SPEARMAN HAS NEW INDUSTRY OF PROMISE

Dry Weather Does Not Interfere With Raising of Pole Cats Here

W. H. Neilson, who owns a fine place in the edge of the breaks, fourteen miles southwest of Spearman, in partnership with his sons, has established a pole cat ranch as a sideline. He has a good start of the cats already and as they multiply at a rapid rate, will soon have all he cares to handle at one time and will begin selling them off. A Kansas City firm which handles the hides, will send a man here to superintend the skinning of the little animals. There is always a ready market for the hides and they bring a good price. Mr. Neilson says the pole cats are easily tamed and when he goes into the small enclosure in which they are kept, they will follow him about the place and climb over him very much like the regular house cat. They will eat most anything, but their principal feed is grain soaked in water until it is soft. Mr. Neilson is cutting back all cats except the narrow stripe variety, as the hide with a narrow stripe brings the highest price.

This is a new business for the Spearman country but if there is money in it, we are "for" it.

OUTLINE OF THE PROGRAM FOR THE FOURTH ANNUAL CONVENTION OF PANHANDLE-PLAINS CHAMBER OF COMMERCE SEPTEMBER 19 TO 20

Tuesday Morning
9:00 Decorated Automobile parade.

10:00 Invocation.
Address of Welcome, Mayor Lon D. Marrs, Amarillo.

Response to Address of Welcome Hon. W. M. Knight, Hereford.
Business session Panhandle-Plains Chamber of Commerce.

3—President's Report
b—Appointment of Nominating Committees.

c—Unfinished business.
d—Good of the Organization.
Tuesday Afternoon

1:30 Address: "Our Marketing Problems" by Carl Williams, editor Oklahoma-Farm-Stockman, Oklahoma City.

2:00 Annual meeting Panhandle Commercial Executives Association.

2:30 Address: "Panhandle Speciality" Mrs. Phoebe K. Warner, Claude. To the Women's Federated Clubs of the Panhandle.

3:00 Address: "Good Roads" A. R. Losh, Federal Highway Engineer W. T. Wheeler, Seely, and Treas. Texas Highway Association.

3:30 Foot ball game: Amarillo vs. Charendon College.

7:30 Address: "Right Human Relationships" Arthur Nash, Cincinnati, Ohio, America's Greatest Philanthropic Philosopher.

Wednesday Morning
9:00 Address: "The Support of Public Education in Texas" Dr. J. A. Hill, Pres. West Texas State Normal, Canyon.

10:00 Address: B. E. Clement, Pres. American Grain Dealers' Association, Waco.

10:30 Address: "The Dairy Cow a Means of Developing the Panhandle" J. W. Ridgway, Director Dairy Development, Mistletoe Creamerie of Texas.

11:00 Hog Raising in the Panhandle, Col. L. S. Palmor.

Wednesday Afternoon
1:30 Business Session Panhandle Plains Chamber of Commerce.
Invocation.

a—Election of Officers and Directors.
b—Selection of Next Meeting Place.
c—Unfinished business.
d—New business.

2:30 Address: "What the Public Doesn't Know", Dr. A. H. Lindsay.

3:30 Address: J. L. Chapman, Commissioner of Insurance and Banking, Austin.

4:30 Band Contest—All bands of the Panhandle participating.

7:30 Address: "My Dash to the Pole, Life, Habits, and Customs of the Peoples of the Northlands", Dr. Frederick A. Cook, International Character and Noted Explorer.

SPECIAL NOTICE
Jasper Bogue, district Missionary of the Christian Churches of the Panhandle, is anxious to get into touch with all members of the Christian church living in communities where there is no Christian Church and would appreciate it very much if all such or those knowing of such would write him at Dalhart.

Most of the bones of contention are wishbones.

HELP US COME BACK

The disastrous fire of August 27 put the Hale Drug Company and the Reporter completely out of business, caused the postoffice to be moved at great expense and inconvenience greatly damaged the Blake Dry Goods Company. The owners of these businesses are making frantic efforts to reestablish themselves. Buildings must be erected, new stock bought and the freight charges, erection charges, and a thousand and one items of expense must be met. Therefore if you want to see Spearman continue to grow; if you want to help the entire town and community, you can do so by just simply paying up that little bill. The Reporter needs the money worse than we ever needed it since we began and the others can use every dollar they have coming. Help us over the hill and it will be appreciated. That little account doesn't amount to much so far as you are concerned, but several hundred little ones will make a nice speck and a dollar looks as big to the Reporter as a Star windmill lying on the ground.

What Water Does For Batteries

Not too much nor too little—but just the right quantity of water should be kept in your battery all the time.

The water does two things; it keeps the battery solution over the tops of the plates so that the whole plate surface is used; and it gives proper strength of solution.

Don't hesitate to ask us for water service even if yours isn't a Willard Battery. The Willard Standards of Service are the same for every make.

Guymon Battery Co.

NOW RAISING COTTON IN THE DUMAS COUNTY

Greatest Industry of the Southland is Gradually Moving Northward

On exhibition at the offices of J. R. Collard in Spearman is a stalk of cotton taken from the field of O. B. Burnett, near Dumas, which looks as though it was grown in the black land belt of central Texas. The plant is well loaded with fully developed bolls and judging from this stalk, the field should produce about three-quarters of a bale per acre. Mr. Burnett has been experimenting with cotton on the plains for a quarter of a century. He introduced the plant into Hall county about twenty-five years ago, and four or five years ago began experimenting with it in Moore county, near Dumas. He first got the seed from Mississippi and after several years of experimenting, now believes he has a variety of cotton which can be produced profitably on the north plains. Several of his neighbors have become interested in the experiments, and this year there is 700 or 800 acres of cotton near Dumas, and if the yield will justify the investment, a gin will be built there and Moore county farmers will add cotton to their list of products. Without some great calamity befalls the crop it will pay farmers of the Dumas country \$30,000 to \$40,000 this year, besides furnishing employment to a hundred or more people during the picking season. This year's crop was planted in May but was hailed out and the present crop was planted in June. Mr. Burnett believes he has produced a cotton that will stand the winds of the plains, and also believes that it will improve with each year it is planted. He is an extensive rancher and farmer and is doing a great work in the development of the Dumas country.

SEVEN BUSHELS MORE WHEAT PER ACRE

This is what Actually Happened the Last Crop Year in Texas From the Use of Pure Seed

In the fall of 1921 eight Texas farmers sowed an aggregate of 460 acres to an extra good, approved seed wheat. Each man drilled the balance of his wheat land, 503 acres altogether, from the regular bin supply.

At threshing time this year these eight men threshed an average of 17 bushels an acre from the good seed and 10 bushels an acre from the ordinary seed—a gain of 7 bushels an acre without extra labor.

In Kansas 6 1/2 bushels more. A well known farmer in western Kansas reports 34 acres this year yielding 11 1/4 bushels of a pure strain of an adapted variety; while 66 acres in the same field, sown with common seed, produced only 6 bushels an acre.

At the Kansas State Agricultural College the use of a superior variety of seed wheat increased the yield from 23.8 to 27.7 bushels an acre, or a gain of about 17 per cent.

A Fourth More in Missouri. Prof. Freat of the Missouri College of Agriculture says that if all the wheat sown in the different sections of the State was one of the four leading varieties most suitable to Missouri conditions, Fulcaster, Michigan Wonder, Poole and Dietz—the total yield would be increased 25 per cent.

Sow Clean Seed of a Variety Adapted to Your Locality

Twenty per cent of the wheat sown in Kansas is said to consist of cracked, immature or injured kernels that will not grow. The feeding value of these kernels which are useless as seed, will pay for the expense of running the seed through a fanning mill or grain strader.

Avoid Mixed and Diseased Seed
Professor Salmon of the Kansas State Agricultural College, says, "Losses in yield by sowing badly mixed and diseased seed might easily amount to 25 per cent of the crop."

There may be one predominating variety in a mixed seed that is well suited to local conditions, but it is out of the question to assume that all of the varieties represented in the mixed seed are desirable. Ed Fagg, Jake G. J. desirable. C. M. Terry.

Guaranty State Bank
SPEARMAN, TEXAS

to increase from year to year. Rye reduces the grade, the quality and the market price. Grow rye if you wish, but, by all means, keep it out of the wheat fields.

Look Out for Smut

Smut destroys the crop, often causing a decrease in yield from 5 to 50 per cent. It also destroys quality, thus reducing the selling price. L. L. Zook of the North Platte, Nebraska Experiment Station, says, "I am quite sure that the treatment of seed wheat for smut would improve the yield of wheat in this part of the State at least 5 bushels per acre and improve the quality 15 or 20 per cent."

Smut is carried by the seed and the smut spores are sown with it. There are two kinds of smut common to wheat—the stinking smut and the loose smut—both of which can be entirely eliminated by seed treatment. Each kind of smut requires a different treatment. Directions for doing this work can be secured from your county agent, your Agricultural College or your farm paper.

How to Obtain Better Seed of an Adapted Variety

At this time, The Southwestern Wheat Improvement Association is co-operating with many of the county agents, mills, elevators, and grain buyers, locating available seed wheat and places where such seed is needed.

In districts where seed is needed arrangements are being made, so that the county agent, local mill or elevator will have on hand a supply of seed which can be bought or exchanged, usually on a basis of cost, not very much above regular market prices.

Those desiring to locate pure or certified seed should see their County Agent or write to their State Agricultural College for approved seed wheat lists.

If you need better seed, you should arrange for it right now. Possibly your community will have enough seed for local demands. If you have seed for sale you should tell your County Agent or local buyers.

LIGHTNING STRUCK HIM FIVE TIMES

In the rapers thirty years ago, Jason Goodrich one-legged Civil war veteran of Rich Hill, Connecticut, was reported struck by lightning five times during his life. Jason was not the only case of a man being struck by lightning more than once. Yet you will find people getting off the same lightning bolt about lightning never occurring twice in the same place, on this some smarty probably will 12 miles out to us that Jason was hit by the same place every time lightning struck.

or single file, and dragging an empty car behind. They pull out the loaded car, set the empty one where the miner wants it, and go back the way they came, with the load of coal.

There are other strings of mules, also, and they distribute the empties and mobilize the loaded cars from and at given points. Then the compressed-air engine comes along and makes up a train of loaded cars after dropping one of empties ready for distribution. The coal trains are pulled down to the hoisting shaft, and one by one the cars go to the surface, an empty coming down as a loaded one goes up.

How the Coal Came to Be
Having seen the harvest in the coal field, let us turn to the seed time. Millions of years ago Nature stored away billions of tons of coal for us, and then left us a record of her processes written in a language that all ages and tongues can understand. It is a story so wonderful as almost to defy belief, and yet one so plain to him who reads it as to defy unbelief.

"Vegetation grew rankly, leaves and stalk settled into marshes and were carbonized, almost as though it had been for our benefit. Those were happy days in the vegetable kingdom. Plant life is stirred by the ozone of the sea, for the air was laden with unimaginable supplies of carbinoic acid gas, which was inhaled by the Brobdignagian jungle. "Indeed, so rich was the atmosphere in its supply of this gas that while it made vegetation grow extraordinarily rank it would have suffocated man. Furthermore, there was warmth exceeding anything we know in the tropics today, and there was moisture in abundance—more than the most spendthrift of plants could wish for.

"How amazingly dense was the vegetation of the coal-forming era may be shown by comparisons with existing forests. Should nature, by the process of the coal age transform the densest jungle in the world today into a coal seam, it probably would be only a few inches thick; yet there are coal seams which are sixty feet thick, though ten feet is regarded as a fine seam, and three feet will produce more than five thousands tons to the acre."

Mine Planned Like a City

Arriving at the bottom we soon find that a coal mine is planned like a city. There is one main street, or entry, and it has been laid out with the nicety of a grand boulevard. Parallel with this are other entries, and across these entries run other streets, at right angles, usually, which are called headings. Lining all these headings as houses line the streets are the chambers, or rooms, in which the miners work.

When we stop at the bottom we feel ourselves in a small-sized hurricane. It is the air rushing down the shaft and starting through the mine on its mission of purification. "We walk and walk until we begin to feel as though we might be coming out over in China or France, and then we come to the rooms or chambers—for all the coal in the neighborhood of the hoisting shaft has gone up in heat and smoke long before now and this mine is far-flung.

Catacombs of the Living

"These rooms or chambers might be monks' cells in some catacombs for the living. Here the miner bores and blasts and digs away the coal and loads it into the mine cars. If he has a helper he does not need to do the loading himself. The car holds about 6,000 pounds of run-of-the-mine coal, and a miner is supposed to fill two of them a day.

"When the car is loaded the miner puts his number on it, and presently, with much ado, there comes up the heading and into the passageway leading to the chamber a string of mules walking tandem,

drove to Kismet in a car, where the ceremony was performed. Both are well-known young people in Liberal. Mrs. Rafferty is a daughter of Mr. and Mrs. J. R. Peintz and is a graduate of the Liberal high school. She leaves a host of friends behind her when she goes to her new home. Mr. Rafferty is the son of Mr. and Mrs. Tom Rafferty of Topeka, but has lived with his uncle near Spearman, Texas, on a ranch for some time. The young people will make this ranch their home and left Liberal Tuesday night.—Liberal News.

BOOSTING THE FAIR

Messrs. Handley and Markham came from Beaver city on Friday of last week to talk over the different phases of the big Hansford County Fair to be held on Tuesday and Wednesday, October 10 and 11, with President Barkley, Secretary Hillhouse and the heads of the several departments. Mr. Hanly is the county agent of Beaver county and Mr. Markham is a district agent, with headquarters at Stillwater, Oklahoma. They gave the Spearman Fair boosters some mighty good pointers on how to conduct a Fair and the local men appreciated their visit very much. The Fair work is now under good headway. Advertising matter is being prepared, the ribbons will be here to tie on the winning animals, everything will be in proper order and the Fair will be a success.

AMARILLO MEN BLOCKING AN ACREAGE FOR WELL NEAR PLEMONS

Greathouse Bros. of Amarillo, assisted by Christian and Mathis of Plemons are blocking acreage for a well six miles northwest of Plemons. The largest portion of acreage in the block is being secured from Mrs. Bell Wisdom, J. T. Claybrook, E. Thompson and W. T. Coble, (Turkey Track Ranch.)

California operators are interested in drilling the test, and operations will begin as soon as sufficient acreage is assembled.

Competent geologists have passed favorably on the land in question as being favorable for the production of oil. The test well be drilled a short distance north of Gulf No. 1 Dial, a producer.

WHAT YOU OUGHT TO DO IN A CASE OF FOOD POISONING

"Ptomaine poisoning" is a term used to describe the illness due to taking bad food. When first employed, it was applied to the poisoning from the chemical products of putrefying foods. But now it is the popular way of naming any sickness following the eating of decomposed, germ-laden or poisoned food, no matter how the poisonous material entered it.

There is a popular idea that "bad" food is of necessity decomposed and vile or tainted in taste. This is not the case. For instance, oysters and clams may be perfectly sound and wholesome in and of themselves, but the water contained within the shell may be infected with the germs of diarrhoea or typhoid fever. In the body of the oyster, too, may be the germs of disease.

Meat and canned vegetables may be chosen by a harmful germ as a place to propagate. One such germ is the "botulism bacillus." The food-stuff was perfectly good when it was canned, but there was an accidental contamination with this bad bacillus. The germs grew and multiplied till the whole can became infected and dangerous.

Milk, cheese, ice cream, custard and all dishes made from milk may be the breeding places for germs which in their turn produce a violent poison, known as "tyrotoxin." The fungi of certain grains are poisonous. Likewise, under certain conditions, the seeds of some plants and even the potato, if eaten after it has sprouted, may be dangerously poisonous.

The symptoms of ptomaine poison are familiar to everybody. Nausea, vomiting and diarrhea are the most common. Weakness, fainting, cramps and fever may be present. The first thing to do is to get the poisonous material out of the body. The stomach should be emptied.

To accomplish this, drink a lot of tepid water. Soda added to the water, or a small amount of mustard, will usually do the work. Sticking the finger down the throat will cause gagging and vomiting, especially after drinking the tepid fluid.

In case of violent poisoning the doctor may use the stomach pump. If he is not to be had, proceed as I have directed.

The bowels should be emptied. For this purpose salts may be administered. Keep warm in bed, be quiet and try to sleep after the stomach and bowels have been emptied. Omit taking food for several days. Every case of food poisoning should be reported to the health authorities. This will enable them to trace other purchases from the infected source. Cooperation of this sort makes for the safety of the public. Your assistance may save dozens of others from the misery of food poisoning.

THE FLIVVER AIRPLANE NEXT?

Washington, August 22.—The day of the "flivver airplane" has been brought near as the result of the recent successful experiments with the motorless gliders, Glenn H. Martin, pioneer aviator and aircraft manufacturer of Cleveland, said today here.

Martin believes that within a few years as the result of the development of the gliders, small planes will be flying the air with the same ease and speed as cars travel on the city streets. His experiments toward an airplane of the production of low horsepower, low priced sport planes for the mass, made in the hope of interesting the general public in the proper use of proper flying.

that they can be constructed so that their operation will be as easy as that of the motor car.

AVERAGE YIELDS PAY NO PROFIT

Average results at best bring only a living for those who attain them. From the very nature of the case there can be no substantial profit for any considerable length of time from average returns. This is true of every business enterprise and every profession.

If the average yield of corn—twenty-five bushels an acre, or twelve bushels of wheat, enabled the farmer to support his family comfortably and pay for a farm in his life time, there soon would be so many persons raising corn and wheat that the profit on such yields would disappear. If producing the average grade of beef cattle or keeping a herd of average dairy cows or laying hens returned a substantial profit, these departments of farming would be very quickly overdone.

So the average man just makes a comfortable living while he works. When old age comes he has accumulated little on which to live. This is more generally true of laborers, merchants and professional men in towns and cities than of farmers, because those in town, while receiving on the whole a larger income, are more inclined to spend than are those who live on the farm.

Workers who are below the average in efficiency, whether in town or in the country, make a poor living and, when their strength is spent, must be supported by relatives or public charity.

It is only when you get into the ranks of those who are above the average in capabilities—those who produce more than average crop yields, who breed better than the average live stock, who take better than average care of their soil and who market their product with more than average intelligence, that we find men who, as a rule, get ahead.

The young man starting into business of any kind must now face this universal law. Unless he is willing to put forth more than average effort, work more than the average number of hours, apply more than average intelligence and devote more than average attention to his business, he will achieve only average success.

The way to get more than average results is not difficult, especially on the farm. Better sires at the head of the herds, more than usual care in the selection of seed, greater attention to well known and comparatively simple details of soil management and the application of common sense in marketing the output will put any farmer in the upper third and enable him in the long run to get ahead.—Kansas City Star.

AUTOMATIC MOTOR CAR SIGNALS

It appears that letters patent have been granted for a contrivance for motor car signals. The peculiar advantage claimed for it is that it operates automatically, demanding no attention of the driver on the part of the driver of the car. All he has to do is to manipulate his clutch, brake and steering gear and the signals display themselves in such fashion as to meet the requirements of each occasion.

At the rear of the car are two movable covers, which on rotating upward display the words "Slow" and "Stop." The words are painted large on sheets of red glass, and the lifting of one cover or the other is accomplished incidentally by the operations of the driver.

Thus, for instance, when the steering shaft is turned in either direction, or when the driver de-clutches, the left-hand cover plate automatically rotates in such a way as to display the signal "Slow." When the machine resumes speed the cover plate is thrown back into its original position by a spring.

When turning, the driver of a car slackens his speed. At the same time he throws out his clutch; but whether he does or not, the signal "Slow" is displayed by the steering operation. If he puts on the brake, the right-hand cover plate can be covered in the "Stop" position.

THE LENGTH OF LIGHTNING

Much of the mystery of the long travel of lightning flashes and the supposedly high voltage necessary to produce them has been solved by Prof. Harris J. Ryan at Stanford University.

Science has had to assume trillions and quadrillions of volts difference in potential between clouds or between clouds and earth according to its old rule for the power behind Jove's thunderbolts, but Professor Ryan says that the relation is logarithmic, which means greatly increased length of discharge for a given difference in voltage when the voltage is high.

In other words, 600,000 volts will cause a discharge of ninety inches, but a million volts is sufficient to discharge 435 inches. When two million volts is reached the current will jump with "seven-league boots" for a distance of twenty-two thousand inches, and with three million volts eighteen

miles can be covered in the discharge through the air. Under the old idea of how far electric sparks or lightning could jump the rule was ten thousand volts per inch of discharge.

Even with this new understanding there is little temptation to play with lightning for it is well known that three or four hundred volts is generally fatal if the current passes directly through the body and even as low a voltage as the ordinary lighting current at 110 volts may kill if the conditions are just right or if the heart of the person shocked happens to be weak.

WOMEN HAVE CHANGED LITTLE

Women who danced for and with the Pharos put on the war paint just as enthusiastically as the lady of today.

A collection of the vanity pots of an Egyptian lady of quality; rescued from the tomb which held her mummified corpse, has just been brought to London. In it, wonderfully blown glass took the place of the silver toilet accessories of the present time.

Some of the glass pots are beau-

tifully iridescent—due to the iridescence on the pots by the acid in the stibium with which they were filled, and with which the Egyptian beauty painted her eyelids and eyebrows. The collection included a bracelet with which feminine Egypt of the period headdress her finer nails—London's smart set is doing this season.

OLD LINOLEUM

Old linoleum should not be thrown away, but cut into mats for kitchen use, to stand hot casseroles, pans, greasy dishes, etc., upon. The older strips can be used as floor lighters for the furnace.

George Wright is said to be the pioneer of golf in America. In 1861 he imported a set of clubs to display in his store in Boston. The first shots were made on a vacant lot in that city, there being no such thing as a golf course in all America at that time. Now there are forty courses in Boston alone.

Some men seem determined that opportunity shall not kidnap them.

The Inside Story of a Coal Mine

Washington, D. C.—The household is not shoveling coal in these piping times of summer, but because of the strike and fears that his favorite winter indoor sport will be interfered with when the snow flies, coal has been uppermost in his thoughts, none the less.

A bulletin from the Washington, D. C. headquarters of the National Geographic Society points a little to the surface users of this necessity—the working of a shaft mine when operating blast. Describing a visit to in which there are eighty miles of underground railway, it says:

Air for Human Fuel
Above ground we will be vitally interested in the coal below—the ventilating shaft without it we would be in a "gassed" condition. In times of a fan in this mine fly with a rim speed of a mile a minute. Every mine has two shafts: the hoisting shaft and the fan shaft. To keep the mine free enough from gas to permit work in safety, enormous quantities of fresh air must be sent down one opening and corresponding quantities of gas

BURGLARIZED THE POSTOFFICE

On Saturday night, September 2, someone broke the Yale lock on the south door of the postoffice building and affected an entrance. From appearances it seems that the party had first attempted to break a hole in the wall where the letters are mailed from the outside and failing in this, broke the lock, entered the building and then broke the lock on the box which holds the letters mailed from outside the building.

This was a peculiar case of burglary. Not a stamp or thing of value was disturbed. Only this letter box was tampered with and of course no one has any idea of what was taken from it. If indeed there was anything, Evidently some one else did not want to go, or someone imagined that a letter containing money or other things of value was mailed. It was a bold thing to do, this breaking into a postoffice. And this is the second time that this postoffice has been burglarized. Some of these days a real government detective will drop into this little town and someone will do a term in the pen.

Spearman needs a night watch. It is a shame that such daring lawlessness as housebreaking can be gotten away with so easily. We need a night watch and we need a bond issue to build an electric light, water and ice plant.

PHONE 73 SPEARMAN

THE TELEPHONE GIRL

Immediately after the roof of the Kniekerbocker Theater in Washington, D. C., caved in under its weight of snow last Saturday night a man who was standing outside of the building went into a telephone booth and told "Central" what had happened. The telephone girl did the rest.

This girl realized the situation, communicated the information to other members of the office force, and within ten minutes seventy-two physicians residing in the Columbia Exchange district, where was located the theater, were told of the disaster; every hospital and first-aid agency in the city was notified, a report was made to the War Department and to the municipal government offices, and the work of the rescue and of relief was almost instant.

In France the telephone girl proved her courage and resourcefulness in war. She had proved it long before under other conditions of emergency and of peril. In floods, in famines, in fire and in riots the telephone girl has showed the stuff that is in her.

We fear that we do not always remember these things in our daily communications with Central. Sometimes, however, when we do think of them we are sorry that we have blamed the telephone girl for annoying things beyond her control, such as the fact that the telephone of a friend is busy when we want to talk to him, and that perchance we are given the wrong number when the fault lay not with the telephone girl's keenly attuned ear, but with our own mumbling manner of speech. We hope by this inadequate tribute that we have made amends for a somewhat frequent use of hasty but really unmeaning words.—Chicago Evening Post.

GET IT DONE!

Time holds all records for speed. If you don't think, if you don't do, if you don't get the thing done—YOU are passed by.

Get it done! Men of decisions are those who take a job in hand and run it through—complete it—and then pass on to the next one—and this process makes up the path that leads to every success.

There is nothing that can totter character so quickly as indecision. Better get the thing done in the best way you know and have part of it wrong than to hesitate and see somebody else take up what you should have done—and do it.

Big men probably make an infinitely greater number of mistakes than little men—but they pay small heed to them, passing them so quickly with deeds of real moment that the world itself soon forgets the mistakes they made.

The important affair in life is to do something and then keep right on doing things.

Keep this motto ever before you —GET THE THING DONE!—Geo. Matthew Adams.

NOT HIS JOB

"I'm not supposed to do that," said he. When an extra task he chanced to see: "That's not my job, and it's not my care, So I'll pass it by and leave it there."

And the boss who gave him his weekly pay Lost more than his wages on him that day.

"I'm not supposed to do that," he said; "That duty belongs to Jim or Fred."

So a little task that was in his way, That he could have handled without delay Was left unfinished; the way was paved For a heavy loss that he could have saved.

And time went on and he kept his place, But he never altered his easy pace, And folks remarked on how well he knew The line of tasks he was hired to do;

For never once was he known to turn His hand to things not of his concern.

But there in his foolish rut he stayed And for all he did he was fairly paid, But he never was worth a dollar more

Then he knew too well when his work was through And he'd done all he was hired to do.

If you want to grow in this world young man, You must do every day all the work you can;

If you find a task though it's not your bit And it should be done take care of it And you'll never conquer or rise if you Do only the things you're supposed to do.

—Edgar A. Guest.

FIVE EGG SPONGE CAKE

Fine cakes, says one famous cook are those in which several eggs take the place of baking powder. Five egg cakes which contain no more than a cup of sugar, can be made without the addition of any baking powder, especially when they contain no butter. The mixing and baking however, makes just as much difference in the quality of this cake as they do in the pound cake.

Five eggs, one cup of sugar, one cup of flour, flavoring is all we need for a fine cake. Whip the whites and the yolks of the eggs separately. Beat the sugar into whites or all that you can of it, so that what you have is like an icing and cannot be broken down. Add the yolks and then fold in the flour and finally add the flavoring. A small amount of heated fruit

It's toasted. This one extra process gives a delightful quality that can not be duplicated

cut fine and floured and added the last thing may be used for this cake. When so finished and baked in large muffin-shaped cakes, and feed these make pretty gift cakes.

WANTED

To get in touch with land owners in the Panhandle. We have several buyers. Please quote us your lowest price and terms in first letter. Also send us full description of your land. Address FAIRVIEW LAND CO., 38-14-pd, Fairview, Oklahoma.

A card from B. V. Andrews requests us to send the Reporter to Hot Springs, New Mexico, for a few weeks, where he and his family are visiting and enjoying the famous baths. We are sending it along. Ben, but for a few weeks it will be printed in Liberal, Kansas. While Mr. Andrews has not enjoyed the best of health for the past year, still he has been fortunate in that his big hardware store in Spearman was not in the path of either of the disastrous fires which has visited the town.

POWER FLASHED THROUGH ALL SPACE TO RUN THE WORLD —SAYS TESLA

Wireless Transmission Will be the Next Astounding Scientific Development Says Noted Inventor

New York City—Wireless transmission of power will be the next astounding and revolutionary development of science!

This is the promise of Nikola Tesla, famous electrical engineer, and inventor—a promise he says within two or three years.

"It is not a mere vision," said Tesla, in an authorized interview with N. E. A. Service. "I have perfected this system in all its details and can transmit power to any terrestrial distance—say 12,000 miles—with a loss not exceeding five per cent."

"Very soon such power will be available everywhere for the purposes of peace as well as war. We shall shut heat and light homes and operate our factories by the means of power generated from the falling water and cheap fuel directly at the source of supply and then flashed to us through the space."

"Airplanes and trains and ships will carry no fuel but will run by the transmitted energy. In war power generated thousands of miles away will be applied with destructive effects of such intensity as to compel a quick cessation of hostilities."

Tesla sees in hydro-electric development the greatest possibilities but not to the elimination of coal and oil.

"We shall have to depend first of all," he says, "on the energy of fuel and next on that of falling water. We are bound to open up new sources of power for we have the daily evidence that energy is throbbing through space at an immense rate and it is merely a question of discovering means for capturing it."

"But no development of this kind will be as important to the world and conducive to peaceful progress of humanity as the wireless transmission of electrical power."

Atomic energy is not regarded by Tesla as offering great prospects in power development. He calls this a "scientific illusion," and says that in disintegrating atoms so much energy is expended that it will not pay to liberate atomic energy for power purposes.

"In fact, Tesla continued, most of the speculations about radium, for instance, are without foundation. The idea has been produced in the public mind that the power of this element is immense. But the real truth is that coal is trillions and trillions of times more powerful."

A piece of radium will give off tremendous energy at a low rate through a period of 2,500 years.

"Similarly, one cent invested at a compound interest of 6 per cent for a term of 2,500 years will yield the fortune of Rockefeller multiplied by the number of 2 followed by 52 zeros."

But who wants to wait that long? We want immediate results, and wireless power can be made available at once and in the most remote places. It is of great economic importance but of immeasurably greater specific value.

Think of being able to heat and light a household no matter how distant or inaccessible by merely setting up a simple apparatus contained in a small box which can be readily carried about.

"Light bulbs will last forever being merely exhausted hollow tubes."

"With wireless power," Mr. Tesla says, "travelers need be cut off from their homes and their comforts."

Bachelors usually believe they are contented but it is because they do not know any better.

KANSAS CITY IS 16TH CITY IN U. S. IN FACTORY OUTPUT

Kansas City ranks sixteenth among the cities of the United States in the total annual value of its factory products, according to late compilations made by the United States census of manufactures.

With a total valuation of \$468,636,423 Kansas City shows an increase in growth in the last five years of 123.1 per cent. This growth compares well with an average percentage of 152.1 for seventy-seven leading industrial centers, each of which has a production of \$100,000,000, and sets it far ahead of the rival city across the river which has but \$192,815,052 as a total valuation.

New York ranks first in point of total value of its factory products, with Chicago, Philadelphia and Detroit holding second, third and fourth positions, respectively.

Kansas City, Missouri, shows a per cent of growth of 214.3 but ranks forty-fifth when compared with the other cities of the country. Kansas City recently jumped from seventeenth to sixteenth place which indicates a steady climb toward the rank of leading industrial cities of the Middle West.—Kansas City Kansan.

Jim—You mistake me, dear. I admit that I am a poor, weak mortal, but lying is not one of my failings.

Jane—No, it certainly is not! It's one of your successes.

States are beginning to legislate against the road hog. That is one brand of "pork" legislation few American citizens will object to.

The man who says that he will think it over generally means he will ask his wife about it.

J. R. Collard Jr., was listed with the sick several days the past week, but is much better at this writing.

WHO'S WHO IN C & A

By Mrs. Della Young

The Hazelwood mentioned in this article is none other than our fellow-townsmen, D. W. Hazelwood. Doc also tells some pretty scary tales of early life in the Indian Territory.

No other one person confers the blessings on the community in which he lives as does the country doctor. He shields your eyes from the garish light on your entrance into this world; on your journey through life he salves your shiny, new wounds, set bones, quinlines wounds, sets your bones, quinlines and calomels your chills, and at the exit tenderly morphines you into the sleep that knows no waking.

All these and many more kindnesses are to the credit of the above sketch. Born more than three score years ago in North Carolina, moved to Texas and from Panhandle City, Texas, to Cheyenne soon after the opening.

In the cool parlor of their luxurious home he and his family told of their various experiences that now bring forth much laughter.

Said Mrs. Miller: "When we were called to Canada must be some mistake. Miller would never have sent here, but how can we live until returns. But it was no mistake."

I lived there in the red dirt and esp water with the Doctor gone most of the time for over three years. I'd think, I can never stand it another day; when Doctor comes home I'll tell him he must take us away; but when he did get in off of one of his long rides, he'd be so tired I'd know he was having the worst of it, so I'd fix him up something nice to eat, and put my troubles away.

The Doctor said: "In all the years of my practice that extended from beyond the Canadian river nearly to Mangum and east and west quite as far, I never failed to reach a patient when I'd started and never stopped but once on the road and that was over on Quartermaster. I had strated to the home of Robert's son-in-law, it was dark as ink and I took the wrong road and drove into Billy Adam's father's home where I waited until daylight.

"Speaking of Quartermaster, reminds me of a man named Hazelwood coming in late one afternoon with word that a boy in a cow camp had broken his leg. We started horse-back. I had a special trail out that way but Hazelwood thought he knew a shorter route, when we were in the brakes of Nine-mile creek, it was already dark, Hazelwood's horse gave out, I rode on alone. Just as I was making the divide I came out on a bare shale place, I heard a rattle-snake. My horse stopped still and was bitten many times, I had to go on, but

every now and then got off to rub down the swelling leg, before long the horse got so lame I got off and led him for fear he would fall with me. When I struck the brakes of Quartermaster I assured myself of the direction of the camp by the lead of the cattle tracks in the trail by lighting a match now and then. It took a good while to get the broken leg of the young man I had come to see; by then my horse was in a terrible shape, I was then forced to leave him. That was in September and it was November before I got my horse home. I made several trips to see the patient; just as soon as he was able he left and I was out my time, trouble and a good horse, which dwindled along until spring and died.

Another horse I had was a Spanish pony—Blue Dog—tough as any whang. As long as I rode him he never allowed himself to be caught except by running him into the lot and then he'd circle around till he came to the top of a bare mound and with his head and tail up would snort like a mustang.

Long afterwards a Mason asked Dr. Miller: "How does it happen you are so well versed in Masonry; you've not been a Mason many years?" "I memorized it riding on Blue Dog to and from my patients." "You remember when Mrs. McMurtrey unjointed her ankle; if I'd cut it with a lance I couldn't have made a straighter wound, the tibia stuck into the ground; it was about this time of the year—hot and dry—no ice nearer than Canadian; I hung above her bed a pail with a nail hole in the bottom so the water could drip on the ankle. Every day the bandage and bed would be as red as the ground from the sediment from the gyp water.

"Speaking about the Canadian, there was an epidemic of small pox over in Day county. They sent for me and the Standifer Bros., who had come to Cheyenne by then. Dr. John and I were coming home and broke through the ice on the river: "We'd better get the team out on the sand bar and pull out with a rope." Dr. John said: "No, you drive and I'll lift the wheel out." Of course he broke through and we had to pull out with a rope after all, and Dr. John's feet were wet," said I. "His feet, he was wet to the waist."

"How long were you superintendent of the Sunday school?" "Twenty-five years," and, says Mrs. Miller, "If the Doctor had been up all night with his patient and got in at nine o'clock he went to Sunday school just the same, never missed it if he was at home." And his religion was not reserved for Sunday. He believed in practicing it each day in the week. There are numbers of families in the Cheyenne and Arapaho whose Christmas present from Dr. Miller was a letter enclosing a receipted bill for medical service during the year. A widow in telling of the Christmas gift to her said: "No truer, better Christian man ever lived than Dr. Miller."

The family followed me to the porch; Mrs. Miller in her pretty way, insisting that I should stay for supper, but I had to go and thought as I did—Surely there will be no aloes in his honey.

A STRANGE HAPPENING

Child Crawled on Fender of Car and was Carried Miles Before Discovered

The writer had the thrilling experience of being an eye witness to a very peculiar accident that happened Thursday evening while returning from the Round-up at Garden City. It was about 10 o'clock or near that time. Just outside of town (south) Mr. Lust's car broke down. While fixing the car another car drove up, stopped and offered assistance. During this time the little three year old boy of Mr. Lust's was playing around climbed upon the fender of the other car and went to sleep. Mr. Lust discovering he had to have some repairs, went back to town to get them. While he was gone the occupants of the other car thinking he would get along all right without them, drove on not noticing the child. After being gone the mother missing the child remembered it being on the fender of the other car. She became frantic but was perfectly helpless as far as getting the child as the car had gained quite a distance before the father returned. When the father returned, the alarm was given, the roads were searched but no trace of the child could be found. Elijah Hopewell being near was called on for assistance. He in company with the father and Charles Killingsworth started in pursuit of the car (at a speed that would make anyone tremble on any other occasion). After going over rough roads, hills, hollows, around curves some seven or eight miles they came up on the car that had carried the child away. Driving alongside the car, they shouted for the driver to stop. The driver stopped, the child was found still on the fender fast asleep. The driver was so astonished at seeing there all that distance he could hardly talk. The expression and look of anguish on his face told without words what he was suffering. His looks will long be remembered by those who were on the scene at that time.

The frantic father, with the child in his arms, was taken back to the mother where she was being cared for and comforted by those left behind. How the little child, who crawled on the fender of the car, courtesy of the next to the driver, fell, is not known. All that is known is that he remains in his car, and the work of the boys. Chas. W. Miller, who was with the boys, says that his eyes had been such as to render their living together in-

RUSSIAN RUBLES IN TOPEKA

A former German-Russian in Topeka displayed a remarkable letter received yesterday from Russia. Pasted to the envelope were 16 streamers, sheets of postage stamps nearly a foot long and the width of the envelope. These sheets contained 50 stamps of 250-rubles, making 12,500 rubles on each and 200,000 rubles in all. Before the war the letter would have been carried on a 10-cent stamp, or one-fifth of one ruble. On this comparison the old Russian ruble was worth a million present rubles, and this is about as has been reported. Russian money units are no longer the ruble but the million-ruble. Why the postal authorities of Russia attach 16 streamers to a letter containing 800 separate stamps of 250 rubles each, in place of attaching a single 200,000 ruble stamp is another of the enigmas of Russian postal management.

There is a sense, however, in which Russian money is as good as gold money, or approximately so. The gold metal in a gold dollar is worth a dollar as metal and at prices in Russia from the looks of the postage stamp streamers, the amount of paper in 200,000 rubles must be worth close to 200,000 rubles. The people therefore are getting their money's worth, if they can dispose of the rubles at paper prices when they get them. This may explain the fact that bulky sheets of stamps are attached to letters. After being detached they are worth as much in the paper market as they cost originally, or may be. At the least there must be a large salvage in canceled postage stamps. But money based on the value of paper is about the limit in a currency system. And a posted letter with a sheet of stamps attached as long as a kite tail is something new in political efficiency. —Topeka Capital.

SAYS BOBBED HAIR WILL REMAIN

Leavenworth—Upon returns from the fashionable marts in the east, Miss Bess McKinney, millinery buyer for a local store, asserts there was no indication that the bobbed hair fad is scheduled for the discard along with its contemporary, short skirts. Big drop in skirts, even to ankle lengths, says Miss McKinney.

Cheapest place in town to buy lard. Star Meat Market. 291f

SAYS TANLAC IS FINE TO BUILD UP WEIGHT

Persons suffering from stomach trouble and who are under weight find an ever ready friend in Tanlac. This celebrated medicine has increased the weight for thousands of people everywhere.

Mrs. J. G. Ebert of 3112 S. 7th Street, St. Louis, Mo., says: "For eighteen years I suffered from indigestion and my troubles had become so distressing I could hardly endure life. Now I can eat most anything I want and have gained twelve pounds."

Under nourishment is the cause of most cases of underweight. Tanlac enables the stomach to extract the healthy nutrition from the food, builds up the whole body and increases the weight to normal. Millions of people have testified to its great benefits. Get a bottle today at any good druggist.

CITATION BY PUBLICATION

The State of Texas to the Sheriff or Any Constable of Hansford County, Greeting:

You are hereby commanded to summon C. J. Jones and Lee Coffman, whose residence is unknown, to appear at the next regular term of the Justice Court of Precinct No. 1, in Hansford County, Texas, to be held at the office of the Justice of the Peace of said Precinct No. 1, in Spearman, this said County and State, on the first Monday in October, A. D. 1922, the same being the 2nd day of October, A. D. 1922, then and there to answer a petition filed in said court on the 23rd day of November, A. D. 1921, in a suit numbered 55, on the docket thereof, wherein the Panhandle Lumber Company is plaintiff and C. J. Jones and Lee Coffman are defendants; the cause of action being alleged as follows: suit for the recovery of judgment for \$21.10, with interests and costs of suit, the claim being for coal sold to defendants on July 25, 1921.

You are further commanded to so summon such defendants and to serve this citation by making publication of this citation once in each week for four consecutive weeks previous to the return day hereof in a newspaper published in your county; herein fail not, but have you before this court, on the first day of the next term thereof (said being the first Monday in October, A. D. 1922), this writ, with your returns thereon, showing how you have executed the same.

Given under my hand at office in Spearman, Texas, this Seventh day of August, A. D. 1922.

CITATION BY PUBLICATION

The State of Texas, To the Sheriff or Any Constable of Hansford County, Greeting:

You are commanded to summon G. W. Bledsoe whose residence is unknown, to appear at the next regular term of District Court of Hansford County, Texas, to be held at the courthouse thereof, in Hansford, Texas, on the Third Monday in November, 1922, being November 20th, 1922, then and there to answer a petition filed in said court on June 14th, 1922, in a suit numbered 55 on the docket thereof, wherein Addie Bledsoe is plaintiff and G. W. Bledsoe is defendant; the cause of action being as follows:

Plaintiff alleges that she and defendant were legally married in Dallas, Texas, on March 5th, 1909. That at said time plaintiff had a home and considerable other property. That defendant soon squandered her money and property and she lost her home. That soon afterwards defendant began a course of unkind, harsh, cruel and tyrannical treatment toward plaintiff and soon quitted, abused and mistreated plaintiff. At one time defendant living House in Spearman, Texas, in 1921-22, he cursed and used such names as whose name he caused her of staying out drinking improper relations with other women. He was forced to work in restaurant late at night to make a living for her and children. That his conduct has been such as to render their living together in-

GUS B. COOTER, 36152* Owner of Palo Duro Ranch.

NOTICE TO THE PUBLIC

I will sell wood for \$5.00 per four horse load. It will be necessary to either phone or come to headquaters before getting the wood, otherwise you will be treated as trespassers.

Positively no hunting allowed. W. T. COBLE, Owner of the Turkey Track Ranch.

NO TRESPASSING

The public will please take notice that I will not allow hunting or fishing in my pasture on the Palo Duro, west of Spearman. Please observe this notice and avoid trouble 20116p Mrs. JOS. W. JONES.

NOTICE TO THE PUBLIC

No hunting or fishing will be allowed in the Diamond C pastures, on the headwaters of the Palo Duro. These lands are posted and trespassers will be prosecuted.

JAMES H. CATOR & SON.

NO FISHING OR HUNTING

The public will please take notice that fishing and hunting, fishing especially, will not be allowed in the Steele pasture on the Palo Duro north of Spearman. The river will be watched closely hereafter and trespassers will be asked to move out.

W. T. COBLE, Leasee. J. I. STEELE, Owner.

HUNTERS TAKE NOTICE

Hunting will not be allowed in the VZ pasture, on the Palo Duro. Hunters will please take notice and avoid trouble, as I will positively prosecute all such as trespassers.

RUTLEDGE HENDERSON, Manager.

TO TRESPASSING

Trespassing will not be allowed on the Simmons ranch on the Palo Duro. Fishing and hunting is positively forbidden.

SAM ARCHER, Owner.

ATTENTION MASONS

There will be a meeting on our regular meeting night, Saturday, September 2nd, in our temporary quarters in the Palo Duro hotel. Every Mason is urgently requested to meet with us. Don't forget the night.

CARD OF THANKS

I desire to sincerely thank my friends who assisted me in removing my stock of dry goods, clothing and shoes from the path of the fire. We expect to be opened up again within a few days, and as usual, will appreciate your business.

BLAKE DRY GOODS COMPANY

FINE BOAR PIGS

I have about 10 head of Big Bone Poland China pigs for sale. Pedigrees guaranteed. No better hogs in the country. If you want to improve your hogs begin by buying a registered boar. Address Ernest Spivey, Texhoma, Oklahoma, 25 miles northwest of Spearman. t2pd
