Question:

Is Lone Star doing everything it can to hold down costs?

Answer:

Yes!

We're operating more efficiently than ever before. But our costs are going up none the less... just like yours.

For instance, the interest rates on money we have to borrow for constructing new gas supply systems have increased dramatically. These rates have recently been at all time highs.

Within the last 18 months, we have invested nearly \$100 million:

- to build a large diameter, 400-mile pipeline from West Texas to the Dallas-Ft. Worth area,
 - for other facilities along this pipeline,
 - to attach major new reserves and
 - to pay for well drilling by producers...
- all for the purpose of assuring continuing natural gas supplies to our customers.

These investments don't even include the cost of all the gas we must buy to fill the line. In 1969, natural gas

cost us about 19 cents per thousand cubic feet.

Recently we paid more than 85 cents for major new supplies. And the price is still rising.

Costs like these are the price Lone Star must pay for your continuing natural gas supplies. It's important that you understand our need for adequate rates so we can continue to deliver clean gas energy to your home for winters to come.

We're doing everything possible to hold down controllable costs. But even with gradual rate increases, natural gas from Lone Star will still be your most economical and efficient non-polluting fuel.
