Fistula, Pollevil and the Teeth a Specialty

Derangements of the teeth of the horse very frequently lead to grave difficulties, both local and constitutional. The teeth become decayed, holes form in them and loochache is a comoccurrence. There is no such thing as blind teach, as is often termed, it is either a rotten or a long tooth. Ninety per cent of the horses that are fed condition powders to recuperate their health, need nothing but their teeth repaired.
