"He has-youth to offer," said Doctor Greeding, watching her rely: "Good evening, Miss Carlisle. Hello, Ned." And he asked: "Is Dan at home?" action to this suggestion.

"That's a fairly common asset," she pointed out. "If youth is a man's only capital, he'll soon be bankrupt. I'd rather rely on qual- back till Sunday." And then, quickities acquired by years of life and ly, to Doctor Greeding: "I'm sorry effort, than on the accidental-and our phone didn't ring, Doctor. It fleeting-virtue of youth!"

He looked at her thoughtfully. "You plead Mr. Jerrell's cause pretty warmly," he suggested, an intangible uneasiness awakening in

She smiled, said in easy evasion: "Oh, I was just talking abstractions." Then, abruptly: "It's almost two o'clock. We ought to get back.'

So they rose; yet he said as a reminder: "Thursday night, then. It's settled?"

"Of course," she agreed, and they went out to the car.

Doctor Greeding found himself, during the days that intervened, full of a lively anticipation. When at about seven o'clock on Thursday evening he alighted in front of Professor Carlisle's home, he told a storm of passion in the man-Thomas not to return. "I'll walk home," he explained. The car moved away and he rang the bell. Mary Ann herself opened the door; but she did not at once bid him en ter. He saw that she was flushed and warm, and he said, smiling:

"I can see you've been standing over a hot stove!'

She said in a confused hesitation: "As a matter of fact, it isn't just that I'm-hot, Doctor Greeding. I'm a little embarrassed, too. Hence these blushes." And she explained: "You see, I expected Father to be at home tonight; but there's some distinguished foreigner or other, visiting Professor Mid dleton, and he called Father half an hour ago, and asked him over to dinner. And Father went."

She added honestly: "He told me to telephone you and put off our spaghetti till some other time.'

He said, shrewdly amused and pleased: "But you didn't!" And he stepped past her into the hall.

She confessed, slowly closing the door: "Why, I had it started already and it seemed a shame to

"Of course," he agreed. "And now that I'm here, I've no notion of matic to do so; he had molded not staying. It's a long time since himself into a proficient surgeon, I've been considered-dangerous. I feel suddenly capable of any impropriety.'

She could not well send him away. To do so would only serve to lend importance to the unimportant. So she laughed and said: "Spaghetti isn't very romantic, I'm afraid! Come on out to the kitchen, and I'll put an apron on you, and you can

sentment there lived another man, The preparation of supper amused bold and ruthless and passionate. them both; they laughed together driven by appetite, drunk with deand were gay. Modern City Quite Practical.

Beyond the lovely Newar city, grouped around a huge park and stretching away to the east, lies modern Katmandu, the creation of the Gurkhas. Here are no romantic pagodas rising golden tier upon golden tier towards an azure Heaven, but severely practical barracks, schools, colleges, hospitals, and prisons built in the "European style." Here, too, are the immense 'modern' palaces of the king, the Maharaja and the chief nobles, de-

signed by French architects in the late Nineteenth and early Twentieth centuries.

When one recalls the difficult journey into the valley over steep and wild mountain passes, it seems strange to look upon these vast buildings, standing in so remote a to-date conveniences and luxuries. good and broad, and it is amusing to remember that all the motors and lorries which run on them have mony. been carried bodily over the passes by swarms of coolies.

Katmandu. Passing through its nar- in him and in his service for God. row streets you come into the fantastic Durbar square.

On one side, a graceful group of temples rises in a series of elegant red pagodas ribbed with gleaming bronze. Brightly colored struts, rich with delicate carving, support their myriad roofs; shimmering bell finials cap their airy upper stories. Opposite them, and dotted irregularly over the spacious square, lies a swarm of other temples, a fountain, a colossal bell, and a number of tall, slender pillars bearing the shining bronze figures of gods and kings.

The pagoda temples have brightly colored stuffs hanging in gay ripples from their eaves. There are also temples in silvery stone built up in tiers of intricately carved pillars, and pavilions which cluster around the massive curvilinear tower rising from their midst like some huge gray cactus plant.

The third large town in the valley is Bhatgaon. It can be ap-world, kept by God even in a world proached from Patan by motor over a bad, uneven road, a distance of some seven miles. Far the most delightful way to enter it, however,

JESUS PRAYING FOR HIS DIS-CIPLES

LESSON TEXT - John 16:5-7; 17:14-GOLDEN TEXT - That they may one, even as we are one. John 17:22. PRIMARY TOPIC — When Jesus Prayed for His Friends. JUNIOR TOPIC - Did Jesus Pray

INTERMEDIATE AND SENIOR TOP-- Jesus Praying for Us. YOUNG PEOPLE AND ADULT TOP-IC — Unity with God and One Another.

The assurance that someone is praying for us is an anchor in a time of storm. Many a man or woman has been on the point of giving up in despair, of yielding to temptation, and has been carried through to victory by the intercession of a godly mother or father. for us is to find strength for the ki.ees that have weakened and for the heart that has all but failed.

truth of our lesson, that the Lord suggestions; illustrations of all Jesus himself prayed for each one stitches used; material requireof his followers. John 17:20 makes ments. country, equipped with the most up-The roads in the actual town are also included in his petition all who preferred) to The Sewing Circle since that day have come to be-

Before entering upon his inexpressibly precious and beautiful Though Nepal is nominally a king- prayer, the Lord gave to his followers a promise which was of vital

I. A Promise (16:5-7).

Persecution is coming, and Jesus will not be with them to meet the He is modern and enlightened in trying hour. The essence of the work of the Holy Spirit is to glorify Christ (16: his own way of doing things, even 14), and in so doing he convicts the when you think there are better Besides Katmandu, there are two unbeliever of sin and guides the ways. other large towns in the same valey, both former capitals of Nepal. a Spirit-filled Christian is that he Patan practically adjoins modern permits the Spirit to glorify Christ

II. A Prayer (17: 14-26). When one enters the sacred precincts of John 17 he feels that he has come into the holy of holies, and that he would not only loose the shoes from his feet, but also stand silent in worship and in praise. He prayed for me-for me!

Each student of this lesson will wish to enter fully upon the meaning of these words as he re-reads them, in the illumination of the Holy Spirit. May I suggest three things which Jesus sought for His children?

1. Consecration (vv. 14-16). No one is Christ's child without regeneration, but, sad to say, there are many children in his blessed house hold who are not obedient, not spiritually well and strong. They are in the world, they must be here, but alas too many of them want to he as much like the world as possible. He prayed that we might be that hates him and his truth.

2. Sanctification (vv. 17-21). This means to be set apart and cleansed is on the back of an ambling Tibet. for God's service. How is it accomplished? VOCATION, AVOCATION, PROFESSION, AGRICULTURE

difference between the first three cent banquet made us think a lot unless protested. of those terms, and how the FFA boys might use them. We are 8-3t-10 heartily in sympathy with activities of those who go in for vocational agriculture. There is nothing nicer than a profession, avocation or vocation in the field of Number of application RA-1529 agriculture.

It is one of the principal vertabra in the backbone of civilization. the products that come from moth-

er earth? And certainly it is one of the most satisfying. There is tranquility about the exhilarating life of a farm. New hopes are born, when new life springs from the soil. Each new day brings something different, new zeal and new ambitions.

One may advance easily, for each decade gives birth to new attractions in the field of plant life, or added helps to those who till the soil on the morrow.

One may go to the busiest corners of the earth, and find the busiest financial kings and queens, have as investments, avocations or hobbies, somewhere in the country a little farm, where they can go and find rest and new courage, in the cleanliness and order of life as it comes from old mother earth.

And thus we echo Mayor West at the recent banquet, "Boys who are interested in farming can do no wiser thing than to continue the work of the farm."

SHALL IT BE IRIS?

A very commendable suggestion was made by Mrs. J. T. West recently at the Woman's Club, that of making Hagerman and this community distinctive, by having some flower grown more extensive ly than all others. The lady also suggested "Iris" since it is universally popular, and is well adapted to this soil and grows prolifically with very little water.

This is not a new idea, flower lovers will readily recall, other towns and cities, which immediately the name is called, the name of some flower is also remembered as connected with the town or city. It is a very pretty idea, besides adding to the beauty of the country-side, it helps to build up and feed a desire for the beautiful in a greater percentage of individuals, other than those whose every day life is woven around fragrant blossoms.

Let's make it grow! The idea and the Iris!

DROUGHT SHOWS HOW SOILS CHANGE WITH THE WEATHER

Deep soils shrink and expand with the weather. In dry weather there is a noticeable shrinkage, while in wet weather the soil expands, according to measurements taken by the Soil Conservation Service at the Bethany, Missouri, soil-erosion station.

During the extreme drought of 1934 large cracks frequently appeared in the soil, extending to a depth of three to four feet in many instances. Digging into the subsoil, C. M. Woodruff, of the station, found more and larger cracks than those appearing at the surface.

Checking against elevation readings taken the previous year on plots of alfalfa and blue grass he found the vertical shrinkage on both plots amounted to almost two and one-half inches, although erosion measurements showed only a trace of soil loss on each of the

One of the unusual results of the soil contraction and expansion was the Session Laws of 1931, Paul 317 acres of land described as bereports, however, were

Essentials of Existence.

The soil conservation, resettle-

By WILLIAM C. UTLEY

OR some weeks there lay on the desks of several hundred editors throughout the land an immortal document. This living, breathing contribution to the nation's higher brackets of prose was the work of those prolific gentlemen, the members of the PWA "press section," in the throes of inspiration. If not whimsy.

The mimeographed handout, dealing with the incredible volume of the highest standard of well-being water which the PWA apparently has gathered together here and there about the country, was delivered to editors early in January, but was not to be released for publication until February 1.

Events of the weeks leading up to the publication date leave the observer a little uncertain as to whether the PWA, with its customary genius, was able to reach into the future and draw a few neat analogies, or is merely trying to scare the pants off us.

Ducking for Pennsylvania.

At any rate, in view of what has been happening in the Ohio and Mississippi valleys, the PWA's little article is at once lucid and om-

"The greatest water impoundment program in the world's history is being carried out in the United States through the Federal Public Works administration. All the water held at one time in dams and reservoirs completed or under construction with PWA assistance

"Cover the state of Pennsylvania with two feet of water, with enough left over for a few good sized lakes.

"Supply New York city for 62 years with sufficient water for its requirements for washing, drinking and industrial use.

"Reduce the world's ocean level a quarter of an inch.

"Flood the state of Delaware with a 44 foot stage, 14 feet deeper than the recent Johnstown flood.

"Float 1,078,431 vessels the size of the British ship Queen Mary." PWA Really Has Story.

The recent spectacles of city folks and farmers arriving and departing from second story windows via rowboats even takes some of the steam out of the PWA article's intended piece de resistance-the fact that, because a new dam has cre-

nued, or completed with public

805,690. There have been 12 nonfederal loans totaling \$22,145,700. This has made work-creating construction estimated to cost \$595,005,-

PWA funds have not been solely responsible for all of these accomplishments. An allotment of \$51,-000,000 to TVA, for instance, set up that organization and started Norris and Wheeler dams, but it required other funds to complete

Likewise, PWA allotted \$38,000,000 to the mammoth Boulder dam which was already under way. The reservoir behind the dam, known as Lake Mead, has a storage capacity of 30,500,000 acre feet. The PWA allotment enabled the bureau of reclamation, department of the interior to complete the dam proper. The entire Boulder dam project is estimated to cost \$120,260,000. PWA has also made an initial alotment of \$15,000,000 to the Grand Coulee dam, located on the Columbia river in Washington: a project estimated to cost in the neighbornood of \$175,000,000.

Everything to Gain.

It is possible only to estimate the amount of water impounded by nonfederal projects, but should they all be taken into consideration, total water impoundments by PWA would run far in excess of 22 trillion gal-

Scientists, engineers, industrialists and sportsmen declare the United States has everything to gain by its tremendous water impoundments.

Sportsmen set forth the advantages by pointing to the increased opportunities for boating, swimming and fishing which may take place in the man-made lakes throughout the nation. It will be possible to float large-sized yachts on the waters of Grand Coulee, Bonneville. Boulder dam's Lake Mead. Fort Peck, or any of the larger non-federal "lakes." There are already more than a hundred privately owned boats on Lake Mead, one of which carries more than 40 passengers. Persons in that arid area had never seen a lake until man made Lake Mead.

Engineers point out that such dams as Fort Peck, Tygart dam near Grafton, West Virginia, the ture is found in its adaptation to 14 reservoirs of the Muskingum dis-flight. "City of Death" By FLOYD GIBBONS Famous Headline Hunter

LL during the World war, Anita Johnson of Lynn expected 1 to be blown up by a bomb. In those days she lived in Halifax, Nova Scotia. That, of course, is up Canada way, tration, have taken place for five and from 1914 right through to the Armistice, the folks up principal reasons: Water for human there took precautions against air raids and attacks by the Germans. At night, no lights were allowed to face the harbor. The harbor was patrolled by boats day and night.

Anita was just a kid then. She didn't know what all those precau-tions were for, exactly. But she sort of understood that one day the German airplanes would come flying over the Atlantic and start showering bombs on the city.

But nothing even remotely resembling an air raid happened in Halifax until December 6, 1917. Then something happened that was worse than a hundred air raids.

The Great Halifax Explosion.

You remember what happened then. You remember how two ships ollided in the harbor-how one of them was loaded to the gunnels with ammunition that exploded and almost wrecked the whole town.

The great Halifax explosion was one of the notable disasters of the entury. And Anita was right where the big blast did some of its worst

Anita was ten years old when it happened, and she was in school when the big French munitions ship let go with a roar that was heard

"We had just been in our class rooms for five minutes," she says, "when suddenly we heard a series of noises. I remember looking toward a window and thinking that a car must have backfired outside. But it didn't take long to find out that it was

What Anita had heard was just a couple of little explosions that set off the big one. The real blast didn't sound like an explosion to her

Teacher Knew What Was Coming.

Anita may have thought those sounds were the backfiring of a car, but her teacher wasn't fooled. She seemed to sense what was coming

and told the children, "Quick! Put your heads down on your desks!" Those kids did as they were told. Then it came! Not a loud report. Those kids were too near it to hear the blast, for the schoolhouse was on a hill, not five minutes' walk from the harbor. But all of a sudden it seemed as if the whole world were crashing down on them. AND

Well, suppose we let her tell you herself how she felt. "At that age," she says, "my mind was, of course, full of war. had my own ideas about air raids, so, as my head lay on the desk, my eyes tightly closed I felt myself traveling skyward as I expected a bomb should send me.

"I kept traveling up and up until it seemed there must be someng wrong with my means of transportation. 'After all, a bomb could only send me so far, and I should be com-

back by now. I was positive I would be killed when I landed, and The style is 1202 and it can be I could see no reason to prolong the agony, so I decided to investigate. "I opened my eyes and saw the floor. Now that floor wasn't sup- 14 requires 4% yards of 39 inch posed to have followed me, so I realized that I wasn't up in the air at all.

"I hadn't even moved, AND I COULDN'T MOVE. There were so many things on top of me. I heard some yelling and I yelled too. But that didn't help, any, so I waited.'

Most of Them Were Dead or Disabled.

Anita doesn't know how long she waited. Time didn't mean a thing be interested in this style as a to her. She was so dazed by the shock that she didn't feel any pain. It wasn't until later that she even realized she was hurt. But she at her desk until some soldiers came into the room and pulled her out of it.

"Luckily I was able to walk," she says. "There were only five or six of us who could."

Then Anita started making her way out of the school building. We managed to climb and crawl over things that blocked the halls," she says. "The stairs were all gone but there was enough debris piled up where they had been to take their place. We slid and crawled down those piles and finally got outside.

"I stayed there at the school for quite a while, too dazed to do anything else. All I could see around me was fire. The soldiers kept bringing other girls out of the school building. "Some of them were dead. Others so injured that they couldn't

be recognized. Other buildings were down all around us "It didn't take us long to find out what had happened. After I had been there for ten or fifteen minutes I saw my sister coming out."

Anita Was Covered With Blood.

Anita waited for her sister to come up. But sister walked right up trate now on her new gingham to her-walked right on past her and didn't even notice her. Anita called to her and she came back. And only then did Anita and-butter cotton version, but a learn that she was just as unrecognizable as some of those other in-

jured kids she had been pitying. HER FACE-HER CLOTHING-HER WHOLE BODY-ALL OF THEM WERE COVERED WITH BLOOD.

Together, she and sister started for home. They walked around wreckage, dodged live electric wires and stepped over dead bodies by the score. And when they arrived at their home they found it just another wreck like the schoolhouse and all the other buildings in the neighborhood

Anita's head was full of bits of glass, but she managed to have it all taken out except for one piece which she says she thinks the doctor left there for a souvenir. She has a few fancy scars, too, but they're nothing to what she

"And," she says, "I have still to find out what it feels like to be blown up in the air by a bomb." @-WNU Service.

Birds' Muscles Centered; Body Is Short and Deep

The whole secret of a bird's struca whole storehouse of interesting information, observes an authority in

the Detroit Free Press. On first glance, it may seem that

ary tail of light, air-resisting feath-The birds' muscles are not scatcles of the wings are located on the be used in place of lard. breastbone. Birds have small calves and most of the muscles are on the upper legs close to the body. The all its parts centralized, thus bringing the relatively heavy liver, gizard and intestines close to the censmallest possible bulk to pass through the air.

Albinism

Albinism occurs more among birds than with mammals. Albinism must not be confused with the changes that take place with some birds and mammals on the approach of winter. The mountain hare, brown in summer, becomes white when the mountains are covered with snow. The ptarmigan, a rich mottled brown in the breeding are straight. The slightest twist season, is clothed in snowy white feathers in winter.

T WAS some job, Ladies of The Sewing Circle, to get these three lovelies together to pose for the camera this week They're under the strict tutelage

By WILLIAM HORNE

T IS perhaps the "sand-I hog," the human mole who goes about his deathdefying trade of burrowing into the innards of the constructing subways, tunnels and mammoth foundations who holds first place in a swiftly moving world of high adventure and glamorous drama. And well might his job be called the world's most dangerous

Unlike his brother, the miner, who works hundreds of feet below the surface in gloom and shadow, the sandhog must have glaring light at his constant command. Unlike his brother-in-trade, he can work only in three-hour shifts at most, and under certain conditions only one hour each day, cut into two thirty-minute periods.

Picture, if you can, a gigantic like this, is probably the verdict of steel tube, twenty feet in diameter, Reva Whitcomb, who is taking her being built through the bowels of

An enormous cylinder with the tion at Rochester, recently. She ap- front end open and protected only parently agrees with the judges that by a movable, circular steel cap her pies are the best, for she is that precedes construction, pushed shown eating one of her blue-ribbon forward by mighty hydraulic jacks that have a combined thrust of a million and a half pounds.

> Hundreds of tons of sand and dirt and water press constantly on the steel walls and seek admittance through any possible opening.

Wall of Solid Air.

As the gigantic steel cap is forced forward to make room for additional sections of the tube, the muck and silt and sand and water are exposed in a gushing, naked circular wall. But it does not come far into the tube.

What holds it all back and makes onstruction possible? Nothing but terrific pressure of compressed air. Enough pressure must always be kept inside to equal the pressure without-be it twenty pounds to the inch or fifty.

If, when the cutting cap, or shield, is hitched forward, there comes a "leak" or a "fissure" in the naked. newly exposed wall before an additional section can be bolted in place, or the air within the locks

may escape, there is great danger. This is called a "blow", and with no resisting air to hold it back the sand, muck, silt and water will gush in and fill the tube, often drowning or smothering to death the men working in that compartment.

"Shot" From Tunnel.

Always there is constant danger of "blow," the most dreaded of all catastrophes that can befall a burrowing sandhog. Many men have died, caught like rats in a trap; others have been literally shot through the earth to the surface where the air escapes above.

experience to tell about it. That was during the construction of the Battery Tunnel beneath the East River in New York City.

There were three men in the "head" of the tube when the unexpected blow came. First, a fissure appeared as if by magic in the newly exposed, naked wall of sand and

Suddenly there came a deafening report as it broke wide open, and the three hapless men were sucked bodily through the opening with the escaping compressed air.

Richard Creedon was one of the men, and his breath was sucked away by the terrific gush of air as he went hurtling through the 120foot length of the fissure.

Companions Lose Lives.

His breath came back to him as he was thrust upward through the bed of the river, and the icy water revived him. Choking and gasping ne was expelled upward and shot high above the surface like a straw caught in a typhoon at sea.

He fell back with a splash, unhurt, and swam ashore unaided. It was just one of those things that happen—a miracle.

But his two companions were not

Experiences of Life—

Their Significant Interest and Some Ways to Meet Them

THE journey through life is but we had no eyes to see them filled with experiences from at the time. We can laugh over the time we are born to the day them and actually enjoy the rewe die. Without 'hem life would membrances of what were breathbe dull and uninteresting. The taking events when they hapmore experiences are crowded in- pened. to our lives the fuller and more interesting they become.

When we are in the midst of vents that have elements of dan-

No Age Limit.

Since life is so full of experi-ences some of which turn out felicitously, and others not so satisfactorily, there must be a good reason for our having to go through the events. I remember when I was a little girl and there was something which, to me, seemed very important to decide rightly, how I envied grown-ups. They always knew just what to do! The fallacy of this assumption we all know, but we do not all appreciate how dull life would be if it were true, and how de-velopment would be retarded. There is no age limit to the series of experiences.

Learning by Experience.

The benefits of our life experiences come through our way of taking them, and on our wisdom of decisions when these require our consideration. If we think of ourselves only we become selfish, hard, and difficult. If we decide with a larger vision of results, and of the best good to others as well as to ourselves, we become fine and strong characters. By the exercise of good judgment and by making the best of things we learn to develop well by experi-

ences.

DEPOSIT INSURANCE

An Extra Measure of Protection

Federal Deposit Insurance applies to all deposits. The maximum amount insured for each depositor is \$5,0000.00. This does not mean that a depositor with an account of say, \$500, is guaranteed \$5,000, but it does mean that his \$500 is fully insured.

Deposit insurance is for your protection. It is a permanent part of the Nation's law.
