#### Helpful Tips For your Dishwasher

- ★ A dishwasher will usually hold a whole day's dishes. It takes as much hot water and energy to wash one dish as it does a full load. Stack your dishes out of sight in your dishwasher and wait until you have a full load to turn it on.
- ★ Use only detergents manufactured specifically for dishwashers. A wetting agent helps prevent water spots on glasses and silverware.
- ★ Clean the filter screen often. A clogged filter can reduce the efficiency of your dishwasher.

#### Water Heater Tips

- ★ To assure long life and efficiency, the water heater tank should have a small amount of water drained periodically. Once a month should be adequate. The purpose of draining water from the tank is to prevent sediment build-up in the tank bottom.
- ★ A water heater that's old, or too small for your family needs, can be wasteful, because it's working too hard and using too much energy to keep up with your hot water demands.
