KERR BARS HIMSELF FROM BIG LEAGUES

CHICAGO, April 18.—Wee Dick Kerr, White Sox holdout pitcher, cast his fortunes with semi-professional baseball when he hurled the first seven innings of a game in the Midwest league. This action automatically bars him from the big leagues. Kerr said that he had signed a three-year contract for \$17,500 with the semi-professionals. Kerr's home is in Paris, Texas.

WOMEN FAVOR LAW MAKING - CHILD DESERTION FELONY

OKLAHOMA CITY, April 18.—Some laws concerning women and children may be asked of the next legislature, it was indicated in resolutions adopted at the meeting of the Second District of the Women's Federated Clubs of the state, just closed at Weatherford. It is proposed the legislature enact a law making it a felony for child desertion and another requiring publication of intention of marriage. Bills touching on both these subjects were introduced in the last legislature, but after some discussion were laid aside. These matters, however, have gained sufficient support that it may be sure they will receive some attention at the next session of the legislature.

THREE MARINES DIE WHEN PLANES CRASH

WASHINGTON, April 18.—Three marine corps flyers were killed late Monday when two planes collided in midair over the Quantico (Virginia) flying field. The dead are Lieutenant Earl M. Randall of Winchester, Mass., Lieutenant Duncan W. Lewis, of Memphis, Tenn., Private Joseph Googhe of Chicago. Lieutenant Randall was flying a Pobje plane, unaccompanied, and Lieutenant Lewis with Private Googhe, was flying in a Wright machine. The two machines were being piloted in battle maneuvers when they suddenly crashed together and dashed to earth, a mass of wreckage.

INTRIGUING ROMANCE REVEALED IN FLIGHT OF MME. LEBAUDY AND DAUGHTER

Jaqueline Lebaudy and mother.

An intriguing romance is revealed in the disappearance of a Paris sanitarium of Mme. Jacques Lebaudy, acquitted slayer of her husband, "Emperor of the Sahara," shot to death at their Westbury, N. Y., home in 1919, and her daughter, Jacqueline. Roger Sudreau, detective, said to have married Jacqueline so that she might inherit her father's fortune, has police searching for the two women. In denying that he married her to facilitate handling the Lebaudy fortune of several million dollars, Sudreau asserts that he and his wife were devoted to each other. An artillery officer is believed to have aided the women in vanishing.

NEGLECT AND IGNORANCE IN APRIL COST LIVES OF MANY BABY CHICKS

By F. W. KAZMEIER, Former Poultry Husbandman A. & M. College Extension Department.
In April many thousands of baby chicks are lost representing a financial loss of hundreds of thousands of dollars. To a very large extent this loss can be prevented by proper feeding and management.
A baby chick the first few days is very delicate and helpless. It gains strength very rapidly so that at the end of ten days they are quite lively, vigorous and strong. It is also surprising the rapid growth they make under favorable conditions.
In discussing baby chick diseases for good reason, we must stress preventive measures rather than the cures. It is seldom possible to cure a baby chicken or growing chick by giving them medicine.
We have found it wise to build up the vitality of our chicks so that they are better able to cope with chick diseases and troubles. A strong chick is less liable to contract a disease and if it does, is better able to throw off the disease. To build up the chick's vitality provide the following essentials: Heat, milk, green feed, grit, water, a dry place to live and easily digested food. Heat is perhaps one of the greatest essentials. Without heat you cannot expect to raise strong chicks. Heat appears as important for their growth as for plant growth. Thousands of chicks die each year from chilling. A temperature of 100 degrees for the first week; 95 degrees the second week, 90 degrees the third week, gradually reducing the temperature about 2-1.2 degrees each week until the chicks can do without it.
Milk Means Much.
Milk means much to the life of a baby chick. Milk seems to be almost necessary to insure proper development of the chick. For this reason the so-called buttermilk starting foods have gained a wonderful popularity during the last year. Sour milk is the best and should be provided as soon as the chicks are taken from the incubator, or hen. Clabber milk may be fed with good results. In the winter, sweet skim milk may be fed. The milk must be fed in such a way that the chicks do not get into it and become wet and chilled.
Green food for growing chicks acts as a wonderful stimulant and aids and increases digestion. Few people realize the importance of green food in promoting the growth and keeping the chicks healthy. If you do not know how much green food they will consume, just give them an opportunity to eat all they want and you will be greatly surprised. Any kind of succulent green food such as growing oats, clover, Bermuda grass, rape, turnips, and collards will do. We consider green food necessary in order to keep the chicks healthy and growing rapidly.
Grit is another important thing for small chicks. We always place several shovelfuls of gravel, coarse and clean sand, where they can have access to it. If this is not available we provide commercial grit.
Overcrowding is one of the greatest causes for all kinds of chick troubles and diseases. Most people overcrowd their chicks at some age. Many do not appear to seem to realize that

IT'S VENUS, NOT MARS, THAT MAY SUSTAIN LIFE

Mars Is Dead, Says Scientist, But Venus Is Infant Planet.

STOCKHOLM, April 18.—The planet Mars—an old dying world—is receiving altogether too much attention from earthly scientists these days and nights, while the up-and-coming young planet Venus is just waiting for a chance to know us better.

This is the conclusion of Professor Svante Arrhenius, Nobel prize winner and one of Europe's foremost scientists and astronomers, who lectured here on the prospect of wheeling from the heavens the secrets of some of our celestial neighbors, and especially Mars, when that planet swings into closest proximity to the earth two years hence.

Mars Frozen Ball.
If scientists and long distance radio fans really want to communicate with some celestial neighbor, Professor Arrhenius said, they will not find Mars very cordial, for the old fellow—dying or already dead—is covered with hard frozen sand and is so dry that its only rain is meteoric dust. Perhaps a few sea weeds still exist, he said, but it is highly improbable that even low animal life could find enough to sustain it.

Venus, on the other hand, offers potential possibilities to the patient astronomer, Professor Arrhenius declared. By "patient" he meant about a billion years, he explained. At the expiration of this period, he thought a flourishing colony of intelligent beings might be discovered on the bright little planet.

No Drouth Here.
"Everything on Venus is dripping wet," he continued. "The planet is covered by constant rain-clouds ten kilometers thick, preventing any rays from the sun penetrating to the bottom of the air-strata. Life on the planet of love is short and intense."

Living organisms, he thought, might be found at the polar regions where the temperature was slightly lower than other parts of the planet. "When the earth is extinguished," he concluded, "it will be Venus, queen of heavens, that will take over the role as carrier of culture."

CREEK DAMMED UP TO HOLD CORN MASH

ALBA, Texas, April 18.—County Officers McCabe Alston and Estes, aided by City Officer McColum and Federal Prohibition Officer McKenzie, made a raid on a corn whisky incubator in the extreme southwestern part of Wood county Sunday noon. They found several large barrels which had been emptied and only part of the furnace and other fixtures of the still. Later they found a small creek near by. It had been dammed up, making a pool of about fifty yards long. The stream was being used for the making of mash. It was running from knee to waist deep in pure corn mash.

This is the first finding of this nature ever on record in this part of the country, as most moonshiners use barrels in which to make mash. These moonshiners evidently couldn't make enough at a time, and took the creek for bigger resources.

USE OF AEROPLANE IN FRANCE - JUMPS OVER 1000 PER CENT.

PARIS, April 18.—Nearly 2,000,000 miles were traveled by French commercial aeroplanes in 1921, involving more than 6,000 flights, according to an announcement by the French air ministry. A total of 10,330 passengers, 366,278 pounds of merchandise and 20,758 pounds of postal matter was carried. These figures are triple those of 1920 and ten times those of 1919.

DETROIT NOW BUILDING LARGEST MASONIC TEMPLE

DETROIT, Mich., April 18.—Construction work has been started on Detroit's new \$5,000 Masonic temple, one of the largest and costliest structures of its kind in the world. The building is to occupy an entire city block on the northeast corner of Temple and Second avenues, close to the business quarter of the city, and will be one of the most lavish in design and furnishings to be found in the country, it is asserted. It will be fourteen stories in height, each story to have a mezzanine floor, making the building equivalent to a twenty-five-story structure.
