## TRAIL DUST

By DOUGLAS MEADOR

In every man's cupboard of achievement are bowls of empty hours bearing the sticky fingerprints of procrastination.

Memory's mirror reflects many impressions which have been swept away in the rolling current of changing times. A press-button wash day is far removed from the black simmering kettle I used to fire with cottonwood chips, and the turn of a nickle faucet is like shoveling a cloud. A gentle horse pulled the crude sled that held a water barrel, topped with a piece of brown duck and held fast by a loose hoop. Trails of the sled runners vanish across the years and leave me with fragments of my mother's song as she scrubbed over a tub in the shade of the cottonwoods.

Charm of the small community allows each man the privileges of a prince without imposing the responsibilities of royalty.

Except for preferences of the individual, society would surely perish in the sinister juices of its own contempt. It is probable that wisdom is conceived somewhere during the romance of choice and that destiny is shaped through selection. Regardless of the consequences to my social position or the stigma the whim may attach to my name, I shall continue to prefer the taste of blackeye peas to that of caviar. I must admit, in fairness however, that I am more familiar with one than the other, and not by preference alone.

If dogs possessed the amount of intelligence with which they are credited they would exercise more diligence in the selection of masters. A stray canine should be able to understand the parsimonious traits of a man by the absence of meat left on the bones from his table.

excellent pasture on sandy and sandy loam soils when it is properly managed. This management includes initial seeding through establishment and grazing.  
Weeping lovegrass can be seeded in a clean tilled seedbed after the windy months are over, usually during May. Under normal rainfall conditions a stand of grass will develop the first growing season. Some of the forage will be available for harvest after frost during the first year of growth.  
The grass can be seeded as

a range grass but is most desirable when treated as improved pasture. This treatment includes fertilization, rotation, adequate water, minerals, and proper stocking rates. Stocking rates will vary during the season but will average 2 to 3 acres per animal unit from May to September if adequate rainfall is received and sound management applied. The grass should be rested from September 1 to frost to allow regrowth for plant improvement and vigor. The regrowth can be grazed after frost for winter forage.  
Other grasses are suitable for seeding as pastureland in Motley County. These include Bermudagrass, fescue,

pure stands of some native grasses, and other improved species. Management requirements on these grasses are similar to Weeping lovegrass in order to obtain maximum production.  
Assistance on management and converting cropland to grassland or re-seeding rangeland can be obtained from your local Soil Conservation Service. All programs and services provided are available to everyone without regard to race, creed, color, sex, or national origin.

## Youngest President Of Okla. Cattlemen

QUINN COURTNEY

When the Marshall County Cattlemen's Association of Madill, Okla., elected Quinn Courtney as the organization's 1975 president in January it was observed that he was the youngest "man" ever to head the group.

The son of former Matador residents, Mr. and Mrs. Hal Courtney, the youthful president graduated from Madill High School May 16. He started to school in Matador, with the graduating class here, and came to attend their commencement.

Young Courtney was president of the Madill FFA chapter and has been actively involved with his own cow-calf operation three years with a registered herd of Limousin cattle, an imported exotic breed.

He is also president of the Oklahoma Junior Limousin Association and vice president of the national junior association.

"Actual experience with ranching operations goes

## Compensator keeps calves gaining right through the summer.

Overcomes slowdown in rate of gain caused by changes in forage quality.

As summer grasses mature, they become more stony and less leafy. Protein content declines.

Digestibility and vitamin levels drop.

The result is a slowdown in rate of gain for calves. Because a cow can't keep up good milk production on forage of declining value.

Without compensation for the loss of nutrient value in the forage, cows and calves face a costly summer slump.

What can you do?

You can keep on feeding COMPENSATOR liquid supplement right through the summer. The protein, phosphorus, sulfur, vitamins, minerals and energy in COMPENSATOR supply the balance of nutrients cows need to maintain high milk production even on high-fiber roughage. And a few licks from the feeder on its own, gives the calf these extra nutritional benefits directly.

An Oklahoma cattleman reported that calves on COMPENSATOR through the summer gained 56

more pounds than the same type of calves in the pasture next to them without COMPENSATOR. And he could carry a higher stocking rate using COMPENSATOR.

In Alabama, calves on COMPENSATOR from June 25 to October 22, gained 42 more pounds than similar cattle without COMPENSATOR. And this was on well-fertilized Coastal bermuda.

You may get less than this, or more. It depends on weather, stocking rates, fertility practices and forage type. But experience has shown that most cattlemen can get extra gains and profit from feeding COMPENSATOR through the summer.

Why not prove it for yourself this summer?

## SOME QUESTIONS TO ASK THE PRINTING AND OFFICE SUPPLIES PEDDLER

When the person selling printing, office supplies and advertising solicits your business, here are some questions he should be willing to answer to YOUR SATISFACTION:

1. Is he a taxpayer in your community or county?
2. Does he donate space in the newspaper to local and county projects and enterprises?
3. Does he pay wages to employees who live and do business in your community?
4. Does he grant favors that you would ask of your local newspaper?
5. Does he donate newspaper space to promote you and your neighbor's business?
6. Does his price include freight, postage and insurance?
7. Does he support your civic organizations, schools and churches with free publicity?

We sincerely believe that these questions should be considered when you purchase printing and office supplies—a question of whether you should support those who help support you!
