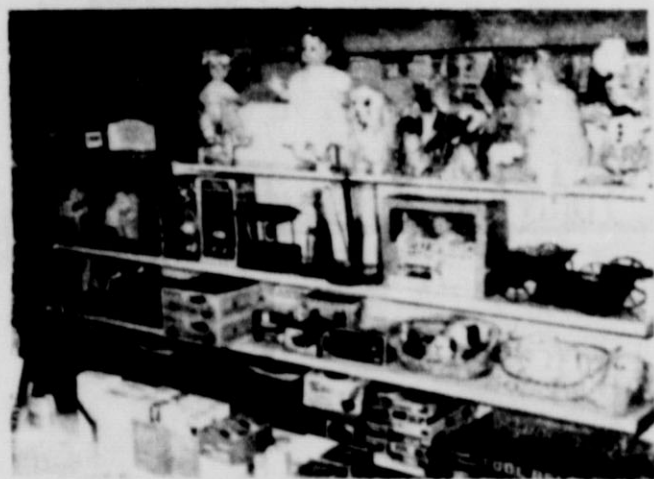

What is a "Lucy Stoner"?

Lucy Stone was 28 years old when she graduated from Oberlin College, Ohio, in 1847. Because her father did not approve of college education for women, Lucy had to teach school for 9 years in order to earn the money to go to college. She decided to devote her life to correcting what she considered to be the many injustices in society and the law. Soon she became an eloquent speaker against slavery and for civil rights. For years she wore bloomers instead of dresses to protest against the awkward and uncomfortable women's fashions of the period.

When Lucy Stone married, she continued to use her own name as part of her protest against the laws that made a wife legally inferior to her husband. Ever since, a married woman who keeps her maiden name has been known as a "Lucy Stoner."

What is a tsunami?

Sometimes you hear people speak of tidal waves. A much better name for them is "tsunamis" (from the Japanese words for "harbor" and "wave"), for they are not caused by tides. Tsunamis are caused by earthquakes under the oceans. The earthquakes create waves that travel across the sea at speeds up to 500 miles an hour. When they reach land, they may pile up into walls of water as high as 60 feet. They can do very great damage.
