Reddy's helpful tips for your Home Laundry

PLAN AHEAD

Sort clothes according to type of fabric, color-fastness, degree of soil and garment construction.

You'll save both hot water and electricity by doing similar items together.

Accumulate a full load before running your washer.

BE SELECTIVE

Choose the cycle that is precisely appropriate for the clothes you are washing. Is a "hot" temperature setting really necessary? Except for heavily soiled items, most loads will come clean in either a cold or warm wash. Look into cold wash detergents.

Use the least amount of detergent that will get your clothes clean — most loads require only an ounce or less!

Overloading causes extra strain and wear on your equipment; check the manufacturer's recommendations for load weight.

Balance your load by alternating small and large items.

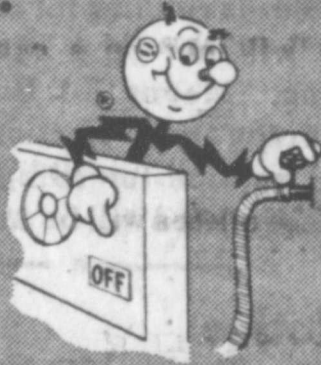

FOR SAFETY SAKE

Be sure control is "off" before reaching into your washer.

If one is necessary, use only a heavy duty extension cord.

Be sure your washer is grounded.

Keep dry cleaning agents, color remover, and Fibreglas out of your washer. It's a good idea not to wash clothes containing cleaning fluids in your washer.

**Use your
Refrigerator Wisely...**

- ★ Open and close the refrigerator and freezer doors only when necessary. Several items can be removed at once to reduce loss of cold air.
- ★ Freezers and refrigerators operate most efficiently when filled to the correct capacity. Foods should be placed slightly apart on refrigerator shelves for correct circulation.
- ★ Cover all liquids stored in the refrigerator (especially frost-free models). Moisture is drawn into the air from uncovered liquids making the refrigerator work harder.
- ★ Be sure your appliance is standing level so that the door seals properly. By setting a glass of water on the top, you can see if it is level.
