### A. S. C. News

#### Crop Measurements

As you know, Donley County will again use the producer certification method of determining crop acreages for 1967. It is very important that you measure your diverted acres out before you plant your row crop. If your farm is fully allotted and you plant all of your permitted acres to row crops, you may come up short on diverted acres (due to turnrows ditches, etc.) Be sure and allow enough for diverted acres and you shouldn't have any problem.

This office will again assist you in any way we can by planimetry, etc. However, our assistance does not relieve you of the responsibility of the acreages reported.

These provisions do not pertain to soil bank farms. Acreages on these farms will be determined by this office, as in the past.
