Board Of Directors Will Open Bids Tomorrow On New Building Bonds

LESIE CHABAY

Noted Tenor Sings At First Rec Hall Program Tonight

Leslie Chabay, Metropolitan Opera association tenor, who is both an operatic star and artist, will be presented in a concert on the Tech summer recreation program at 8:30 o'clock tonight on the Ad Building green.

The noted singer came to this country from Switzerland in 1940 and joined the Metropolitan Opera association. Four years previous he had been heard extensively in concert, oratorio and on the radio in Europe with the Zurich, one of Switzerland's foremost opera companies. He is completing his third season with the Metropolitan and has completed his second season with the San Francisco Opera company. He also has been a member of the Mexican Opera Nacional in Mexico City. He has sung two seasons with the Central City Music festival in Central City, Colo.

Kurt Adler, chorus master of the Metropolitan Opera association, will be accompanist for the program. He also will play a group of piano solos.

New English Instructor Will Join Tech Faculty

Harold N. White will join the English faculty of Tech for the 1949-50 school year. Dr. Truman Camp, chairman of the English department, has announced.

White is coming to Tech from the University of Texas where he has been a staff member for the past two years while working on his Ph.D. degree in English. He will complete requirements for that degree while teaching at Tech next year. Camp said.

He was formerly a member of the English staff at Texas Arts and Industrial college at Kingsville, stated Camp.

Summer Privileges Released By Dean

Mrs. Margarette W. Walker, dean of women, has announced that students living in Women's Dorm III will have 11 o'clock privileges on week-nights and Sundays during the summer session, and will be allowed 12 o'clock privileges on Fridays and Saturdays.

With present arrangements, Women's Dorm IV will be closed for the summer and married couples will live in Drane hall. Meals for Drane hall and Dorm III students are being served in the Dorm III dining-room.

Mrs. Edna Eikel and Mrs. Cecil Turner, social directors, are in charge of the two dormitories. Mrs. Norman Davis and Miss Gertrude Miller, counselors, will assist.

Mrs. James G. Allen, assistant professor of journalism, was elected president of the Lubbock Women's club's Board of Directors Monday night.

Largest Budget In Tech's History Okayed By Board

Tech's board of directors approved the largest budget in the history of the college during their annual commencement meeting here on May 30.

The budget represents an operating sum of \$2,511,000 for the 1949-50 session of the college. The figure approved is approximately \$400,000 larger than that for the last school term and the directors have begun drawing up new contracts under its terms.

The board of directors also moved to call in \$300,000 worth of bonds on the new dormitories to save interest costs. They will be retired in November. Funds for the purchase of the bonds will come from the surplus built up by the college during the past few years.

The board also approved an appropriation of \$7,115 for emergency repairs to buildings at the Pantex Ordnance plant near Amarillo in order to take care of wheat storage in the project. Railroad trackage on the property was leased to the Santa Fe railroad company for use in hauling the wheat.

G. R. Buchanan, general manager of the Santa Fe's western line and H. C. Vincent, traffic manager, appeared before the board regarding the leasing of the trackage. They are both from Amarillo.

A contract has been signed, with approval of the War Assets Administration, for the use of many buildings at Pantex to store upwards of 600,000 bushels of wheat. The board drew up the contract in order to assist wheat raisers of the Panhandle and South Plains area. Storage space for this year's bumper wheat crop is one of the most critical problems now confronting farmers.

The Pantex Ordnance plant was recently assigned the college by the War Assets Administration.

Registration Hits New Summer High

Wednesday marked the last day of registration for the summer semester at Texas Tech, but the official figures for enrollment were not available, according to Evelyn Clewell, assistant to the registrar. It was known however, that the figures for this summer surpass those of the past year and it is highly probable that this semester will see an all time high for the school.

Most noticeable among the registrations thus far is that we already have registered an all time high number of students working toward a master's degree.

Tech Press New Equipment Ready For Toreador Daily

This is the first Toreador to be published with the new Lin-o-type, which the Tech Press received last week, Wayne Kittley, superintendent of Tech Press, said today.

"We have completed the purchase of \$40,000 worth of new equipment for the press and now have one of the most complete press rooms on the Plains," Kittley stated.

When The Toreador decides to go daily, the Tech Press will be ready to take care of the extra work it will bring on, said the superintendent.

Sales May Finance Wing Additions To Ad And Engineering Buildings

Members of Tech's board of directors will accept bids tomorrow in Fort Worth on \$2,800,000 in bonds issued under terms of the college building amendment program approved in the summer of 1947 by Texas voters.

Money obtained from sale of bonds will be used to finance construction of new buildings on the campus. The bonds are part of the \$4,000,000 building program recently approved by the directors.

Women Graduates Followed Mothers

Two women students who graduated from Tech this spring followed in their mother's footsteps.

Both the young women, senior home economics students Exa Faye Hooten of Stephenville and Sue Lynn Guthrie of Memphis, had the unique opportunity of helping "mama pick her college." Mrs. Maude Hooten was graduated in home economics education in 1940 and Mrs. Elizabeth Bass Guthrie finished in 1938 in education.

Exa Faye graduated with a bachelor of science degree in foods and nutrition, and Sue Lynn in home economics education.

Indications are that several bids for the bonds will be received from financial houses in Texas and in other parts of the country. Officials said it was expected that an interest rate of less than 2.75 per cent will be asked. The successful bidder will be the one which quotes the least interest rate.

Under the building amendment tax money paid for Confederate pensions will be assigned to colleges over a 30 year period to retire the bonds. Tech will be able to issue additional bonds in 10 years and more in 20 years.

Tech officials hope to erect with the funds two wings to the Administration building, two wings to the Engineering building, and additional space for the home economics division. It is also hoped that funds will extend far enough to erect a new science building.

In their last meeting the directors authorized a contract to be drafted for Wyatt Hedrick, Fort Worth architect, to draw up preliminary plans for the two Administration building wings. If the contract is approved and the bonds sold, expectation is that construction will be started before fall.

A committee from the engineering division recently visited the University of Oklahoma in order to obtain ideas on what the wings to house engineering departments should contain. While in Norman the committee studied an engineering building that has recently been erected there.

The Administration building wings are expected to contain upwards of 18,000 square feet of floor space to accommodate college administrative offices and to provide additional classrooms and offices for the faculty. It is expected that the business administration division will be allotted much of the additional space. The wings will cost an estimated \$700,000.

During the past two years Tech has added four new dormitories costing \$4,000,000 which has doubled the capacity for student housing. In addition Tech has added a new petroleum engineering building, the new Jones stadium, with permanent seating capacity of 16,800 and costing approximately \$425,000 and several other buildings. Prior to 1947 buildings on the campus were evaluated at only slightly more than \$4,000,000.

They tell a mad tale about the prof who got tired of having people call his course easy. One day he rushed into the room, pulled out a whip, snapped it over the students' heads several times and cried, "This is what is known as a sharp course."—The Daily Texan

Board Accepts Regretfully Resignation Of Dorm Director Mozelle Craddock

Tech next fall will begin operation with a new director of dormitories.

Miss Mozelle Craddock, director since Sept. 1, 1934, has resigned to accept another position in Lubbock. The Tech Board of Directors at its May meeting accepted the resignation "with regret" and directed that a letter of thanks for work done be sent to Miss Craddock.

The retiring director came to Tech from Texas State College for Women at Denton. During her

term of office virtually all of the dormitories on the campus were erected.

Jim West hall, named in memory of James West of Houston, former director, was erected in 1934. Joe Sneed hall, named also for a former director, was built in 1939. Doak hall also was erected in 1934 and Drane, named for Mrs. F. N. Drane, also a former director, went up in 1941, at the same time as the dormitory administration building was erected. Each of the dormitories houses 320 students.

In 1947 the new men's and new women's dormitories were erected each housing 720 students. The buildings generally are rated as the best accommodations for students on any campus of the nation. No successor to Miss Craddock has been named.

Hilary G. Fry, dormitory supervisor of Men's Dorm III, is at the University of Chicago working on his masters degree this summer.

W. P. Clement, registrar, will attend a state meeting to be held in Austin June 17 of the State Committee on Classification and Accreditation of High Schools.

Marshall Pennington Of Texas Mines Named First Texas Tech Comptroller

On August 1 Tech will have a new director for its business affairs.

Marshall L. Pennington, business manager of Texas College of Mines since 1934, will come to Tech on that date to become the first comptroller in the history of the college, assuming direction of financial and business affairs.

Pennington, 35, is a graduate of the University of Texas and during the past year served as assistant to the president of Texas Mines, as well as business manager. He won letters three years in basketball and two years in

football at Texas university and from 1936 to 1943 was basketball coach at Mines, in addition to his business duties. He served in the Navy during World War II. He is married.

The office of comptroller for Tech was created and filled by the Board of Directors at the regular meeting in connection with May 31 commencement. The state auditor and board of control of Texas recently recommended that such a post be set up at the college because of rapid growth and expansion of Tech activities.

Mr. Pennington will take over most of the work done by W. T. Gaston, business manager of Tech since 1929. Mr. Gaston will retain his title of business manager, but will devote his time to a large extent to duties as yet unassigned.

The Texas College of Mines, by act of the legislature, this summer becomes Texas Western College of the University of Texas.

Summer Activities Planned By The Centaur Social Club

Centaurus, men's social club, will be active this summer even though all of the members will not be here, stated Bill Gillespie, retiring president.

Summer officers are Bill Bean, president; Horton Russel, secretary; Jerry McKeo, treasurer, and Ed Crawford, vice president.

Combination Sunday night dinners and meetings at the Hilton hotel will be held all summer stated Gillespie.

MARSHALL PENNINGTON

Hemmle Appointed Head Of Music For Tech's Expanded Department

Gene L. Hemmle of New York will become head of an expanded music department at Texas Technological College in September.

The appointment of Hemmle to the Texas Tech faculty was approved at a recent meeting of the college board of directors. Hemmle, 35, is a native of Missouri and is a graduate of Arlington, Texas, high school. Since 1946 he has been professor of music and chairman of the department of music at Texas College of Mines, recently renamed Texas Western college. He has been on leave the past year for further study at Columbia university.

Hemmle attended Kansas City Conservatory of Music, Southern Methodist, Colorado university, University of Texas, North Texas, and Columbia university. He has

a bachelor of music degree from SMU and a master of arts degree from Columbia. He has taught music at North Texas Agricultural College, North Texas State College, Texas College of Mines and was director of choral music at the American Institute of Normal Methods in Boston.

He served as state choral director of Mississippi, Colorado and Texas, clinical director of the Houston-Bay festival, vice-president of the Music Education club at Columbia and as clinical director of the Tennessee Music festival. He is a member of several learned had articles in various publications.

Dr. J. P. Blitz, former head of the music department, will remain as professor of music.

Hey, Johnny!

Hey, Johnny, wake up! It's time to go. Remember all those resolutions you made a few weeks ago? Then you said, "I'll never get behind again. No more D's and F's for me. I've learned my lesson. From here on in I'm starting to study at the first of the semester." Remember, Johnny?

Joe remembers. You might know Joe yourself, Johnny. He came to Tech several years ago. He should have graduated this spring, but he's still around.

Yes, Joe's still around. He simply never could bring himself to sit down and study. After all, there was always a party somewhere to which he was invited, and God forbid if Joe ever turned down a party. Then, too, he dearly loved bull-sessions—he was really in his element with a bottle of beer in one hand, a cigarette in the other, while all the time expatiating on his favorite subject, sex. When things got a little dull the boys down in 306 always could be counted on to need another for poker and Joe was just too happy to be of service.

Those are the things Joe excelled in, Johnny. He really shined in that. You could always see him at the dances, smiling, the life of the party. He never worried and he never studied. Just happy-go-lucky Joe. Life for him was a big rosy dream, financed by the old man's money. He changed majors several times and finally got in the easiest racket he could find. Even there I don't think he ever made above a C. The only constructive thing

Speaking Frankly

By FRANKLIN GRANT

Changes on the campus and in the faculty seem to have happened overnight. We are beginning to wonder as we wake up each morning what new change will have taken place.

The most notable of these changes is the resignation of Miss Mozelle Craddock.

Miss Craddock came to Tech in 1934 and during her reign almost all of Tech's dormitories have been built. She has had a hand in the successful completion and operation of the millions of dollars worth of dormitories we now possess.

We are not going to write a highly complimentary farewell for Miss Craddock, because she wouldn't expect that from The Toreador. The Toreador and Miss Craddock have not always seen eye to eye on everything, but have always had a sincere respect for the others work. Our differences of opinion have probably brought us closer together than any two departments on the campus and it is

he's ever done for the college is to yell at the football games.

Joe is sorry now, Johnny. He's suddenly realized that you have to know something besides the proper way to mix drinks to succeed on the outside. Being hale, hearty and well met, he has found, are not enough.

Nearly all of Joe's friends left soon after the commencement exercises and he's here all alone. Yes, he's studying now, but I think it's a little late, don't you?

Don't be a Joe, Johnny. Wipe up! You don't have a million, Johnny, and you're going to need a job when you graduate. Employers want someone who knows their stuff, Johnny. Things are tightening up on the outside. Ask anyone who graduated this spring. They'll tell you jobs aren't so plentiful anymore. To get one you like, Johnny, you have to be on your toes.

So open that book, Johnny, and get off that sack. Remember Joe, because Joe remembers now—too late.

with deep regret that we see her go.

We simply say that Tech is losing the best doggone business woman in its history or in the history of any other college.

SEEMS TO US

It seems to us that the West Texas Museum is going up at a record breaking pace. Tech will have one more building of prominent beauty to help make our large campus even larger.

Wonder when work will start on the Administration building? That added class room space could be used to advantage when the flock comes home next fall, but guess that would be almost impossible. We just hope that it doesn't take as long as the museum has.

SO THEY SAY

George Smallwood, professor of English, called over to say that the George Smallwood who recently filed suit for divorce in Lubbock was not he.

During the first two weeks of June, Chief Twitty and Fire Marshall Black of the Lubbock Fire Department, in cooperation with George Smallwood, superintendent of buildings and grounds, and Charles F. Libby, supervision custodian, will make an inspection of fire prevention equipment and measures on the campus.

MONEY, MONEY, MONEY

With the largest budget in its history—\$2,511,000—Tech should progress further along the road of its unlimited future. The college officials must find it nice to have a little more moola to work with. Maybe the state has finally come to realize that the University is not the only state school that must have money to operate.

MANY LONG YEARS

At the end of the 1947 spring semester, Amon G. Carter of Fort Worth gave Tech a statue of Will Rogers riding Soapbuds. To this date the statue has not been seen on the campus. From what we can gather it is just collecting dust in storage. We believe it is about time that someone get on the wood and let the statue be seen on the campus.

New Stall For Ollie; But Same Owner

"The Green Hornet" is conspicuously missing from its usual habitat west of Sneed hall. Better known around the campus as Ollie III, this green Chevrolet coupe, vintage 1927, has been moved, along with two other comparatively modern replicas of the automobile world, to a safer parking ground.

Ollie III and its companion vehicles have stood on the parking lot west of Sneedhall for months and have long been a source of trouble for the department of buildings and grounds, which finally moved them to permit the grading of the parking lot. The lot will allow for better drainage and provide more ample parking space for the residents of the dorm.

Ollie III was moved to the lot directly south of its former place of rest, and the two companion vehicles, one a black 1934 Pontiac tudor sedan, 1948 Texas license AN-7418, and the other a grey 1934 Plymouth coupe, 1948 Texas license JP-2308, were moved to the vacant area north of Jones stadium.

A. B. LaGasse, instructor in horticulture and member of the department of buildings and grounds, said there were no identifying papers in either vehicle and no effort is being made to find the owners. If you are the owner of one of these cars, please remove it from the present location and keep it on one of the regularly assigned parking lots.

Many Features Scheduled For Rec Hall Entertainment

A number of outstanding summer entertainment features are scheduled for appearance once a week during the first summer term on the campus.

Leslie Chabry, tenor, from the Metropolitan Opera Association of San Francisco, will begin the summer artist series tonight.

The nation's Number One Negro Minstrel, Huddle Ledbetter is to be presented June 17. The Wahl Quartet which is a collection of four artists performing in separate fields will be featured June 23. Member of the quartet include George Roberts, dramatic tenor from New York, outstanding as an oratorio singer; Priscilla Barton, soprano, from Baltimore, Md.; Nina Dunkel, harpist who made her debut in 1946, and is a member of the Betty Paret Harp ensemble; and Ivor Gothe, pianist, best known for presentation of Mozart and Schubert compositions.

The Minne-Singers, a group organized and coached by Suzanne Fisher, concert artist and Metropolitan Opera Star, are scheduled for July 1.

All the programs will be presented either on the Green south of the Administration building or in the Recreation hall. A picture show and a dance are scheduled once a week. Entertainment nights are planned for Wednesday, Thursday and Friday each week.

Plans For Freshman Aptitude Tests Set

Entering freshmen were not required to take aptitude tests before registering for the summer session because there was no available time. Dr. Ernest Wallace, assistant dean of arts and sciences, has stated.

Plans are being made to give a "stream line" version of the regular session program during the first term, he explained. The time and place of the examination will be announced by the dean's office of the various divisions within a few days.

Entering freshmen who complete the aptitude tests this summer will not be required to take them during the counselling period immediately preceding registration in September.

Geraldine Clewell, associate Professor in the home economics division, is attending Ohio State University this summer, working on her doctor's dissertation.

Troy Lemly and Bryan Clark who have been teaching at McAdoo and Plains respectively are back on the campus as students this summer.

Dr. Rose Announces New Clinic Hours

Dr. Embree R. Rose has announced that clinic hours for the Infirmary during the summer will be from 8 a.m. to 5 p.m., weekdays, and from 8 a.m. to 12 noon on Saturdays. The Infirmary will remain closed on Sundays.

However, the Infirmary will remain open 24 hours a day for emergency cases, and a registered nurse is on duty at all times. Because of overcrowded facilities, students are asked to come for treatment only during clinic hours unless it is an emergency. Dr. Rose said.

The Infirmary is now undergoing repainting and renovation. The building includes a laboratory room, diathermy treatment room, a Picker 100 milliamper X-ray machine, a Castle sterilizer, dark room, 2 general treatment rooms, a utility room, kitchen, and staff dining room.

The Infirmary can care for 15 patients and employs five registered nurses, one laboratory technician, two cooks and a cook's helper.

Stangel, Anderson Attend Chicago, St. Louis Meets

W. L. Stangel, dean of the agriculture division, will attend a meeting to be held at the Ralston Purina company's research farms and laboratories in St. Louis, Mo., June 16 and 17.

At the same time, Stanley E. Anderson, instructor in animal husbandry, will attend the twenty-sixth Annual Livestock and Meat Board Meeting and the second Annual Reciprocal Meats conference in Chicago, Ill.

On June 18, Stangel and Anderson will meet at the J. Garrett Tolan Aberdeen-Angus farm at Pleasant Plains, Ill., where they will make an inspection for a prospective herd sire for the college Aberdeen-Angus herd.

PUBLICATION DATES

The Toreador will be published every Friday during the two summer terms.

Dean and Mrs. James G. Allen are vacationing in the summer home of Mr. and Mrs. Clifford B. Jones in Chipite Park, Colo.

Tech To Celebrate Goethe's Birthday

This summer Texas Tech joins colleges throughout the nation in celebrating the 200th anniversary of the birth of Wolfgang von Goethe, famous German poet and scientist of the eighteenth century born on August 28, 1749.

The Goethe Bicentennial celebration, sponsored by the Foreign Languages department of Tech, will begin with a program at 8 p.m. June 20, behind the band building, according to Dr. C. E. Qualls, head of the foreign languages department.

The principal speaker, Dr. Robert T. Clark of the German department of Texas university, will discuss the importance of Goethe in our present-day world.

The Texas Tech Summer School band, under the direction of Prof. D. O. Wiley, will play *The Prelude to Faust* and the entire fifth act of *Faust* by Gounod.

On August 8 student-members of the Goethe Bicentennial committee will present a one-act play, *Die Wette*, by Goethe. The play will be directed by T. W. Alexander, instructor in geology and foreign languages.

Also on August 8, Mrs. Allen Strout, internationally known puppeteer, will present a marionette play, *Of the Margarete Episode of Faust*, written by Mr. Alexander.

Mowery, Burkhart Attend Sheep Meeting in Sonora

Ray C. Mowery, professor and head of animal husbandry and H. J. Burkhart, associate professor of animal husbandry, are leaving today to attend a field day at the Texas Agriculture Sub Experiment station in Sonora, June 11. The two men are meeting with Texas sheep breeders to discuss the results of a ram progeny test.

The first experiment of its kind ever carried on, it will be the results of one ram's offspring of the same size to be fed alike under the same conditions.

Geology Students Leave On Las Vegas Field Trip

Eighty eight junior and senior geology students left Tech Tuesday morning for a six week geology field course in Las Vegas, New Mexico.

The course will be under the supervision of members of the geology staff, including Brand, Tanner, Warn, and Irvin.

Glass From Everywhere Fills Attic Of Professor And Mrs. Mills' Home

By DELANE ADAMS

The crash bang tinkle of breaking dishes through the Mills household into a frenzy—it might be one of Mrs. Mills' collection which is the largest private collection of antique glassware of its kind.

Mrs. Mills, wife of R. A. Mills, English professor at Tech, has had the attic of her millies home especially prepared to hold the collection of probably 2,000, or more goblets, tumblers, wineglasses and ale glasses. It even has double windows to keep out sandstorms.

From ceiling to floor are rows and rows of glasses from thumb size to a quart. Some are intricately designed, some are colored, some have even been decorated with 20 carat gold.

Visitors are interested in the most rare pieces, of course. The oldest glass of the collection is probably 400 years old and came from Spain. One wine glass has the honor of having been drunk from by George Washington. A most fascinating glass is a victrola glass from which King George drank. One end of a wine glass, the other a champagne glass probably the rarest of the collection.

Among the "things in general collection" is an English snuff box Mrs. Mills got in Canada. It belonged to an English Earl.

Many newspapers have written articles about Mrs. Mills and her collection. In the April issue of "Profitable Hobbies" is an article by Nelva Joyce Halbert who wrote the story as a project in a journalism course.

Only a quotation of Mrs. Mills can explain her love of the hobby. She gestured toward the attic room and said, "This is my realm".

At the entrance to the attic room is a book in which visitors register. Among the celebrities recorded in the book of over 5,000 names are Rise Stevens and James Melton.

The Millses estimate they have travelled over 100,000 miles adding to their collection since the hobby was started. They have visited nearly every capital city in the United States. Additions to the collection are bought only from dealers, but many glasses have been received as gifts. When Mrs. Mills was in Virginia in January, the great great grandson of Josiah Wedgwood was there lecturing. He told her some unique facts about Wedgwood china.

Forty three chapters of a book Mrs. Mills is writing on Early American glassware are in manuscript form. She has given numerous lectures on this type of glassware and her collection.

Glassware is not the only collection of Mrs. Mills. She also has figurines, paintings, fans and "anything pertaining to the early American period". She has bisques from every country that makes them. The little Dresden figures wear real lace which has been dipped in molten marble.

Among the "things in general collection" is an English snuff box Mrs. Mills got in Canada. It belonged to an English Earl.

Many newspapers have written articles about Mrs. Mills and her collection. In the April issue of "Profitable Hobbies" is an article by Nelva Joyce Halbert who wrote the story as a project in a journalism course.

Only a quotation of Mrs. Mills can explain her love of the hobby. She gestured toward the attic room and said, "This is my realm".

Home Economics Division Adds Three New Courses

Three courses in applied arts in the home economics division will be added to the art curriculum at the opening of the 1949-50 school year, Dean Margaret W. Weeks has announced.

Two of the courses, both on an advanced student level, are particularly concerned with home decorations and planning. One of the courses stresses United States homes, Miss Weeks said.

The third new course, also for advanced and graduate students deals with special problems in leather, wood, metal, clay, textiles, jewelry, and plastic work, stated Miss Weeks.

Drastic Changes Are Seen In Social And Academic Life

By RICKEY ARCHER
Toreador Business Manager

To old-timer Techsians who know best the long, gaily social semester, the beginning of the summer has brought a definite change of personality to the campus. It just isn't like "home" any more. For one thing the amount of sand and rain has decreased so that the weather is almost decent. The parking lot is still strangely new and the Rec

Hall is no longer the scene of happy wasted hours, but a fugitive from ghost town.

Classes are so hurried, assignments seem enormous and the student body is an assorted mixture of regular students, band school kids and older people. The seriousness of some summer scholars makes the average student feel slightly uncomfortable and sometimes even inspires study.

Dorm life is undoubtedly the most different. Residents are composed of, again, older people, regular Techsians, and the band school kids. Besides this nice conglomeration, the dining room in Girl's Dorm III is also serving all the married couples from across the way. It isn't a bit crowded, they keep telling themselves, but it would be easier to have a picnic on the floor than find a place to sit down.

Two housemothers and a senior counselor keep a check on dorm activities. Any illegal ventures wouldn't have a chance. The nicest difference is getting to stay out until eleven every night with the customary 12 o'clocks on Friday and Saturday. That is if you have anywhere to go, to stay out.

The more mature of our group write letters to husbands and family and study.

All this in the time when summer romances are supposed to bloom. The summer nights are cool and soft, so pleasant for moonlight walks. But no, no men, girls sit in their rooms and make faces at each other over vitally interesting textbooks and sensational scrapbooks about the Japanese recovery plan. The universal cry is, "A man, my God, don't let him get away." We long for the long semester. But the situation is bound to improve. It just couldn't get any worse.

New Expansion Program Is Underway In Petroleum Engineering Department

The petroleum engineering department is working on an expansion program which is to give some relief to the pressing need for work space and equipment for members of the department, but which, according to Professor William L. Ducker, head of the petroleum engineering department, is all a part of the normally anti-cumulative engineering department.

A building belonging to the department has been moved from south of the Chemistry building to a location northwest of the new petroleum engineering building. This building is going to house both a material store room and an instrument repair and maintenance shop along with new instruments which are to be installed.

There is an arway to the rear of the new building now in the process of being paved, and the completion of these projects will terminate all repairs and construction for which contracts have been let.

Ducker also reported that the W. C. Norris manufacturing com-

pany, of Tulsa, Oklahoma, has donated an underpump jack and a hydraulic rod-line pumper along with other pumping accessories. The department has been notified by the Continental Supply and Equipment company, that they are shipping to the college as a gift the same pumping equipment that was displayed by them at last spring's Engineer's Show. This equipment is coming complete with motor and all accessory items.

This equipment, Ducker said, is the beginning of an outside heavy equipment laboratory which is going to be constructed north of the present petroleum engineering building. It will extend some 300 feet north and will be approximately 100 feet in width from east to west. This area is to be graded shortly, a cyclone fence erected and three phase power installed for use with the heavy equipment.

Ducker says he expects that it will take all summer to complete these installations.

Jobs Are Plentiful; Qualifications Rigid

"Jobs seem to be plentiful, but there is a tendency for employers to set up more definite qualifications. They are inclined to look more carefully for people who meet their requirements."

This was the statement made by Mrs. Jean A. Jenkins, executive secretary of the Placement office when asked whether or not jobs are being as easily secured by graduates as they were last year. This statement seems to be the general opinion of all the department heads contacted.

Dean W. L. Stangel, head of the division of Agriculture, said all graduates would be placed in some type work but they couldn't pick the lucrative jobs they could have last year. He said some of the students are going back to the farms and ranches and others will go into various other types of agricultural work. Marshall Howard, district supervisor of the Soil Conservation Service, interviewed approximately 35 seniors for that type work, and Dean Stangel reported that some of them were hired.

Prof. C. B. Qualia, head of the foreign language department, said that many foreign language students are going into other types of positions instead of teaching. He said only three students of high calibre who intended to go into the teaching fields had finished at Tech recently, whereas there were many language students who are going into such work as foreign service and governmental work.

Professor R. E. Garlin, head of the Education and Psychology division, said it was a bit harder for teachers to get positions in the secondary schools than last year. However, in the elementary school twenty-four hundred teachers will be needed every year for the next ten years to supply the demand. This was an estimate made by the Texas Council on Teacher Education last year. Garlin said that there were only five hundred turned out. He also said that now it was harder for English, history and all social science teachers to get a position teaching English. He said in previous years it was a matter of getting someone to teach but now it was possible to pick the teachers and get the better quality.

He said he thought this situation would soon be eased some with the gradual improvement of teaching

Noyes Is Elected Senior Class Prexy

Jack K. Noyes, Midland, was elected president of the summer senior class in a called meeting Wednesday in the Ad building.

Other officers elected were Oscar Allen, Hale Center and Mrs. Edith Bailiff, teacher, from Childress.

Deadline on invitations and caps and gowns is July 21st and all seniors must place their orders before that date, Noyes said.

Final exams will be held on Wednesday and Thursday, August 24 and 25 instead of as planned on the 25 and 26. This is for all students, he said.

Commencement rehearsal will be held Friday, August 26 and graduation will be at 8 p.m. that same night in Jones Stadium. No Baccalaureate service will be held this summer.

Additional information will be available later for the expected 300 graduates.

Most of the home economics graduates already have positions, Mrs. Jonnie Michie, head of foods and nutrition, stated. This year there are more calls for home economics majors than in any one previous year, she said.

Mrs. Vivian Adams, head of home economics education, said this division was also filling all calls for position. She said there had been many calls for home demonstration agents in extension service with the U. S. Department of Agriculture. Mrs. Adams also said there had been many opportunities for girls to work in the summer to get experience with the extension service.

Head of the mathematics department, Prof. Emmett Hazelwood, said that any student majoring in mathematics could get a job. He said many of the oil companies were hiring these students and they also were getting jobs with governmental concerns.

Prof. Cecil Horne, head of the journalism department, said he had not had any trouble placing all of his seniors. He said jobs were not as plentiful as usual but salaries were as high for journalistic work.

Dean O. V. Adams, professor and head of the division of engineering, said that due to several existing situations that were unavoidable that it was a little harder to place graduates this year than last. For one thing, there were twice as many graduating this year as last so there would naturally be more difficulty in placing all of them at once.

Every Sunday June 19th is Father's Day!
