

Hundreds of Afghans desert

Snipers inflict Russian losses

By The Associated Press

Rebel snipers have killed some 40 Soviet soldiers in the streets of a provincial capital in Afghanistan's far north, and hundreds of Afghan troops have deserted their government's cause in the area, sources in the Afghan capital of Kabul reported Thursday.

The report could not be independently confirmed, since Afghan authorities have banned travel outside Kabul by Western journalists. But reports reaching the capital spoke of continued small-scale rebel attacks in the province involved, Takhar, and in three other northern provinces — Baghlan, Kunduz and Badakhshan.

The International Red Cross reported Thursday that an observer team it has sent to Kabul has received permission from the Soviet-backed Afghan government to visit political prisoners in Afghan jails.

A Red Cross spokeswoman in Geneva, Switzerland, said word of the development was received only a few

hours after the IRC complained to reporters in Geneva that the Afghan government of President Babrak Karmal had reneged on an earlier promise to allow such visitations.

The Red Cross says it has been told by Afghan authorities that they hold only 57 political prisoners. But unofficial reports put the number at between several hundred to several thousand.

In other developments:

Officials of the United States, West Germany, France, Britain and Italy were working out details of a meeting scheduled for Feb. 20 in Bonn, West Germany, to coordinate their responses to the Soviet intervention in Afghanistan. The talks will represent a new effort by the Carter administration to rally Western support for its retaliatory measures, including the proposed Olympic boycott.

The Soviet news agency Tass, in a commentary directed at France and West Germany, said the events in

Afghanistan "cannot and must not jeopardize... detente in Europe." The leaders of those two countries issued a joint statement earlier this week calling the Soviet intervention "unacceptable" and demanding a pullout of Soviet troops.

Deputy Secretary of State Warren Christopher, who visited Pakistan last weekend with National Security Adviser Zbigniew Brzezinski, said Pakistani President Mohammed Zia ul-Haq still has not accepted the U.S. plan for \$400 million in military and economic aid over two years, an amount Zia calls "peanuts." The aid is intended to build up the Pakistani armed forces to deal with any potential threat from the Soviet troops in neighboring Afghanistan.

Mahammed Rahim Rafat was fired as editor of the Afghan government's English-language newspaper Kabul New Times after he published two editorials that seemed critical of the new Karmal regime.

Windmill stamp

Retired Tech professor Billy Wolfe, left, was one of the first Lubbockites to receive an autographed stamp cancellation at the First Day of Issue ceremonies for the Windmill stamps at the Tech Museum Thursday. Signing the stamp cancellation

is Ronald Sharpe of the Office of Printing and Engraving in Washington, D.C. Lubbock was chosen for the First Day of Issue because of the windmill's importance to the West Texas plains area.

Carter to have women register

WASHINGTON (AP) — President Carter will call for the registration of women for the military draft, White House officials said Thursday.

The White House scheduled an announcement for Friday detailing the president's plans for the entire draft registration program.

The president's proposal, disclosed by officials who asked not to be identified, is a sharp break with historical precedent. It will be the first time that a president has suggested registering women for the draft.

Carter decided to include women in the program despite a warning from House Speaker Thomas P. O'Neill that it would not pass the Congress.

The president probably will limit registration to persons 19 and 20, though full details were not made available.

Carter announced plans last month in his State of the Union message to resume draft registration, citing an increasing military threat from the Soviet Union.

Although he remained mum on the question of whether he would include women, he has previously taken the position that any such program should include women.

In recent weeks, Carter's decision has been foreshadowed by statements from administration officials and the president's wife, Rosalynn, who urged registration of women.

Currently, there are about 150,000 women in the military, out of a force of more than 2 million. However, women still are banned by law from combat.

Windmills revived as modern technology

By MARY JANE KILCREASE
UD Staff

Windmills are quickly being revived as a part of modern 20th century technology and could possibly form an alternative energy source to be researched by the Department of Energy, according to Carl C. Ulsaker, senior assistant postmaster general. Ulsaker spoke Thursday at a First Day Issue ceremony for windmill postage

stamps held at the Tech museum.

Ulsaker said that windmills, whose history dates back to 700 B.C. and were once used for pumping water for irrigation, grinding feed or running light machinery, are currently being experimented with in the production of electricity.

National efforts actually began in 1973 when the decision was made to build large scale wind generators compatible with a typical utility system, Ulsaker added.

The National Aeronautical and Space Administration (NASA) became involved in the program and "provided people to design parts, develop machines, build and test them," Ulsaker said. Currently, NASA has four wind generators in Ohio, New Mexico, Puerto Rico, Rhode Island, and a fifth one is planned for Hawaii.

According to Ulsaker, NASA began operating the world's largest wind generator, a 2000 kilowatt wind mechanism, at Howard's Knob overlooking Boone, North Carolina, last July. Ulsaker said that the wind turbine is expected to provide power for 300 to 500 average size homes in the area. This modern windmill is 20 stories

high and the blades measure 200 feet across with the generator and gearing mechanism housed in a shelter the "size of a boxcar," Ulsaker continued.

Ulsaker noted that Neiman-Marcus advertised "his and her" windmills in its 1977 Christmas catalogues for a "bargain" price of \$16,000 each.

Ulsaker noted the symbolic significance for people who have read Cervantes' novel, "Don Quixote." According to Ulsaker, Don Quixote saw windmills as his enemy, and although his attempts were futile, tried to conquer the windmills. Ulsaker said these attempts created the expression, "tilting at windmills", an accepted concept for trying to do the impossible.

Following Ulsaker's address, he presented albums of first day issued stamps to several of the dignitaries present at the ceremony, including Lawrence Graves, interim president of Tech; William Curry Holden, director Emeritus of the museum; Leslie C. Drew, director of the museum; and Ronald C. Sharpe, designer of the windmill stamps.

Ulsaker also added that an album would be sent to President Carter at the White House.

Tech faculty probably to ignore unionization

By DONNA RAND
UD Reporter

The creation of a statewide local of the American Federation of Teachers, AFL-CIO, in late January will probably be ignored by most of the Tech faculty, according to local presidents of the Texas Association of College Teachers (TACT), the American Association of University Professors (AAUP) and the president of the Tech Faculty Senate.

"In general, if you took a poll most faculty members would be opposed to unionization," said Gary Elbow, Tech Faculty Senate president. "The AFT tends to carry a trade union aspect. If we do organize with someone I think the professional aspects of TACT and the AAUP would be more attractive to most of the faculty."

Elbow added that if Gov. Clements continues to threaten faculty cutbacks and gives no salary increases, sentiment may change.

"The faculty will think their only protection will come through collective bargaining," Elbow said.

Elizabeth Sasser, Tech's president of the AAUP said that if something is not done to keep salaries apace with inflation, faculty will look for collective bargaining. Sasser added that if the legislature abandons tenure, security for faculty member members will lay with unions.

Tech's TACT president, Lewis Hill, doesn't detect any faculty feeling toward unionization and feels most people are opposed to the AFT.

"TACT maintains the only professional lobbyist in Texas for teachers and professors," Hill said. "We've brought problems to the legislature's attention and they are fairly responsive to our needs. I don't think the AFL-CIO will have that much more clout."

The AAUP and TACT have been

working together recently but Hill opposes the suggested merger of the two organizations. The merger would adversely affect membership and would indirectly lessen TACT's and the AAUP's legislative influence, according to Hill. He said the two non-union groups need separate identities and representation in Austin.

Elbow said that faculty cuts could greatly degrade education. He cited possible enlarged English classes because of a faculty shortage as an example of this. It would be impossible to grade 150 compositions, and multiple choice questions would not compensate, Elbow said.

A cutback in students would not help the situation, Elbow added. Faculty salaries are based on formula funding and a decrease in students would decrease the funds allocated for salaries, he said.

"The governor is not being helpful," Elbow said. "A five percent increase

for merit pay does nothing compared to a 14 percent inflation rate." The last across-the-board salary increase from the legislature occurred in 1975.

According to Elbow, the merit pay is supposed to be based on a faculty member's research, service to the community and teaching ability. However, he said merit pay is usually given out on the basis of the amount of research done and the number of papers published. Teaching ability and service to the community are secondary. This makes it difficult for any of the faculty to receive merit pay.

"Without a salary increase, and with the difficulty involved in obtaining merit pay, it is hard to get good people to work for us," Elbow said. "Texas is being left with a university system that has been robbed of its best employees."

If the situation continues, unionization may be the only answer, he said.

Changes approved for election code

By JOEL BRANDENBERGER
UD Reporter

Several amendments were added to the proposed Student Association Election Code, before final passage was secured at Thursday's meeting of the Tech Student Senate.

All of the amendments were proposed by Sen. Roger Settler, who said he wanted to keep the 5A Election Code "within the spirit of the State of Texas Election Code."

In all, Settler proposed seven changes in the code, four of which passed.

Items that passed called for one representative from each candidate for executive offices to be present while ballots are counted after the SA elections, and for all materials from the election to be available for public inspection for 10 days after the election.

Two other items that passed called for students who vote to sign a roll sheet, and for all ballots to be consecutively numbered.

Settler said the reasons for the amendments were to curb the incidence of controversy in the SA elections.

The amendments that failed called for an increase in the amount candidates can spend on an election, an increase in the number of posters that could be distributed during an election, and for pollwatchers to monitor each polling place.

Sen. Jeff Williams said that an increase in the amount students can

spend on campaign materials would be detrimental to the entire financial process.

"Right now printers try to accommodate students by keeping prices within our limits. If we raised the limit, printers will raise their prices, and some students just can't afford that," Williams said.

Current price ceilings are \$85 for executive candidates, \$45 for senatorial candidates, and \$55 for at-large senatorial candidates.

Similar arguments were made by senators for keeping the number of posters in the campaign small.

One senator said that some people couldn't afford posters at all, and if the number was increased, then those on a limited budget would be eliminated from practical consideration.

The major argument presented against pollwatchers was that if every candidate assigned people to watch every poll the polling places would be overcrowded.

It was also pointed out that if someone really wanted to observe polling, there was nothing in the current election code to prevent them from doing so.

In other business, the Senate approved some new organizational appropriations from the Budget and Finance Committee. Among the appropriations was \$2,000 to the Law School Moot Court team which placed first in national competition in New York last weekend.

Hold it!

Practice makes perfect, especially in measuring and locating. Ron Clemmer works with a surveying team for a civil engineering class.

Bucy given reception

By CLAY WRIGHT
UD Managing Editor

In appreciation for the endowment of a chair in Electrical Engineering totalling more than \$600,000, Russell Seacat, chairman, presented a crystal vase to Tech Regent J. Fred Bucy and his wife Odetta Greer Bucy in a reception Thursday evening.

New Tech president Lauro Cavazos said, "We owe a tremendous debt of gratitude to the Bucys for this magnificent gift."

"What this personal gift means is that we can use the interest from the money to get a professor who is very well-known in the area of electrical engineering, and specifically in the area of solid state electronics, to come to Tech," Seacat said.

"There are only one or two other endowed chairs at the university, and it is the endowed chairs that really enhance the reputation of the university," Seacat said.

"By enhancing the reputation of the university, we can really attract the best professors here," Seacat said.

The inscription on the vase reads, "In grateful appreciation for establishing the J. Fred Bucy, Jr., and Odetta Greer Bucy chair in electrical engineering."

At the reception, Odetta Bucy was made an honorary chairman of the department of John Reichert of electrical engineering.

"The last time anyone was made an honorary chairman was eight years ago, so it is quite an honor," Reichert said.

NEWS BRIEFS

Directions

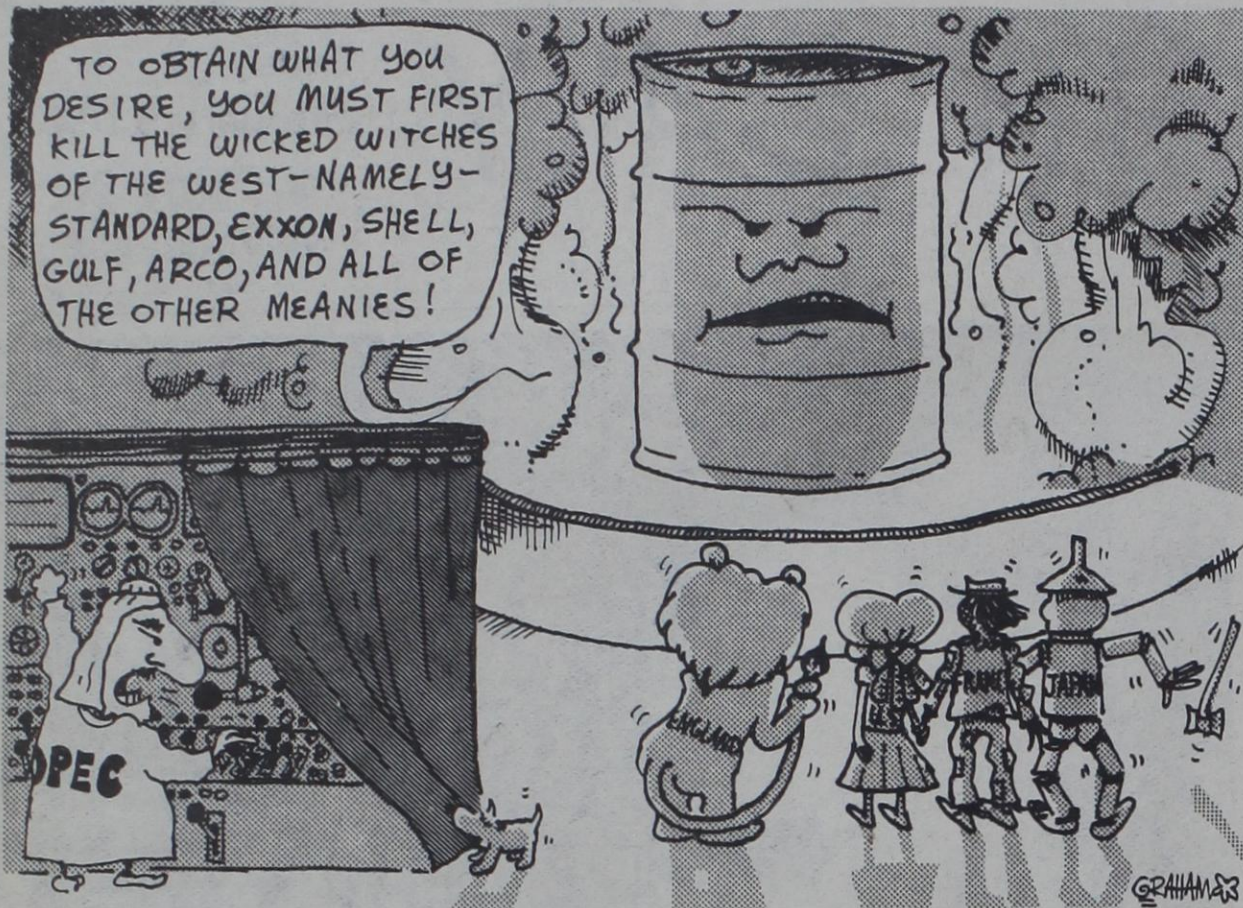

Entries are being accepted for Directions short story and poetry contest. Short stories should be typed on a 65-space double-spaced line and be limited to 10 pages. Entries in both categories are due Wednesday. Winners will be chosen by Entertainment Editor Inez Russell, Directions Layout Editor Lynda Stephenson and Newsroom Director Bev Johansen. Winning entries will be published in the Feb. 22 Directions.

Regents meeting

Reductions of Tech employees will be one of the main topics discussed at today's meeting of the Tech Board of Regents. Other topics up for discussion include recommendations of faculty members for tenure and academic promotion and tenure for both the university and the Health Sciences Center.

weather

Texans braced for a fresh blast of wintry weather Thursday, as an arctic cold front collided with a snowstorm moving into the state from New Mexico. Heavy snow accumulations were forecast for Northwest Texas. The Panhandle and the South Plains were under a winter storm watch through Friday.

Clements' appointee infers

Tech not a 'quality' school

Shauna Hill

"Outside of the University of Texas and possibly Texas A&M University, no other state-financed college even approaches being a quality school."

Chairman Beryl Milburn of the Texas College Coordinating Board said at a meeting of that board and newspapers all over Texas printed it.

So everyone knows that other universities are second-rate, substandard, stepchildren to the mighty land grant schools of Texas.

Gov. Bill Clements evidently agrees with the person he appointed to the Coordinating Board because his ad-

ministration has been disastrous for schools not among the chosen few.

Tech's Water Resources Center, beef cattle program and nursing school are a few local casualties in Clements' stated war against expensive higher education.

Of course, Clements now wants to cut bodies as shown by his request to reduce the number of employees by five percent at Tech and the Tech Medical School.

There's no way to win. Cutting programs and people at non-land grant universities reduces the supply specialists and researchers to those universities. Without the varied programs, the curriculum is reduced to courses found at

most good junior colleges. Specialists or demanding professionals (like nursing) must go to schools which have advanced programs.

And where are the programs? At the land grant schools. And you have to appropriate money for special programs to land grant schools because of the demand.

Supply and demand. Joseph Heller would call it a Catch-22, but in the current Texas government, it simply would be called a "problem" and shuffled to some committee for "consideration."

Tech people don't like the legislature's actions, but the attitude is that things will return to normal in the next legislature if a Democrat is elected governor.

Maybe. But the blame cannot be placed on one Republican administration. Tech and other non-land grant universities have been given leftovers since their inception.

Choices for an independent university in Texas seems to be acceptance of second rate status or a war against the legislature.

Tech should fight, but the government must not be the only emphasis. Tech must gear toward quality and our quality people must remember where they were educated — monetarily and verbally.

If not, Tech always will be second rate and scrambling for funds.

Tellico Dam example of political games

Anthony Lewis

In our cautious system of government, change is usually incremental and mistakes can be corrected. But every once in awhile we sense that a government decision has done permanent damage: to the country, to faith in the system.

An article by Peter Matthiessen, the naturalist, has just had that effect on me. It told a story so painful that I wanted to escape, but I stayed and learned. The piece appeared in the current issue of The New York Review of Books. It concerns the

decision, maneuvered by Sen. Howard H. Baker, Jr., to complete the Tellico Dam in Tennessee and destroy the Little Tennessee Valley.

IT IS ONLY one dam, in a place unknown to most Americans

What makes Tellico canal extreme is the way the thing was done. Logic, law and economics were overwhelmingly against it, but the facts availed nothing against the guile of cynical politicians.

The valley drowned by this dam had 16,000 acres of the richest riverbottom farmland in the United States. Running through it was the last free-

flowing stretch of the Little Tennessee.

It also was the habitat of the snail darter, the tiny fish that for a time forced a halt in construction of the Tellico Dam because it would violate the Endangered Species Act.

PROponents OF the dam argued that a "useless minnow" should not be allowed to stand in the way of progress — to "waste" a \$120-million project that would produce energy vital to the area.

The shoreline of the lake to be created by the dam would attract industry, providing jobs for an economically depressed region. And anyway, the snail

darter could be moved elsewhere.

Those were the arguments. Every one of them was a fake.

According to the TVA itself, the annual cost of maintaining the dam will be greater than its income. The "benefits" from the new lake will be nearly \$1 million a year less than the income from the lost farmland.

THERE WILL BE no electrical generator in the Tellico Dam.

Industry does not need new lakeside sites for jobs in the area: There are 24 existing major dams and lakes within 60 miles of the Tellico Dam, and most of them have long un-

developed stretches of shoreline.

Three attempts have been made to transplant snail darters to other streams. In two places the fish died; in the third they are threatened.

In the Republican forum in Iowa the other day Baker said: "Politics is an important secular mechanism in this country. It's not just a game. It's not beneath us, it's how we decide our future."

The sentiments are admirable. But Howard Baker's behavior in the affair of the Tellico Dam shows why millions of Americans have come to despair of politics.

Letters:

Draft objection

To the Editor:

In meeting the criteria of a democracy created "by the people, of the people, for the people" a government loses its validity to exist the moment that government becomes an entity apart from the people to the extent it must force its citizenry to defend it.

In other words, if the people of a nation choose not to defend a political system, then that system, if truly a democracy, has no place in forcing its own perpetuation.

Resumption of conscription at this point in time would only serve to illustrate the shallowness of the democratic process in this country.

It seems ironic that the United States, while professing to be the vanguard of freedom and democracy has historically rushed to the aid of the world's most repressive and "Hitleresque" regimes (e.g. Chiang Kai-shek, Ferdinand Marcos, Ngo Dinh Diem, Nguyen Van Thieu, Mohammed Reza Pahlavi, etc.), while the Soviet Union, our avowed arch-enemy, has been the champion of popular movements throughout the world.

I, too, was raised in the military. Furthermore, I have spent the last half of my life in Europe and Japan. I can state with utmost authority that life in West Germany is not the nightmare Ms. Drake would imply. Rather, life in Europe and Japan differs most from life in Lubbock in the absence of reactionary Baptist hate mongers.

In Japan, I made several trips to Nagasaki. There I walked among and talked to survivors of the second atomic bomb to be dropped on humanity. A recurrence of this tragedy must be avoided at all costs.

Limited nuclear warfare is a hoax, as even conventional warfare is impossible to contain. (32 kindergarten children were killed in Okinawa in 1974 when a leftover W.W. II landmine exploded in their schoolyard. As late as 1972, the U.S. Army in Okinawa was uncovering and disposing of 750 tons of unexploded W.W.II ordinance a year.)

Yes, I will leave the country as soon as the draft is reinstated.

Mr. Lanning, Ms. Drake, and all others who favor the draft, if military strength is truly a concern of yours and you are not enlisted, you alone are responsible for the shortcomings of a volunteer army. This is how a democracy works.

As for me, I echo President Kennedy's sentiment when he said simply, "Peace will not exist until that future day when the conscientious objector is provided the same prestige and honor the warrior is given today."

Plan for Iran

To the Editor:

I once wrote jokingly, "Nuke Iran until it glows." I meant to express my growing hatred for Iran and my frustration with the continuing situation.

I still think Iran rates with the smelly stuff I scrape off of

my boots, but this is too critical an issue to be taken lightly.

Our first priority in this situation must be on the well-being of the hostages. Under no circumstances can we allow any more harm to befall them.

A military rescue force sent into Tehran is totally out of the question. Our losses in soldiers and hostages would be too great. If you have ever seen a young man die, you would never suggest such a thing.

We are then forced to negotiate the release of the hostages. I could not care less about the former Shah, but we must not ever surrender to the blackmail of terrorists. Let the United Nations investigate the reign of the Shah if it will help to free the hostages.

Promise the terrorists anything in order to free the hostages, but deliver nothing until all Americans are free from their dirty hands.

I think a blockade of Iran is long overdue. Sure, it too is an act of war, but so is attacking an embassy. Iran is almost isolated now. A blockade would be very easy. Just place one fleet in the Persian Gulf, supply adequate air support and sit.

Iran has no friends in the Middle East. Iran hates Iraq and Russia, Afghanistan is down the tubes, and Pakistan won't trade with them against our wishes. I wonder how much sand an Iranian can eat.

We cannot allow this situation to perpetuate itself. Does anyone remember the U.S.S. Pueblo? Eighty-two Americans spent 330 plus days in hell that time. That's not something I want repeated.

In the dreaded event that

by Garry Trudeau

those low-lives torture, injure, or kill one of our brothers, I propose one of the most awesome aerial and commando assaults ever.

We should hit and destroy all military and industrial targets. We should avoid using ground troops in order to keep our casualties low. We should also avoid hitting civilian targets for humanitarian reasons. I believe most Iranians have little control of the atrocities in Iran. The military and government must be eliminated.

I strongly desire a peaceful, mutually-beneficial settlement to this unfortunate incident. But

Alexander Barker
Address Withheld by Request

Peacemakers

To the Editor:

I was alarmed by the letter from the ex-Navy man in Thursday's paper, so symptomatic of the mounting global war-fever. The author of the letter suggests — rightly — that it is easier, but less honorable, to flee to Canada rather than serve in the Army or go to jail as a pacifist.

I suggest that it is easier, but infinitely less honorable, for a

nation to go to war rather than seek just and equitable solutions to problems.

I do not believe that people are ever one's real enemies. It is the cause around which they rally which may be threatening.

To kill the adherents of a cause does not make the cause extinct, any more than the actual destruction of a cause requires massacre.

A survey indicates that 60 percent of Americans believe that Jesus of Nazareth was the Son of God, while many others hold him to have been either a prophet or a great teacher of commonsense.

More than 60 percent of Americans, then, should feel no surprise at the difficulties which nations experience, for all nations, including unfortunately this one, have chosen to base their empires on military strength, conquest, and violence, whereas Jesus of Nazareth said: "Blessed are the peacemakers, for they shall be called children of God. If someone strike thee on the right cheek, turn to him the other also. Love your enemies.

Everyone who hears these my words and does not act upon them shall be likened to a foolish man who built his house

on sand. And the rain fell and floods came, and the winds beat and blew against that house, and it fell and was utterly destroyed."

Perhaps these words uttered on a Palestinian hill long ago are impractical and irrelevant, or perhaps they explain why empires fall, and offer some hope to people of sufficiently revolutionary temperament to act upon them, rather than take the "obvious" and "practical" course of action.

Murderers — including war-makers and enemy invaders — are psychopaths. They do not need to be killed; they need to be helped back to sanity. There are no just wars; violence feeds upon violence.

I do not know how to solve the problems of the Middle East, but I do not believe that all of the crude-oil in the world is worth a single human life. A certain rabbi was once unjustly arrested.

When a friend — a fisherman by the name of Simon Peter — attempted to defend Him, the rabbi said: "Put back thy sword into its place, for all those who take up the sword will perish by the sword." (Matthew 26:52)

Living off-campus

Guide answer to apartment searching

So you save money all summer in anticipation of your big move to an apartment off campus. Now the question is: where to look?

HUNTING through the classified ads is the most common method. This will cost you time and gas, and the classifieds are usually a bit vague.

A good way to shop for an apartment is the Lubbock Apartment Association's guide to rental apartments. According to LAA, about 74 percent of Lubbock apartment owners list information, such as security deposits, rent, services provided, or locations, in the guide. The guide is published in the early summer. The book is free, so just go to the LAA office at 2220 34th St. to pick one up.

The Student Association publishes a similar rental guide in the summer. All Lubbock apartments are listed, with most of the information you need to start looking. This guide is free, and is available in the SA office in the University

Center. **THERE ARE** about 16 rental agencies in Lubbock. Some provide free information on vacancies, others charge a fee. They are usually helpful, but by no means should you use one of these agencies exclusively. Shop around a lot before you decide. This will probably save your peace of mind later.

My personal favorite source of information is word-of-mouth. I found out about the finest places I've lived in from friends who already lived there. Begin your search for a new home by asking around. **VACANCIES** in Lubbock ebb and flow with Tech semesters. It is much easier to find a place if you do some advance work. Take two or three days in August and come to Lubbock. This way you won't be pressured by registration, buying books, or classes.

Generally an apartment manager or landlord will hold an apartment or house for the date you want to move in if you sign a lease and-or give a

security deposit. Remember all the things you will have to do before you move in, like arranging phone service, electric service, gas inspection, etc. At the beginning of semesters, it seems like everyone is in line for these services. Avoid the lines by taking care of your business early.

TECH students are notoriously transient. The postal service does an admirable job (the best in the world) of keeping up with the great volume of address changes they are faced with each year. Once you know your new Lubbock address, tell everybody about it (your bank, magazines, your

parents). Also, fill out a change of address form at the Post Office.

Last words of advice that may make all the difference to your sanity: Keep your finances straight. Don't write hot checks. Pay your rent. Don't spend all of your food money before the month is over. Fasting is no fun.

Funny driving position

Finding a good place to sleep can be rough, but Randy Benefield may be carrying the problem too far. Actually, Benefield is

cleaning the rice out of his speakers that he collected at his recent wedding.

Job Interviews

INTERVIEWS FOR 1-18 - 2-22 Interview schedules will be available for signing on the following dates starting 7 a.m. Tuesday in Room 152 Administration Building for May and August 1980, undergraduate and graduates and Alumni, December 1980 and students interested in summer employment may sign up on Wednesday at 8:00 in Room 152 of the Administration Building.

Tech hosts tourney

Over 500 high school students and teachers will arrive today for the Tech Spring Forensic tournament to be held this weekend. The tournament is sponsored by Tech's Speech Communications Department.

Approximately 45 high schools from the Texas Panhandle east to Dallas, south to San Antonio, and west to New Mexico will participate.

participate. The tournament is a state qualifier for the Texas Forensics Association. There are 60 debate teams and 400 individual events. Tech students are welcome to attend any of the events, according to Vernon McGuire, director of forensics. Events will be in the Mass Communications Building. Information about specific schedules may be obtained by calling 742-3904.

THE EXCELSIOR
YOUR WINDOW TO THE WORLD
INSPIRED BY LOVE... FOR YOUR VALENTINE
For over three hundred years, the menfolk of many European villages have symbolized their love and affection with the carving and giving of a love spoon. The giving of a love spoon was an indication that a man desired to court a particular young maiden. Of course the love spoon is symbolic. For instance, a heart means "my heart is yours." Spoons with a twisted stem mean "as the tree has grown, so has my love." Double spoons denote togetherness, and the key indicates the key to one's heart.
Each love spoon is hand carved and initialed by its creator. The perfect way to say... I love you!
\$12.00 to \$85.00

Scientists confirm existence of extrasensory perception

NEW YORK — Will reputable scientists ever accept the claim that extrasensory perception and other "paranormal powers" really exist?

Some already have. A rash of new parapsychology experiments drawing ideas from the physics of atomic particles have rekindled an old controversy over whether parapsychology is a legitimate science or a pseudoscience created by charlatans to snare the naive. SOME experimenters claim that the natural process of radioactive decay can be influenced by mental concentration, and that results of their latest work demonstrate the contention. Other experiments try to show that mind power alone can change the temperature of super-sensitive thermometers and the separation between objects.

Laboratories have sought to either confirm or debunk the legitimacy of parapsychology since the controversial 1930's experiments Dr. Joseph Banks Rhine of Duke University. Rhine had his subjects try to use supposed paranormal powers to "see" the designs on special cards concealed from them.

His results proved, he contended, that extrasensory perception permits subjects to pick the right cards significantly more often than chance alone would allow.

OTHER SCIENTISTS challenged his conclusion,

saying that Rhine and other parapsychologists routinely reject data from subjects who are not performing well. If all the data from extrasensory perception tests were preserved and reckoned into the statistics, some critics say, the statistics would show results from pure chance.

The parapsychologists have argued that paranormal abilities cannot be turned on or off like laboratory apparatus. They say it is reasonable to discard results from subjects who are not "on."

Mahlon Wagner, a psychologist at the Oswego campus of the State University of New York, recently published the results of a poll he conducted.

Wagner sent questionnaires to 2,100 professors at colleges and universities throughout the country and received 1,188 responses. Of the natural scientists who responded, he said nine percent said they accepted extrasensory perception as an "established fact." Forty-five percent described ESP as a "likely possibility."

HOW DOES Wagner himself feel about his results?

"I used to be a total skeptic," he said. "But I've become a little more accepting because there are good, honest scholars in the field."

Research in parapsychology has been spurred by a number of recent financial grants.

ANOTHER physicist, Peter F. Phillips of Washington

University in St. Louis, was awarded a \$500,000 grant several months ago for psychic research. The grant, one of the largest ever made for psychic research, was

from a foundation established by the McDonnell Douglas Corporation.

There have been hints that American intelligence organizations have ex-

perimented with ESP, and Soviet security officials interrogated and expelled an American news correspondent for allegedly receiving a secret research report on

parapsychology. At the annual meeting of the prestigious American Physical Society last year, a special session on parapsychology was held for the first time. Although most of those attending were deeply skeptical, some 500 scientists listened attentively to such parapsychologists as Helmut Schmidt of the Mond Science Foundation of San Antonio, Tex., an institution maintained by grants from William Thomas Slick, Jr., a Texas oil magnate.

Schmidt, a physicist by training, uses devices called random-number generators in his experiments. These machines are actuated by the random quantum-mechanical process of radioactive decay, producing a continuous series of numbers.

DESCRIBING his experiments in an interview, Schmidt said one of his machines has a ring of lights arranged like a clock dial, and the radioactive process randomly illuminates one of these lights at a time. Subjects are asked to try to influence the direction in which the lights come on. The results, he asserted, demonstrated a significant correlation between his subjects' mental

efforts and the observed results.

In another type of experiment already conducted, Schmidt said he gave subjects the same instructions, but unknown to them, the machine had already produced its random series of numbers the previous day. Electronic recordings had been made of the numbers and stored in a safe without being examined. Copies made from them were then played for the subjects, who believed they were watching the machine in action rather than a mere recording.

Again, Schmidt said, there was correlation between their mental efforts and the results, even though the results had been obtained beforehand.

"The implication seems to be that the effect can work backward in time," he said, "and that is an outrageous idea from a conventional standpoint. But it may be that some quantum effects not yet understood could account for just such an outcome."

The chairman of the parapsychology session, Paul Horowitz of Cambridge, Mass., a physicist, asserted that Schmidt was "probably wrong." "But it's important that the investigation of parapsychology be kept within the structure of science where it can be examined critically," he said.

Some scientists are outraged by such thinking.

Among them is John A. Wheeler, an American physicist specializing in the theory of gravitational collapse and "black holes."

CONTENDING that parapsychology is a "pretentious pseudoscience," he has sought for the past year to have the Parapsychological Association based in Alexandria, Va., deprived of its status as an affiliate of the American Association for the Advancement of Science.

Wheeler and other scientific critics of parapsychology maintain that when results from psychic experiments are scrutinized according to accepted scientific and statistical tests, they turn out to prove nothing.

Despite such objections, scientists are as often duped

by charlatans and hoaxsters as are nonscientists, skeptics assert.

A case in point, they say, is that of John G. Taylor, a distinguished mathematician at King's College, London, who wrote a popular book in 1975 called "Superminds." The book recounted how Taylor had become convinced by the demonstrations of a self-styled psychic from Israel named Uri Geller.

Geller claimed to be able to bend spoons, transport objects through the air and perform many other tricks by mental power alone.

Later, when Geller's feats were revealed as mere tricks of stagecraft, Taylor published two papers in the scientific journal *Nature* recanting his earlier endorsement.

BUT MANY similar cases over the years have failed to shake the convictions of a number of distinguished scientists, including two giants of physics, Sir William Crookes and Wolfgang Pauli.

British physicist, a 40-year-old British scientist who was awarded the Nobel physics prize in 1937, has increasingly turned toward parapsychology during the past 10 years in his research at Cavendish Laboratory, Cambridge University, England. (The latter institution awarded its first doctorate in parapsychology last year.)

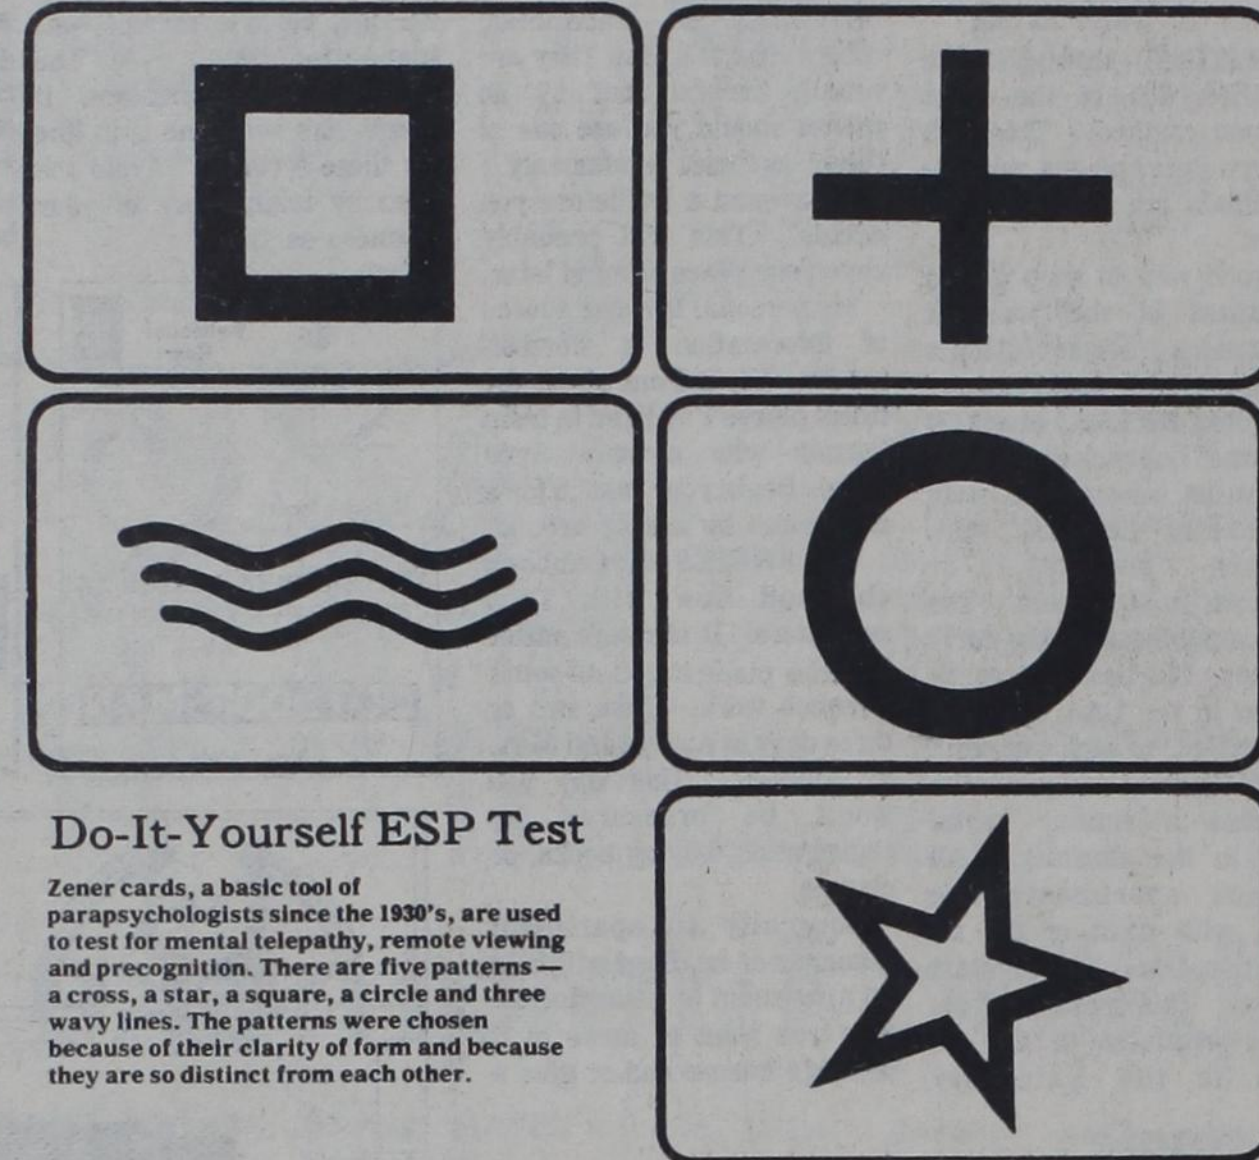

Josephson's mastery of quantum mechanics and other hard physical principles led him to discovery of the Josephson effect, by which electrical conductivity in an ultra-cold environment can be switched on or off with a magnetic field. Super computers of the coming decade are expected to be based on it. Is the rigorous technique of thought that discovered the Josephson effect compatible with parapsychology?

"YOU ASK whether parapsychology lies within the bounds of physical law," Josephson said. "My feeling is that to some extent it does, but physical law itself may have to be redefined in terms of some new principles. It may be that some effects in parapsychology are ordered-state effects of a kind not yet encompassed by physical theory."

"My interest in not only in parapsychology but in the nature of intelligence and consciousness. These are also ordered processes which are not yet understood," he said. "It may be that an understanding of intelligence and consciousness lies outside the paradigm of physics. It may be that more can be learned about the nature of reality through meditative processes."

BUT he did not expect the results of such work to be universally persuasive.

"It is clear," he said, "that you can never satisfy a skeptic except by enrolling him directly in an experiment, you can't do that with every skeptic."

Do-It-Yourself ESP Test

Zener cards, a basic tool of parapsychologists since the 1930's, are used to test for mental telepathy, remote viewing and precognition. There are five patterns—a cross, a star, a square, a circle and three wavy lines. The patterns were chosen because of their clarity of form and because they are so distinct from each other.

ESP home experiment offered

To do a home version of a classic parapsychology experiment, construct a pack of 50 Zener cards by making 10 copies of the patterns illustrated here.

If such a pack is carefully shuffled, a blindfolded subject stands a one-in-five chance of correctly identifying each card as it is dealt. In a pack of 50 cards, a subject could

expect to make 10 correct guesses by chance alone.

Consistent correct guesses of more than 10 cards at each pass of the deck could be taken as evidence of some paranormal effect, and the more correct guesses and better consistency, the more convincing the evidence.

The experiment may be done in various ways.

The experimenter can look at each card in order, while

attempts to read the experimenter's mind and demonstrate mental telepathy. For the sake of convenience, the subject should be close enough to shout out his answers so the experimenter can record them. It is also possible to do this with experimenter and subject sitting across a table from each other; the subject must be carefully blindfolded.

In a variant, the subject can be asked to call the order of

the cards before they are shuffled and dealt, thereby testing precognition (or clairvoyance).

Parapsychologists say that even persons with paranormal gifts cannot perform uniformly well, and it is therefore fair to discard their guesses when they seem to be guessing badly.

Skeptics maintain that such a practice violates the rules by which all scientific theories must be tested, and that since parapsychology depends on such statistical tricks, the effects it claims are nonexistent.

The reader may judge for himself.

Happy Birthday
SARAH!!
LOVE YOU!

Library's microfilm collection

Tech gains Jefferson reel

By REAGAN WHITE
UD Reporter

The latest addition to the Tech library's microfilm collection of the Presidential Papers is a 65 reel set of the Papers of Thomas Jefferson.

The microfilmed papers record letters written to and from Jefferson from many important figures in early American history such as George Washington, John Adams and Benjamin Franklin.

The collection also records Jefferson's correspondence with Revolutionary War generals, Jefferson's day-by-day journals from 1767 through 1782, notes on court cases, readings in law, weather observations, Virginia history, plantation matters, a catalogue of Jef-

erson's library, and much more.

The Presidential Papers program is a result of an act of Congress, approved in 1957, for the purpose of arranging, microfilming, and indexing the personal papers of the Presidents.

By putting the papers of the Presidents on microfilm, Congress intended to "preserve their contents against destruction by war or other calamity," and to make the Presidential papers more "readily available for study and research" in order to inspire "informed patriotism."

However, in order to inspire, the papers must first be deciphered, and deciphering these 200 year-old scrawls can be tedious, according to one

student caught using the collection.

Another student was overheard to remark the papers were "probably as difficult to read as any letter written from any grandmother in America, but darn well worth it."

The Tech Library owns the papers of only 17 of the total of 23 collections of Presidential papers offered by the Library of Congress.

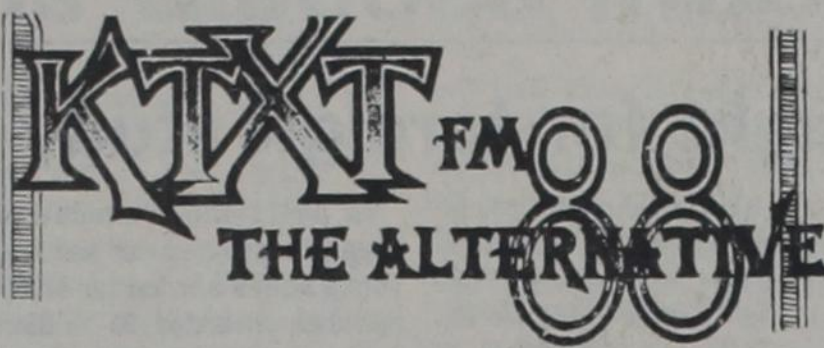

Cliff Hicks, associate director of Library Services, said the enormous size of some of the Presidential collections, which include up to 500,000 papers on reels of microfilm, is responsible for the prohibitive cost of some of the sets of papers.

Hicks said the Jefferson collection cost \$750 and that larger collections could cost

several thousand dollars. "And, quite frankly, the faculty has expressed very little interest in the collection," he said.

Hicks indicated the Jefferson collection had been acquired indirectly as a result of the interest expressed by a student who needed some of the 65 reels of microfilm that make up the Jefferson collection. "We had the money available to purchase the Jefferson collection and so we did. It is our intention to eventually purchase all of the microfilmed papers as our financial resources allow," he said.

Hicks said the Tech Library could arrange to borrow reels of Presidential papers the library did not own from other libraries that did own a complete set.

Tech pre-vet program comparable

Texas A&M may be the only University in Texas which offers a degree in veterinary medicine, but Tech offers a pre-vet program "every bit as good," according to J.M. Hellman, assistant professor of animal science.

Many pre-vet students may actually benefit by taking their requirements at Tech rather than A&M, Hellman said.

"A&M has so many students enrolled in their veterinary program that classes are often very large and labs may run late into the evening," said Hellman. "Also, a pre-vet student who has completed his requirements at Tech has just as good a chance at being accepted to the A&M vet school as one who has completed his requirements at A&M because acceptance is based solely on grades."

Prospective veterinary students must take 66 semester hours of required courses to be admitted to the A&M veterinary school, said Hellman. Some of these required courses are common for all majors and include English, history and political science. But pre-vet majors must also have hours in physics, animal science, chemistry, math and biology. These are the courses that pre-veterinary students may take at Tech, prior to applying to the A&M veterinary school.

Hellman said pre-vets can complete these requirements in two years but he recommends that students stretch the program to three years and concentrate more on achieving good grades and less on dispensing with the requirements quickly.

Many students at Tech as well as A&M choose to continue with school for the full four years and get a degree in

a related field, such as Animal Science, before applying to veterinary school. The degree may help better their chances for selection, Hellman said.

The A&M vet school will not ever consider out of state applicants, according to Hellman. Even so, it receives approximately 600 qualified applicants a year. Of these only about 138 are accepted, Hellman added.

"Of the 138 applicants accepted last year, only six had met the minimum requirements solely. The rest had completed four years of college and many were doing graduate studies," Hellman noted.

The pre-vet program at Tech had an enrollment of 80 last fall, but the number of actual veterinary majors probably decreased, according to Hellman.

"Many students may register pre-vet because it sounds good, but they often do not realize how difficult the program is and often switch to another related field, such as Animal Science," said Hellman.

The pre-vet program at Tech may be rigorous, but those who persevere are often rewarded. According to Hellman, of the 14 pre-vets who applied to the A&M vet school last year, 10 were granted interviews and 5 were accepted.

Afternoon sleep

After a hard class Martin Miller takes a rest on a convenient bench while enjoying the fine weather. However, temperatures are ex-

pected to plummet today as snow is predicted for the South Plains.

Students sought for foreign study

By CARMON McCAIN
UD Reporter

Young men and women in the Lubbock area are being solicited to be Rotary Foundation education award candidates for study outside the United States in 1981-82. Application deadline for the awards is March 1.

The Foundation offers five types of educational awards such as graduate and undergraduate scholarships, according to Charles Neill. Also included are technical training awards, awards for teachers of the handicapped and journalism awards.

Each award includes round-trip transportation, education and living expenses for one year as well as funds for extensive language training, if needed.

Five Tech students were awarded scholarships from the Foundation and will be studying abroad during 1980-81. The students are Rex Caldwell, who will be studying in Australia; Adria Gregg will be travelling to Costa Rica; and Cynthia Fulton will go to Italy. Others are Donna Boyle, a graduate student who will study in Austria and Dayna Escue, who will be attending the University of Geneva in Switzerland.

In 1947, the Foundation began its program of sending young adults abroad for study and has awarded 35 million dollars in scholarships. Over 10,000 young people have travelled abroad since the program's inception, Neill said.

A non-profit organization, the Rotary Foundation is supported by voluntary contributions from Rotarians, Rotary Clubs and friends of Rotary in 154 countries.

Application blanks and additional information are available from Harley D. Oberhelman, Tech classical and romance language professor, 742-1643 or 799-1643.

Re: Zip codes, shelters

Do you question the practices of a professor? Are you needing an answer to a question about Tech administrative policy? Or are you curious about something you have seen on the Tech campus? If so, send your questions to RE: The University Daily, Box 4710, Texas Tech, 79401. Questions will be answered each Friday.

Q: What does ZIP stand for and is there a nine-digit ZIP code going into effect in the future?
B.K., administration

A: ZIP stands for Zone Improvement Program. According to a Lubbock post office spokesman, a nine-digit ZIP code is not expected to go into effect in the United States in the near future.

Q: What kind of fallout shelters are on campus at Tech?
Dave Tarr, junior, telecommunications

A: According to Marvin Buckberry, director of building maintenance, there are tunnels running throughout the campus and basements in designated buildings which would be used in the event of an emergency.

Q: How much soft drink is consumed by Techsians through the coke machines throughout campus?
D.R., junior, journalism

A: A Spokesman for Coca-Cola-Sprite Bottling Co. said 300 to 350 cases of soft drinks are delivered each day. That's at least 7,200 bottles, adding up to approximately \$1,440 spent on soft drinks daily.

Q: I am enrolled in a business course which has a multitude of required readings. These readings have been put on reserve at the library. The class has about 80 students in it, but according to the professor, only one copy has been placed on reserve. How can 80 people read off only one copy?
F.R., senior

A: Up to five copies of an article can be placed on reserve in the library, according to a library spokesperson. The number of copies put on reserve is determined by the professor. Students are allowed to check out the articles for up to two hours. The spokesperson said five articles is plenty for students and that for smaller classes, three copies are recommended. The only way she could see a class of 80 students using one copy of an article would be to copy the article, at seven cents per page.

According to the professor, the BA operates on a point system where each class is allocated points to determine how many copies can be made of an article. This is done to cut down on the number of copies printed each semester. The professor also said that copies of the 30-40 articles needed for the class are available at a local copying service and that this was announced in class. He agrees that it is an inconvenience to the students but there is nothing he can do about the situation.

LTC to move to Lindsey

By JOHN HARDWICK
UD Staff

'Clowns' proceeds to fund move

The quality of the plays presented at the Lubbock Theatre Center has long outgrown the quality of the facilities. The LTC building is characterized by a delapidated exterior, limited parking facilities and a cramped, overly-intimate seating arrangement.

After its current production of "A Thousand Clowns," the Lubbock Theatre Center will move its operations to the Lindsey Theater, located at Main and Ave. J downtown.

According to Richard Talley, president of the board for the Lubbock Theatre Center, the move is "a dream that has become a reality." "The Lindsey Theater is a

very nostalgic place," Talley said. "It will be completely restored to its original post-war (WWII) condition."

The building has been vacant for the last year-and-a-half. From its construction in the mid-'30s, the Lindsey Theater has been a popular Lubbock movie house. Extensive modifications will be necessary to convert the theater for live performances.

"Construction costs will range from \$500,000 to \$750,000" Talley said. "The lobby and seating area, which includes a balcony section, will be restored to original condition. Most of the money, however, will go into con-

verting the stage and supplying the technical equipment for that conversion."

The money for the project will be acquired from three sources: federal grants, foundation grants and donations from within the community.

"The cost of building an entirely new facility would have been \$3-\$4 million," Talley said. "By gradually restoring the existing Lindsey Theater, we can refurbish the theater over a period of two to five years while still producing plays there."

"You Can't Take It With You" will open April 11 at the partially restored Lindsey

Theater, which will be renamed the Lindsey Center for the Performing Arts. It will seat 980 people, as opposed to the LTC's capacity of 280.

The LTC building will be used in the future to build and store scenery. It will also provide a stage for the children's theater program in Lubbock, Talley said.

Additional money for the move will be necessary from the ticket sales of the current production of "A Thousand Clowns," Talley added. The show will continue its run at 8:15 tonight and Saturday, and Feb. 15 and 16. For reser-

variations and additional information, call 744-3681.

A tentative schedule has also been released for next year's season of plays at the Lindsey Center for the Performing Arts.

According to Talley, the plays to be presented will include "Same Time, Next Year," by Bernard Slade; "The Sunshine Boys," by Neil Simon; "On a Clear Day, You Can See Forever," a musical by Alan J. Lerner and Burton Lane; "The Star Spangled Girl," by Neil Simon; "Peter Pan," a musical based on Sir James M. Barrie's classic tale (pending its release from a current Broadway run); and "White Lies, Black Comedy," by Peter Shaffer.

Listen Here!

T.H. Maynor listens to Maureen Conheady in a scene from the Lubbock Theatre Center's presentation of "Thousand Clowns." Performances will be at 8:15 tonight and Saturday night and Feb. 15 and 16. See Curtain Call for ticket information.

Photo by Mark Rogers

Poetry selections discuss life, love, work

By LAURIE MASSINGILL
UD Staff

The poet is the forgotten writer of literature. Sure, we all suffered through that poetry unit in our junior English class. We all wrote those noxious, sickening-sweet verses during elementary school.

We all memorized the time-worn poems of great American poets as assigned by speech teachers. . . . "Casey at the Bat," "The Road Not Taken," "Hiawatha" and "The Charge of the Light Brigade."

Then, we forgot them. The work of black poetess Ntozake Shange is not easily forgotten. And her second collection of poems, "Nappy

Edges" (Bantam Books), is not easily dismissed as just another product of the youth movement or the "me" generation, as the poetry of many young poets is often classified.

The literary world is often hard pressed to find works that are fresh, new and creative, yet capture the emotion and spirit of early poetry.

"Remember when poetry used to give you chills, make you tremble? Ntozake Shange writes that kind of rousing poetry. It has the power to move a body to tears, to rage and to an ultimate rush of love," writes critic Marilyn Stasio. It's almost impossible to

read Shange's book and remain unmoved. Her style is her own. She doesn't use upper case letters and her use of punctuation is rather unorthodox. But these factors do not detract from the beauty of her poetry and her simple, whimsical, lyrical style.

One of the most appealing characteristics of Shange's work is its simplicity. Shange defines "Nappy Edges," in the collection's title poem as: "the roots of your hair — what turns back when we sweat, run, make love, dance, get afraid, get happy: the tell-tale sign of living —"

Sometimes her language is raw, but the rawness is necessary. Her poetry is realistic. Her ideas are ideas

we've all thought about, but never had the courage or conviction to relate to others. She is honest and open . . . about her life, her heritage, her work.

She focuses on her poetry in the selection, "i talk to myself." In answer to the question, "what do you believe a poem should do?" Shange writes:

quite simply a poem shd fill you up with something — cd make you swoon, stop in yr tracks, change yr mind, or make it up. a poem shd happen to you like cold water or a kiss.

Indeed, Shange's poetry is

shocking, exhilarating, chilling. It's emotionally draining.

Shange seems to acknowledge the fact that poets are often forgotten, taking a minor place next to other writers and musicians. She subtly condemns the reader for not seeing the importance of her words and her poetry in "takin a solo — a poetic possibility — a poetic imperative."

"If you take us as seriously as you take a set of traps — a saxophone — maybe we'll have decades of poems you'll never forget."

In "advice," she explores people's attitudes towards the poet and the whole business of writing poetry, as opposed to

the public's ideas about musicians and other writers.

"people keep tellin me these are hard times — what are you gonna be

doin ten years from now — what in the hell do you think — i am gonna be writin poems . . . i am a poet — i am not a part-time poet — i am not an amateur . . .

i have had it — i am not goin to grow up to be somethin else

i am goin to be ol & gray wizened & wise as aunt mamie i am gonna write poems til i die."

With a promise like that, readers should see additional collections of Shange's work in the future. If the quality of Shange's poetry remains at the high level of sensitivity that she has established in her play "for colored girls who have considered suicide — when the rainbow is enuf" and "Nappy Edges," Shange will certainly make her mark as a leading black poet.

Writer rates best, worst

Kirk Crumbley

At great personal expense in matters such as grades and social life, I have kept tabs on the present television season. I have watched prime time shows every evening I could, and have compiled this list of what I consider to be the five best and five worst TV programs presently on the air.

The Best:

"Taxi:" This show boasts one of the finest casts in the business. Judd Hirsch, Danny DeVito, Marilu Henner, and Andy Kaufmann have all developed their characters to a remarkably believable degree. The program is often hilarious and sometimes touching. De Vito's character of Louie is perfect: He is one of the most reprehensible little trolls ever seen on TV. Kaufmann is also outstanding as Latka Gravas, the immigrant mechanic. All these elements combine to make "Taxi" possibly the best situation comedy on the air.

"Real People:" Although two of the show's hosts, Sarah Purcell and Skip Stevenson, are totally inept, "Real People" consistently features some of the most bizarre yet interesting stories seen on television. This show is about the only worthwhile project Fred Silverman has given the world. It is an innovation, which is the commodity most lacking in television.

"Barney Miller:" Like "Taxi," this sitcom is aided by a fine cast. Hal Linden is excellent as Captain Miller. Perhaps the best characters, though, are Harris (Ron Glass) and Dietrich (Steve Landesburg). Dietrich's low-key humor is carried off very well by Landesburg. Glass plays to perfection the fashion-conscious detective-author-investor. The various criminals in the show are always uniquely funny.

"MASH:" This program can still be deemed one of the best in spite of its extensive character changes. The only originals remaining are "Hawkeye" Pierce (Alan Alda) and "Hotlips" Hoolihan (Loretta Swit). The show's strongest feature is its writing. The scripts have never been less than superb. Recently, the show has dealt with more serious topics, such as Hoolihan's divorce and Hawkeye's drinking problem. Don't expect this show to last much longer; the cast have said they want to quit on top.

"60 Minutes:" This is the best news show in television history, gaining a large share of the prime time audience recently. It is indeed a pleasure to watch an unlucky victim squirm under Mike Wallace's scathing assault. "60 Minutes" consistently covers interesting and provocative stories, ranging from phony medical clinics to taxes in Liechtenstein. Wallace is aided by Harry Reasoner, who defected to CBS from ABC, Morley Safer, and Dan Rather. If anyone thinks news is boring, he should watch "60 Minutes." The show just might change his mind.

The Worst

"Love Boat:" This program really should be called "Love American Style, II" because that is exactly what it is. The formula is the same every episode: Three stories involving three couples who nearly lose each other. The couples always wind up back together, having learned a lesson. "Love Boat" is easily one of the biggest pieces of tripe ever aired. The cast is laughable, and the writing sophomoric.

"Laverne and Shirley:" This is a show with a message, and the message is: Beware! Laverne and Shirley is the most ridiculous program presently on the air. As with "Love Boat," the plots are the same each week. The girls find a humorous way to get into trouble, then Carmine dances, and everything turns out fine. I wonder how Penny Marshall and Cindy Williams feel portraying TV's zaniest imbeciles?

"The Misadventures of Sheriff Lobo:" I cannot say a whole lot about "Sheriff Lobotomy" as I have only been able to sit through it twice. Claude Akins stars as the moronic sheriff in a series that is so simple-minded that even some well-bred dogs prefer something a bit more cerebral.

"Charlie's Angels:" These two names say it all: Spelling and Goldberg. These men help produce this show and nearly every other bad cop show. "Charlie's Angels" has proved to be quite tenacious, even in the face of several schedule changes. This show is the most insulting to the average intelligence of any on the air. It's possible that contests are held in Hollywood grammar schools in script-writing. Each week, the lucky winner has his or her script used for the shooting of "Angels". My favorite episode was the one in which Jaclyn Smith, with no prior training, landed a 747 jetliner. The characters of this show could not collectively act their way out of a paper bag. My recommendation for this show is euthanasia.

"Three's Company:" I saved this one for last because it is the show I love to hate. Full of suggestion and cheap double entendres, "Three's Company" would not know real humor if slapped in the face with it. Suzanne Somers is maybe the least talented actress of the Twentieth Century and fully merits the title of "dumb blonds". If ever a show deserved the ax, this is the one. However, the astronomical capacity of the viewing public for ingesting garbage will likely keep "Three's Company" on the air for some time to come.

'Godspell' again

Photo by Mark Rogers

Susanne Barnard sings a solo from the second act of "Godspell." The musical will be performed at 8:15 p.m. Thursday through Saturday, with a matinee on Sunday throughout February. Call 747-0171 for ticket information and reservations.

Lepers' revenge terrifies town

Movie causes fear

By M.W. CLARK

UD Entertainment Writer
There is a curse on your town. Six must die to pay the price of revenge. Strange things start happening in the night. You cannot get away from "The Fog."

"The Fog" was produced by the same folks who gave us the instant horror classic "Halloween." "The Fog" is similar to "Halloween" because both have the same brilliant cinematography as well as a reverberating soundtrack.

Sometimes knowing the plot can take away from the scariness of the movie. But sometimes if you know what is going to happen, it will drive you crazy... waiting.

On April 21, 1880, six conspirators meet in the small coastal town of Antonio Bay, Calif. They plot to kill the members of a leper colony who wish to move near them. The conspirators plan to misguide the lepers' ship into the rocks at night and steal their fortune in gold. It is done.

One hundred years later, the townfolks of Antonio Bay are celebrating their centennial. Three fishermen are off the coast when the fog comes in. They are found dead, cut up like ribbons.

It is made known that the time has come for revenge by the lepers. They want an eye for an eye. Six have to die to compensate for the number of conspirators. They will take

any six — men, women, children and the aged.

Adrienne Barbeau plays Stevie Wayne, the disc jockey who works alone in the lighthouse. Her sexy, on-the-air voice soon turns to a voice filled with terror as she watches "The Fog" take its toll.

Hal Holbrook portrays Father Malone, one of the descendants of the original conspirators. Malone realizes what the lepers want and gives it to them.

"Halloween" star Jamie Lee Curtis plays a minor part as a hitchhiker who happens to be caught up in the whole mess. Her real-life mother

Janet Leigh portrays Kathy Williams, a councilwoman and the widow of one of the three fishermen.

The lepers are but shadows in the fog, but it is their lack of presence which gives you the chills. The lepers will slice their way in and out of your hearts.

Although the movie is not as scary as "Halloween" it is definitely worthwhile. But be careful. The movie may have a strong impact. Once you get home and close the door, you may start to wonder — what's out there?

"The Fog" is currently playing at the UA South Plains Cinema.

Style sets singer apart

By PAM MALONE
UD Staff

Singer-songwriter Mike Gulezian will bring his "acoustical pyrotechnics" to the Storm Cellar tonight.

Gulezian's talent lies in the strange and imaginative sounds he creates with his six and 12 string guitars. With tunes such as "Cafe on the Rings of Saturn" and "Rocky Mountain High, My Ass," Gulezian has been noted for his different viewpoints on matters.

Gulezian's first professional engagements were ap-

pearances at the Colorado State Penitentiary, The Salvation Army's Men's Rehabilitation Center in Denver, the Pina County Home for Delinquent Juveniles and the Greyhound Bus Depot in Truth or Consequences, New Mexico. From these unlikely beginnings, his career became a regular on the college circuits.

Gulezian's new album, "Snow," produced on the Aardvark label, is his first acoustical album debut.

"I'm sure this record will rocket to the top of the

Billboard charts in spite of its artistic quality and establish me as a future superstar in the '80s," Gulezian said in an interview with critics.

Influenced by Leo Kottke and the Love Unlimited Orchestra, Gulezian's own style has emerged as reflective of his own experiences.

Tickets for Gulezian's performance will be available at the Storm Cellar door for \$1 with Tech ID and \$2 for the general public. The Storm Cellar is located in the Faculty Club just off the UC Courtyard.

Comedy duo to appear at club

Bowley and Wilson, the five member "bathroom humor" band from Dallas' Up Your Alley Club, will appear at Cold Water Country Sunday.

The event, sponsored by Beta Theta Pi, highlights the fraternity's fund-raising venture each year with proceeds going to the Southwest Alumni Association, according to David Payne, Beta president.

The band plays a mixture of

progressive country, Beatles and Buddy Holly music.

Tickets are available at the

UC Ticket Booth for \$2.50, or may be purchased at the door for \$4.

Films to show

"Age of Medici," a trilogy of Roberto Rossellini films, will be shown at 8 p.m. today in the Biology Auditorium. The films are offered by the Tech Division of Architecture, and there is no charge.

"Age of Medici," written and directed by Rossellini, will feature in chronological order "Cosimo de Medici," "The Power of Cosimo," and "Leon Battista Alberti: Humanism."

The trilogy consumes four hours of screening time, and documents the influence of the Medici family on politics, economic patterns, and social life in 15 century Florence. The theme of the films is the explosion of arts and sciences during the Renaissance.

Vincent Canby, critic for the "New York Times", has written that "The films have a form dictated by their function, which is to tell us as much as possible, as efficiently as possible, about life and thought of the times."

Tech heads to Waco

Rice upsets Raiders, 71-61

By JEFF REMBERT
UD Sports Writer

HOUSTON — Never before has the Jekyll and Hyde script been performed so realistically.

Only three days after defeating the Southwest Conference's number one team, Texas A&M, Tech experienced a complete transformation and lost to the eighth-place Rice Owls 71-61

Thursday in Autry Court. Tech travels to Waco Saturday to meet Baylor.

The transformation started at the 15:30 mark of the first half with Tech leading 11-6. Forward Ben Hill had just scored a Tech bucket on a turnaround jumper, and it looked like the Raiders might settle the outcome of the game early.

What happened during the next five minutes and 28

seconds was inhuman from the Raiders standpoint. Even the doctor's drug took its time.

Rice held Tech scoreless until midway through the first period. The Owls were ahead 15-11 and by then they never looked back.

Tech pulled to within two points, 23-21, on a Ralph Brewster bank shot at 6:36 but another scoring drought

immediately set in. It lasted only three minutes and 46 seconds. But by the time the Raiders had recovered, Rice had developed a thirst for victory.

Meanwhile, Tech Head Coach Gerald Myers was voicing displeasure about the game with the referees. The refs charged Myers with two technical fouls at 4:21 mark of the first half.

Women face tough foes in Oklahoma track meet

Coming off its first meet victory of the indoor season, the Tech women's track team will head north Saturday for the Oklahoma Indoor Track Classic at the Myriad in Oklahoma City.

The Raiders will be in their toughest meet of the season as they compete against 18 other teams that include world-class competitors in every event.

The meet will be hosted by the University of Oklahoma and will be comprised of three divisions: university men, junior college men and all-level women. The Tech men will also be in action at the Classic.

The prelims are set to begin at 9 a.m. Saturday. The finals start at 7 p.m. Saturday.

The Raiders will field a strong squad to compete against such track powers as Arkansas, Missouri, Nebraska, Oklahoma, Texas and Texas Woman's University (TWU).

Tech's individuals to watch for this weekend are Cende Mills (Lynwood, CA) and Sharon Moultrie in the long jump; Veronica Flowers in the 60 yard hurdles; Dora Bentancourt in the quarter-mile; Ella Rich in the half-mile and Pam Montgomery in the 60 yard dash.

Montgomery will go up

against world-class sprinter Lelith Hodges from TWU. Last year at the state meet, Montgomery finished a close second to Hodges and is expected to challenge her again this year.

So far this season, Raiders who have qualified for the

AIAW National Indoor meet are Montgomery and Falecia Freeman in the 60-yard dash; Flowers in the 60-yard hurdles; Mills and Moultrie in the long jump; and Freeman, Moultrie, Flowers and Montgomery in the 4 by 178-yards relay.

Tracksters run in Sooner race

Coach Corky Oglesby will send his tracksters to Norman, Okla. Saturday for the Oklahoma Track Classic. The meet should serve as an excellent warmup to next weekend's Southwest Conference Championships in Fort Worth.

Tech will have a chance to see first-hand such SWC teams as Baylor, SMU and TCU. National powers Kansas and Kansas State also will be on hand, along with all the Big 8 teams and other clubs from around the Midwest. A total of 72 teams will be in Norman. Oglesby said, "Our team is much stronger than we've been the past couple of years and the experience we get this weekend could really help us down the road."

Leading the Raiders this season has been James Mays. In only his first meet of the year, the junior from Hereford ran a 1:10.3 for 600 yards, qualifying him for the NCAA National Indoor Championships.

Helping Mays has been Joseph Mutai, Greg Lautenslager and Edwin Newsome. Mutai, a junior college transfer, won the 1,000-yard run at both the West Texas Invitational at Canyon and the Lobo Invitational at Albuquerque.

Lautenslager captured first in both the mile and two-mile jaunts at Canyon and took third in both events at Albuquerque. Newsome, a footballer, has been consistently strong in the quarter-mile run.

"We've had some extremely fine performances from all our athletes early in the season which really surprised me," added Oglesby. "I hope we can keep it going this weekend."

Rice guard Bobby Tudor was awarded four free-throw attempts. The first two bounced off the back iron, the third fell short and the fourth attempt went in and out of the goal.

Tech was unable, however, to turn the missed free throws into winning momentum.

Rice went into the locker room leading 32-26. Tech pulled to within three points twice in the second half. The Raiders cut the margin to 46-43 at 9:21 and 50-47 at 6:25 but Rice responded on both occasions with a penetrating offense and excellent rebounding.

Rebound production was the Owls most dominating area of the game. Rice out-rebounded Tech, 40-25. Rice forwards Ricky Pierce and Kenny Austin together hauled down 23 rebounds.

Tech center Ralph Brewster pulled down 10 rebounds but he received little support from his teammates. He was also Tech's leading scorer with 19 points. Tech guard Kent Williams and Jeff Taylor added 12 points and 14 points, respectively.

Pierce and Austin also provided the partisan Rice crowd of 2600 with an offensive show. Pierce showed 27 points and Austin 10. Tudor showed 11.

Rice made 33 free throws out of 44 attempts.

LIFE IS A MULTIPLE CHOICE TEST.

Here are some of the answers.

The tests don't stop when you graduate. Some of the hardest lie ahead. Like the one you're facing right now — how to launch your career so that every year counts as a big one in personal and professional achievement. You want to look back and say, "Now that was a good move."

It's your life and your future. What does all this have to do with The BDM Corporation? A lot. Because we have at least some of the answers you will want to consider... answers to questions like these:

1. "How can I start building a career that's best for me?"

Look for a company that is committed to growth and has compiled an outstanding growth record to confirm that commitment. (BDM has grown an average 30 percent per year for the past 7 years.)

2. "Why is corporate growth so important?"

Strong corporate growth means that the opportunity for personal career growth is much greater than in a more static organization. (Graduates who joined BDM two years ago have moved far ahead of their counterparts in most other organizations.)

3. "Why should I join a professional services company?"

For one reason, because ours has

become a service economy. A modern professional services company offers greater opportunity, greater diversity, greater potential. (BDM gives you the best of two worlds — professional services growth plus a corporate focus on tomorrow's technology and systems.)

4. "What are the most promising fields in which to apply my technical skills?"

National defense, communications, energy, the environment, and transportation come quickly to mind. (Not coincidentally, these are the primary

The Professionals We Seek

We offer career opportunities to men and women with degrees in EN-GINEERING (especially EE, ME, and AE) APPLIED PHYSICS APPLIED MATHEMATICS COMPUTER SCIENCE (Scientific Applications) OPERATIONS RESEARCH

We're looking for highly motivated people who want the challenge of analyzing and solving problems in communications, software development, systems analysis, computer simulation and modeling, laser physics and engineering, electro-optics, nuclear effects, statistical test design, logistics, electronics, environmental sciences, economics and management sciences, energy production and distribution, and related areas

areas established for BDM growth in the 1980s.)

5. "The world is changing fast. How can I avoid a dead-end career?"

Choose a company dedicated to being out in front of the changes. (Our clients hire BDM to help them anticipate tomorrow's changes; so we must stay on the leading edge of advances in both national policy and technology.)

6. "What else should I look for in choosing a career?"

An organization large enough to offer you real opportunity but not so big that you are unimportant to it. A professional staff (your future colleagues) with outstanding credentials and demonstrated achievements. A working environment that is both thoughtful and dynamic. Nationwide locations. A planned advancement program offering multiple "ladders" of career growth within a flexible matrix management structure. A chance to contribute directly to major national and international programs and issues. And, of course, generous compensation and benefits.

We have just described the career opportunity waiting for you at BDM. Send us your resume, and we'll tell you more about BDM. Contact: College Relations Coordinator, The BDM Corporation, 7915 Jones Branch Drive, McLean, VA 22102. An equal opportunity employer m/f.

Tech guard too good to be true

By DOUG SIMPSON
UD Sports Writer
Kent Williams can't help it if he's perfect.

He never made an enemy — he doesn't know how. He likes everybody. Everybody likes him.

He's the type of guy who'll smile and shake your hand when you throw an elbow into his jaw. He might, however, make it a pact to himself to outdo you the next time you meet him on the basketball court (remember the incident with Willie Foreman in '78? Williams got the last laugh).

Fans have attached every nickname in the book to the 6-5 Hobbs product. He's "Rainbow," the player who makes things happen, the quarterback of the ball club, and so on. Williams doesn't object to the labels or let them go to his head. He takes them in stride.

He puts the city of Lubbock on a higher level than Dallas and praises Tech, his alma mater, for all it stands for. He's very complimentary of his coach, Gerald Myers, and he makes it known that he wholeheartedly approves of Myers' brand of offensive basketball.

Simply put, Kent Williams is everything you'd like an athlete to be. He's every coach's "dream player." He's conscientious, unselfish, dedicated, and smart.

When the history of Tech basketball is recorded, Williams won't likely be remembered for being the Raiders' all-time scorer, rebounder, or even passer. But he has something which makes him unique.

You see, all of Williams' alleged personality traits, every bit of the "great guy" image, all the labels — they're true. There's nothing artificial about "Rainbow." He's genuinely "perfect."

Incidentally, Williams is known for his basketball ability. Besides being one of the most accurate free-throw shooters on the Tech team, he is, as everyone says, the leader and quarterback of the squad. He scores, he passes, he leads, he produces.

In a recent interview with The University Daily, Williams touched on a variety of subjects, including basketball, recruiting, the past, the future, Myers, the fans, and the press.

Who is the "real" Kent Williams? Is he labeled? Does he live up to the labels?

"I don't know if I am

labeled. If I am, I certainly don't object to them. I don't always live up to them. I like being called the leader of the team."

What do you have left to prove at Tech?
"I don't know as if I have to prove anything. I would like to go out a winner. When I came here from Hobbs, I was used to winning. Winning grew on us."

Why did you come here?
"Rob Evans recruited me. I came here partly because I wanted to play with Geoff Huston. I wanted to play in the same backcourt with him. I was very close to Geoff. He influenced me a lot. I wanted to play with him, and I guess you could say I accomplished that."

What makes an athlete decide to come to Tech? Doesn't it seem funny to you that sometimes the best athletes pass up a chance to play for A&M, Texas, or Arkansas just to start at Texas Tech?
"Tech has the image of a winner. Coach Myers is not only one of the best coaches in the conference — he's one of the best in the nation. And you won't find better assistants. When a player looks at a college, he looks at the atmosphere he'll have to deal with. He looks for a pleasant atmosphere. Tech is definitely that."

Myers' brand of offensive basketball has been criticized? What is your feeling on this?
"You don't seem to get hacked off by things people say. You seem to take things in stride. Why is that?"
"I don't know. Maybe it comes natural to me."

"I personally don't care what the press says. I've found that the thing to do in most every situation is to make something good out of it."

How would you describe your career at Tech?
"That's tough. I'd say it's been enjoyable. But like I said before — we haven't won a championship while I've been here. That's been kind of a letdown. I've had a good time here. But I want to win the big one."

Do you have any aspirations for pro basketball?
"I believe we can."

Williams drives

Tech's Kent Williams drives past TCU's Ed Wineinger during the Raiders' 57-42 victory against TCU Feb. 2 in the Coliseum. Williams and his teammates will travel to Baylor Saturday to meet the Bears. Williams is Tech's third-leading scorer and is first in assists with 113, far ahead of runnerup David Little, who has 42 assists.

NATIONAL LAMPOON

Anniversary Issue

You've heard all the wonderful stories about the seventies; now read about the real and disturbing stories that we experienced in the seventies. It's all in the February 1980 special tenth anniversary issue of *National Lampoon* — plus pages of the winners of the *National Lampoon* contest of nude girl friends with buckets over their heads.

And for fans and collectors, the issue will include a complete history of *National Lampoon* from its beginning, including its special projects, such as record albums, radio shows, live comedy productions and, of course, *National Lampoon's Animal House* — how they came about and how we cornered the market on the best comedy performers, such as John Belushi, Gilda Radner, Chevy Chase, Bill Murray, and many more.

It's all in the February issue of *National Lampoon* — on sale now.

"I come strictly from a run-and-gun-type offense. That's what fans like to see. And that's part of basketball. But it's only one side of basketball. I think college basketball is on a higher level than high school basketball. The players are better. You have to refine the game."

"We've been moving the ball better this year. Part of our game is to beat the other team down the floor. Some fans don't realize that you can't make a fast break every time you get the ball."

"We play smart, basic basketball. That's the kind of offense Coach Myers runs. He doesn't play out-of-control ball. But he wins. Most coaches who play smart, basic basketball do."

You don't seem to get hacked off by things people say. You seem to take things in stride. Why is that?
"I don't know. Maybe it comes natural to me."

"I personally don't care what the press says. I've found that the thing to do in most every situation is to make something good out of it."

"That's tough. I'd say it's been enjoyable. But like I said before — we haven't won a championship while I've been here. That's been kind of a letdown. I've had a good time here. But I want to win the big one."

Do you have any aspirations for pro basketball?
"I believe we can."

"I'd love to play pro ball. If I get the chance, I'll give it my best shot. But that's in the back of my mind now. If I do my job in what's left of my college career, the rest will take care of itself."

How important is it for Tech to get the third-place berth in the Southwest Conference Tournament?
"Third? I'm not looking for third. I'm looking for first. When I know we can't get first, I'll look for second and third. It's important that we have a good record going into the tournament."

Will the A&M victory cause Tech to overlook any teams on its schedule, which has happened in the past?
"I hope the A&M win will help us. We'll find that out, I guess. We lost some respect around the conference with our losses, and I hope we gained it back."

"You get so high for a game like A&M — your intensity level increases, and the adrenalin flows — then after a big win, you realize you have to come back and work out the next day. It's an adjustment you have to make."

How do you think Tech will do in the tournament?
"I never like to come out and say how good we are. But I think we have a lot of talent. You have to come out every night with fire in your eyes. You have to have intensity. If we do that, we can play with any team in the conference."

Can you win the tournament?
"I believe we can."

Women cagers host top-ranked Longhorns

By JEFF HOLLOMAN
UD Sports Staff

The Texas Longhorns arrived in Lubbock Thursday to begin a two-game Panhandle tour, playing Wayland Baptist in Plainview last night, and returning to the Hub City today to play Tech at 7 p.m. tonight in the Coliseum.

The Longhorns come to town sporting a perfect 22-0 record and a number one ranking in the state.

UT last week was tied for the top spot in the nation with last year's national champion, Old Dominion (ODU).

On paper the Longhorns are impressive. They hold down second place in team scoring behind SFA, averaging 80.1 points per game. Texas is rated just above Tech in two areas. UT is averaging 42.9 rebounds per game and is making 69 percent of their free throws.

As a matter of fact, Tech stands just behind UT in almost every statistical category.

The Raiders were ranked third in the state last week before losing to Texas A&M Monday. The most obvious reason for the Raiders' lethargic play was due to the team's anticipation of possibly knocking off the top-ranked Longhorns.

"We were so flat Monday," said Coach Gay Benson. "Our freshman did not play a consistent game like they did against Wayland. We just let A&M have one they never should have gotten."

So now, what about the team's attitude as the UT-Tech contest looms ahead?

"I think that was our problem before we played the Aggies," said Benson. "We were so concerned with beating Texas that we completely forgot to give A&M any consideration."

The Longhorns do have an impressive team and they are undefeated, but the Red Raiders have lost only one game in the Bubble.

"I know that we can beat

them if we play as well as we did against Wayland," said Coach Benson. "In fact, if we could have two halves like the first half we had when we played Texas earlier, we'll beat them for sure."

Indeed, earlier in the season in Austin when the underdog Raiders went into the locker room at halftime tied with the Longhorns, they thought they had their victory over UT then.

But the Raiders came out flat and were held scoreless for the first ten minutes of the second half. Tech finally woke up long enough to hold the score down to a 30-point deficit as the Longhorns shot the nets off the buckets in beating Tech 77-47.

Since that road trip, Tech has won 12 of 14 games, compiling a 19-7 record.

Both UT and Tech are running teams and have good outside shooters. But Texas will be without the services of high-scoring Jackie Swaim (6-2).

Tech's only line-up changes include the replacement of the departed Nodia Vaughn with the scrappy freshman, Vicki Lee at guard, and the hot-shooting Lynn Webb taking over for Rose Penkunis at forward. Other Tech Starters are Pam Stone, Gwen McCray and Louise Davis.

"Without Swaim, Texas is more vulnerable inside, but their guards are classic outside shooters and have been holding UT together," said Coach Benson.

The Texas Longhorns, as opposed to the Raiders, have been getting large crowds at home. There were 7500 people at the Drum in Austin to see the UT-SFA game.

The number of fans at the Bubble has been increasing steadily every game. The Raiders are hoping for their biggest crowd ever to watch them attempt to pull off the upset of the year. And with Tech facing the top-ranked Longhorns in the Bubble tonight there's been no better chance for an upset to occur.

Leaping

Tech's Vicki Lee leaps toward the basket in an effort to rebound a missed shot against Texas A&M. The effort by the 5-4 Lee was for naught as the Aggies took both the rebound

and the game, 66-64. Tech will compete against the nation's top-ranked team, Texas, at 7 p.m. tonight in the Coliseum.

McHaney chosen president-elect

Tech women's athletic director Jeannine McHaney has been chosen president-elect of the Southwest Association for Intercollegiate Athletics for Women (SWAIW).

McHaney will follow current president Donna Lopiano, women's athletic director at The University of Texas at Austin. McHaney will be installed in January of 1981.

SWAIW is composed of 71 university member institutions from a four-state regional area encompassing Texas, Arkansas, Louisiana and Oklahoma.

Athletic director at Texas Tech since the department's inception in 1975, McHaney has served at the national level on AIW's long range planning committee for the past several years and as that committee's chairman in 1978.

For the Texas AIW she has

held several responsible posts, including founding and honorary membership in the Texas Commission on Intercollegiate Athletics for Women, membership on the TAIW Executive and Editorial Boards and as president of the statewide group in 1976-77.

McHaney

Men netters open season

The Tech tennis team will make its debut at 2 p.m. Friday against Angelo State at the Tech Courts.

Coach Mark Hamilton is looking for an overall improvement in last year's 10-14 record and eighth-place finish in the Southwest Conference. Three junior college transfers and an outstanding freshman recruit should aid the improvement effort.

"We are hoping to improve our position in the conference and these early meets will give us ideas on what things we still need to work on," Hamilton said.

The Raiders defeated Angelo State 7-2 last year in San Angelo. The meet should be a good warmup to next weekend's West Texas State Indoor at Canyon.

Hamilton said he would probably play Zahid Maniya in the No. 1 position Friday, followed by Chow Wah, Jose Rivera, Jeff Bramlett, Mark Thompson and Gregg Davis. Wah and Davis are returning lettermen while Maniya, Rivera and Thompson are JC transfers. Bramlett is a freshman from Midland.

Women tankers meet SMU

The Tech women's swimming and diving team travels to Dallas to face powerhouse SMU in a dual meet at 1 p.m. Saturday. The Raiders are 5-2 in dual meet competition coming off a resounding 85-44 victory over Texas A&M two weeks ago in Lubbock.

Tech's record stands at 1-2 against SMU. The Raiders' only victory over the Ponies came in 1976, but Raider Coach Anne Goodman thinks her tankers have a chance to even that mark this Saturday.

"We'll give them a really good meet," said Goodman, "and I feel we have a chance, however slim, of beating them. It will be difficult because they are a super tough team, but they do lack depth in some areas where we're strong."

The SMU tankers will be led by 1979 AIAW National Qualifier and State Champion Martina Bebin in the distance free and butterfly and by National Qualifier Laura Geibel in the spring free.

In diving, the Ponies boast one of the most powerful teams in the nation including Olympic Medalist Janet Ely Thornburn, 1979 AIAW National Champion in one and three meter diving, and Michelle Hain, 1979 Pan-Am Games Champion.

Twisters travel to Austin

The Tech Twisters, Tech's gymnastics team, will compete in a triangular meet with Texas and Texas A&M Saturday at Gregory Gym in Austin. Warm-ups are set for 6 p.m., with the meet scheduled to start at 7.

It will be the first action of the 1980 gymnastics season for the Twisters.

Tech, which finished 5-5 last year, competes in the Texas College Gymnastic Club Conference against schools such as Texas, Texas A&M, UTEP, and North Texas State.

The Twisters competed last Saturday in an intra-squad meet at the Intramural Gym.

Members of the Tech gymnastics team are: Drew Oberbeck, Frank Graffeo, Alphonso Kelley, Kellee Bowers, Danny Lautenslager, Kevin McDonald, Kris Brown, Ross Royce, Marcus Lines, Brad Clement, Mark Hempstead, Rod VanSickle, Rich Whitker, and Manuel Iriondo.

Wrestlers host tourney

The Tech Wrestling Club will host the fourth Texas Tech Invitational wrestling meet today and Saturday in the Intramural Gym.

The six-team meet kicks off at 7:30 tonight, with the finals scheduled for 9 p.m. Saturday. Tech, Richland, Rice, Texas A&M, North Texas State, and the University of Texas at El Paso are the schools that will be participating.

Tech hosted and won the third Tech invitational last year. In last season's competition, the team finished second and third in a number of dual and triangular meets and landed a third-place finish in the 1979 state meet.

In recent on-campus, dual meet competition, the Raiders won a pair of bouts with opposing schools but dropped a 45-12 decision to New Mexico Highlands. Tech posted 34-18 and 27-24 victories over UTEP and North Texas State, respectively.

Wrestlers who will be competing for the Raiders in this weekend's meet include: Barry Roberts (118-points division); Les Davis (126 points); Bret Comer (150 pounds); Bill Aguirre (158 pounds); Andy Wilson (167 pounds); Rick Alder (177 pounds); and Keith Walker (190 pounds).

Recognition of Performance is Key to Success at Natural

Career opportunities available for Petroleum, Mechanical, Electrical and Computer Engineers

Natural Gas Pipeline Company of America provides an ideal environment for entry level engineers. We're big enough to be involved in every facet of our industry. Big enough to have equipment and facilities among the most modern available. But not too big to recognize individual achievement. That's why many of our engineers, who started at the entry level, have advanced quickly into management positions.

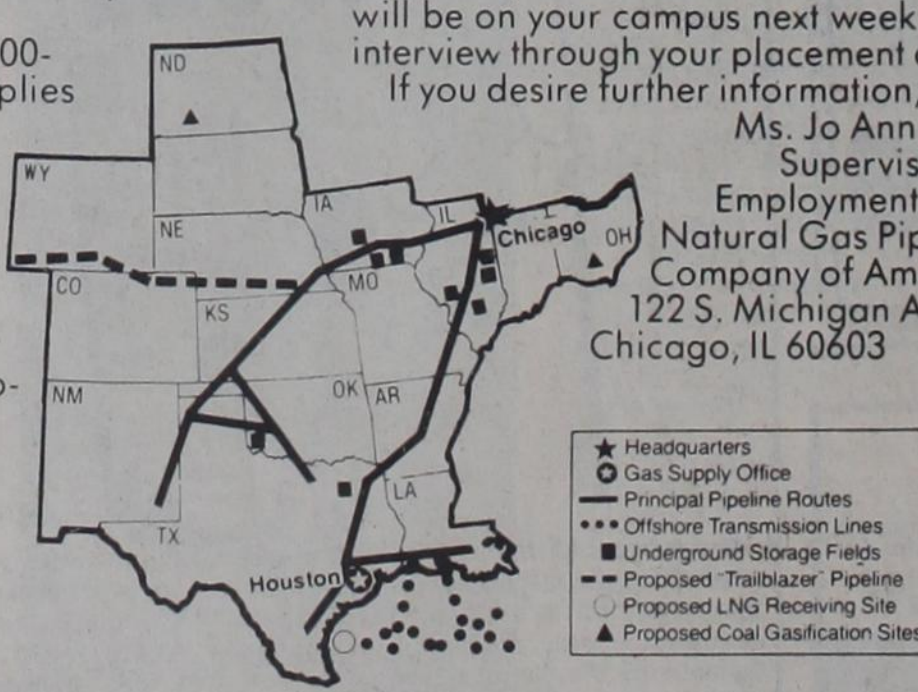

Such opportunities are available to you at field posts throughout our 11-state operating area and at office assignments in Houston and Chicago. And we'll help you succeed—with on-the-job training and educational assistance. These are but two items in a comprehensive employee benefit package.

Natural, with its nearly 12,000-mile transmission system, supplies the natural gas energy needs of 12 million people in Mid-America. Our pipeline network serves 49 utility customers in a 9-state market area. Each year, NGPL transports almost 6% of the total gas production in the United States.

Our day-to-day operations include on- and off-shore exploration and production, as well as transmission and storage. Far beyond those traditional operations, we're planning an 800-mile pipeline, "Trailblazer", to tap into gas reserves in the Overthrust Belt of the Rocky Mountains. We're utilizing biogasification and synthetically-produced gas and are actively pursuing the development of coal gasification and the importation of liquefied natural gas. In the future, we hope to tap supplies from the Arctic and Mexico. Whatever avenues of supply or technology open up in our industry, we'll be there—among the frontrunners.

If you are a skilled, imaginative, aggressive engineer, who wants to be rewarded for performance, now's the time to act. Our recruiters will be on your campus next week. Arrange an interview through your placement office today.

If you desire further information, contact:
Ms. Jo Ann Lazuka
Supervisor of Employment Services
Natural Gas Pipeline Company of America
122 S. Michigan Avenue
Chicago, IL 60603
