BRACKETTVILLE, TEXAS

TIGER TIGER TIGER TIGER TIGER TIGER

The Fighting Tiger Football Team, shown above, during the action at the Charlotte-Brackett game at Charlotte, this past Friday night, September 8th. Unfortunately Brackett was defeated 29-7, with Brackett's touchdown being scored by Steve Karl. Evidently several fumbles by Brackett contributed to this early defeat witnessed by a large crowd from Brackett.

DON'T MISS THE NEXT GAME, HERE, WITH LA PRYOR.

SWTJC

RESIDENT GRADUATES

RECENT GRADUATES -- Allen Breaux of Brackettville was among 10 Southwest Texas Junior College students graduating in August from the one-year air conditioning and refrigeration technology program. The graduating class included (front row) Breaux; Santos Mendoza, Crystal City; Abelardo Torres, Del Rio; Homero Morin, Uvalde; Carlos Carares, Batesville; (back row) Jim Everett, Uvalde; Damon Scevers, Del Rio; Josh Cos, Campwood; Ernest Shimp, Instructor; Manual Hurtado, Uvalde; and Rafael Esparza, Del Rio. Mendoza was named the outstanding student for the graduating class. (SWTJC news Photo).

HILL CARAVAN

There will be a Hill Caravan here in Brackettville, Thursday, September 21, 1978, at 9:00am. Tyrrell Hill will be among the Members of the Caravan. Tyrrell Hill wants to meet the people, answer their questions, and see what they think. Everyone invited. The rally will tentatively take place at the Civic Center.

VEGETABLE
Task Force

THE SLANG PHRASE 'DON'T BUG ME'

The slang phrase "Don't bug me!" must
have been first uttered by a frustrated
home gardener. If you are gardening in
Texas, you are going to be "bugged" at
one time or another.

Many of our fall gardens are growing
well and so are many of our water bills
because there have been long dry spells.
But, actually dry weather is the best
growing condition for vegetable pro-
duction. Dry means little or no fungus
problems. Insects, unfortunately, are
not so much affected by dry weather con-
ditions.

Insects are bad enough, but a fungus-
insect combination is murder--you may
remember this occurrence last spring when
the fungus killed the plant from the
bottom up, and spider mites killed it
from the top down.

So we still have insect problems.
But, because our plants are still small,
we can control them better. This better
control is made possible by complete
spray or dust coverage of bottom and top
of leaves without worry of "poisoning"
our edible vegetables--there are none
yet. Regardless of the insect to be
conquered or insecticidal weapon to be
used, there are several important hints
which will make your control task eas-
ier and more effective.

First of all, read the label on the
pesticide BEFORE you mix and use it.
This not only will prevent you much
concern later but also may prevent the
burning of your beautiful plants be-
cause of an overdose. Use only the
amount recommended on the label. In the
case of insecticides, twice as much does
not necessarily do the job twice as good.
It may kill the plant twice as fast!

Secondly, use additives to increase
the effectiveness of your pesticide. By
additives we mean liquid detergent and
vinegar. Liquid detergent (some people
prefer Joy since "Joy in the garden"
sounds so nice!) acts as a spreading
agent on the leaf's surface. When
water is beading and running off your
plant as it does on a newly waxed car,
your spray is not covering and protect-
ing the plant's surface.

This kitchen detergent will make the
spray "wet" the leaves. Be sure to add
this teaspoon of detergent per gallon
of spray material after the sprayer has
been filled and pesticide added; other-
wise get ready for more soap suds than
you're going to know what to do with!
The vinegar is an acidifier for our
alkaline water. Spray materials, es-
pecially malathion and diazinon, will
remain much more active for a longer
period of time if applied in an acidi-
fied water spray.

So now we know to read the label and
the "extras" to add. Now for the in-
sect problems which most of us probably
will encounter. First, the cabbage
looper, more appropriately, the re-
sistant cabbage looper--it is referred
to as "resistant" because it can lit-
erally drink the more common insecti-
cides.

If you are wondering how to tell if
you have this insect pest or not, the
simple answer is that your vegetables,
especially cabbage, broccoli, cauli-
flower, lettuce, and collards, will
suddenly become holey. The beautiful
cabbage that you had this morning looks
as if it has been shot with buckshot by
evening!

These critters are also on the bottom
of leaves and can easily--yes, easily--
be controlled if you use the proper in-
secticide. It is the safest insecticide
available, organically approved, and
composed of Bacillus thuringiensis bac-
teria. It naturally kills all leaf-eat-
ing caterpillars including tomato horn-
worm, pecan webworm, corn earworm, gypsy
moth larvae, and bagworm.

This Bacillus is marketed under many
names including Bio-Spray, Thuricide,
Dipel, and Biological Worm Spray. The
use of the liquid detergent or a commer-
cial spreading agent is especially im-
portant when using this pesticide to
spray members of the cabbage family
whose leaves are especially waxy.

Now that we have a cure for larvae or
worms, what about beetles and other
"buggers" of our garden? Unfortunately,
the Bacillus will not control these.
The old stand-by insecticides of diazi-
non, malathion, or Sevin (carbarly) must
be used. These can be mixed with Bac-
illus to give a broad spectrum control.
All insecticides used should be proper-

Present Day Myths

by: JOE TOWNSEND

Freedom of speech is guaranteed by the Constitution and hence acceptable to every good citizen. I suppose everyone has his own idea as to limitations of this freedom. There are certainly things that I feel should not be allowed the shelter of this tenet. The U.S. Supreme Court gives freedom to the dissident to curse a police officer with impunity. This I can't agree is right. Things are allowed to be said in courts of law that are legally acceptable but certainly do not promote the general welfare. Many things said on TV do not meet what I personally feel are standards of good and right. Many of these things however, I have to agree are certainly protected by "Freedom of Speech." My own problem comes really when I read or hear someone say something with which I do not agree. It may be factual. It may be true. It may even need to be said. If I don't like it, however, I find myself condemning the speaker or writer. Regardless of my personal feelings any person has the right as an American citizen to express himself as he sees and feels he wants to as long as he does not become personally abusive in misstating facts or truth. It's an old trite quote but worth repeating, "I may not agree with what he says, but I'll fight to the death for his right to say it." This is the American Way.

RETAMA GARDEN CLUB

The Ratama Garden Club Members started this year with a very delightful tea in the patio of Mrs. Julian Lucas.

The fish pond was a conversation piece with gold fish, blooming water lillies and a fountain.

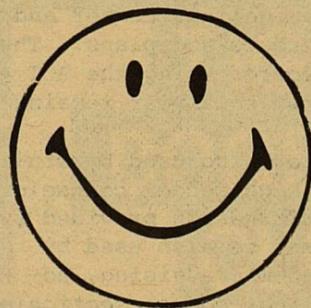

Hostesses were along with Julian Lucas were Pauline Lucas, Kathline Smith and Edna Tarver.

Mrs. Lucas also honored Clarice Gravenston from San Miquel, DF Allende, Mexico.

GREEN THUMBS

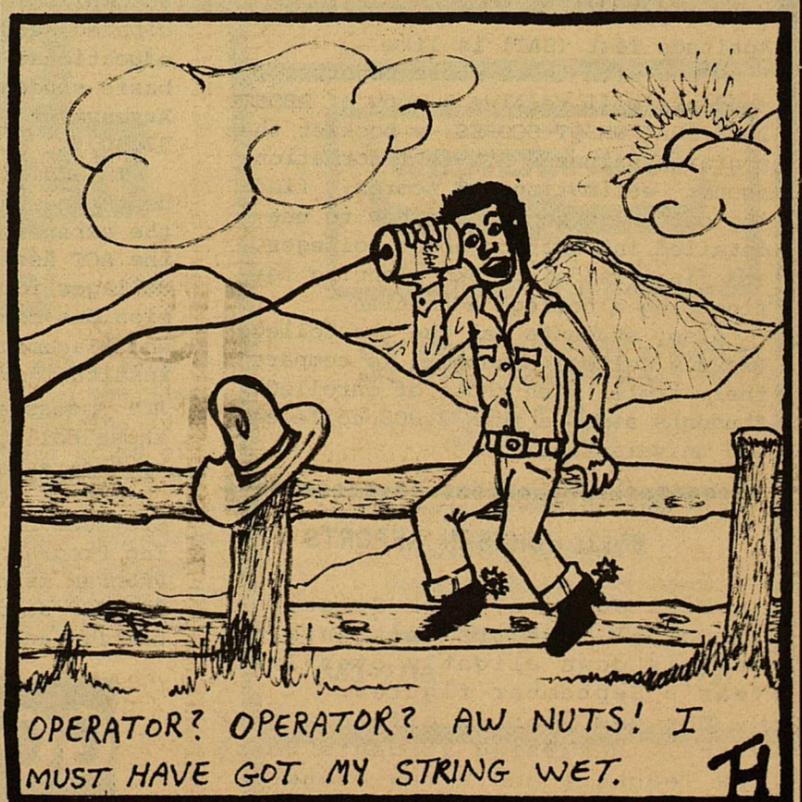

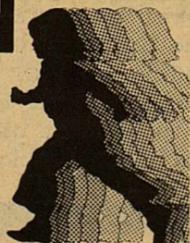

by: JOE TOWNSEND

Now is the ideal time to fertilize lawns, shrubs and ornamentals. The rain and a break in the intense heat has set the stage for fertilizer to have it's best opportunity to do good. It will help to get everything ready for winter. Grass will have opportunity for most growth, as will shrubs and ornamentals. After a particularly stressful summer, all the help that growing plants can get is needed. If these are properly fed now they will have a much better start in the Spring, and a better year all next year.

PSAT/NMSQT

Lee Schermerhorn, guidance director at Brackett High has announced that sophomores, juniors, and some seniors will be able to join over one million other students around the world in taking the Preliminary Scholastic Aptitude Test/National Merit Scholarship Qualifying Test (PSAT/NMSQT) this fall. The test, co-sponsored by the College Board and National Merit Scholarship Corporation, is an important step in making college plans.

Scheduled for October 24th, at Brackett High, the PSAT/NMSQT measures verbal and mathematical aptitude -- two abilities important in doing college work. The test can also lead to other opportunities for high school students. For example, students can ask to participate in the College Board's student Search Service which helps colleges learn about students like them.

By taking the PSAT/NMSQT, they can enter the competition for scholarships administered by the National Merit Scholarship Corporation and can get a good idea of what the Scholastic Aptitude Test (SAT) is like.

Along with their score reports, students will receive a copy of ABOUT YOUR PSAT/NMSQT SCORES, a booklet that contains valuable how-to information about: estimating SAT scores; finding out where to get and how to use detailed information about colleges and financial aid; and planning for financing a college education.

Also, students can use the College Board's College Handbook, to compare their scores with those of enrolled students at more than 2,800 colleges and universities.

BILL JOHNSON REPORTS

Bill Johnson, High School Principal, reports that enrollment is down slightly over last year's September figures.

The new year is off to a good start. Returning students found new Teachers and a few changes over last year.

ACT ASSESSMENT PROGRAM

Will it be education or vocation after graduation?

An answer to that question and the subsequent planning for either school or job are facing Brackett High School students, especially juniors and seniors, as they begin the 1978-79 school year.

Guidance counselors, parents, friends, and a national service called the ACT Assessment Program will play important roles in that decision making and planning for many of the students.

Designed to provide extensive guidance information for education and career planning, the well known and widely used ACT Assessment Program is recommended for use by student applicants at nearly 2,700 colleges, universities, and scholarship programs.

Brackett High students will have five opportunities during the 1978-79 school year to make use of the national program, which consists of four tests and a two-part questionnaire. Students complete the questionnaire at home as part of the program's registration process, and then take the battery of tests at area test centers on any of five weekend national test dates. said Lee Schermerhorn, Counselor.

The five 1978-79 national test dates (and corresponding registration periods) are:

October 21, 1978	(Aug. 7 - Sept. 22)
December 9, 1978	(Oct. 9 - Nov. 10)
February 10, 1979	(Nov. 27 - Jan 12)
April 7, 1979	(Jan. 29 - Mar. 9)
June 23, 1979	(Mar. 26 - May 25)

At area test centers on those five dates it takes students about three hours to complete the ACT Assessment's four exams covering subject areas of English, math, social studies, and natural sciences. On any of the five test dates, most local students will take the tests at Del Rio or Uvalde, Texas. Mr. Schermerhorn said the test scores provide an assessment of general educational development and the questionnaire section information focuses on academic and nonacademic accomplishments and interest, anticipated needs, as well as career and educational interests and plans. The basic student fee for using the ACT Assessment Program this year remains \$7.50.

In addition to being used by students and their high school counselors, the extensive information provided by the ACT Assessment is also used by colleges for academic advising, admissions counseling, course sectioning and placement, student services, and institutional research. The students' ACT Assessment reports are sent to only those colleges specifically designated by the respective students.

One of several educational services provided by the American College Testing Program (ACT), the ACT Assessment Program is used each year by more than 900,000 students as part of their education and career planning.

STADIUM SEATING

Mr. Koch reports that the reserved seating area at Tiger Stadium has been expanded to include 28 more seats. The reserve seating area now extends from 40 yard line to 40 yard line, the best in the stadium. Only one reserve seat remains to be sold.

TALENTED YOUTH

Brackett High School Counselor, Lee Schermerhorn has been appointed to serve as the 1978-79 co-ordinator of this area's Talented Youth Seminars. Monday he was busy planning for the first planning session to be held September 28, 1978, at Southwest Texas Junior College in Uvalde. Representatives from eight area schools will attend the meeting.

The Talented Youth Seminars Program, established in 1963, addresses itself to the needs of the students who are identified by their teachers as having outstanding abilities and who are capable of high performance. (State Board of Education, 195).

The objectives of the Talented Youth Seminars include: leadership training, self awareness, creativity, research skills, abstract thinking processes, and career and vocational opportunities.

Students are selected to participate in the seminars if they meet a set of stringent criteria: Junior or Senior students who, (1) have high mental ability, scores on standard achievement tests (above the 90%), (2) school grade average of 85% or better, (3) leadership ability, (4) creative or productive thinking, (5) talent in the visual or performing arts.

Other factors such as interest in the program, social and emotional adjustment and teacher recommendations are also considered.

The seminars have provided some unique learning experiences for these students. Programs have included lectures, field trips, and college classroom visitation.

Brackett High Students who participated in the program during last school year were Paul Koch and Margaret Starzel. This year's participants are Margaret Starzel and Cathy Wills.

Senator Lloyd Bentsen Watching Washington

Which is the better bargain, a \$150 water heater or a \$180 water heater with superior insulation that will save you \$1-\$2 a month on your gas or electric bill?

Sometimes it pays to look beyond the price tag. In this case the better insulation would more than pay the difference in price over an 18-month period. And over 10 years you would save eight times as much.

This is a lesson I've been encouraging government purchasing agents to learn: the cheapest buy may turn out to be the costliest over the long run.

In the past, when buying such items as hot water heaters and air conditioners, government has tended to consider only the initial purchase price with no thought given to costs of operation and maintenance.

Operating costs—especially in a time of energy shortage—can add substantially to the price of equipment. So, in many cases, government purchasing practices that are intended to save money for taxpayers wind up costing them more. Sometimes substantially more.

The practice of buying from the lowest bidder, for example, has been long-established in government as the most effective way to eliminate favoritism and make sure taxpayers get the most out of their money.

But, in considering only the initial purchase price when calling for bids, government bidding procedures lag behind modern business and management techniques.

I am hopeful that the Senate this year will approve my legislation to encourage federal agencies to make a full evaluation of any equipment being bid on, including the estimated cost of operating and maintaining it over the years.

The measure, which I originally introduced in the last Congress, was approved recently by the Senate Governmental Affairs Committee.

The approach it encourages is known as "life cycle costing." It has long been considered sound business procedure and it is time government made more use of it.

Even though it has had only limited use by government, "life cycle costing" is already paying rich dividends to taxpayers.

In one case the federal government bought some 8,000 hot water heaters that use 11 percent less energy than earlier models. Although these heaters cost a bit more they will save an estimated \$300,000 in the long run.

Another example is the purchase of 26,000 electric and gas ranges. They use energy much more efficiently than the models that government had bought previously. During their lifetimes, these ranges will save \$780,000.

And in another example the government bought 27,000 room air conditioners which are estimated to use 21 percent less energy than previous models. The lower operating costs will mean a savings of about \$400,000.

Considering operating and maintenance costs along with the initial purchase price is hardly a novel idea to businessmen who have to keep a close eye on the balance sheet.

But this is something that has been used far too little by the federal government.

The American people are fed up with wasteful government spending practices. They expect a dollar in value for every dollar they pay in taxes; but they are suspicious of empty anti-government rhetoric, and rightly so.

The people want concrete proposals for making government work more efficiently.

My bill, to promote government-wide use of "life cycle costing," is one concrete step which can be taken immediately to help achieve this goal.

PTA NEWS

It is PTA time again and you are invited to come to meet with teachers, other parents, and your school administrators. The PTA's purpose is to unite the school and parents and this cannot be done unless there is participation by both. President Beverly Gage will introduce the teachers and outline the PTA events for the coming year. Zulema Wilson will have refreshments so join us at 3:15 pm, Tuesday, Sept. 18, 1978.

JOE TOWNSEND

I'm sitting here at my desk pondering the weather. I know of no more useless way to waste time but I just kinda feel like wasting time. It's not that I don't have plenty to do - it's one of those sultry days - not a leaf stirring - broken clouds overhead and at the moment the sun is beaming down offering everyone exposed to its full glory a natural suana. So - what's to ponder? I hear a tropical storm has moved in below Brownsville and is moving generally in this direction. That could mean some good rains in our area. It could mean some floods. It could break up and mean nothing. It's kinda interesting to muse about the possibilities. If it brings heavy rains we need them generally. If it brings heavy rains it well could be harmful to some. If it brings light rain it would help almost everyone. If it brings light rain it could be detrimental to some. If it brings no rain many will be disappointed. I'm just glad I'm not God above. What a difficult time he must have trying to please his creatures. I just know that whatever He sends, I'll be glad to get and I'll get along.

VEGETABLE Task Force

CONTINUED FROM PAGE 2

ly timed, of the proper type, properly applied, and at the proper interval. Most of this information is found on the insecticide's label--READ IT!

And 1st, but certainly not least, we must mention most gardeners' 'ole acquaintance and worthy adversary--the spider mite. Smaller than a chigger; multiplies faster than a speeding computer; yet able to destroy a beautiful garden with a single, silent invasion--it is truly a super nuisance! Forget all all of the previously mentioned insecticides; gardeners must now use a miticide. Kelthane is the only available mite control for home garden use.

Once an invasion is noticed, spray every three days for four consecutive sprays. Use the previously mentioned detergent and spray under the leaves. Invasion will be signalled by yellowing areas or spots on the tops of leaves caused by sucking of mites. The bottoms of leaves will have a webby appearance, and mites can be seen if lighting if adequate and eyes are sharp. Control mites now while plants are small and populations are manageable. Wait until later, and you will loose your fall production!

STATE BOARD OF INSURANCE

1110 SAN JACINTO

AUSTIN, TEXAS 78786

Austin -- Adjustments to rates charged for auto insurance will be made on policies written November 1, 1978 and thereafter, according to new schedules adopted September 6 by the State Board of Insurance.

Of the forty rating territories in Texas, twenty will receive increases, eighteen will be reduced, and two will not change.

The average passenger car rate for the entire state will be 3.2% greater than rates charged during the past two years.

Present rates run from \$226 in the Southeastern territory to \$363 in Harris County. New rates will be \$224 in the Southeastern territory, a \$2.00 reduction, and \$377 in Harris County, a raise of 3.9% or \$14.00.

For the purpose of calculating the averages, the risk was assumed to be a 1978 medium priced Ford, Chevrolet or Plymouth, not used in business, but driven to and from work. No male operator under 25 was included in the family, and the coverages were assumed to be \$10,000/\$20,000/\$5,000 liability, \$5,000 personal injury protection, \$50 deductible comprehensive, and \$200 deductible collision. Actual rates will vary according to the type of car covered, coverages ordered, and the driving records of the individuals buying the insurance.

Insurance industry requests for increases were for an average of 8.9% on passenger cars, and the total on that basis would have been \$95 million in additional premiums. The amount granted by the Board is a \$35 million increase, about \$60 million less than was sought by the insurance industry.

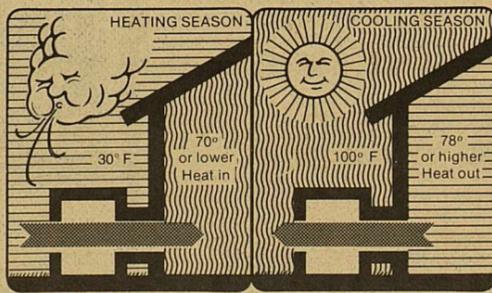

Efficient heating and cooling with the heat pump.

Research shows that in the South Texas area served by Central Power and Light Company, the electric heat pump delivers about 2½ units of heat for each unit of electrical energy needed to run it.

What makes the heat pump so efficient? A heat pump is based on the principle that all air contains heat from the sun. Even when the weather is cold and cloudy, the heat pump removes heat from the outside air and pumps it into your house. In the summer it reverses the process and becomes an air conditioner, moving heat from the inside to the outside. You get the desired temperature indoors year around.

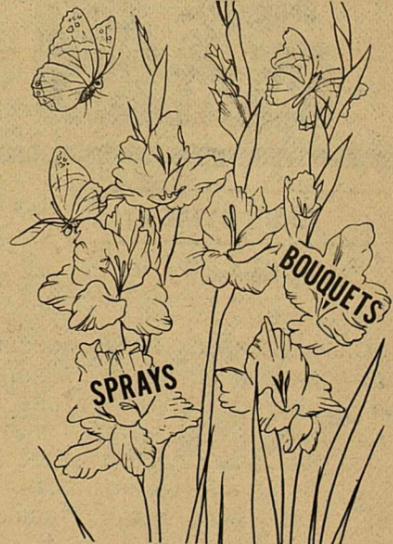

And because it uses energy so efficiently, the heat pump has the lowest operating cost of any type of electric heating equipment. If you are considering a new heating and air conditioning system, you should know that the heat pump is an important device for using energy efficiently.
