“My heat pump’s so efficient it saves money. And it’s a clean system. I like what it means for the environment.”

—Elta Chandler
Park Board Member

Elta Chandler cools and heats her home with a heat pump because it saves money and energy. And since it's electric, it's "wonderfully clean."

A heat pump uses the energy in the air to keep her home comfortable all year. Even on cold winter days there's heat in the air. A heat pump captures that heat and uses it.

And it costs less to operate than a gas furnace. It's so efficient that for each unit of energy it uses, it creates two to three units of heat.

In the summer a heat pump becomes a high-efficiency air conditioner, capturing the heat inside the home and removing it.

For more information, call a heat pump dealer or TU Electric. It's your chance to save more than money.
