W. C. (Bill) McDonald.

Just a line to let you know that I shall be deeply grateful for your helping to "keep 'em working', support in the election Saturday. W. C. (Bill) McDonald

> Candidate for 51st District Attorney

Sanco Camp Meeting

The Sanco Camp meeting has been in full swing this week A traditional revival time for this part of West Texas, the scene is typical of olden times and a reminder of days that have gone by The crowds have been reduced on account of present day conditions but quite a bit of interest is still maintained. The old fashioned barbecue still draws a crowd.

To Foreign Fields

Bobby Lee Davis of San An tonio spent last week end visiting his parents and friends in Robert Lee before leaving on foreign supervisor of Boobkeeping Me- bana, Ill. chine operator.

Angelo visited in the home of family last week. Mrs. Lizzie Davis first of week.

WEEKLY NEWS ANALYSIS

Powerful Strength of Nazi Thrust Drives to Greatest Gain in Russia; Aussies Smash at Rommel in Egypt; U. S. Forces 'Change Policy' in China

(EDITOR'S NOTE: When opinions are expressed in these columns, they are those of Western Newspaper Union's news analysts and not necessarily of this newspaper.) Released by Western Newspaper Union.

RUSSIA:

Deepest Drive

Even Moscow admitted it. The powerful Nazi thrust had finally driven deeper into Soviet territory than at any time before in the history of the war. Last year it was toward Moscow that drive penetrated to its farthest point.

But the current German campaign wasn't headed directly that way. Its spearhead had thrust itself across the Don river and swung around the big bend of that river heading southeastward down the valley toward Stalingrad.

Though there were immense losses of Nazi men and machines Hitler kept on going for he wanted Stalingrad on the vital Volga. But even more he wanted what he could the rich oil pools find beyond of THE CAUCASUS.

The Moscow-Rostov railway had been cut earlier and Soviet communications thus suffered a hard blow. When the Germans slash across and solidate their positions on the Volga it means that still another highly important link between the final battleground for the Caucasus and Moscow would be severed. Crumpling of their forces further to the north of Rostov would also leave the Russians open to a hard new push by floods of Nazis released from that battle sector.

Russia's hope was the heavy toll of German strength that was being extracted as the Reds fell back in their delaying action all along the fighting front. German claims of success spoke of the breaking of "local resistance everywhere." Some military sources were inclined to agree with them in this regard but there was speculation as to whether or not communiques like this one were true:

only six planes and on the same day Russian losses were set at 63 tanks and 74 planes.

In one day's fighting Germany lost

Berlin said so, but Moscow didn't.

SABOTEURS: All Doubt

ment-appointed counsel which tried to give these enemy agents the benefit of all doubt as to their guilt.

Extensive cross-examination by defense counsel of prosecution witnesses slowed testimony but during the trial little information leaked out to the news-hungry public.

Elmer Davis, director of the Office of War Information, had a tough round with the court in getting release on any news whatsoever. He did get two daily press releases but they were described as "circum-

CHIEF: U. S. army air forces have as their new commander-inchief in the European area Maj. Gen. Carl Spaatz

CHINA:

Change of Policy

"There has been a definite change in policy since July 1. (This was the date on which regular U. S. army air forces started operations in China.) Hankow, Canton and other cities in occupied China which were never bombed before have been bombed now.'

So began a hard-hitting statement from the headquarters of Brig. Gen. Claire L. Chennault, chief of air operations against the Japs in

"We are going deeper and deeper into China. All cities under Japanese occupation will be bombed. There will be a more active policy from now on. You can draw your own conclusions as to what will happen," he further stated.

Meanwhile, concrete evidence of this new surge of strength was revealed in an announcement from Lieut. Gen. Joseph Stillwell's Chungking headquarters which said that Linchwan, important base for

GENERAL JOSEPH STILLWELL Helped with a "change of policy."

the Jap thrust in Kinangsi province, had been bombed by planes.

But not only air power seemed to be growing in the Linchwan sector. for the Chinese ground troops were reported driving back the Japs toward that city and toward Nan-

EGYPT:

Again the Aussies

German Field Marshal Rommel had to deal with the Australians again. His mobile columns and artillery had smashed the British back in a headlong drive that had dangerously extended his communication lines back to Bengasi and Tobruk. And then at El Alamein the British army of the Nile, reinforced by Australians, let him have it.

They chose the coastal route to slap back. Along the Mediterranean they rushed at the Nazi and Italian forces who had little time to dig in and consolidate their positions. The British, South African and New Zealand desert units threw out an offensive to the south and west of their El Alamein line and the Aussies charged in against the German tanks.

Reports from Cairo said that they were using a new type of anti-tank gun and they used it at shorter range than usual. It had been a pre-dawn assault and some of the enemy had been caught napping. Time after time the Aussies were way out in front of their supporting tanks. They overran enemy gun positions and in some cases turned the guns around to the west and fired at the German-Italian positions

There developed later, however, the most important angle of the battle for the Suez. It was an allout air battle. Rommel had suffered some heavy plane losses as he kept hammering the British back but now his air strength seemed to be strengthened. For as the Aussies caught his tanks temporarily off guard, Rommel's planes rose to blast the advance British lines. This seemed to mean that from somewhere had come help.

Answer in Crete?

Experts looked toward Crete for the answer. For on that island in the Mediterranean were based the Nazi ace in the hole. This consisted of the powerful plane force and the parachute troops that had taken the island from the Greeks last year and which now were poised to relieve pressure from Rommel.

INDIA: Gandhi's Gain

MOHANDAS K. GANDHI A step-up in moral pressure.

His doctor had ordered him to rest because of his extreme exhaustion but Mohandas K. Gandhi was again on the road to beating down the British and he would not be stopped.

After six days of discussion at Wardha, Gandhi's All-India Congress party's working committee agreed to adopt his project for a step-up in moral pressure to force Great Britain to give India full freedom immediately.

News out of New Delhi indicated that this step came as triumph for the 72-year-old advocate of Indian nationalism over Pandit Jawaharlal Nehru, left-wing leader of the party. Nehru has been described as the best friend the United Nations have in India and thus it appeared that any movement to force freedom from Britain would be so carried out as to refrain from interfering with the war effort there. For most sources did not believe Nehru would have been won over so easily if he thought the United Nations cause would be endangered.

CEILINGS:

Some Changes

When first the General Maximum Price regulation was introduced it was pretty difficult to adjust cases that appeared to be directly harming someone unfairly. This has now been afmended to permit Leon Henderson's Office of Price Administration to adjust ceiling prices in certain "hardship cases.

Frozen fruits and vegetables were among the first ceilings to face adjustment. Ceiling prices on these products are being increased to prevent crops from rotting in the field because of increased gathering and packing costs.

Price relief will also soon be granted for jams, jellies and preserves.

Some idea of the amount of money to be spent, taxed or saved throughout the country in the coming months came from Commerce Secretary Jesse Jones in a statement to the effect that the American people in 1943 will have over \$30,000,000,000 more income than "the value of things for which the money can be spent."

RATIONING:

Gasoline

About 8,000,000 eastern motorists were to get their basic permanent gasoline coupon books, said OPA, and local boards were instructed to insist on complete proof of eligibility and need before granting supplemental rations of any kind.

However, congressmen, members of state and local legislatures, and other government officials will be eligible for "special rations" for use

in legislative or official business. Bona fide political candidates may have extra rations for travel necessary to the prosecution of their candidacies. Newspaper reporters and photographers will be eligible for supplementary rations up to a quantity sufficient to permit 470 miles of occupational driving per month if they can meet car pooling provi-

Gasoline stations which have been supplying war workers will be granted increased monthly quotas and the WPB granted OPA authority to require filling station operators to submit coupons or other evidence that rationing regulations are being complied with when gasoline is delivered to their stations.

Eligible motorists may be refused new tires by local rationing boards if an inspector's report shows that the purchaser has abused his old tires, according to an announce-ment made by OPA. Also local boards may receive application for new tires from purchasers of tractors, farm implements, and other vehicles sold without tires.

Washington Diges

U. S. Bond Purchases Are Better Than Forced Savings

Federal Taxes Unable to Cover Total of Present War Expenses; Transport Planes' Importance Growing.

By BAUKHAGE

News Analyst and Commentator.

Washington, D. C. Washington, which never hesitates more at offending the electorate than in election year, today is faced with doing that most of-

fensive thing of all-taking away the

The President's anti-inflation program has not been carried out and nobody dares take the first cruel

people's money.

step to put it into force. The love of money may be the root of all evil, but the presence of too much money in too many pockets has become an evil, too. The two methods of rooting out this evil are to stop the money coming into all these pockets and to take it away after it gets there. I have had an interesting glimpse into plans for the taking away process through the eyes of some of the men who have some very decided views on that

My story begins in a very ornate corner of the Capitol building just off the senate floor.

Senater Z was opposite me. I always call on him when I want an idea in a couple of pungent paragraphs. He was once a newspaper man himself, and as a timid representative of a news syndicate many years ago I used to beard him in his news den.

"Senator," I said, "what are you going to do about taxes?"

Senator Z's eyes lighted up. He shifted his cigar. "Baukhage," he said and slapped my adjacent knee, "I am not going to do anythingnow. When the time comes I am going to do a lot. Let me tell you something. Last January Secretary Morgenthau came and talked to some of us. He said: 'I know it's hard for you folks to vote for a big tax bill in election year. But it's got to be done. And I'll tell you what I want. I want the country to pay for the war two-thirds of the way as we go. I want you men here to make a team and agree to that. Taxes to equal two-thirds of expenditures.

"So we agreed. But in the five has been thrown completely out. Instead of paying with taxes twothirds of current expenses we will be lucky if we can pay one-third.

"And let me tell you this: It is a lot better to make the taxes lower, to leave some money in the taxpayers pocket and force him to buy bonds. I'm not coming out for compulsory savings now for that would defeat itself. I am going to wait until Joe Doaks begins to realize what is happening.

"And let me tell you this!"

"When this war is over, unless the money to fund the war debt is still in Joe Doak's pocket, Joe is going to lose it and the whole economic framework of the country will go to pot. Joe doesn't know that. He thinks the money in the bank is still his. It isn't. It's the bank's. Now Joe won't keep the actual money in his pocket. He'll spend it. Eventually the bank will get it if he does. But if he buys a government bond and puts that in his pocket, he will be safe. So will the country."

"Well," I asked the senator, 'when are you going to do something about this, are you going to come out for compulsory savings?"

"No," he said, "but I have a plan, and when Joe Doaks realizes that Henry Morgenthau's voluntary purchase of bonds has fallen down I'll be ready."

Americans Show They Can Do It

Nobody dislikes anything compulsory more than red-blooded Americans, but when an emergency arises, if they feel it is a real, national emergency, they will do what they are told and do it willingly. Three million men did it willingly in the last war when they were told they had to go and fight. Millions are preparing to do it in this war.

Now saving is something that Americans talk about but never have done so much about. In the piping times of peace the insurance agents used to tell me that 90 per | craft except balloons." cent of the American people had no estate at all when they died and "to lay the old aside."

WNU Service, 1343 H Street, N. W., | were utterly dependent when they quit work.

Working men and farmers are twoof the most independent thinking classes in America today. But strangely enough, the same day that I talked with Senator X in the overstuffed chair in the senate anteroom I ran into P. P is a great friend of the oppressed. He is also a great friend of the laboring man, oppressed or otherwise.

After an exchange of greetings I said to him:

"How do you fellows expect the farmer to be willing to let farm prices be curtailed in any way when wages aren't frozen?"

"I don't," he said, "but I have a great idea. I have been working on Phil Murray about it. It is simple. Let all wage raises from now on be paid in non-negotiable war-bonds. That will stop inflation, for it will keep the money out of circulation."

Well, as I say, I'm no economist but after those two experiences I have begun to get ready to sign upright now for so many bonds a

Military Transport Planes For Troop Movements

"Which would you rather try tolick? One wild cat or a swarm of

Naturally, I chose, not too willingly even for a purely mental

combat, the wildcat. "So would the Germans;" My lunch partner leaned across the frail restaurant table and pounded it until the tomato-juice cocktails leapt into the air and frightened war-

workers looked at us apprehensively. "You could take a million men across the English channel in ten days in small planes that could be built in six months. They would be as thick as hornets. Those planes could be built without the slightest strain on our war effort."

"That's just an example," my friend went on, "of what we could do with planes if we could get these months since then the expenditures fossils to build them. Check my have increased so that the balance figures with the Civil Bureau of Aeronautics if you want to.

"What I am really getting at is this-" my friend went on and then stopped to absorb the agitated tomato juice. Soon he was off again on a most interesting exposition concerning air-power. I tried to keep up with him.

It is hard for a layman to assay these enthusiasts. What they say is always studded with figures quoted from official records. And they usually can quote volumes to prove that people who disagree with them said the same things about Billy Mitchell's ideas all of which have been proved correct.

What my friend was getting at was this: That military transport has been woefully neglected. That only now are we beginning to build transport planes on a scale to meet the demands.

Germany has 10,000 transport planes in service. We only have five plying between China and India. But even a plane carrying 11/2 tons could do the work of a hundred and fifty trucks over the Burma road.

I had just heard the surprising word from the lips of a Chinese general that even before the Burma road was destroyed, China was getting very little more in the way of supplies than she is today. Why didn't we begin plane transport then? I thought of the couplet by Pope:

Be not the first by whom the new is tried Nor yet the last to lay the old aside.

I thought we had gone a long way in transport already. Our transports or ferries are over every continent except Antarctica. The Pan American Airlines, which established a regular service across Africa, transporting its own supplies and men to equip the fields, is about to be

taken over by the army. But, according to my friend, we would have been much further along if it hadn't been for "Brass hats who think only in terms of text books that don't even contain the words 'dive-bomber,' or 'glider' or more than passing mention of any air-,

I don't know-perhaps it is time

CHAPTER XVI

An uncanny howl from somewhere dland rose to crescendo, slid into diminuendo and died away. "What's that?"

The teeth of one of the pilots visibly and audibly chattered as he an-

swered Paxton.

"That a wolf cry, yes sirree. Smoke an' fire drive dem to shore. Dey no lak fire. Not much ever come oder time. Hunters come here. Shack up by trees."

Paxton's voice showed strain. "You've clung to your camera, I see. We may wish it were something to eat before we get through. There are two cans of crackers in the launch, that's all. If only this infernal smoke would lift, we'd get back to the yacht. The men were right. There's the shack."

Janice's heart went into a tailspin. On a little hill, a spur on the side of the mountain, sagged a cabin of warped, weather-beaten boards.

She didn't know how long she and Paxton stood there staring at the distant hut. He wheeled at sound of the put-put of an engine starting. With a startled oath he ran back to the water's edge. Janice stumbled after him. As they reached it, the stern of the launch vanished into the mist.

"Come back! Come back!" Paxton shouted. Only the fading throb of the engine responded. He drew his revolver and fired into the air. As though in answer, a wild wail was relayed by echo after echo through the woods. Janice caught his arm. Her voice came raggedly.

"Ned! Ned! Save your ammunition. Remember that ghastly howl."

A shower of hot stones pelted the man and girl. Rain splashed.

"Come on, Jan. We'd better make for that shack while the going is fairly good. I'll bet it leaks like a sieve, but it will be some protection. Those infernal quitters threw out a can of crackers. I'll take that along.

He picked up the tin.

They passed great patches of blue lupin. Wild raspberry bushes, higher than Janice's head, clawed at her wet clothing, as though to direct attention to the dead ripe fruit hanging in maroon clusters. She gathered handfuls, carried them in her hat which she had lined with a damp but spotless handkerchief. The woods rustled with the motion of unseen life. A porcupine rattled across the trail ahead. An otter swam down stream, two martens scuttled into a tangle of brush. A fox trotted by, stopped, one foot raised, looked back before he dashed off as though pursued by furies. A fat ptarmigan rose with a whiz which sent Janice's heart into her mouth. A few blood - thirsty mosquitoes buzzed about her head, before drifting smoke sent them winging. Did everything living feel the pervading rain." imminence of danger?

Paxton's eyes were inscrutable as they met Janice's. Something about the grimness of his mouth set her heart thumping. He waved his hand

toward the hut.

"Let's investigate. I have a light. never to leave the ship without a flash, a gun and matches." He pulled an electric torch from an inside pocket of his soaked blue coat. Its glow revealed a room high enough for a man, a tall man, to stand upright without hitting his head. A bunk against one wall was heaped with dried boughs of spruce. A loose-jointed pipe, one end poking through the roof, acted as smokeconductor between a rusty cookstove and the outer world. A degenerate chair and a rickety stool kept dissolute company. A table, whose legs sprawled outward like those of a teetering new-born calf, supported two tallow streaked bottles and a dirty pack of cards. A rusty kettle and a frying-pan burned black hung from a crude shelf. Against the wall leaned an axe with a long handle and nicked blade.

Paxton snapped a gold lighter. After several futile attempts he succeeded in producing a small flame which he applied to a candle stub in one bottle. "We will save our matches for the fires. My knowledge of camping is all laboratory stuff, no field work, but I know enough for that."

They hung over the table breathlessly till the wick caught and a flickering flame set ghoulish shadows astir on the walls. Paxton snapped off the electric torch, laid his revolver on the shaky table, a card of matches beside it.

"Those must be kept dry. Think you can start the fire in the stove while I collect brush for a signal to the yacht? Wrecked on a desert is-

land stuff.' He flung his wet blue coat over the chair-back. Axe in hand he smiled at her from the threshold.

Good, but not good enough. Did | was a wolf-just back of you-hehe think she didn't know that the outside fire was more to keep off marauding animals than to signal the boat, that she had forgotten those banshee howls? She steadied her lips and smiled back at him. This last hour had aged him unbelievably. It had set deep crow'sfeet at the corners of his eyes, etched lines between his nose and lips. Except for war service, all his luxurious life he had played hard and worked little. His once immaculate buckskin shoes oozed mud; his soaked white flannel trousers were criss-crossed with black lines, where wet shrubs had lashed at him; little green rivulets, sponsored by his necktie, were cavort-ing down the front of the silk shirt which was plastered to his body. His eyes with a laugh in their blue depths met hers.

"I don't like the suggestion of criticism of my appearance in your expression. You're not so hot your-

The liking she had felt for him during the first weeks of their acquaintance, which had flamed into love-or fascination-crumbled into gray ashes of doubt and distrust. stole back. It warmed her voice.

She took careful aim. Fired.

"I'm a sight. I feel like a rag doll which has been left out in the

She heard the crackle of brush under his feet.

She lifted a rusty cover from the stove. Her thoughts raced on as she laid a fire of dry leaves and brush. Billy and Bruce had taught her woodcraft when they had I was trained by an old sea-dog taken her with them on their fishing expeditions. If only Bruce were with her instead of Ned Paxton.

She struck a match to escape the memory which set her heart pounding unbearably. She watched the dry leaves ignite before she clapped on the rusty cover. She listened. The fire roared. Had she put in too much fuel?

How the pesky thing smoked. She wiped her smarting eyes as she hunted for a damper. Her throat stung. It was humiliating not to be able to start a dinky little fire, but she would have to ask Ned to help. She stepped to the entrance for air.

What was that? Good grief! What was that behind the tree near him? A dog? A gray dog? A dog's eyes wouldn't be green. A wolf! What was benging from the creature's cruel mouth? Cloth! A piece of plaid cloth caught on one yellowed fang. Sickening! She tried to call a warning. Her tongue dried to the roof of her mouth. Her body prickled with horror. The animal took a stealthy step toward the man on the stump. Stopped. Not a muscle rippled under its skin. Ned would have no chance to save himself.

Eyes on the motionless creature. Janice backed to the table, seized the revolver. On the doorsill she dropped to one knee. "Steady! Steady! Remember Jimmy's instructions," she warned herself. She took careful aim. Fired.

Man and beast leaped simultaneously. The wolf soundlessly slunk into the shadows. Paxton ran toward her, caught her shoulder. Shook her.

"Why in heaven's name did you

do that?" She steadied trembling lips. "It

he was watching you-hungrily. I thought-I thought-'

She dropped her head in her hands. Shuddered uncontrollably. "A wolf! You shot him?"

"I shot at him." There was a touch of hysteria in her laugh. "I'm not too good."

"God, we'll have the whole pack down on us."

Indignation steadied Janice's nerves as no commendation would have done. "I call that darned ungrateful. You would have been torn to shreds if I hadn't fired.' 'Why didn't you yell?'

"Yell! I was dumb with horror. I came to the door to ask you to help with the stove, saw that terrible creature moving toward you, and fired."

He loosened the fingers still clutching the revolver, laid it on the

"Did you care when you thought me in danger, Janice?' Her heart flew to her throat. Blue

eyes aflame could be more terrifying than fierce green eyes. "Care! Wouldn't you care if you saw a human being in peril of his

life? Isn't the smoke stifling? Can't you do something to stop it?"

"I-" He coughed, sneezed, wiped his eyes. "What's the matter with the infernal thing?"

Lids half shut, tears marking grimy furrows down his cheeks, he poked about the stove. Tears brimming from her smarting eyes, Janice tried to help. He shook what seemed to be a damper. The portion of the pipe which pierced the roof fell with a clatter which set her already taut nerves twanging like violin strings under the fingers of an impassioned virtuoso. A vicious orange-red fang shot from the standing smoke-stack, licked at the rotting branches of the roof. Damp as they were, they ignited. Fire ran from twig to twig.

The man and girl stared incredulously.

"We've done it now! Quick! Out of this!"

Paxton pushed her to the door, caught up the revolver as he dashed by the table. Janice grabbed her camera, snatched the tin of crackers. As they jumped to the mossy log she heard the crackle of wood. The walls of the shack were on fire.

Side by side they watched the lurid light inside flicker, flame, wane. Heat poured out as through the door of a furnace. Janice turned her back.

"I'm thoroughly toasted on one "Tis an ill wind, etc.' It would have taken hours before an ordinary fire to dry our clothes. What is the next feature on this peppy program? It ought to be announced over a coast-to-coast hook-

Paxton's eyes shone blue and clear in his smoke-grimed face. "Janice, you're the best sport in the world. You set a great pace." He steadied his voice. "The fire's dying down. We'll have a warm, charred shack at our backs. That will be some protection."

"Protection from what?" She hated herself for the terrified catch in

"From prowlers. You heard the native pilot say that the volcano smoke would drive animals to the water. They will come down the bed of this brook from the interior."

Hours passed. Hours filled with nerve-racking suspense, listening, listening for the sound of a boat which did not come, with the drip of rain, the pelt of hail, flash of lightning and detonations of thunder. Janice dropped to the mossy log in front of the shack which gave out an acrid odor of smoldering wood.

Paxton carefully laid a heap of brush beside him as he dropped wearily to the log. The fire had died down to red coals.

He opened a gold cigarette case. 'One left." He snapped it shut. 'Glad you don't smoke. Otherwise I would have to sacrifice that on the altar of chivalry. Any crackers?" She drew one grimy piece from her pocket. "The last?" She nodded. 'Put it back. I have indulged in too many calories already. I'll lose my boyish figure if I don't watch out

"What's that?" "What? Where?"

Janice gripped his sleeve. Pointed. Two lambent green dots glowed between low alders.

With a muttered imprecation, Paxton threw on the pitifully inadequate pile of brush beside him. The fire flared. The sinister points of light retreated. A howl tore through the distance. From near at hand the blood-curdling wail was answered.

Paxton rose swiftly. 'I'm going for more wood." "Where? You mustn't. It isn't safe."

NOAH: GOD'S COVENANT WITH MANKIND

LESSON TEXT-Genesis 9:1-16. GOLDEN TEXT-I will remember my covenant.-Genesis 9:15

God does not forget. He keeps His promises now just as He did in the days of Noah. Since our lesson of last Sunday, a long period of time had elapsed. Generation after generation had come and gone, and all the while man grew more and more wicked. Finally, God saw that He must put an end to the corruption of the human race, saving just one righteous family, that of Noah, with which to begin anew.

He warned Noah of the judgment of the flood, and he in turn doubtless warned others, but finally the day came when God shut him in the ark and poured forth the waters of judgment upon the then inhabited earth. But the same God who shut Noah in (Gen. 7:1), in due time called him out (Gen. 8:15, 16).

Noah had obeyed God, and He now rewarded him. The man who had borne the ridicule was now honored by Him. The experience of Noah brings before us-

God's Three Gifts to a Believing Man:

I. Power (vv. 1-4). Man is the "lord of creation," not because he has brought about its subjection, but because God gave him that power. It was first given to Adam (Gen. 1:26), and it is renewed here, with the additional promise of the animal as food. This was not to be, however, after the manner of wild beasts (v. 4).

No man ever lost anything by obeying the commands of God, even though appearances may seem to so indicate. The ridicule of those who called Noah foolish for obeying God, had now been eilenced by the judgment of the flood, and he stood forth vindicated, empowered by God, with authority over the whole earth.

Faith is still the victory. Men who put their hopes in the kings and empires of this earth have seen them "rise and wane," and even unbelievers are beginning to talk about he necessity of a spiritual anchorage for the souls of men. It is ound only in Christ, but in Him is found both peace and power for victorious living.

But we see a second gift of Godfl. Protection (vv. 5-7).

Human life is not as cheap as men would have us think. Their estimate based on greed and lust for power makes man but a unit in a machine designed to build up political power. The blood of those who are not profitable to such an enterprise, is shed in utter callous-

Those who do such things, need to read the words of God, "Whoso sheddeth man's blood, by man shall his blood be shed: for in the image of God made he man" (v. 6). What a tremendous bill some men will have to pay when they stand before the seat of judgment of our God. Even the animals who kill men are to be slain (v. 5). How much greater shall be the condemnation of the man who violates God's command,

But we see a third gift of God, designed to remove a deep fear from his heart, namely God's-

III. Promise (vv. 8-16).

God made a covenant with Noah and with his descendants and every living creature (vv. 9, 10). This is the third of God's eight covenants with man, beginning with the one to Adam in the Garden of Eden (Gen. 1:28), and closing with the new covenant (Heb. 8:8).

This was a promise of God's grace that there should be no more judgment by flood, and as a sign He chose the rainbow, which, appearing in the very time when rain should fall, would reassure men that a new flood was not coming upon them. What a beautiful symbol!

"I will remember," said God, and He has not forgotten. Though thousands of years have passed, there has never since been such a cataclysm of judgment. How unspeakably precious it is to recall that God has not forgotten a single one of us; that He remembers every promise He has ever made; that He keeps every covenant. And on the contrary, how disturbing it must be to the unbeliever to realize that God has not forgotten his sin and unbelief, nor the judgment which is sure

to come. The story of Noah should stimulate our faith, causing us to trust God, to obey His every command, and to look to Him for His power in our lives.

LIFE WITH FATHER

FATHER: I've called this family council to get our living program adjusted.

MOTHER: What's the trouble, Father?

FATHER: Well, the way living costs are up, I'll give a dollar to anybody here who contributes a suggestion to save money. How about it, Bob, my boy?

DAUGHTER MARY: For goodness sake, Father, you know Bob never saved a cent in his life . . . he . . .

SON BOB: Silence, worm! I've got an ad here. It's about motor oil and it says: "You can hardly think of one working part in your engine as cheap to replace as dirty, thin oil-a jinx to precious parts."

FATHER: I get it, son . . . and that car of ours has to go another two years at least. What oil is it?

SON BOB: It's Conoco Nth motor oil and the ad tells how the six engines were run to destruction in a Certified Death Valley Test. Conoco Nth made twice the mileage averaged by the five other big-name oils.

FATHER: Son, you get the first dollar. Take the car down tomorrow and get Conoco Nth oil.

Join Bob in this economy move! See your Mileage Merchant and get Conoco Nth oil for an OIL-PLATED engine. Continental Oil Company

Post-War Period In U. S. to Be an **Amazing New Age**

After-War Years Will See Astonishing Changes in Ways of Living.

Mr. and Mrs. Average American of the post-war era probably will find themselves living in a world full of comforts, conveniences and gadgets that at a present day view have a decidedly Jules Verne flavor.

They may own a home that was erected from the ground up within eight hours and is just as stable as one which before the war required six months to build. The home will have conveniences undreamed of even for comfort-loving Americans. They probably will drive a modestly priced automobile that runs 35 miles on a gallon of gasoline and will negotiate terrain and hills formerly suitable only for the time-honored mountain goat

If they live on a farm they probably will have an amazing vehicle that can be used to plough, harrow, milk and round up the cows.

When vacation time comes around they may fly over to Cairo or down to Buenos Aires for the week-end. Or they may even make an aroundthe-world trip during the head of the family's traditional "two weeks off with pay.

These are not fancies conjured from a Lewis Carroll (who authored "Alice In Wonderland") imagination. They are practical potentialities which industrial experts already are forecasting as the logical peacetime application of armament developments.

War is a forceful spur to the progress of industrial science and invention. Under its duress there is no time for the cautiously slow experiments which mark the reception accorded new inventions and discoveries in years of peace. New methods, new materials are accepted overnight and are tested in the acid furnaces of combat. The tragedy of modern warfare is an anachronism of progress.

Distance Annihilated.

There is no better illustration of this than the advancement made by aviation as a result of World War I. The airplane represented new potentialities of speed and destruction and as such was seized upon as a eapen of offense by the Allies and their enemies alike. In the short period of four years aviation made an advance that would have required a quarter of a century in normal

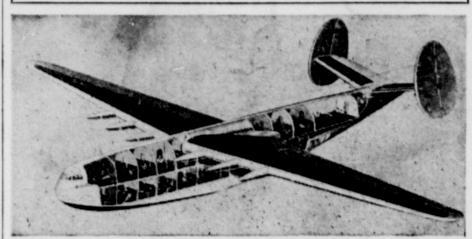

Today, the same situation magnified ten times over obtains. Only recently, Glenn Martin, the noted aircraft designer, announced plans for a 125-ton behemoth of the air capable of transporting 50,000 pounds of equipment at speeds of 200 to 230 miles an hour to be built after the war. This plane, said Mr. Martin, will be "as big as a 30-room house." Meanwhile, another company is reported to have already completed the wooden dummy of a ship that will dwarf the Martin monster -a 160-ton model which could move whole battalions across the continent overnight.

Already in use are new methods of construction which lighten aircraft by hundreds of pounds and so tremendously increase their passenger and freight carrying ability. Naturally, these planes are at present only in military form.

When Peace Comes.

However, when peace comes these Goliaths of the clouds will be interpreted in terms of pleasure and convenience for a travel-loving nation. The almost unbelievable speed which has been developed for mili- 1,400 pounds in weight and should

This new design of Glenn L. Martin company's proposed 250,000pound flying ship is a "preview" of what all will be seeing as it roars across the skies after the war is won. Such planes as these today could haul regiments from coast to coast in a day's time.

excess of 500 miles an hour-will load. place far-flung continents and their cities within a comparatively few days or few hours flying distance of the United States. Flying freight trains probably will become the order of the skies.

The increasing public interest in aviation, the training of thousands of young men as expert pilots and the strides made by safety in aviation also presage a new era of private flying. Ten years, even five years from now, plane-rental and fly-it-yourself services probably will be too commonplace to be news. When priorities are no longer necessary, stall-proof, spin-proof planes such as the "Ercoupe" and "Skyfarere" (notable for folding wing features) probably will travel side by side with automobiles along the highways as they shuttle from air field to garage.

As C. R. Smith, former president of American Airlines, recently declared, "In the post-war period, non-

Toward a New Era

Even as the nation devotes the full energies of its industrial power and scientific genius to victory, its citizens can still lift their eyes above and beyond the holocaust of world war to an era that will bring with it a new pattern of living at once finer and more dramatic in its benefits than anything civilization has known before.

stop operation over the ocean will be prosaic with most of the crossing to Europe done at high altitude speeds in excess of 300 miles per

Miracle Car Forecast for Farm Use.

As in aviation so in the world of automotive progress the developments of war will become integrated into America's peacetime pattern of life a few years hence.

In recent tests conducted by the United States department of agriculture and Willys-Overland Motors, Inc., makers and manufacturers of the standard design Jeep, at Auburn, Ala., and Toledo, Ohio, the vehicle gave promise of performing with the same versatility on the farm as it presently is doing on the battlefields of Europe and the Far East.

During these tests the car did everything from cultipacking and harrowing a field in one operation, using 2.12 gallons of gas per acre, to hauling almost a ton and a half of farm produce a distance of 13 miles on a gallon of gasoline.

Already known as the "army's miracle car," the Jeep is the descendant of a motor driven platform on wheels known as the "belly-flopwhich was first demonstrated at Fort Benning, Ga., in 1940. At the request of army officials Joseph W. Frazer, president of the Willys-Overland company, and other automotive experts undertook the design of a car which would not exceed

This is a modern version of beating swords into ploughshares: converting the army's miracle car, the "Jeep," into an agricultural vehicle of many uses. Who knows, but that some future day Old Bossy, down in the south pasture, will be herded by means of such a jeep?

tary planes-some of which fly in | be capable of carrying a 625 pound

That a peacetime version of this vehicle which can climb grades that balk a tank and negotiate rough terrain at 40 miles an hour should be developed is, of course, logical and the American farmer will thus inherit one of the nation's most valuable pieces of military equipment.

These automotive principles of high-powered engines which consume a minimum of fuel also will be applied to pleasure vehicles, automobile designers predict, forecasting a light yet powerful car which will require only about one gallon of gasoline every 35 or 40 miles.

On the Sea, Too. On the sea also the war effort is providing amazing new inventions applicable to the country's peacetime pattern of living. The United States has experimented with an allaluminum destroyer which they believe will cut through the water at 52 knots an hour.

Seacraft designers declare that the use of aluminum in boat construction may well be the forerunner of high speed passenger transport ships faster than anything previously dreamed of. Row and sail boats so light that a half-grown boy can carry one across country, and fleet pleasure craft that will rival in water the speed of their automotive cousins on land, undoubtedly will make their appearance in the postwar era at prices within reach of the American in the smaller income bracket.

Describing the post-war house which Americans may be occupying ten years from now, Norman Bel Geddes, who designed the Futurama at the New York World's Fair, pictures a prefabricated house which a crew of six men could erect in one eight-hour day. With such house a family might well eat dinner in a home that had been no more than a pile of materials the same morning.

"We have all the techniques and facilities to build houses such as I have described," says Mr. Bel Geddes. "Today, we have an opportunity to change over from old-fashioned and costly methods to the modern mass production way of building better homes at lower cost." He estimates that at least 2,500,000 new housing units will be required after the war.

Still another noted American architect, Walter Dorwin Teague, declares that we have only to apply to home-building the same techniques of design, manufacture and selling that have provided one motor car for every four people in the United States to produce a type of home which will be within reach of the man in the very low income

Mr. Teague has designed a house to sell for \$1,000 to \$2,000 which can be rearranged, even when occupied, as to size and floor plan almost as eastly as one changes the furniture in a room. The Teague house not only can be enlarged or reduced in size at the owner's will but also can be moved from one building site to another.

Such a factory-fabricated house, he says, will compare with present day houses as a modern automobile compares with an old-fashioned buggy. If the owner of such a house discover's that his job necessitates a move across the continent he will simply take the house down, call a truck and have the house transported to his new place of residence. If after six or eight years he wants a new house he will trade in his old one just as he does his automobile.

Still another architect who has been studying post-war housing problems, William Hamby, urges that "For better living the post-war home must be improved for the one who has the most to do-the woman."

In a house planned "to take the drudgery out of housekeeping," Mr. Hamby abolishes the usual kitchen and substitutes a streamlined and beautified unit so planned that while the homemaker gets dinner she can also participate in the family's activities.

China's Total War

(WNU Feature-Through special arrangement with Colliers Weekly)

By Owen Lattimore

IF YOU want to know how to win the war, study China.

The Chinese show us what can be done when every man and boy does his part. They do not worry whether that part seems glamerous or important; they know that the sum total of effort is the thing that counts -the millions of little contributions which go into the common pot. The individual Chinese may be only breaking stones with a hammer or carrying earth in a basket, but by the thousands they build an airport in the mountains as well as we could build it with our elaborate machinery. Each knows that he, with hammer or basket, is fighting in a great cause.

Not long ago, in a cave in Southern China, I watched men making rifles. With Japanese planes ranging frequently overhead, this was the only safe place for the machinery. Moisture dripped from the roof of the cave, so the men had to work under tarpaulins.

A 14-Year-Old-Boy's Experience.

One of the most highly skilled workers, handling a delicate multiple adjustment lathe, was a 14year-old boy. He told me he came from a little farm in northeast China. Two years ago the Japs swept in. The farmhouse was burned, the boy's parents were killed or disappeared. The boy escaped, crept through the Jap lines, and traveled 2,000 miles on foot into South China.

Now this homeless farm kid, by the hardest kind of application, has made himself a first-rate machinist. He not only puts in a hard day's work himself, but studies at night in the factory school which is helped by government funds. Every little factory in China is now a technological training institute.

This boy, and his experience, tell good deal about the new China Millions of others, like him, have made their way through the Japanese lines to join the army or to help in production. Millions, pushing into sparsely populated western China like American pioneers, have opened up surprising new sourcesof coal, oil, iron, and metals to help carry on the war.

Chinese Are Not Slow.

Others, like this boy, have proved that the Chinese are as quick at mastering machinery as any other

The Japanese seized the Chinese factory regions-but they didn't get all the factories. The Chinese managed to carry away into free China some 150,000 tons of factory machinery. They pulled it up the river in junks, they loaded it on primitive carts, they hoisted it up mountain slopes, they carried it on their

China used it as a nucleus to build new industries from the ground up. The Chinese government, through industrial co-operatives, helped finance thousands of little industrial plants employing from half a dozen to a hundred men. Many of these have grown up into thriving private enterprises. So, from almost nothing, in the midst of war, from under the shadow of defeat, China created an industry able to maintain an army of 3,000,000 men.

Under Chiang Kai-shek.

This army, fighting with rifles and bayonets against the massed tanks, planes, and heavy artillery of Japan, suffered heavy defeats and terrific casualties. But, under the strategy and leadership of Generalissimo Chiang Kai-shek, it was never routed. It never fell into panic. It was never encircled.

Chiang realized that his men, without modern arms, could not defeat the mechanized Japanese armies in the flat coastal regions He fought, fell back, scorched the earth (the Russians learned something from that), and fought again. As he says, "I traded space for

Then, when he reached the wooded hills and mountains, where Japanese tanks and trucks could not operate, and where his men could find shelter from the swarming Jar planes, he held. There he still

Young Suitor Felt Sure The Idea Was Correct

The young man had for some months been calling on Helen. Then at last he came to see her father. Without a tremor he asked for the daughter's hand in marriage, and hardly waiting for a reply, added this announcement: "It's a mere formality, I know, but we thought it would be pleasing to you if it were observed in the usual way."

Helen's father stiffened and glowered, then:

"And may I inquire," he asked, "who suggested to you that asking my consent to my daughter's marriage was a mere formality?" "Yes," replied the young man.

We Can All Be **EXPERT BUYERS**

to prices that are being asked for what we intend to buy, and as to the quality we can expect, the advertising lumns of this newspaper perform a worth while service which saves us many dollars a year.

It is a good habit to form, the habit of consulting the advertisements every dme we make a purchase, though we save already decided just what we want and where we are going to buy It. It gives us the most priceless feeling In the world: the feeling of being adequately prepared.

 When we go into a store, prepared beforehand with knowledge of what is offered and at what price, we go as an expert buyer, filled with self-confidence. It is a pleasant feeling to have, the feeling of adequacy. Most of the unhappiness in the world can be traced to a lack of this feeling. Thus advertising shows another of its manifold facets—shows itself as an aid toward making all our business relationships more secure and pleasant.

Prepare for Winter With Delicious Canned Fruit (See Recipes Below.)

Fruit Canning

Plan now to put up those fruits from the market or your victory garden while you

can still capture their gardenfreshness and summer sweetness. This year's canning will require more care-

ful planning than ever before, for waste in the fruit itself, canning jars, rubbers or sugar is highly undesirable.

Chart your plans before embarking on the canning program. Consider first how much sugar you will have available, with the five pounds per person allotment for people who are canning. Plan this amount so it will do for the jams, jellies, preserves, and sugar syrups for fruit canning.

A hot water bath is best for processing fruits because they are acid. They can safely

at high temperatures, and texture, flavor and color are best. Oven canning is good also. For the hot water bath, use a large wash

boiler or vessel with tight fitting cover. Fit this with a rack at least 1/2 inch from the bottom. Fill the rack with enough water to cover jars at least one inch over the top. Count the processing time as soon as water surrounding the jars begins to boil. There should be free circulation of water around jars.

For oven canning, set the temperature at 250 degrees. Set jars on a rack in the cold oven, however. Start counting time when oven is switched or turned on. Do not allow the temperature ever to exceed 250 degrees as this causes liquid to boil away and evaporate.

In placing your jars in the oven, allow for free circulation of heat between them. Do not allow the jars to touch each other, as this will often cause breakage, and do not allow them to come in contact with the sides of the oven.

The Sugar Question.

Fruit may be canned successfully water or fruit juice used in its place. Sugar, however, does mellow and ripen the fruit, giving it a better flavor. You might try making your fruit syrups for fruit canning less sweet than usual if you are short on

Honey may be used in place of sugar in making the sweet syrup, but the fruit will be somewhat more dark than if sugar is used and the fruit flavor will be intensified. Use honey for each cup of sugar in the substitution.

White corn syrup is another acceptable substitute, but since it is less sweet than sugar, substitute 11/2 cups of corn syrup for 1 cup of sugar.

Syrups to Use.

Thin syrups (No. 1) are used for small, soft fruits such as cherries and berries. Make the syrup by using three parts of water to one part of sugar.

Lynn Says:

How many jars are you putting up of the fruits? Here's a guide to help you pick out jars:

Cherries: 9 baskets yield 2 pints pitted, 7 pints, if whole. Peaches: 21/4 pounds (small

basket) yields 1 quart. Plums: 1 14-pound basket yields 25 pints.

Strawberries: 1 crate yields 26 pints, if canned whole; 31 (71/2ounce) glasses of jam.

THIS WEEK'S MENU

Smothered Steak With Onions Green Beans Scalloped Potatoes Tomato-Lettuce Salad Bran Muffins Whipped Fruit Gelatin

Medium syrup (No. 2) does best by sour berries, acid fruits as cherries and rhubarb, and peaches. Boil two parts of water with one part of

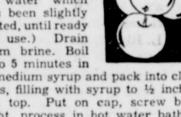

Beverage

Heavy syrup (No. 3) is prescribed for the large, sour fruits in which you desire extra sweetness. Measure one part water to one part sugar and bring to a boil.

Apples or Pears. (Hot Pack)

Wash, pare, core uniform-sized apples and cut to desired sizes. (If

fruit is to stand long enough to discolor, drop into water which has been slightly salted, until ready to use.) Drain from brine. Boil 3 to 5 minutes in

a medium syrup and pack into clean jars, filling with syrup to 1/2 inch of the top. Put on cap, screw band tight, process in hot water bath 25 minutes, or in the oven (at 250 degrees) 75 minutes. If using a pressure cooker, process at 5 pounds for 10 minutes.

Apples or Pears. (Open Ke(sle)

Select uniform fruit, wash, pare and core. Cut into halves or slices. Drop into boiling No. 1 syrup, and boil for 20 minutes. Pack into clean, hot, sterilized jars and seal tight.

Peaches. (Open Kettle)

Select firm, ripe peaches. Peel or dip peaches in hot water, then in cold and slip off peel. Leave whole or cut in halves or slices. Boil 20 minutes in No. 2 or 3 syrup, and pack in clean, hot, sterilized jars, Seal tightly.

Peaches. (Hot Pack)

Prepare as above, removing peel and pits. Precook for 3 minutes, then pack into clean jars, add syrup to within 1/2 inch of the top. Put on without sugar or sugar syrup with | top, screw on firmly, and process in a hot water bath for 20 minutes, or in the pressure cooker for 10 minutes at 5 pounds, or in the oven (25) degrees) for 68 minutes.

Plums.

(Hot Pack) Use the same method and time as for peaches, except do not peel the fruit, merely prick the skins.

Berries. (Cold Pack) (Except strawberries and cranberries)

Wash, stem and pack berries. Pack into clean jars and add No. 2 or 3 syrup. Put on cap, screw tightly. Process in hot water bath 20 minutes or in pressure cooker 8 minutes at 5 pounds or in the oven at 250 degrees for 68 minutes.

Cherries. (Cold Pack)

Wash, stem and pit cherries, if desired. Pack into well cleaned jars, fill with No. 2 or 3 syrup depending on the sweetness desired. Put on cap and fasten tightly. Process 20 minutes in a hot water bath, 10 minutes in the pressure cooker at 5 pounds, or 68 minutes in a 250degree oven.

If the directions for the fruit you desire to can are not given here, or if you have any query on other canning problems, write to Miss Lynn Chambers, explaining your problem to her. Address your letters to her at Western Newspaper Union, 210 South Desplaines Street, Chicago, Illinois. Please enclose a stamped, self-addressed envelope for your reply.

Training Program

Pointing out that more than 80 percent of all jobs in Texas war industries are filled by workers who have had specialized training Mr. L. L. Ruttle, manager of the San Angelo office of the United States Employment Service urged people in this area who wish war plant jobs to apply for the necessary training in the free National Defense schools.

Most of these war industry jobs are entirely new to Texans. Special pre-employment training is necessary before the employers will hire people to fill them. This training is provided to both men and women free of charge by the National Defense Schools. There are openings now in these sceools and local people should investigate them through the Employment Service which refers train ees to the schools.

Machine Shop, Aircraft Eegine Mechanics, Aircraft Sheet Metal (including Riveting) are the courses offered. The training is open to men between the ages of 18 and 65 years, and to women between 18 and 45.

Mr. Ruttle stressed the fact that the training is entirely free.

For County Democratic Chairman, write in the name Dr J. K. Griffith,
