## A Shape Appeals to a Ghost

There must be somewhere in Geneva, among the fine marble buildings that house the physical plant of the League of Nations, a large filing case to which the appeal of King Zog of Albania has recently been consigned.

King Zog's letter to Secretary-General Avenol of the League was a request that the facts of the conquest of Albania be called to the attention of League members, with a request that they refrain from recognizing this "conquest achieved by blood and iron" and brought about "by all modern means a state of 44,000,000 has at its disposal when it plans an act of aggression."

In that same file would be numerous documents from Haile Selassie, the King of Kings of Abyssinia, faintly protesting from his English retreat, the occupation by Italian troops of his remote African domain. And beside it somewhere must be the files from China, couched in the polite and gentle language of the Chinese diplomat, asking the League to do something about the invasion of China.

The file grows apace, wherever it is, and yet of course these documents are doomed to no better fate than to yellow and fade, and await the attention of the historians of the future.

These shades of kings and governors are appealing to the ghost of a League, and there is a strange unreality about the whole procedure.

The League still exists, twenty-or-so members still adhere to it and maintain the marble buildings and the thinning secretarial staff that still goes through the motions of conducting a going concern.

Perhaps even so shadowy a performance is not entirely in vain. May there not come a time when the nations of the world, weary of the eternally-increasing burden of armament, sick of living beneath the perpetual shadow of crises, will turn again to try to reconstitute a better way of handling these things than by force and threat?

In its main objectives, the League of Nations has failed. It is easy now to see some of the reasons. Too heavy a dominance by the victors in a great war, too close a tie to the terms of settlement of that war, these are factors of failure which are easy to understand today.

Yet the League has done good work in some fields, has adjusted many minor problems, even though it failed in the great ones. It has not been entirely in vain. The experience gained in the "experiment, noble in purpose," will be a guide-post when the effort comes anew, as it must come some day.

It is a ghost, perhaps at Geneva, but it is a ghost of whose presence men are still constantly aware.

## Wings Over Atlantic

By chance or by design, the first scheduled flight of the Yankee Clipper across the Atlantic comes just 20 years after the great flight of the NC-4, pride of the navy, after the World War.

The NC-4 in those days represented all the lessons the navy had been able to learn from the World War—she was the last word in over-water flying development. Yet how odd the pictures of the NC-4 look today in contrast with the sleek and streamlined clippers! They seem scarcely akin at all, and not as a development one from the other, the NC dumpy and a mass of struts, the Clipper clean-lined and smooth.

With this evidence before us of what the past 20 years have done, who can doubt that great progress will mark the next 20? We shall fly to Europe as easily as we now fly to New York or Chicago.

But will there be a comparable progress in the uses to which these magnificent ocean-birds will be put? The same intelligence that built the ships must provide the answer.

## Second American City

We have become accustomed to think of New York as the first American city, Chicago the second, at least in size.

But now we shall have to be more specific, and say "North American city" or "city of the United States."

For Buenos Aires, the beautiful capital city of Argentina, is now the second city of the Western Hemisphere. Its population, which has had a phenomenal growth in recent years, is now 3,304,000 as compared with Chicago's 2,584,444. The two cities are almost the same size geographically since Buenos Aires increased the federal district which marks the city as our own District of Columbia bounds Washington. During the past eight years, Buenos Aires has grown in population by 400,000 while the whole state of Illinois was increasing only 200,000.

All this is simply a visible evidence of the great forward strides that are being made in the more progressive countries of South America, destined to be great empires within this century.

## Enterprise Wins Again

The early bird still gets the worm, the squeaky wheel still gets the grease, and Sandy Henville got the job.

Because her daddy still believes in rugged individualism and in going out after what he wants, Sandy, his ear-old baby, is a Hollywood star.

Sandy's daddy is a milkman in Los Angeles. He was proud of his pretty little daughter, and like 87 per cent of all proud parents, he envisioned a movie career for her. But how was an obscure milkman to get the attention of movie moguls already besieged by swarms of adoring parents with cute babies?

Daddy remembered that on his milk route was one movie director. One morning, carefully weighted down by the morning quart of milk, he left Sandy's picture on the director's doorstep.

Sandy's in the movies now, because her daddy had rains and gumption. We drink a toast to him in a foaming glass of—milk.

Hollywood moguls have two predominant formulas for making news. They can't have two stars in love, they have them fighting mad at each other.

## Travel Note

YOU CAN NOW GO TO EUROPE IN LITTLE MORE THAN A DAY

IF YOU WANT TO GO TO EUROPE

## • BRUCE CATTON IN WASHINGTON

WASHINGTON, May 27. — It is a queer mixture of fantasy and fact that the Dies committee is unearthing these days.

If it shows how anyone at all can set up shop as a dealer in scare-stories about the "Communist revolution," and can drive a flourishing business in wild and wooly propaganda, it also shows that he can find a market for his wares.

And if this material about the "Jewish plot" is childish, put out through transparent superfluges, there is the sobering thought that if a Fascist type of uprising ever does occur in this nation it will happen along just the lines that the committee has been uncovering.

The formula is simple. As the Dies committee has exposed it, it goes like this:

### FIRST SELL "ISM" THREAT.

FIRST sell people on the idea that the Communists (plus the Jews) are getting ready to seize the government. Persuade them that if something isn't done an alien "ism" will dominate the nation. Keep feeding them a steady stream of propaganda to convince them that these horrid radicals are either just about to strike or have made such headway that the fruit will fall in their lap without much further effort.

Then bring together a group of patriots who are willing to "up-hold the Constitution" by taking up arms to crush this alien menace. Emphasize that it takes force to meet force.

Stress the fact that you have only the lightest and most patriotic of motives.

And then watch your time and wait for some storm cloud that will enable you to strike.

That, roughly, is the program as the congressional investigators drew it out of Dudley P. Gilbert and James Erwin Campbell. Gilbert and Campbell never got a great way with their scheme, to be sure. Gilbert admitted that Campbell and his mailing list of "40 influential people" were all that was left of Gilbert's original grandiose idea for a nation-wide organization of 3,000,000 "American Nationalists."

He said efforts to raise money for the venture had not been very successful, and ruefully confessed that they hadn't tried to collect initiation fees from the prospective 3,000,000—adding that if they had, things might have gone easier. He himself, he said, had put up the four or five thousand dollars spent on the venture to date; on more exactly, his wife had, he himself not being in funds of late.

### FRIGHTEN PUBLIC TO ACTION.

THE idea of sending out all the scare stories about the leftist plot, said Gilbert, was to prepare people for the trouble. No, he didn't favor a private army; what he had in mind was getting people in the frame of mind so that they would "offer manpower" to the police, the army, and so on when the red uprising took place.

Much the same sort of idea was in Campbell's mind, as revealed in his testimony. The U. S. army, he felt, would be the ultimate salvation of the government. It would have to act when the reds went a little farther, and would probably have to seize power in the different states, turning things back to the civil authorities only when the last vestiges of radicalism had been stamped out.

All of this boils down to little enough. John Hamilton told the committee that he has a "nut file" for crank letters about subversive activities, and that Campbell's famous letter to him belonged in it. And the whole episode might well be added to it, except for one or two things.

### PROPAGANDA STILL DANGEROUS.

IN the first place, the campaign of Gilbert, Campbell et al did succeed in one thing: it planted some damaging anti-Semitic propaganda all around the country, and the echoes of that propaganda will still be going about long after this specific campaign has been forgotten.

For another thing, the whole crack-pot scheme did lay down a blueprint for revolt. There is an audience for this sort of stuff. If, some day, someone with genuine organizing ability, adequate financial backing and a trifle more inventiveness comes along, here is the way he will operate.

He will peddle his embryonic dictatorship as a means for preserving democracy, the Constitution and American ideals generally. . . . and although in this particular case little enough progress was made, there was just enough progress to make you shiver when you think of the potentialities.

## Texas Today

Apparatus enabling the first completely automatic measurement of the velocity of light has been developed at the Harvard university physics laboratories by a native Texan, Dr. Wilmen C. Anderson, research fellow.

The 29-year-old scientist was born on a farm near Waco, was graduated with honors from the Waco high school at 15, received an A.B. at Baylor when 20, and the A.M. the next year. At Baylor he majored in physics and minored in chemistry and mathematics, and studied one year at the University of Texas. He went to Harvard in 1933 as an assistant to do graduate work. The ancient university on the Charles river gave him the doctor's degree in 1936 and two years later promoted Wilmen Anderson to a full time research fellow.

Thus equipped, the young Texan tackled the problem—timing light waves—that scientists have been grappling with since the time of Galileo, 300 years ago. Light waves travel about 138,000 miles a second, probably the highest velocity in the universe. For 250 years increasingly accurate measurements have been made, first by observation of astronomical bodies, and in the past century by experimental technique.

The equipment developed by Dr. Anderson is to be used in a long-term research project on the important question whether speed of light is constant. Many important theories and measurements in physics and astronomy are based on the assumption that light velocity is constant under all conditions. But evidence of past velocity measurements is inconclusive on this point.

Anderson's apparatus is the first light speedometer which has not required visual observation and which has been able to eliminate friction as a possible source of error in measurement. At the present stage it can measure the speed of light with an error range of only two and one half miles a second, and it is believed the equipment

will give the most accurate light-velocity measurements ever obtained.

In contrast with the large size of some types of light-speedometers, which utilize long outdoor tubes, Dr. Anderson's apparatus is contained in a small laboratory room and hallway. With the equipment four separate measures of the speed of light can be made per minute.

The basic principle of the Anderson apparatus is to impose a wave-form on a light beam in such a way as to compel the light to help in the measurement of its own speed.

The beam originates in a high-power 1,000-watt projection lamp. It passed first through a tube which modulates the beam at a frequency of 19.2 megacycles. In other words, the beam is made to fluctuate between bright and dim intensity 19,200,000 times a second. The beam may be pictured as issuing from the modulator tube in "saw-saw" lengths, or waves,—19,200,000 of them a second,—with each length bright at both ends and dimmer in the middle. So great is the speed of light that each wave is approximately 50 feet long.

Success of the apparatus depends largely on accurate modulation of the light beam at the high frequency, and this is controlled with an accuracy of one part in eight million by a standard frequency generator perfected at Harvard by Prof. George W. Pierce.

With the frequency of the manufactured light waves known, the main problem is to determine the exact length of the waves. Velocity is equal to the frequency multiplied by the wave-length.

The fluctuating beam is split in two by a small sheet of glass held at an angle across the light path. One side of the beam is sent off, up and down a hallway system of mirrors, until it has traveled about 135 yards. This distance is fixed, and has been measured with an accuracy of one part in 200,000. The other half of the beam is sent over a shorter path, about two yards long, whose length is slowly varied during the velocity measurement. Each half of the beam has the same wave-form, or light to dark fluctuation, as the original.

After traveling their different paths, the two beams are brought together again, this time focused on a photoelectric cell, a five-stage electron multiplier tube, which translates the light force into electric impulses whose intensity can be readily measured and recorded.

It is the intensity of the reunited light beam which gives the basic clue to the wavelengths. The inten-

**Congratulations to the Builders of La Casa del Rancho Flowers by Midland Floral Co.**

Fred Fromhold, Owner  
Member Floral Telegraph Delivery  
Phone 1286--1705 W. Wall

sity is directly dependent on the relation between the fluctuations of the two half beams as they reunite. If the fluctuations happen to coincide—that is if the bright parts of the other beam (the dark spots also will coincide)—then the fluctuations of light intensity on the cell will be at their greatest. On the other hand, if the two beams "cancel" each other—if the bright spots on one enter the cell with the dark spots of the other—then there will be a minimum fluctuation of the light intensity.

By a mirror mounted on a very carefully controlled gear, the Anderson apparatus alters the length of the short light path slowly and constantly during the recording. At the point where the light beams cancel one another it is known that the long path beam is entering the cell exactly 23 half-lengths behind the short-path beam, or, in other words, that the long light path is 23 half-wavelengths longer than the short path. Since the actual lengths of the two paths in meters is accurately known, determination of the wavelengths of the light waves becomes a matter of simple mathematics.

Dr. Anderson's experiments, leading to the construction of the present apparatus, have been under way for three years, and have been financed in part by the Carnegie Corporation of New York.

The first attempt to measure the velocity of light was made by Galileo (1564-1642) whose plan of visual observation of lamp-light speed between mountain tops failed because of the great velocity of light. The first successful measurement was made by Roemer, a Danish scientist, in 1676, who observed that the light of the moons of Jupiter took 22 minutes to cross the earth's orbit. This value has since been found to be about 16 1/2 minutes. Roemer's speed calculation was about 192,000 miles per second. This was confirmed and refined in 1728 by stellar observation by the English astronomer Bradley.

The first laboratory observations were made in 1849 by the French physicist Fizeau, using a revolving disk furnished with rim-teeth, cutting a beam of light hundreds of times per second. This method was carried on by Cornu in 1874. In 1892 Foucault utilized a rapidly revolving mirror in light-velocity apparatus. This method was developed by Simon Newcomb and the late Dr. A. A. Michelson of the University of Chicago.

**Household Supply Co.**  
123 North Main—Midland

white-plastered adobe structure. The house is open for inspection today from 2 o'clock in the afternoon until 8 at night.

The cement-floored front porch opens directly into the living-dining room which extends the width of the house from south to north, with steel casement windows and a modern fireplace.

The livingroom suite employs the Spanish motif in its painted designs and styling. A combination book case and desk with unusual wooden decorations holds an honored place along with an oddly-shaped desk chair which strikes a strong color note in its reddish-orange tones. Most of the furniture in the house is from Barrow Furniture company.

Two low plastered columns mark the division between living and dining parts of the room and the dining room furniture harmonizes in design and coloring with that for the living room. The tall cupboard with open shelves above and closed compartment below is a thoroughly modern note. Dining chairs are slat-back.

The kitchen features a large array of cupboards with an unusual corner door in one group, a narrow shelf below the window above the sink, more cupboards above the refrigerator, and glass brick over the gas range. The white wood work is contrasted with the bright red of the cabinet top which is bound in metal. One thing that any housewife would appreciate is the curved metal molding along the wall at the back of the cabinet—making for ease and thoroughness in cleaning.

The bath room, reached from a small hallway which also gives access to the livingroom and two bedrooms, likewise employs the Mexican figures in bright colors applied as wall decorations. The tub is a recessed one with shower curtain. Closets are provided for linens and a container for laundry.

The master bedroom at the front of the house has a Spanish-type bedroom suite similar to the furniture in the living-dining room. The

dresser harks back to grandmother's day for its tall mirror and goes ultra-modern with a roomy shelf beneath the dresser top where one may thrust away all those gadgets which never seem to fit into dresser drawers.

This room has two closets—guaranteed promoters of peace between any two fastidious room-mates.

The back bedroom has only one closet but that is a large one. The bedroom suite here is the unique and handsome maple one called the "wagon wheel" because the headboard of the bed is in the shape of a wagon wheel, the foot of the bed represents an ox-yoke and the dresser has a circular mirror rimmed with what appears to be a wagon wheel with the spokes cut short.

## Japanese Plan Navy for Use Of "New China"

By ROBERT BELLAIRE  
United Press Staff Correspondent

SHANGHAI (U.P.)—Japanese reports that the Nanking reformed government, controlled by the Chinese army and navy, is launching a naval building program and establishing a naval academy has aroused the interest of foreign naval experts in Shanghai.

The Japanese navy spokesman told foreign correspondents here that for the present, the new Chinese navy would comprise only coastal and river patrol boats, but official Japanese reports said these patrol squadrons would "form the nucleus of the Reformed Government's new navy."

Japanese navy officers will serve as instructors in the new Nanking naval academy which will have an enrollment of about 500 men in the first year. The new armed coastal patrol boats, which eventually will relieve the Japanese navy of patrol duties in the Yangtze river and Hangchow Bay, will be built in Japanese dockyards. They will aid in enforcing the Japanese blockade of the China coast.

As yet the Nanking regime has no navy ministry but it is believed such a post will be created as soon as the patrol squadron is ready for duty, probably in another six months.

## Chinese Admiral Appointed

Admiral Hsu Chien-ting, former commander of the second squadron of the Chinese Nationalist navy, has been appointed head of the new patrol squadron and is the favorite choice for minister of navy.

Foreign naval experts do not believe Japan can ever build up a Chinese fleet which could be risked in battle line action against America or Britain. The Chinese are notoriously poor artillery men, regardless of the amount of expert training they receive. They are equally poor in anti-aircraft work and their warships probably would be easy targets for foreign bombers.

However, foreign observers believe the Japanese navy could employ a carefully adapted Chinese naval force to great advantage for scouting and patrolling duties, removing much of this type work from the Japanese navy in case of war. The Chinese basically are excellent sailors and probably could, under Japanese officers, handle patrol and scouting ships as well as the Japanese could expect of their own crews.

## Strategical Move Seen

Another reason for Japan's sponsoring a new Chinese navy, which would remain under Japanese control, is seen in the possibility that Japan eventually will seek a new naval limitations treaty with the United States, Britain and France.

The current navy race, in which Japan is expected to find it virtually impossible to compete with the potential building resources of the great democracies, has led to the belief that eventually she will seek a new naval limitations agreement even at the old 5-5-3 ratio.

In negotiations for such a treaty, neither the Chinese regime at Nanking nor the Japanese-controlled Manchukuo government could participate. They are not recognized by any of the great

## Stabilized Adobe Brick Used in the Building of "Casa"

Stabilized adobe brick forms "La Casa del Rancho," 500 Holmsley street, a new Spanish-ranch type home opened for inspection by the public today from 2 o'clock in the afternoon until 8 o'clock tonight. The house will also be open Monday and Tuesday.

Thick white-plastered walls contrast pleasantly with the brown-stained wooden porch pillars and the dull blue composition roof of the new house constructed by Velvin-Strauch Inc., in the Elmwood addition developed by Barney Grafa. A triple-gabled roof treatment features the eastern end of the house.

The stabilized adobe means bricks that are water-resistant, resistant to erosion from wind and sun, and high in compression strength, the builders declare.

The thick walls have high insulation value, are soundproof, and present no fire hazard.

Steel casement windows are employed.

The house is plastered inside and out and interior woodwork is white except for the "air float" doors strikingly simple and stained brown. White doors are employed in the kitchen.

Opening directly from the kitchen is the garage in which four feet of storage space is provided.

The hallway has a storage closet.

## Steady Growth Shown By Elmwood During Last 18 Months

Elmwood addition has grown steadily since the first home was completed there in December, '37, and it will be the scene of the opening today to the public of La Casa del Rancho.

Exactly 62 homes have been built in the addition, according to B. G. Grafa, developer. There are five applications in for FHA loans with which to construct new homes in Elmwood, Kansas street has been paved in the addition and Storey street will be paved shortly.

More than 400 Elm trees were planted in this addition several years ago as an added attraction to prospective home builders.

## Hispanic Room In U. S. Library

WASHINGTON (U.P.)—Library of Congress officials have announced completion of a "Hispanic Room" devoted to fostering cultural relations between the Americas. Occupation of the room will begin immediately and dedication will follow after a few months.

The room, designed by Paul Cret, Philadelphia architect who planned the Folger Shakespeare Library here, is located in the east wing of the Congressional Library. Approximately 85,000 volumes by Spanish, Portuguese and Latin American authors will be placed at the disposal of all who wish to study the culture of the Latin American republics.

Conversion of the room from a card index division was made possible by a \$40,000 contribution from an anonymous donor. Books have been acquired through exchanges and gifts, but have been bought principally with income derived from a \$250,000 contribution made by Archer M. Huntington.

In Use Already. Although the Hispanic collection has not been centralized in the new room yet, its usefulness is being proved by a Mexican scholar and a South American student, who both came here expressly to study Spanish literature.

Establishment of the room is hailed as a link in President Roosevelt's "Good Neighbor" policy. It is believed that creation of the divi-

western naval powers and consequently their naval construction program could not be brought within the limitations of any naval treaty.

Consequently, Japan might hope to achieve navy parity with America and Britain outside the framework of a naval treaty by building what, nominally would be "Chinese" and "Manchukuo" fleets, actually under the control of the Japanese navy.

IN  
La Casa del Rancho  
Installed by  
**Jno. P. Howe Co.**  
We invite you to inspect this modern ranch home in Elmwood Addition—and see us for all your plumbing requirements.

sion came at the time when all relations between the Americas, cultural and economic, need to be materially strengthened.

Dr. David Rubio, scholarly, cultured Spanish priest, in charge of arranging the room, will become curator of the division when Dr. Lewis Hanke, instructor in Spanish-American history at Harvard university, assumes his duties as chief of the division.

A tiled hall-way leading past the rare book collection room is halted by a massive oak door which opens into the reception hall of the Hispanic room. The wall facing the door is covered with a rich tapestry on which is embroidered the coat-of-arms of a 15th Century Spanish family.

The reception room opens into a high-ceilinged room whose appearance of quiet dignity is heightened by marble inlaid in the walls in rectangular patterns. An ancient, solid-silver chandelier wrought in Toledo hangs from the middle of the ceiling.

Names of great men of Spain, Portugal and South America are emblazoned in gold above the marble works. Tribute is thus paid to Loyola, El Cid, Cervantes, Lope de Vega, Camoes, Colon (Columbus), Magalhaes (Magellan), San Martin and Bolivar.

A long reading room leads south. High, wide windows line the east

## MIND Your MANNERS

Test your knowledge of correct social usage by answering the following questions, then checking against the authoritative answers below:

1. Is it good manners to ask an acquaintance to guess your age?
2. Should you ask personal questions of acquaintances?
3. Should you ask a good friend

how old he is?  
4. Should you ask a friend what his salary is?  
5. Must you answer questions that you would rather not?  
What would you do if—  
You have a friend that you know has been married—but she never has told you whether her husband is dead or divorced—  
(a) Ask her?  
(b) Hint for her to tell you?  
(c) Decide that if she wanted you to know she would have told you.

**Answers**  
1. No.  
2. No.  
3. No.  
4. No.  
5. No.

## Loser in Fight For Girl Wins Her in Upset

LONDON (U.P.)—Two young men, in love with 18-year-old Joyce Williams, of Maccles, Glamorgan, Wales, decided to settle their quarrel by fighting for her.

They met—Ronnie Jones and Billy Thomas—in the local boxing ring. Joyce could not watch them.

She agreed to wait outside for the result. Inside the two men fought toe to toe in a battle that made onlookers gasp.

Jones hit harder. He wore Thomas down. His partners yelled encouragements. After four rounds the referee held up Jones' hand. "Ronnie wins! Ronnie wins!" they shouted.

Joyce, waiting outside, heard them. Thomas, bruised and beaten, slipped out unnoticed on his way home. But Joyce caught his arm and went with him. When Jones came out, Joyce was gone. Later Joyce said:

"The loser won in this case. I suppose I loved Billy all along."

Said Billy: "Ron and I have settled our squabbles and shaken hands over it. But Joyce is my girl now."

### Miss Louise McLean and Don Gray Are Married Here Saturday Morning

Miss Louise McLean, member of the Midland schools faculty and daughter of Mrs. Sam McLean of Denton, became the bride of Don Gray, son of Mr. and Mrs. A. T. Gray of Vivian, Louisiana, in an early-morning ceremony here Saturday.

The double ring ceremony was read by Rev. H. D. Bruce, pastor of the First Baptist church, at 8:30 o'clock yesterday at his home.

Friends of the couple attending were Mr. and Mrs. T. S. Jones, Miss Pauline McMurray, and Miss Flo Marie Robertson.

The bride wore a navy-and-white sheer jacket dress with matching accessories. Her flowers were a corsage of gardenias.

After the wedding, Mr. and Mrs. Gray left by motor on a wedding trip, choosing for the destination to remain unannounced. They will return in a few days and will be at home in Midland, at least for a while.

Mrs. Gray is a graduate of Denton high school and holds a degree from North Texas State Teachers college in the same city. She has also done graduate work at Texas State College for Women at Denton. She has been a member of the school system in Midland for the past two and a half years.

The bridegroom is a graduate of Nebraska university where he was outstanding in track activities. He has lived in Midland two years, being a geologist scout with Standard Oil and Gas company.

Mrs. Gray was honored, before her marriage, with a tea and shower for which Mrs. T. S. Jones, Miss Pauline McMurray, and Miss Flo Marie Robertson were hostesses.

### Benefit Dance Revue Scheduled For Monday Night

An Indian theme was followed out in the program for the Story Hour in the children's library at the courthouse Saturday morning, with Mrs. J. Howard Hodge in charge.

A moving picture, "Little Indian Weaver," was shown and an Indian song was sung.

Mrs. Hodge told Indian stories. Attending were 63, including children and several adult visitors.

They were: Patsy Pope, Jean Ann Preskitt, Norman Cornelius, Sharon Cornelius, Jimmie Greene, Eugene Hejl, Betty Jo Greene, Charles Ruckman, Jane Cameron, Marvin Prager, Frank Aldrich, Patricia Ruckman, Opal Scribner, Betty Jane Rayburn, Ruth Hall, Faye Manville, Tommy Jean Newsom, John Ann Thomas, Jimmy Reaney, Doris La June Lance, Valda Dee Pigg, Billie LaJean Pigg, Bob Hugh Alexander, Robert Hunter, Orval Dale Stice, Norman Jean Stice, Alberta Smith, Mary Smith, Peggy Whitson, Jamie Fry, Barbara Whitson, Helen Golladay, Dorothy Mead Burns, Mazie Secor, Royce Ray McKee.

Barbara Ann Boering, Colleen Oates, Elaine Hedrick, Dora Alkire, Betty Chansler, Joyce Morgan, Barbara Bradshaw, Mary Jo Hejl, Evelyn Hejl, Harold Reese, Irvin Lee Reese, M. L. Alexander, Frances Adams, Joan Coleman, Rosemary Anderson, Harry Loskamp, Duane Fritz, Billy Secor, Alev Oates, Caret Martin, Patsy Charleton, Don Smith, Martha Wright, Doris Nell Gray, Mrs. J. W. Smith, Audie Merrell, Geneva Merrell, Betty June Tumes, Jackie Tumes, Margaret Coleman, Howard Hayes, Duward Chaney, Miss Ernestine Bryan, Gordon Reigle, Roselyn Leggett, Waldo Leggett, Janice Jones, Charles Jones, BeBee Slaughter, Yvonne Glenn, Riveley Glenn, Elle Cutbirth, Otis Cutbirth, Grace Cliff, Mrs. J. A. Wilson, Miss Marguerite Hester, Mrs. W. E. Pigg, Mrs. W. E. Wack-off.

### Mr. and Mrs. Hays Compliment Club With Party Friday

In courtesy to the Lucky Thirteen club, Mr. and Mrs. B. M. Hays, 1701 W. Kentucky, were hostesses for a five-table party Friday evening at 8 o'clock.

A profusion of gladiolas, roses, verbenas, and larkspurs in the house made a gay background for the 42 games for which flowered tallies were employed.

High score for men went to Ellis Conner and second high to W. N. Cole.

Mrs. M. H. Crawford held high score for women, while second high went to Mrs. J. A. McClurg.

Club guests were Mr. and Mrs. J. R. Custer, Mr. and Mrs. C. A. Roark, and Mr. and Mrs. E. P. Eubanks.

A party plate was served to guests and the following club members: Mmes. and Messrs. O. H. Jones, W. N. Cole, M. H. Crawford, S. P. Hall, Ellis Conner, L. P. Joplin, Mrs. J. A. McClurg, and the host and hostess.

### Mrs. Leonard Will Be Presented in Recital Monday

Pupils of Mrs. J. B. Leonard will be presented in a recital at the First Presbyterian church Monday evening at 8 o'clock.

Numbers will be presented by students both of her voice and piano classes.

The program will close the term's work and Mrs. Leonard will leave at once for Long Beach, California, where she will spend practically all of the summer, returning here for the opening of classes next fall.

Cuban land snails travel by air to reach the Florida coast. Fastened to leaves, they travel hundreds of miles on the wings of hurricanes.

Free instructions for ladies by appointment Mondays and Tuesdays from 9 A. M. to 11 A. M. Plamor Bowling Palace. (Adv.)

### Gingham Comes Out of the Kitchen To Sit Proudly in Fashion's Parlor

(From Charles Armour, New York.)

Smartly new and youthfully attractive are these suits of gingham, the fabric which is making fashion headlines this season. Pink and white stripes form a plaid design on the lovely model at left. It has a pleated skirt, with the pleats stitched down, a bolero jacket and an unusual jabot of snowy white pique. The black and white check ensemble, right, has a full, foreshirt, with flower buttons on the dress and covered ones on the neatly fitted jacket.

By MARION YOUNG NEA Service Staff Correspondent

NEW YORK.—Lowly gingham is the cinderella fabric of the season. In bright plaids, checks and stripes, it has stepped out of the nursery and kitchen into fashion's limelight.

The fabric of which most of your frocks were made when you were seven now is used to make some of your smartest suits, dresses and dress and coat ensembles for wear on city streets as well as in the country.

A stunning gingham in which pink and white stripes form a

plaid design on the black background makes a smart town suit which includes a softly tailored dress and a pert little bolero. The skirt of the dress is box pleated all around, with the pleats stitched down. The bodice is finished with a circular jabot of snowy white, crisp pique. The bolero would be nice with a plain white dress or white sharkskin slacks as well as with the matching plaid dress.

### TWO-PIECE FOR WARM DAYS

Another model, in green and

white check gingham, consists of a streamlined dress with an inverted pleat at front and back, and a short, boxy jacket with white linen collar. Buttons on the dress and the one at the neckline of the jacket are small, dark green plastic flowers.

For hot days in the city, a two-piece suit of gingham, with cream and yellow stripes forming a plaid on a brown background, might be worn with a blouse of natural pongee, brown shoes, a large white hat, a brown bag and brown or white gloves. Around the country club, the same suit with white shoes instead of brown ones, would be equally nice.

Other important-looking summer clothes for town or country, of fabrics which you haven't thought of for years—except in connection with house dresses and children's frocks—include seersucker suits, pique sport dresses, ensembles in natural pongee, bleached denim and percale in dark shades as well as light.

### Personals

Miss Dorothy Nell McKee has returned from Texas Tech college at Lubbock to spend the summer vacation at her home here. She is the daughter of Mr. and Mrs. Alva McKee.

Mrs. John E. Pickering and children will leave Monday for Florida to spend the summer with her mother. Rev. John E. Pickering will go with them returning in a few days.

Terry Tidwell and Lawrence Beauchamp left Friday for a fishing trip to San Angelo lake. They are expected to return today or tonight.

Mr. and Mrs. R. D. Lee left Saturday morning for South Texas where they will visit Mr. and Mrs. F. A. Story and family at Crystal City for the week-end. Mrs. Story is their daughter. The Midland couple was accompanied by two other daughters.

Miss Dorothy Nulin of Longview will arrive tonight for an extended visit with her aunt, Mrs. John W. Skinner.

Edwin Lindley is here on business from Eastland. R. H. Alagood is leaving Sunday for Corpus Christi where he is being transferred.

Mr. and Mrs. H. J. Kemler have returned from a trip to Houston.

Miss Mickey Adams of Rotan is the houseguest of Miss Ruth Pratt. They were formerly room-mates at college.

Mrs. J. R. Pratt of Stamford was scheduled to arrive Saturday for a visit with her son, W. I. Pratt, and family. The Pratts will leave later in the week for A&M to be present at the graduation of Bill Pratt.

Mrs. Tom Nance, Mrs. W. P. Knight and daughter, Beiva Jo, left today for a visit in Dallas.

Mr. and Mrs. George Phillipus left today for a vacation trip to Yorktown.

Mrs. J. R. Peach left Friday for a visit with her parents in Dallas. Mr. Peach left today to attend the Shoe Convention in Dallas.

Mr. and Mrs. R. L. Bailey left today for Omaha, Nebraska to at-

tend the horse races.

Mr. and Mrs. Addison Wadley left for Dallas today for a short visit.

Mrs. Bertha Kenney, Maurice Woody and Hope Woody have returned from Temple, Texas.

Mr. and Mrs. Cliff Cool returned from a trip to Lubbock Saturday.

Mrs. John Dunagan and daughters Helen and Virginia Ann left Saturday for Abilene to attend the graduation exercises at Hardin-Simmons.

Mr. and Mrs. E. D. Ferrell of Aspermont are visiting their daughter, Mrs. Harry Roberts and son Edwin Ferrell.

### Claude Cranes Hosts to Steak Fry Friday Night

Mr. and Mrs. Claude O. Crane entertained members of the staff of Mims and Crane and a few guests with a steak fry at their home, 1604 W. College, Friday evening.

Barbecued steak formed the feature of the supper menu served. Games were played during the evening and John P. Howe regaled the group with stories of some of his experiences.

Present were: Mrs. S. M. Warren, Miss Irene Wright, Miss Hazel Smith, Mr. and Mrs. John P. Howe, the host and hostess, and a group of children.

### Stitch and Chatter Club Changes Its Meeting Schedule

Stitch and Chatter club met with Mrs. L. M. Hedges Friday afternoon for the regular sewing session.

Work on a stamp quilt occupied the group.

It was decided to meet once a month through the summer, with the next meeting being with Mrs. W. P. Hedges, 406 E. Tennessee, on June 15. At that time Mrs. W. C. Moore's birthday will be celebrated and plans will be made for a Father's Day picnic.

Present Friday were Mrs. W. C. Moore, Mrs. W. P. Hedges, Mrs. Charles Ward, and the hostess, and two visitors, Mrs. M. T. Hutchman and Mrs. Charley Anderson.

### FEMININE FANCIES

By Kathleen Eiland

Close-of-school has always been regarded as a time of gaiety and rejoicing but with two Midland teachers getting married this weekend, the event seems to take on a romantic character also.

Good luck and happiness to them both and to the various and sundry others who, we have been led to suspect, may be wearing a plain gold band that is shiny and new before the summer vacation ends.

Things seem recently that we like: A bag with one side of plain and one of perforated leather; book ends with the figures of those fascinating little penguins; dotted swiss in all the cool colors of a pale-hued rainbow; blouse patterns featuring soft shirrings; multi-colored travel ads that make one's heart, lift on a wave of yearning to be a vagabond; a checked dress with fitted short jacket of black wool—very nice for traveling.

Speaking of clothes for these summer days—and nights the cotton formals are something to make one take a second longing look.

Red plaid gingham parades gracefully in one such full-skirted gown with a matching jacket of the material, shirred widely at the waist. Another striking costume is of white waffle-weave cloth made with a low decollete edged with a clever decorative motif of red and white. Over this is worn a bust-length bolero of the white, with edging and mand of the red-and-white decoration. The full skirt also employs the touch of red for accent.

Utterly simple, the dress attains the smartness of many very simple things.

### Camp Waldemar to Have Large Group From Midland

HUNT, May 25 (Spl)—School days will turn suddenly into camp days for a group of Midland girls who will leave next week-end for a six weeks' vacation at Camp Waldemar, near Kerrville. The camp opens Sunday for the fourteenth season, according to Mrs. Alma Thomas and Miss Ruth Anderson, Midland representatives.

In the Midland group are Nell Ruth Bedford, Nancy and Suzanne LaForce, Dorothy and Marjorie Barron, Alma Faye Cowden, Barbara Sue Cowden, Elizabeth Ann Cowden, Shirley Culbertson, Monta Jo Glass, Dorothy Fay Holt, Mary Martha Sivals, Dorothy Turner and Jessica Turpin.

With the exception of Nell Ruth Bedford and Nancy LaForce, these girls will all be in the junior department which is to be directed this summer by Miss Anderson, who has been a counselor at the camp for a number of years. She will have charge of special activities arranged for campers of junior age.

Miss Mary Wilson, also of Midland, will be an assistant counselor in the junior department and will work with small groups in dramatics productions.

The 1894 "S" mint dime and the 1913 Liberty Head nickel are two of the modern U. S. coins for which large sums are offered by numismatic companies.

The common house spider has six spinnerets; each of which is covered with tiny spinning spools, and out of these come jets of liquid silk, hardening instantaneously on exposure to air.

### Midland Teacher Will Wed Lubbock Man in Church Ceremony This Morning

Marking the second marriage among members of the Midland school faculty this week-end will be the wedding in Lubbock this morning of Miss Leta Legg, daughter of Mrs. J. H. Legg of Denton, and Felton E. Davidson of Lubbock, son of Mr. and Mrs. S. J. Davidson of Hemphill, Texas.

The ceremony is to take place at the First Methodist church in Lubbock at 9 o'clock, in the presence of a group of friends of the couple.

Attendants for the couple, according to plans announced here, will be the bride's cousins, Mr. and Mrs. "Doc" Harvey.

The bride will wear a white sports outfit with contrasting accessories.

Miss Legg is well-known here, having taught in the Midland schools for two years. She is a graduate of Texas State College for Women at Denton and attended the University of Texas.

Mr. Davidson attended Texas Christian University in Fort Worth where he also attended a pharmacists' school. He formerly lived in Midland for about a year but is now employed with the John Halsey Drug company in Lubbock.

The couple plan to live in that city.

The bride will wear a white sports outfit with contrasting accessories.

Admission charges will be 25 cents and 10 cents.

The public is invited.

### Three New Members Present at Meeting Of Bible Class

Mrs. W. L. Pickett taught the lesson for the regular meeting of the Belmont Bible class Friday afternoon, in the form of a review of the Book of Daniel. The class met at the home of Mrs. W. G. Attaway, 404 W. Ohio, with Mrs. C. E. Nolan cohostess.

Three new members, Mrs. Lucius Bryan, Mrs. C. V. Dale, and Mrs. Joe Dobson were present, as was a visitor, Mrs. H. A. Hipsler.

Other members attending were: Mmes. R. Chansler, W. W. Nelson Jr., Herbert King, C. G. Murray, C. E. Strawn, C. O. Fredregill, W. L. Sutton, J. A. Mead, Harvey Kiser, Carl Reeves, J. L. Kelly, M. T. Walker, A. E. Stuckney, H. D. Bruce, D. E. Holster, and the hostesses.

Refreshments were served and a social hour followed the study meeting.

Next Friday the group will meet with Mrs. J. A. Mead, 309 W. Florida, with Mrs. M. T. Walker cohostess.

San Bernardus Mission at Awatobi on the Painted Desert in Hopland was the first building erected by civilized man in Arizona. Ancient pueblo ruins still stand on the site.

Television experimentation in the United States is in the hands of private enterprises, backed by thousands of stockholders, while in Europe it is in the hands of state officials.

With the exception of Nell Ruth Bedford and Nancy LaForce, these girls will all be in the junior department which is to be directed this summer by Miss Anderson, who has been a counselor at the camp for a number of years. She will have charge of special activities arranged for campers of junior age.

Miss Mary Wilson, also of Midland, will be an assistant counselor in the junior department and will work with small groups in dramatics productions.

The 1894 "S" mint dime and the 1913 Liberty Head nickel are two of the modern U. S. coins for which large sums are offered by numismatic companies.

We, The Women By RUTH MILLETT Well, here it is Spring. The time, supposedly, when it isn't difficult to catch a young man's fancy—or a young man.

### We, The Women

By RUTH MILLETT

The girl who wants to cash in on the theory had better not put off her campaign another day. Let's suppose she has a date tonight, a date with a young man she has had her eye on for some time.

If she can handle the beginning and the end of the evening—the rest of the time will pretty much take care of itself, what with the entertainment the young man has planned.

She'll probably find the "Hello" easier than the "Good-bye." If she only keeps him waiting five minutes or so, she's off to a good start. That doesn't make her look too eager, and yet it doesn't give him time to start wondering, "Who does she think she is, anyway—safe society?"

Of course, she knows enough to act glad to see him. She is smart enough to be friendly and interested in the talk he has cooked up on the way over—instead of fussing with her dress or worrying about her lipstick.

She won't rush him out of the house, but will let him say when—when it comes to starting off. But when it comes to the end of the evening, then it is her decision. And he needn't feel that she must give in to his polite protest that it is still early.

What she does about "Good-night" is her own business. If she wants to kiss him—she need not explain that she doesn't make a habit of kissing men on the first date. If she's smart, she'll leave the kiss till she gets to her front door. That way she can get by with one very nicely.

If she doesn't want to kiss him, she won't find it hard to put the idea across. A smile and a head-shake are usually enough. If she doesn't make an issue of it, or make him look silly, he won't care at all.

She does not say, "Or when like I see you again?" or anything like

He'll assume she would like to see him if she lets him know she had a good time. And when he says, "How about a show Saturday night?" she'll be so sorry that she has another date. But when he says, "Then how about Sunday?" she'll say "Fine" even if she has to do some date juggling to make it come out that way.

That's the way it will go if she takes charge of the "Hellos" and "Good-byes"—and lets him take care of the rest.

Abalone shells are used in the manufacture of toilet articles and novelty jewelry.

There are more than 1,864,648 grandsons of Charlemagne, the miles of copper telegraph lines in the United States. Founded in 1825 by Lothario, the miles of copper telegraph lines in University of Pavia, in Italy, is the oldest institution of learning in the world.

Morgenthau Warns Against Repeal of Present Tax Laws

WASHINGTON, May 27 (AP)—Secretary Morgenthau directed "serious" congressional attention today toward striking from tax laws "any manifest inequities or other defects" in the interest of promoting "lasting business recovery."

Naming a "balanced budget" as the fundamental objective of sound financing, the secretary told the house ways and means committee tax changes must not reduce federal revenue.

Including among tax features for "reevaluation" at this session were the controversial undistributed profits tax, the capital stock tax and the computation of profits and losses for tax purposes.

Swimming Contests Scheduled at Show

Limited to three boys and three girls from each town, an amateur swimming and diving contest will be held in connection with the first annual water carnival at McCamey next Saturday afternoon, no entry fees to be charged. From each town, there must be a girl entry for every boy, age limit being eighteen years.

Swimming and diving events will be as follows:

- Girls Swimming: 1. Free style, 25 yards. 2. Breast stroke, 25 yards. 3. Back stroke, 25 yards. 4. Most graceful swimming, 25 yards.

- Boys Swimming: 1. Free style, 100 feet. 2. Breast stroke, 100 feet. 3. Back stroke, 100 feet. 4. Side stroke, 100 feet.

- Girls Diving: 1. Sawn. 2. Jackknife. 3. Two optional.

- Boys Diving: 1. Swan. 2. Plain back. 3. Half gainer. 4. Two optional.

Postcard Comes Through But It's 26 Years Late

SPRINGFIELD, O. (AP)—Though he waited a long time, Fred Hatcher of the Ohio Odd Fellows Home finally has received a postcard mailed to him from Cleveland more than 26 years ago.

The postcard, with its penciled script still legible and hardly a crack on its face, was written by a Mr. Peck, June 1, 1913, from Willoughby, O., and bore a Cleveland postmark of the same date at 11 p. m.

The card was addressed to Hatcher at his former home in Rushsylvania, O., but did not arrive there until March 29, 1939.

Hatcher received the postcard from Mrs. Mable Sloan, Rushsylvania postmistress along with a note commenting: "It has taken it some time to get here, has it not?"

World Wheat Supplies Near 5 Billion Bushels. WASHINGTON (AP)—World wheat supplies are at a near record total of 4,950,000,000 bushels, according to the Bureau of Agricultural Economics. The bureau estimated world consumption of wheat this year at 3,795,000,000 bushels and a carry-over next July of approximately 1,150,000,000 bushels, compared with the 1934 record of 1,193,000,000 bushels. American supplies were estimated at approximately 1,100,000,000 bushels, including 154,000,000 from 1937. Domestic consumption at 700,000,000 bushels and exports at 100,000,000 bushels, leaving a carry-over of 300,000,000 bushels. When attaching bumper cleats on an automobile, be sure they do not obscure any part of the license plate.

Heir Waits 10 Years And Receives 92 Cents. PROVIDENCE, R. I. (AP)—G-man James T. Hartin has discovered that the mills of the probate courts grind slowly, but like those other celebrated mills, they grind exceedingly fine. After waiting nearly 10 years for a legacy from the estate of a great-grandmother, Mrs. Rose McGonigle of Pasadena, Cal., while a research company investigated potential legatees, Hartin's ship at last came in—but ever so lightly weighted. From his sister Celia in Boston he received his share of the estate. It was 92 cents—of which Uncle Sam claims 4 cents.

4-H Club Girls' Activities. Prairie Lee Juniors. "You should always help yourself to a bowl of food when the meal is just starting, and then pass it to the right," Miss Alpha Lynn, county home demonstration agent, told the Junior 4-H club girls of Prairie Lee when they met Tuesday for an ice cream picnic in the King Ranch pasture. Miss Lynn explained that every one at the table should have a chance to serve himself to every kind of food on the table before anyone starts eating, and that if everybody helps himself and passes the bowl that it will go all the way around the table and return to the persons who started it. Thus everyone would be busy serving himself and all could begin eating at once. Eighteen club members, Mrs. E. A. Livingston, the sponsor, and Miss Lynn were present. The club will meet with Betty Jo Stewart on the second Tuesday morning in June. (Helen Ruth Harris, reporter)

Warfield. The program was based on "How My Table Looks" at the meeting of the Warfield 4-H club girls at the home of Mr. and Mrs. J. H. True-love, Thursday afternoon. A demonstration was given on how to set the table correctly for family meals and also on how to make ice cream with "junket" rennet tablets. Miss Alpha Lynn made the cream. The girls brought whole cream, milk, and sugar to be used in the making of the ice cream. A cake was brought also and served with the cream. Table manners were discussed and questions answered. The girls were told always to sit down in the chair (at the table) from the right side. Plans were made for the building of a clothes closet in their home and work on this will be started soon. Present were: Four club girls, Pearl Wilson, Mary Bess True-love, Jean Randolph, June Randolph; the sponsor, Mrs. Carl Smith; four visitors, Mrs. J. H. True-love, Mrs. Randolph, and Mrs. D. D. Wilson, and Miss Lynn. Club members absent were: Retha Maye True-love, Billie McKandles, and Mary Lou and Hollie May Roberts. Next meeting of the club will be

Whale Hide for Shoes Gets Faint Indorsement. CINCINNATI, O. (AP)—Japan's recent efforts to substitute whale hide for the more common types of leather in the production of shoes may be successful, in the opinion of Dr. Fred O'Flaherty, professor of leather research at the University of Cincinnati here. However, he says that such products would find a very limited usefulness in the United States because American leather users demand style and comfort which the substance would not produce. Dr. O'Flaherty says whale hide especially would be adaptable for buffing wheels.

It's Here at Long Last, The Electric Toothbrush. CLEVELAND, O. (AP)—An electric toothbrush was announced here by the sixth annual Alleghenies Conference of the Junior Division, American Society of Mechanical Engineers. The new gadget was described by its designer, D. B. Schindler, University of Pittsburgh senior, who said it was "the ultimate refinement of civilization." Its features, Schindler said, include a scientific brushing motion away from the gums at 400 revolutions a minute; a sealed-in, waterproof motor in the handle; detachable brushes so the whole family can use the machine, and an estimated cost of \$8 to \$10.

NAVAL AIR STATION TRIP PLANNED FOR CONVENTION

America's largest naval air station is located in San Diego, California, site of the 1939 Broadway of America Highway Association convention. Buildings of the great air base can be seen at right in the above scene from Point Loma. The view also shows the proximity of bay to downtown San Diego. A motorcade urging all local residents to attend the convention June 12-16 arrived here today.

"Friendly Enemies"

"General Robert E. Lee" and "Abraham Lincoln" met—and had a good time together at a recent New York costume party. Comedian Jack Pearl, left, impersonated the Confederate leader, and actor Raymond Massey wore the Lincoln make-up he uses for the part on the stage.

Tipplers' Friend

The alcoholic excesses of Talk-show tipplers mean a neat profit for Mrs. Ken Maynard, former wife of cowboy hero. She rents her 29 teetotaling Cavaliers to drunks and expectant inebriates to protect them from nocturnal pitfalls.

Violin Prized For Its Link To Wild West

TENSLEEP, Wyo. (U.P.) — A 70-year-old violin, that has had more adventures than the hero of a western magazine story, is one of the most prized instruments in the collection of Paul Frison, prominent Tensleep merchant.

Frison, who collects the instruments as a hobby, said he believed his oldest violin was the first such instrument brought into the central Wyoming "badlands." It was believed to have been taken from an immigrant wagon train by a band of robbers about 1870.

The robbery, it was believed, occurred along the Bozeman trail between Casper and Buffalo. The violin had been packed in a box that also contained silverware which the bandits evidently thought might be melted and sold.

"I don't know what they did with the silverware," Frison said, "but there being no musician in the group, they stuck the violin under a ledge of rock in the vicinity of what is now known as the Hole in the Wall, a place that gained fame in the west as a meeting place for cattle rustlers."

"The violin was found years later in a demolished condition. The elements had destroyed the glue that held it together and it was nothing but a pile of wood. When it came into my hands, the instrument was in 23 pieces, tied together with strips of calico cloth."

Frison said he recognized the high quality of varnish on the fragments and had the violin reassembled at a cost of \$67.50.

"The instrument is in first-class

condition and even now has a wonderfully mellow tone," he said.

Housing Survey Made for Chile

ROME (U.P.) — Modeled after social welfare systems already developed by European governments, plans for the rehabilitation and housing of Chilean workers' families will be submitted to President Don Aguirre Cerda by Deputy Benjamin Claro when he returns to Chile.

Claro, who has been making a study of workers' housing programs in England, France, and Italy, when interviewed here said he had been much impressed with what he had seen and expressed the hope that similar undertakings would be considered soon in his country.

"Much of the same kind of work can be done with success in Chile," he said. "There is no reason why workers in Santiago cannot have as fine homes for their families as working people in London, Paris, or Rome."

General Pattern Followed.

Claro observed that in Europe the state has become the guarantor of homes for its workers and that each government follows much the same procedure in providing these homes whether it is democratic or totalitarian in form.

"Construction of workers' homes has been taken out of the hands of private industry and been made the special province of either the state, municipalities or semi-fiscal agencies," Claro said.

"Capital for their construction," he continued, "is borrowed from banks and insurance companies at a rate of interest that fluctuates

between 6 and 8 per cent. The difference between the rent income and the amount to be paid to the bank as interest is made up by the state, usually in some form of subvention.

"The third important aspect regards rent. Under this new system rent is no longer a result of economic considerations such as interest on capital and depreciation of buildings. It is carefully based on the tenants' ability to pay. Normally the rent is about 10 per cent of the tenant's wages. In most cases this represents from 1 to 2 per cent of the interest of the capital invested in the edifice."

Problems Have Been Solved.

After commenting upon the progress made by the application of these methods Claro pointed out other aspects of the problem that he had noted during his study.

The deputy said that the governments in all the countries he had visited have exercised the right of expropriation of private property to build workers' dwellings. He was impressed with the way European cities have adapted the construction of workers' homes to economic and other considerations. In restricted urban centers he found that smaller intensive types of dwellings have been erected.

"It seems to me that the changes in housing for workers that are going on in Europe should be taken into consideration in Chile," Claro concluded. "With the changes necessary to adapt them to our country and our institutions they would seem to provide the solution to the problem of hygienic and cheap houses for Chile's working people."

New Research To Aid Lepers Possible Now

CARVILLE, La. — There is revived hope and a new note of expectancy in this village, huddled behind a Mississippi river levee, for a fresh attack on leprosy has been started at the Carville leprosarium.

New experimentation has been made possible with the comparatively recent discovery that a Syrian rodent is susceptible to leprosy. Before there had been little chance to study the disease for there were no "guinea pigs" for scientific research.

At the leprosy congress in Egypt, reports were made that this one animal is susceptible. A box filled with the squeaking rodents was brought to the laboratory here—and the fight was on again, with a new method of attack. But, still,

the fight has just begun, scientists say.

Still Use Chaulmoogra

For centuries the chief weapon in the fight has been an odd-tasting drug from the Orient, called chaulmoogra oil. Some Carville inmates take it three times a day, others less frequently. All but a few of the 370 men, women, and children have taken gallons of the liquid. It is agreed that the oil in some cases retards the disease, but still more important in the doctors' minds are the old requisites of good health — just, sun, fresh air, and nutritious food.

At Carville the word "leper" is never heard. Besides being the United States' only leprosarium, it is considered the best equipped in the world. Even with skilled medical minds devoted to the study of the Biblical scourge, definite progress in its cure has been long slow. Experiments with the rodents have only started.

It is not known how the germ is contracted. The nearest theory to the answer is "through close contact, repeated over a long period." A child is born without it. However, if it remains with the mother a week—even a day—it may become afflicted.

Babies Are Saved

At the sanitarium new-born

babies are taken away from their mothers. The "chain of contact" is broken.

While Carville waits on science to find a cure, the leper's lot is being improved in another way. A newly-instituted system of parole permits freedom to an ever-increasing number of the diseased. Fully a fifth of the inmates of Carville have passed through the gates again—their disease arrested. Meanwhile the tests go on—not to arrest the disease, but to cure it.

Those who were once inside and now are outside are waiting on science, too, to keep them from returning to the cloistered oblivion inside the gates of Carville.

Doctors here estimate that for ever leper confined, there are two unconfined. They call this a conservative estimate.

Harvard Calls Blind Scholar

BERKLEY, Cal. (U.P.) — When Jacobs tenBroek, 27, brilliant blind law graduate of the University of California, goes to Harvard this fall on one of the much-coveted Brandeis research fellowships, he will take with him "his eyes."

These eyes are those of his wife. He has never seen a law book, except through Braille transcriptions,

but has become an authority on constitutional law. He was accorded the Brandeis fellowship by invitation and not by application in a nationwide competition.

The 1939-40 fellowship at Harvard carries with it a stipend of \$2,300 in addition to tuition and it will advance the young Berkeley family one step farther toward the goal set by the husband.

TenBroek was blinded at the age of 7 when an arrow shot by a playmate penetrated his eye. The accident did not deter him from a scholastic and legal career in which he has won high honors.

Two years ago he married Hazel Feldheim of Oakland, a former student at the University of California and who becomes "his eyes."

The latest honor which the blind scholar attained was the publication in the California Law Review of a series of articles on Constitutional law. In his younger days, tenBroek had been student editor of this publication.

He was graduated from the University of California in 1934 with highest honors in political science. He received a Master's degree the next year and his Jurisprudence degree the following year.

For the past two years he has been a teaching assistant in the department of political science at the university. During his educational career, tenBroek won membership in Phi Beta Kappa, Delta Sigma Rho, debating honor so-

ciety; Phi Sigma Alpha, political science honor society; Order of the Coif, legal honor body, and the Golden Bear and Winged Helmet honor societies.

Convicts Favor Whipping If Terms Are Reduced

JACKSON, Mich. (U.P.) — A bill introduced in the Michigan legislature providing whipping as punishment for robbery and kidnapping meets with the general approval of convicts at Southern Michigan Prison, according to an editorial in Spectator, prison weekly newspaper.

The editorial quoted prisoners as favoring whipping and curtailed sentences in preference to long

prison terms.

"Anything that might reduce the length of sentence," the editorial continued, "has the support of the men in prison." It said the whipping post would be "bad," but added, "it couldn't be worse than prison."

"The offender could pay his wages to sin quickly without waiting—waiting, and waiting."

Although there was an open season on prairie chickens in far West Texas this year, hunters believed there will be more birds this fall than in many years. Gaines, Andrews, Yoakum, Terry and Cochran counties are their chief habitat.

Sightseeing in First Glass Style

Though most Londoners are thinking in terms of bomb-proof shelters these days, a London bus company has come forward with a fleet of new "all-glass" coaches with full-vision roofs and sides.

One for Your Money That's Tuned to Go!

The model illustrated is the Buick SPECIAL model 41 four-door touring sedan \$996 delivered at Flint, Mich.\*

YOU spot it for its beauty—love it for its easy-going gait—buy it for its value.

But there's no question at all about where the thrill lies in having this quick-stepping Buick for your own.

Action is its middle name—fleetness out where the roads are clear, nimble agility when the traffic's thick and tangled, quick-paced travel from the minute you get aboard.

You've literally got the hurricane harnessed

to your service—for with every six inches this great car travels, a tiny cyclone lets go in the cylinders of this Dynaflex straight-eight to give life and lift to its movement.

Your hand on that steering wheel guides a big and roomy carriage—yet a finger movement steers it and a hand's weight holds it to the line.

On curves, its Knee-Action actually "banks" the road for you—on gravel, washboard, loose stone, or cobbles, giant coil springs of soft-flexing steel soak up, blot out, erase the bumps.

Your view's the view-from seats in first-row-center—there's nothing that goes on you don't take in instanter through an outlook stepped

up as much as 412 extra square inches.

All the time, of course, you ride in style fresh as a breath of tomorrow's dawning. All the time you ride assured that you've bought both smartly and well.

For this roomy, full-powered, silken-riding Buick—sprinkled from bumper to bumper with standard equipment that costs you extra elsewhere—is priced down below last year—down below some sixes—down below your own idea of what it ought to cost.

Yes sir, here's the one for your money if you want the car and the value of the year—and it's tuned to go in a big way from the day you take it over.

Why not see your Buick dealer now?

\$894 and up delivered at Flint, Mich. \*Prices subject to change without notice. State and local taxes (if any), optional equipment and accessories—extra.

"Better buy Buick!"

Air Crash—But on the Ground

This plane pile-up at Los Angeles municipal airport brought death to one aviator, serious injury to two others. Walter Reeder, 27, piloting bottom ship, was about to take off when other plane thundered down runway, climbed onto his craft. Reeder was killed.

# FIFTY-FIVE PER CENT OF HURLERS PITCH ILLEGALLY IN SELF DEFENSE

BY HARRY GRAYSON  
NEA Service Sports Editor.

NEW YORK — Ford Frick warns Fred Frankhouse of the Boston Bees and other National League pitchers against the spitball and tampering with the sphere.

The Pittsburgh Pirates charge Frankhouse and Claude Passeau of the Phillies with doctoring the pellet.

Philadelphia rather suspects that pitchers of the New York Giants threw at Morrie Aronovich's head when they thought the young outfielder was taking too many liberties at the plate.

The bean ball is inexcusable. A batter can be loosened up by perfectly legitimate pitches below the head.

But I'd like to remind Presidents Frick and Will Harridge of what Bill McGowan, most competent of American League umpires, told me a year ago, after Johnny Allen of the Cleveland Indians refused to go on in Boston when the Red Sox and McGowan objected to his famous torn shirt sleeve.

It was that 55 per cent of major league pitchers deliver the ball illegally one way or another.

Bob Feller, the Indians' young strikeout king, is one of many who consciously or not goes to his mouth before delivering the ball. Up until this spring the Iowa farm boy also jumped the rubber.

But so much has been taken away from pitchers that they can't be criticized too severely for taking a little edge now and then.

### MECHANICAL PITCHING FAULTS ARE PLENTIFUL

NATURALLY, the smarter ones do their tricks only when in a hole. There would be no percentage in their doing them at any other time, and such a system does not stress infractions.

Mechanical pitching faults are plentiful and old and outworn tricks are still in use and come in a mighty handy, especially when the hurler is attempting to head off the Yankee home run parade.

Johnny Allen spits in his glove and rubs the ball therein, and umpires and opposing players assert that there is too free use of resin in connection with his clothing.

George Caster of the Athletics is another who goes to his mouth. Perspiration serves as saliva in a species of the banned spitter.

Pitchers have cut the seam of the ball with sharp thumbnails and on belt buckles.

They have discolored the ball with mud, licorice, coffee and whatnot.

They have roughed it with sandpaper, emery and fingernails.

Two swipes of his trouser leg and Eddie Cicotte of unhappy Black Sox memory had one side of the agate shined like a ball.

room slipper. Pitchers have shined one side of the ball and blackened the other, creating a dazzling black and white effect. Loading the seam with mud

made the ball dart in unexpected directions. KEEPING ILLEGAL PITCHING DOWN IS UMPIRES' TASK. HOWARD EHMKE stuck chewing gum on the pellet in the first game of the 1929 world series.

WASHINGTON (AP)—Texans in congress learned from J. J. Hurley, special representative of Fort Worth, plans for an organization of all Texas cities of 25,000 population or more in an effort to change the present ratio of gasoline tax distribution.

Here in the interest of a Works Progress Administration project for Fort Worth to remove street car tracks, no longer in use since buses replaced trolley cars, Hurley made it a point to familiarize the state's congressmen with his views on how gasoline taxes should be divided.

He informed them that soon after his return to Texas he would communicate with the municipal fathers of all cities in the state of 25,000 or more, inviting them to send representatives to a conference at Fort Worth some time in June, to discuss means of obtaining for the urban district from which they come, a larger share of gasoline tax collections and make registration fees for roadway construction.

The delegates would form an organization and elect officers at the initial meeting.

The injustice of the present setup of gasoline tax distribution is apparent at once, if you stop to

consider the matter, said Hurley. "The motorist living in the cities of 25,000 or more pay 85 per cent of the gasoline taxes and registration fees collected by the state and federal governments.

"Yet the cities receive practically none of this back. The state allocates the collections to the county commissioners, and almost invariably the commissioners redistribute the funds for highways in their counties so as to exclude the city streets. The same situation exists as to disbursement of federal highway aid.

"It would be the object of the organization to foster such legislation, state and national, that may be necessary to bring about a more equitable distribution of these gas taxes and registration fees."

Tricks With Butter. When melting chocolate in a sauce pan, butter the inside of the pan first. The melted chocolate will then pour out cleanly and smoothly. Butter the lip of the cream pitcher to prevent cream dripping onto the clean cloth.

Frances Sears of Abilene, named business manager of the H-SU Brand, campus newspaper at Hardin-Simmons university, Abilene, is the first coed to fill the position in the 23-year existence of the publication.

ing gum on the pellet in the first game of the 1929 world series. Fellow with unusually strong grips are able to loosen the cover and thus toss a "punk" ball, but this procedure is saved for one desperate pitch. Joe Vance, now with Kansas City, wore a shiny ring on his pitching hand while with the White Sox for a brief period five years back.

Among the more pronounced mechanical faults, in addition to taking a step, or crowhopping with

the front foot, is not coming to a stop before pitching with men on bases. Against the rules, pitchers move the shoulders, head, arms, feet, or fingers after coming to a stop. They do not step toward first base in attempting to pick off a base-runner.

McGowan and all other umpires will tell you that they'd spend half their time running to the box if they did so in response to every mechanical defect and rule infringement.

The umpires' job is, as Bill McGowan explains it, to prevent

hard-boiled old offender from getting away with anything and in general to keep illegal pitching down to a minimum. But they shouldn't be too particular with fellows toiling against those Yankee busters.

### Long-Wearing Buttonholes.

To make buttonholes that will not pull nor ravel, first mark the buttonhole with chalk, then sew around the mark with sewing machine. Cut, overhand once around

the slit and then go once around again with a regular buttonhole stitch.

### Handbag Grooming.

To keep leather handbags in good condition, wipe off with a soft cloth each time it is used. Ordinary soil will usually yield to a slightly damp cloth and quick dry polishing afterward. If the soil is stubborn, use a commercial leather cleaner or a little shoe dressing. Overcrowding surely

### "Chest Window" In Tubercular Cases Visioned

BOSTON (UP)—More efficient treatment of tuberculosis by radiation through a surgical window of film inserted in the body is a "distinct possibility," according to Dr. Walter L. Mendenhall, Boston University physiologist.

Under present treatments, much radiation is lost through absorption by body tissues, Dr. Mendenhall said. He already has used a "window" placed over a surgically-made opening in an animal's chest to observe movements of the lungs.

"So far," he said, "the thoracic window" has been used to advantage in allowing scientists actually to observe in animals the effect of intravenous injection of drugs, the effect of inhalation of various agents, or of local applications on the heart and lungs.

"But it should be possible to use it as a covering for the exposed lungs in applying X-Ray and ultra-violet rays in the treatment of tubercularly-diseased parts in human beings."

### U. S. Coinage for Year Exceeds \$12,000,000

PHILADELPHIA (UP)—More than \$12,000,000 worth of coins were turned out by the Philadelphia, San Francisco and Denver mints last year, according to the United States Assay Commission.

Dimes, quarters and half dollars made up \$8,998,493.05, while the rest consisted of pennies and nickels.

The Guy Bradley family of O'Donnell, Lynn county, subscribe to 18 magazines, three daily and two weekly newspapers. The family claims no record, but admit reading a lot.

ADMISSION . . . 40c

It Was an Awfully Long Errand, Mom

Thirty-one years after he was sent to neighborhood store for gallon of coal oil, Anthony returns to his mother, Mrs. Veronica Kesey, at Wheatland, Pa.—with the oil. Anthony, who was 13 then, said he was stricken by wanderlust, left merchandise in the store.

Aluminum Hoods  
NOW SAFEGUARD  
OUR MILK

No new idea we ever adopted made a hit as quickly as our Aluminum Hoods. Everyone says it's great. This glistening, sanitary Hood completely covers the bottle top, keeps the lip absolutely clean. No contamination when you pour the milk.

SO EASY TO OPEN

The Hood comes off with magic ease. It goes back on just as smoothly for re-covering partly used bottles. When you contrast our Aluminum Hoods with the ordinary way of sealing bottles, you'll realize they cost more. To us they do...but not to you. Prices stay the same. ### Negro Farm Project Announced Complete

DALLAS (AP)—Completion of all major construction work on the Sabine Farms project for negroes in Harrison and Panola counties is announced by the Farm Security Administration, which sponsored it. Future development of the project will be carried out under Jesse L. Owens, who holds a master's degree in agricultural science from Texas A. & M. college.

total fencing, which amounted to 140 miles of boundary and forty miles of farmstead fence, has been completed. Terrace lines, calling for 24 miles of terracing, were laid out twelve of the units. More than half of this work has been done. An estimated 1,500 acres has been cleared and made ready for crops.

through the next crop year. Few of the farmers had previously worked sufficient land to produce a full year's supply of food.

### Land Deeded Town For Cemetery Use

FRISCO, Texas. (AP)—In order to provide care for the graves of his parents after his death, Robert W. Holmes bought 219 acres of farm land recently and deeded it to the Little Elm Cemetery association here. The association, an incorporated body, owns the cemetery in which no lots have ever been sold.

### Wild Ducks Go Tame.

BIGGS, Cal. (AP)—Wild ducks and geese are learning the trick that the best way to escape the game bird's fate at a hunter's hand is to cease being a wild bird and become tamed. Thousands of them apparently from game preserves and in search of new food areas have now settled down in the rice fields, on canals and along sloughs and have taken up friendly relations with man.

# 85 Per Cent of Mileage of Primary State Roads In Country Now Have All-Weather Surfaces

By Ralph A. Moyer, Research Associate Professor of Highway Engineering, Iowa State College. Published in "Public Safety" for May 1939 and reproduced by permission.

AUSTIN, May 25.—For many years the chief concern of highway engineers was to lift traffic out of the mud. All-weather roads were needed so that motorists could travel at any time of the year.

Today more than 85 per cent of the mileage of primary state roads in this country has all-weather surfaces. This is a real achievement. We can be justly proud of this fine system and of the engineers who designed and built it.

proaching urban areas. The preferred treatment for such locations is the removal of the physical hazards. If this cannot be done immediately, special warnings or restrictions will be necessary.

Other standard traffic control devices, installed so as to avoid unnecessary restrictions. The program of reconstruction and new construction should be based on facts, so that we may get the most safety for dollar. The road inventory maps which have been prepared by the State-wide Highway Planning Surveys conducted in cooperation with the U. S. Bureau of Public Roads furnish the needed information on the mileage of different types of highways and their condition. Maximum safety requires many changes in the designs for rural highways.

Clear sight distance. R. E. Tombs, chief of the Division of Design of the Bureau of Public Roads, said recently that highways should be designed with two minimum sight distances: One to accommodate passing of motor vehicles with safety, and one to consider a non-passing minimum. He points out that there is little advantage in the practice of increasing the minimum sight distance on existing highways unless this increase provides the minimum sight distance sufficient for passing with safety.

Shoulder widening. Ten years ago, four or five feet was considered as an ample width for highway shoulders and little attention was given to the type of material. Today, we find that many accidents have resulted from narrow, soft shoulders and shoulders not built up to the same level of the pavement surface. Modern design standards should require that shoulders be sufficiently firm and free from obstructions so as to provide an auxiliary traffic lane for use in emergencies.

towns and cities. These foot-paths should be constructed with a high type surface so that pedestrians will use them and keep off the highways.

Texan Likely Choice As New Law Official  
WASHINGTON (AP)—A dynamic little Texan, credited with the prosecution of some of the worst racketeers and gangsters tried the last few years in federal courts, may be named chief of the criminal division of the justice department.

### Alligators Found In Big Lake Area

BIG LAKE (AP)—Alligators, unusual in semi-arid West Texas, have been discovered at the Howard Westfall ranch, three miles west of here in Regan county, by N. W. Hickman, an employee.

to civil rights. Hopkins argued his case eight hours before it went to a jury which finally was dissolved because the jurymen could not reach an agreement.

## All Roads, Highways and Byways LEAD TO GREATER SAFETY

### On America's Finest Tire SEIBERLING SAFETY TIRE WITH SAW-TOOTH TREAD

This remarkable achievement in tire construction has proven completely that Greater Safety can be had at very low cost . . . Seiberling has produced what scores of tire manufacturers have attempted for years to build . . . A stronger, more pliable safety cord . . . Heat vented for blowout protection . . . and a Saw-Tooth tread that grips the ground with ease and precision.

Visit your nearest Seiberling Dealer tomorrow and see this safety tire on display . . . Get the liberal trade-in offer now being made by Seiberling dealers everywhere.
