C. V. Harris, chairman of the

"We met with the state board He entire assessment of the twentysix counties of the state it was found that the taxable property sis than we had heretofore been informed.

> In going over the assessments for the entire state we found the land, cattle, and other taxable property is being assessed on practically the same basis; however for the information of the axpayers we have gathered statistics and have made a tabulation showing camparisons which we will have published in the near future.

> We consider that we get results from these meetings and the greatest difference we find in the entire state is that some property is escaping assessment entirely. The proceedings of the State board of equalization will be published in about 30 days.

While the assessment for Roosevelt county seemed satiswill be able to make the county rate less than last year and the state rate will be less consequently taxes as a whole will not be The broom corn crop in this any higher and probably somewhat lower than last year.

Auto Tourists

For the past two weeks there has been many auto tourists passing through Portales; some are prospectors and some on outing and recreation trips. These tourists are usually people of means and liberal spenders. When our proposed state highway is completed we can expect more of these people and it will not only be a help to the town but it will enable them to see our wonderful resources.

Gigantic Cucumber

Rev. J. W. Bristow brought to this office a fine specimen of what he calls the yard cucumber. It is gigantic in size being about thirty inches long, almost six in ches in diameter at the thickest place, and weight fourteen Faggard and Howard were in pounds. It was grown on his

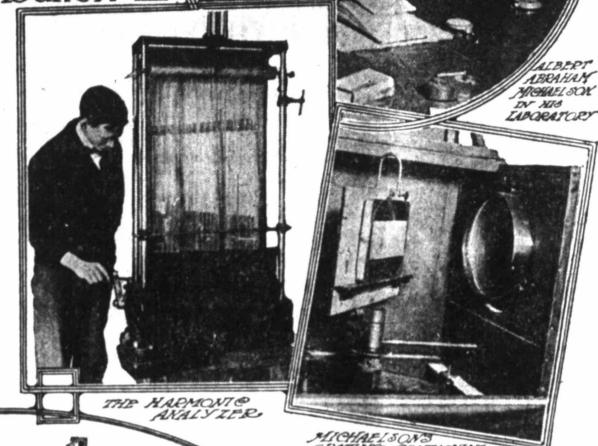

HERE is a man in Chicago who can measure one-five-millionth of an inch-a distance amount-

ing to one-fiftieth of the smallest distance revealed by a theoretically perfect microscope. He can rule on a piece of polished glass, one inch wide, 50,000 straight, parallel lines, equally spaced.

He has determined the length of the standard meter so accurately that his figures cannot be subject to a fault exceeding more than one part in 2,000,000. He has measured the rate at which light travels with a possibility of error not more than one-fortieth of one per cent of the quantity measured—and light flies 186,330 miles a second -and, as a crowning achievement, he has determined the rigidity of the earth.

This man is the first American to receive the Nobel prize in science and the only American who has ever received the Copley medal of the Royal Society of London. Despite achievements that are staggering in their significance, this man's name is little known outside of scientific circles. He is Albert Abraham Michelson, Ph. D., Sc. D., LL.D., professor and head of the department of physics at the University of Chicago.

Professor Michelson's experiments to deter-

MICHAELSONS GRATING, CONTAINING FIFTEEN THOUSAND PARALLEL POVALLY SPACED LINES TO THE INCH MICHAEL SONS

RULINO ENCHNE mine the rigidity of the earth are intensely interesting. Science has long needed to know the physical properties of this globe. It is impossible to learn this directly, as the deepest mines yet sunk penetrate less than two miles below the surface, a distance proportionately no greater than the thickness of the varnish on a two-foot globe. The interior of the earth is believed to be intensely hot. This theory is based on the fact that molten lava is thrown forth by erupting volcanoes. Also, in descending a mine, there is a rise in temperature, amounting to 50 degrees per mile of descent. If this rate of increase is constant, the temperature at only 100 miles down is above the melting point of all substances under conditions as they exist on the surface of the earth. However, despite the high temperature, the interior of the earth may be held in solid

out o

Under the now accepted theory of the celestial mechanics, scientists assume that a heavenly body is held in its course by the attractive force exerted by the other heavenly bodies on all sides of it. In this way is determined the earth's course around the sun and the motion of the entire solar system through space. Assuming that the earth is not a solid mass, scientists have long struggled to discover how it resisted the attractive forces exerted by other planets and stars -whether as a viscous mass or as a perfectly elastic body.

state by the tremendous pressure to which it is

They have long known that the earth did resist these forces in some degree. The ocean tides which sweep our shores twice daily are proof of this. It has long been known that the tides are caused by the attraction of the sun and the moon. If the earth offered no resistance to this attraction, the whole earth would respond quickly to it and there would be no tides. On the other hand, if the earth were a perfectly rigid body it would resist this attraction completely; and the tides would reach their maximum height. The amount that the tides fall short of their theoretical maximum height would measure the degree of rigidity which the earth possesses.

The next step was to determine the actual height of the tides. This long proved the stumbling block. If shore lines were perfectly straight and the floor of the ocean perfectly level, the height of the tides could be measured directly; but crooked shore lines and shelving beaches resist the motion of the tides and make it impossible to determine their height with the accuracy demanded by science.

Sir George Darwin made elaborate experiments to determine the height of the tides, but was obliged to give up the problem in despair. Professor Michelson solved this difficulty by laying two lengths of pipe, each five hundred feet long. and measuring the rise and fall of the water in them. One length of pipe was laid north and south, and the other length east and west, in order to measure the tides in both directions. The pipes were buried six feet under ground to obtain a uniform temperature,

At both ends of the pipes tees were inserted having glass windows for observatory purposes. The pipes were half filled with water; and the changes in the height of the water were obtained by measuring through a microscope the distance between a pointer inserted just under the surface of the water and the image of the pointer reflectd above the water.

The maximum tides in these pipes did not exceed one-thousandth of an inch; but so perfect was the apparatus and so accurate the readings by Professor Michelson that all the variations in the tides were accurately determined. Tides are complex things. Their height varies with the position and distance of both the sun and the moon and, therefore, is never the same two days in succession.

Professor Michelson's experiments revealed 30 of these variations, which corresponded almost exactly with the variations obtained theoretically by computing the variations in the attractive forces exerted by the sun and the moon. The practical correspondence of the actual height of the tides with the theoretical height proved that the earth through and through is as rigid as steel and that it yields to outside forces as a perfectly elastic body and not as a viscous mass.

This experiment reveals the imagination and the striking originality of Professor Michelson. The first achievement to bring his name to the attention of the scientific world was his accurate determination of the velocity of light, accomplished also after overcoming tremendous experimental difficulties. Light is the fastest thing in nature; it represents the absolute limit of speed. After four years of work and study, Professor Michelson announced that light travels with a velocity of 186,330 miles per second. The maximum error in this figure does not exceed one fortieth of one per cent.

On the subject of spectrum analysis, Professor Michelson has devoted many of the best years of his life. Spectrum analyses are obtained by means of the spectroscope. Every substance when heated emits a characteristic light. By means of the spectroscope this light is analyzed and the elements giving off the light are thereby revealed. The spectroscope has enabled scientists to determine the elements in far distant stars. It has made possible tremendously important discoveries concerning the nature of atoms, the minute particles of which all matter is com-

The difficulties of spectrum analysis will be realized when it is learned that a single atom of sodium emits 800,000,000,000 vibrations per second of two slightly different kinds of light. Professor Michelson was engaged in spectrum analysis very long before he improved the spectroscope, calling the improved type an echelon spectroscope. This wonderful machine divides light into its various constituents and makes possible their separate analysis.

The echelon spectroscope uses a glass grating -a piece of highly polished glass on which is ruled from 15,000 to 50,000 straight equally-spaced lines to the inch. To make these gratings Professor Michelson invented a ruling engine that is the most accurately constructed mechanical device in the world. It is operated in a room the temperature of which is kept constant to within one-hundredth of a degree.

To assist in analyzing the lines of the spectrum into their fundamental constituents, Professor Michelson invented the "harmonic analyzer," a machine as complicated and as delicate as the linotype machine. By its use an assistant can in a few minutes make calculations that would take a skilled computer weeks to accomplish.

Scientists have long endeavored to determine the absolute motion of the earth through space. It is known that the earth swings around the sun and that the entire solar system is moving toward the constellation Hercules at the rate of 12 miles per second, or 400,000,000 miles per year. However, as scientists have not yet been able to measure the motion of Hercules, they still do not know the absolute motion of the earth. In 1880 Professor Michelson attacked the problem of determining the motion of the earth with reference to the ether, the all-pervading medium that fills interstellar space.

INTERFEROMETES

All of us have noticed that, when walking through the rain, although it is actually falling vertically, it seems to be falling at an angle, the degree of this apparent deflection depending upon the speed with which we have moved. Looking out the window of a fast-moving train, scientists have noticed a similar deflection in the angle of the light coming to the earth from some far distant star. As the medium that carries the light between beavenly bodies is the ether, scientists argue that the deflection is due to the relative motion of the earth through the ether.

Professor Michelson eventually overcame the tremendous experimental difficulties in connection with this problem; but no motion of the earth with respect to the ether was found. This result came as a profound surprise to the entire scientific world

In order to solve this problem Professor Michelson invented a most marvelous instrument. which he called the "interferometer." This instrument is 50 times more powerful than an absolutely perfect microscope would be. The microscope's power is limited by the length of a light wave; and the smallest distance it can reveal is one-half a wave length, or one hundred-thousandths of an inch. By utilizing the properties of light in another manner, the interferometer can reveal distances equivalent to one five-millionth of an inch. The microscope has been of immense value both in scientific work and in practical life; and the invention of the interferometer, an instrument 50 times more powerful, is in itself an achievement that should win for Professor Michelson undying fame.

He used this instrument to aid him in measuring the standard meter, the foundation of the metric system, in terms of infinite exactitude and in a manner that will make this unit perpetual. The original meter length is carefully preserved at Paris; but scientists have long worried over the possibility of its destruction. In 1893 an international commission on weights and measures asked Professor Michelson to devise some method by which the meter length could be accurately reproduced. The meter is theoretically one fortymillionth of the earth's circumference; but this definition is not accurate enough for scientific purposes. Professor Michelson announced the length of the meter in terms of cadmium light waves, with a maximum error of one part in two million. This definition will always enable act entists to reproduce the meter accurately, as long as the earth exists.

These are the most striking achievements of America's greatest scientist. Any one of them is sufficient to perpetuate a man's name in the annals of science. The result of Professor Michelson's experiments with reference to the motion of the earth has raised questions that it will take science many years to answer satisfactorfly; and his determination of the rigidity of the earth has made possible further and more wonderful progress in the sphere of celestial mechanics.

ily becoming covered with a Large, shady trees encircle network of railroads, there are The sun is sinking behind still great stretches of country and night is approaching that are not yet linked up. In have drunk their fill, and these parts the ox wagon is the only means of transportation.

West of Mafeking, right to the seaboard, there is one unbroken stretch of veldt; and to reach the Atlantic coast there is only one way to travel, namely, trek it by ox wagon.

Fate once sent me on a trading trek up to Lake Ngami, says a writer in London Answers.

Well, Lake Ngami is about a thousand miles from nowhere. To be a little more accurate, however, the lake lies in the northwestern part of the Bechuanaland protectorate, and to reach the little trading center up there, one has to cross the northern glad at the thought, for it is part of the dreaded Kalahari-a waterless desert.

My wagon had 18 oxen to pull it, and the load on it was 5,000 pounds. But it took me over two months to cover the five or so hundred miles that lay between the small native capital of Serowe and Tsau, the capital of Ngamiland.

Half of the distance was over sandy, waterless deserts, and the rest through fever and lion infested veldt.

After a Twelve-Day Trek. "We'll outspan here, Natal," I cried to my native driver.

It was just an hour before dawn and the African sky was lit with a myriad of stars. The oxen were quickly unyoked, but were not allowed to graze, as we would be on the move again in an hour.

We were half way in the desert. We had been on trek 12 days. The oxen were used to "thirst," but the ceaseless strain of the sandy desert was making itself felt. The beasts were already looking worn and shrunken. sat down by the small fire we had kindled and smoked. Everything was very quiet. The sleeping veldt was hushed. Around us were miles of flat, sparsely vegetated country, every mile the same. Not a drop of water had we seen for two days since we had left the last well; and there lay But we are now in 15 30 miles of waterless veldt before the fever is with us. next well would be reached.

became terror. Who was this man?

CHAPTER II.

The Unwelcome Throne.

Kathlyn sensed great loneliness when, about a month later, she arrived something like that. New at the basin in Calcutta. A thousand or more natives were bathing ceremocollie, released from the kitchen, niously in the ghat-men, women, and children. It was early morn, and they were making solemn genuflexions toward the bright sun. The water front swarmed with brown bodies, and great wheeled carts drawn by sad-eyed bullocks threaded slowly through the maze. The many white turbans, stirring hither and thither, reminded her atly the watcher entered through of a field of white popples in a breeze. indow, alert and tense. He flew India! There it lay, ready for her eager feet. Always had she dreamed about it, and romanced over it, and sought it on the wings of her spirit. Yonder it lay, ancient as China, enchanting as storied Persia.

If only she were on pleasure bent! If only she knew some one in this great teeming city! She knew no one; bstituted a note. This houri of she carried no letters of introduction, would not pause to note the no letters of credit, nothing but the ce in writing; the vitainess of gold and notes the paymaster at the mbject would enchain her farm had hastily turned over to her. its. It was all accomplished in Only by constant application to maps ice of a few minutes. Smiling, and guide books had she managed to ed out into the fast settling arrange the short cut to the far kingdom. She had been warned that it was a wild and turbulent place, out of to, and the roaring and con- the beaten path, beyond the reach of were all very satisfactory to the iron rails. Three long sea voyages: across the Pacific (which wasn't), down the bitter Yellow sea, up the es of the bells in the ancient blue Bay of Bengal, with many a sea mission. The old year was change and many a strange picture. e new year was born, carrying What though her heart ached, it was the unchanging sound of hap- impossible that her young eyes should and misery, or promises made not absorb all she saw and marvel over it. I never thought times she had been on the point of streams. The days were hot, but the plenty of time. And remember our taking him into her confidence, but the nights were bitter cold. Sometimes a four heads depend upon the next few frony of fate had always firmly closed

And now, waiting for the ship to warp into its pier, she realized what a chains. fatal mistake her reticence had been.

Bruce had left the Lloyder before dinner (at Singapore), and as Kathtation. It was then she saw the lyn's British-India coaster did not leave till morning she had elected to remain over night on the German boat. As Bruce disappeared among the disembarking passengers and climbed dant. Miss. You ought to know into a rickshaw she turned to the thing that kills) scowled at her evilcaptain, who stood beside her.

"Do you know Mr. Bruce?" "Very well," said the German. Didn't he tell you who he is? No? obeyed. Ach! Why, Mr. Bruce is a great hunter. He has shot everything, written nductor. "But where the dickens books, climbed the Himalayas. Only last year he brought me the sack of a d and locked, and there is not musk deer, and that is the most dangerous of all sports. He collects ani-

Then Kathlyn knew. The name had been vaguely familiar, but the young man's reticence had given her no opme. Well, you know your dad's portunity to dig into her recollection. ness better than I do. Look alive, Bruce! How many times her father s, and get that angora aboard. This had spoken of him! What a fool she Miss Hare herself, and she'll take had been! Bruce knew the country she was going to, perhaps as well as her father; and he could have simplified her journey to the last word. Well, what was done could not be re- Rao?"

> called and done over. "My father is a great hunter, too," she said simply, eyeing wistfully the road taken by Bruce into town.

"What? Herr Gott! Are you Colonel Hare's daughter?" exclaimed the captain.

"Yes." He selsed her by the shoulds "Why did you not tell me? Why, Colo- evening round their dung fire while more persons will be reached by cancaptured it slong, unaided, may by nel Hare and I have smoked many a Kathlyn busied with the tea over a non ball express and limited trolley

them to us old chaps."

small hands and woman's mind she offer battle except when attacked. must find him! Always the mysterious packet lay close to her heart, never for a moment was it beyond the reach of her hand. Her father's freedom!

The rusty metal sides of the ship emotions, to be besieged by fruit sellers, water carriers, cabmen, blind beggars, and maimed, naked little children with curious, insolent black eyes, women with infants straddling their hips, stolid Chinamen: a riot of color and a bewildering babel of tongues.

Kathlyn found a presentable carriage, and with her luggage pressing about her feet directed the driver to

the Great Eastern hotel. Her white sola-topee (sun helmet) had scracely disappeared in the crowd has a camp 20 miles east." when the Hindu of the freight caboose emerged from the steerage, no longer in bedraggled linen trousers and ragged turban, but dressed like a native top. He was in no hurry. Leisurely he followed Kathlyn to the hotel, but to greet her upon her arrival, this Sa'adi. The two weeks of durance vile among the low castes in the steerdays he would be beyond the hand of and we shall return with many. Some the meddling British Raj, in his own will speak English at the bungalow." country. Sport! What was more beautiful to watch than cat play? He was the cat, the tiger cat. And what would the Sahib Colonel say when he felt the claws? Beautiful, beautiful, like a pattern woven in an Agra rug.

Kathlyn on Her Way to Allaha.

Kathlyn began her journey at once. Now that she was on land, moving toward her father, all her vigor returned. She felt strangely alive, exhilarated. She knew that she was not going to be afraid of anything bereafter. To enter the strange country without having down from Hongkong to Singapore ing her purpose known would be the she had met at the captain's table a main difficulty. Where was Ahmed h, Winnie! I must go, and go young man by the name of Bruce. He all this time? Doubtless in a cell like

Three days later she stood at the frontier, and her servant set about arguing and bargaining with the mamountainous divides to the capital. never exercised this power. A dozen rock, over sluggish and swiftly flowing grew damp and they fretted at their them."

succeeded in entering the strange country; for these wild-eyed Mahomedan mahouts (and it is pertinent to note that only Mahomedans are ever made mahouts, it being against the tenets of Hinduism to kill or ride any ly. They would have made way with her for an anna-piece. Rao was a Mahomedan himself, so they listened and

All this the first day and night out On the following morning a leopard crossed the trail. Kathlyn seized her rifle and broke its spine. The jabbering of the mahouts would have amused

her at any other time. "Good, memsahib," whispered Rao. "You have put fear into their devils" hearts. Good! Chup!" he called.

"Stop your noise." After that they gave Kathlyn's dog tent plenty of room.

One day, in the heart of a natural clearing, she saw a tree. Its blossoms and leaves were as scarlet as the needs of a pomegranate. "O, how beautiful! What is

"The flame of the jungle, memsahib. It is good luck to see it on a journey." About the tree darted gay parrekeets and fat green parrots. The green plumage of the birds against the brilliant scarlet of the tree was indescribably beautiful. Everywhere was life, everywhere was color. Once, as the natives seated themselves of the tric and steam railways. Then even d in the files of all metropolitan Burma cheroot together on these was wood fire, a tiger roused near by. The car at grade crossings.

ters. Herr Gott! And you never said elephants trumpeted and the mahouts them in the hollow of his hand. Duranything! What a woman for a man rose in terror. Kathlyn ran for her ing the weeks of his absence in Amerto marry!" he laughed. "You have sat rifle, but the trumpeting of the ele- ica his sples had hung about them like at my table for five days, and only now phants was sufficient to send the bees about honey. They were the fowl-I find that you are Hare's daughter! striped cat to other hunting grounds. ers snared. And you have a sister. Ach, yes! He Wild ape and pig abounded, and ocwas always taking out some photo- essionally a caha wriggled out of the dor to a flight of stairs leading begraphs in the smokeroom and showing sun into the brittle grasses. In an is only when they feel cornered that had reason to be. Umballa gave them Indian prison, out of the jurisdiction they turn. Even the black panther, the new minted rupees for their work, of the British Raj, and with her two most savage of all cats, will rarely many rupees. For they knew secrets.

Kathlyn arrived at the city.

Five hours later Kathlyn stepped out of her howdah, gave Rao the money for the mahouts, and looked craped against the pier and the gang- about. This was the gate to the captplank was lowered; and presently the tal. How many times had her father tourists flocked down with variant passed through it? Her jaw set and her eyes flashed. Whatever dangers beset her she was determined to meet them with courage and patience.

"Rao, you had better return to Calcutta. . What I have to do must be done alone." "Very good. But I shall remain here

laamed "And if I should not return?" affected by this strange loyalty.

Then I shall seek Bruce Sahib, who "Bruce? But he is in Singapore!"

a quickening of her pulses. "Who can say where Bruce Sahib is? He is like a shadow, there today, here tomorrow. I have been his servant, memsahib, and that is how I am today then proceeded to the railway station. yours. I received a telegram to call He had need no longer to watch and at your hotel and apply to you for worry. There was nothing left now service. Very good. I shall wait. The mahout here will take you directly to golden houri from the verses of Hare Sahib's bungalow. You will find your father's servants there, and all will be well. A week, then. If you age should be amply repaid. In six do not send for me I seek Bruce Sahib,

> "Thank you, Rao. I shall not for-"Neither will Bruce Sahib," mysteri-

ously. Rao salaamed. Kathlyn got into the howdah and hib, the quiet man, whose hand had reached out over seas thus strangely to reassure her! A hardness came into her throat and she swallowed desperately. She was only twenty-four. Except for herself there might not be a white person in all this sprawling. rugged principality. From time to time the new mahout turned and smiled at her curiously, but she was too absorbed to note his attentions.

awaited his arrival. He dashed up the poor devil of a coolie who carries imposing flight of marble steps, exult stones from your quarries." ant. He had fulfilled his promise; the golden daughter of Hare Sahib was but a few miles away. The soldiers, guarding the entrance, presented their arms respectfully; but instantly after Umballa disappeared the expression on their faces was not pleasing.

Umballa hurried along through the deep corridor, supported by exquisitely carved marble columns. Beauty in stone was in evidence everywhere and magnificent brass lamps hung from the ceiling. There was a shrine topped by an idol in black marble, incrusted with sapphires and turquoises. Durga Ram, who shall be called Umballa, nodded slightly as he passed it. Force of habit, since in his heart there was

only one religion-self. He stopped at a door guarded by a single soldier, who saluted but spat as soon as Umballa had passed into the throneroom. The throne itself was vacant. The Council of Three rose at the approach of Umbalia.

"She is here," he said haughtly.

The Council salaamed. Umballa stroked his chin as he gazed at the huge candles flickering at each side of the throne. He sniffed the Tibetan incense, and shrugged. It was written. "Go," he said, "to Hare Sahib's bungalow and await me. I shall be there presently. There is blue miasmic haze settled down, and hours. The soldiers are on the verge the dry, raspy hides of the elephants of mutiny, and only success can pacify to be greeted inside by the suave Um-

He turned without ceremony and Rao, the khitmatgar Kathlyn had left them. With oriental philosophy hired in Calcutta, proved invaluable, they accepted the situation. They had Without him she would never have sought to overturn him, and he held

Umballa proceeded along the corri-Before the door of a dungeon Umballa Meantime the man who had followed paused and listened. There was no sound. He returned upstairs and sought a chamber near the harem. This he entered, and stood with folded arms near the door.

"Ah, Colonel Sahib!" "Umballa?" Colonel Hare, bearded, unkempt, tried to stand erect and face his enemy. "You black scoundrel!"

"Durga Ram, sahib. Words, words; the patter of rain on stone roofs. Our king lives no more, alas!" "You lie!"

"He is dead. Dying, he left you this throne you, a white man, knowing till the memsahib returns." Rao sa- it was a legacy of terror and confusion. You knew. Why did you return? Ah, pearls and sapphires and emeralda! What? I offer you this throne upon conditions."

"And those conditions I have refused."

"You have, yes, but now-" Umballa smiled. Then he suddenly blazed forth: "Think you a white man shall sit upon this throne while I live? It is mine.

was his heir." "Then why didn't you save him from the leopard? I'll tell you why. You expected to inherit on the spot, and I spoiled the game. Is that not true?" "And what if I admit it?" truculently.

"Umballa, or Durga Ram, if you wish, listen. Take the throne. What's to hinder you? You want it. Take it and let me begone."

"Yes, I want it; and by all the gods of Hind I'll have it-but safely. Ah! It would be fine to proclaim myself when mutiny and rebellion stalk about. Am I a pig to play a game like that? passed through the gates. Bruce Sa. Tch! Tch!" He clicked his tongue against the roof of his mouth in derision. "No: I need a buckler till all

this rolly water subsides and clears." "And then, some fine night, Hare Sahib's throat? I am not afraid of death, Umballa. I have faced it too many times. Make an end of me at once or leave me to rot here, my answer will always be the same. I will not become a dishonorable tool. You have offered me freedom and lewels. Durga Ram, called lightly Umballa, No: I repeat, I will free all slaves, abolwent directly to the palace, where he ish the harems, the buying and selling knew the Council of Three solemnly of fiesh; I will make a man of every

Umballa laughed. "Then remain here like a dog while I put your golden daughter on the throne and become what the British Raj calls prince consort. She'll rebel, I know; but I have a way." He stepped outside and closed

the door. "Umballa?"

"Kit, my daughter? Good God, what is she doing here when I warned her?" Hare tugged furiously at his chains. Durga Ram, you have beaten me. State your terms and I will accept them to the letter. . . . Kit, my beautiful Kit, in this hell hole!"

"Ah, but I don't want you to accept now. I was merely amusing myself." The door shut and the bolt shot home Hare fell upon his knees. "My head. my head! Dear God, save me my reason!"

The moment Kathlyn arrived at the animal cages of her father she called for Ahmed.

"My father?" "Ah, memsahib, they say he is dead. know not. One night-the second after we arrived-he was summoned

to the palace. He never came back." "They have killed him!" "Perhaps. They watch me, too; but act simple. We wait and see." Kathlyn rushed across the ground intervening between the animal cages and the bungalow. There was no one in sight. She ran up the steps

balls. "You?" her hand flying to her bosom. "L Miss Hare." He salaamed, with sweeping gesture of his hands.

Wisdom From Inexperience. Mr. Brown met Mr. Jones on the ably with drawing-with expression by street.

> "Any news, Brown?" asked Jones. "Nothing special. I've just been reading the Sunday paper. And I find one peculiar thing in it that may be news to you." "What is it?"

"The Sunday paper says that women in ancient Egypt used to act as they pleased, live as they pleased and dress as they pleased without regard to what the men thought. Lucky we don't live in those times, what?"

"Mr. Brown, are you married?" "What has that go to do with m? As a matter of fact, I'm not." "I thought not."-Cleveland Plain

Discoverer of the Pacific, The discoverer of the Pacific ocean was Vasco Nunes de Balbos. On the early morning of the 25th of Beptember, 1513, Balboa, and a small party of men, made their laborious way up the densely covered face of a steep ridge from the summit of which they were rewarded with the vision of the great "South sea" which, up to that time, had never been seen by the eye of a

WOMAN GRIED

Suffered Everything Until Restored to Health by Lydia E. Pinkham's Vegetable Compound.

Florence, So. Dakota. -- "I used to be very sick every month with bearing

down pains and backache, and had headache a good deal of the time and very little appetite, The pains were so bad that I used to ait right down on the floor and ery, because it hurt me so and I could not do any work at those

times. An old woman advised me to try Lydia E. Pinkham's Vegetable Compound and I got a bottle. I felt better the next month so I took three more bottles of it and got well so I could work all the time. hope every woman who suffers like I did will try Lydia E. Pinkham's Vegetable Compound." — Mrs. P. W. Lanseng, Route No. 1, Florence, South Dakota.

Why will women continue to suffer day in and day out or drag out a sickly, halfhearted existence, missing three-fourths of the joy of living, when they can find health in Lydia E. Pinkham's Vegetable

Compound? For thirty years it has been the standard remedy for female ills, and has re-stored the health of thousands of women who have been troubled with such ailments as displacements, inflammation, ulceration, tumors, irregularities, etc.

If you want special advice write to Lydia E. Pinkham Medicine Co. (confideutial) Lynn, Mass. Your letter will be opened, read and answered by a woman and held in strict confidence.

Cauliflower Requires a Rich Soll and Can Utilize to Advantage Heavy Ap-

(By L. M. BENNINGTON.) Such vegetables as cabbage, cauliflower, lettuce and onlons utilize to the best advantage heavy applications of manure.

Plenty of potash and phosphoric acid should be used with all vegetables, and particularly with tomatoes, pep pers, eggplants and root crops.

Lime is the best preventive of clubfoot in cabbage. It doesn't always prevent this disease, but it is usually effectual.

By having vegetables at the earliest possible date you will be able to catch the first customers and hold

Telephonic communication with all available markets and private customers is a necessity to the gardener, if he desires to keep posted and take orders for his produce.

When possible it is best to grow the wholesale trade, instead of retail- off more from the price of the packing. The successful gardener finds age than they are worth. his time too valuable to peddle his vegetables.

A firm and compact seed bed, bringing the seed into intimate contact with moist soil, is the secret of quick germination, providing the ground is warm and the depth of covering not too great.

Soils that are heavily manured for cabbage, lettuce, celery and other crops will not need very much manure the following year, when planted with tomatoes, peppers and root crops, es-

cial fertilizer is used. Vegetables of a distinct leafy na ture, as cabbage, kale, lettuce and spinach, utilize to good advantage heavy applications of nitrogen, while large amounts of this element applied to tomatoes, peppers and eggplants would be disastrous by encouraging an excessive growth of leaves, without much fruft.

Home-mixed fertilizers are the most desirable for the market gardener Nearly every gardener grows a diversifled list of vegetables, which vary more or less in food requirements. and the feeding problem is entirely under his control when the rations are

mixed at home. When green manure crops are plowed under there is more or less tendency of such material to sour the land, and applications of lime after soil and secure a more favorable con- card from the herd.

dition for the growth of clover. It is

often as possible, and a sweet soil is

necessary to get good results with

Cultivation should begin early. Cultivators with not less than twelve small teeth or shovels are best for small truck crops, because they leave the soil in ideal condition, and are the best conservers of soil moisture. A loose and friable soil stimulates steady and rapid growth.

Packages must be neat and clean. As rule small packages are best early in the season when the prices are them during the whole of the summer high, and large packages for the main crop. Use standard sized packages and give full measure.

Crops must be gathered in proper condition and sent to market fresh and clean. Careful grading is essential. A few inferior specimens in a package are the first to attract attenvegetables on a large scale, to sell to tion. Even a few specimens will knock

MANY ADVANTAGES IN KEEPING RECORD

Dairyman Is Enabled to Weed Out His Herd and Retain Only Money Makers.

Accurate records of each cow's milk and retain only the money makers.

They serve as a tab on the milkers. If the cows are not milked clean the fact is discovered. Poor milking by hired help is discouraged, and the drying off from imperfect milking reduced to a minimum.

The cow's daily record is an excellent barometer of her physical condition. Derangements are more quickly discovered and checked, and better methods of feeding are encouraged.

Both owners and help are stimulated to increase the product, and it educates them in the matter of dairy

They induce better business methods in the management of the business, a place where business meth-

ods have been too long ignored. They serve as an excellent guide in selecting heifers that are to be raised plowing under such crops sweeten the to replace the cows we annually dis-

together, and covered with very rich

CONTROL OF THE CORN SMUT TAKEN FOR CANADA THISTLE

Disease Cannot Be Restrained by Treating Seed-One-Year Rotation is One Recommendation.

(By W. W. ROBBINS, Colorado Agricultural College.)

The question is frequently asked: Can corn smut be controlled by treating the seed? It cannot. For the although usually not until it has at other words, an annual weed is one Furthermore, infection may take place Most of our weeds belong to this class. in any part of the plant where there A biennial weed is one that lives for is fresh growing tissue.

vious year. A one-year rotation is sette of leaves above ground, but does usually sufficient to destroy a large not flower or seed. The large tap root number of smut spores resting over in is stored full of food which gives the the soil. Remove and burn the smut- plant an early start the following ted masses on the young plants. Corn spring. From the center of the rosmut spores pass through the alimen- sette of leaves a stalk is sent up tary canal of stock without having which bears flowers and, later, seeds. their germinating power destroyed. At the end of the second year the This probably explains the fact that fields heavily manured often suffer more from corn smut than those tightly manured or not manured at all. The spores, however, do not live long very important to work in clovers as in the manure. Hence old manure is better than fresh to spread on a cornfield. It is known that some varieties of corn are more susceptible to smut than others and it is also very probable that a variety that is not acclimated is more subject to smut than one well acclimated.

ATTENTION TO YOUNG FOALS

Within an Hour After Arrival of Colt It Should Be Standing and Getting First Milk.

(By L. C. BARNES, Colorado Experiment Station.)

If the mare foals in barn, one should provide her with a roomy box stall with plenty of straw. Within an hour after the arrival of the colt it should be standing and getting its this class of weeds are the bull thistle first nourishment. If it cannot stand and the burdock give it help, as the first milk is valuable not only as a food but also as a for Canada thistle. It is, however, natural purge which rids the intes- much larger and more rugged. This tines of the meconium.

around the body of the colt and pro- years. Cutting once or twice in a tect the navel from becoming infected season will usually suffice. It is not from the stable. Some use a dusting generally troublesome in well-tilled powder of equal parts tannic and boric fields and disappears under good roacid on the navel before applying the tation systems. bandage. The navel should be kept protected until it becomes dry.

If the colt strains considerably soon after birth one should relieve this suffering by warm water injections. If the first feces are very hard a dose of raw linseed oil will be advisable.

DAMAGE BY ALFALFA WEEVIL

Insect Has Proved Most Destructive Pest in Western States-Measures for Eradication.

about the size of a grain of wheat, brown in color, with a long slender snout, much like the plum curculio. Imported from the eastern hemis-

Adult Form of the Alfalfa Weevil (Phytonomus Posticus): Adults Clustering on and Attacking a Spray of Alfalfa. (Slightly Enlarged.)

phere it has become established in the region of country near Great Salt Lake, Utah, whence it has spead into ldaho and Wyoming. It has proved a most destructive pest of alfalfa and the production of seed has been impossible in the localities where it has occurred. It is being investigated by is the garden and truck patch. This the United States department of agriculture in order to find some means of preventing or reducing its ravages. These measures have consisted of the application of mechanical devices for destroying the young weevils in the fields, destroying the adults in their hibernating places, and the introduction of its natural enemies into this country from Europe, where they seem to effectually prevent serious injuries from its attacks on alfalfa.

Care in Covering Seeds. Too much care cannot be exercised in covering seed properly. The tendency is to cover too deeply. Such crops as onions, squash, parsnips and lima beans push up the shells of the seed itself and find it difficult to force their way through a very great depth of earth after it is packed down by rains.

Essentials Overlooked.

Particular stress has been put upon the value of lime in all soils growing clover and alfalfa, with the result that many overlook other essentials and seem to think they will have clear sailing when soil acidity is corrected.

Bull Thistle Not Generally Trouble some and May Be Eradicated by Good Rotation Systems.

Weeds may be classified in different ways. One of the most useful classifications is based on the length of time the weeds live. This gives three classes: Annual, biennial, and perennial. most part, corn smut spores rest over An annual weed is one that starts the winter in the soil or in the manure from the seed in the spring, develops pile. Infection of the corn plant may into a plant which flowers and seeds take place at any time during its life, the same year, and then dies; or, in tained a height of two or three feet. that lives but one growing season.

two years. The first year it starts Corn should never be planted on from the seed and develops a large soil that grew a smutted crop the pre- tap root below the ground and a do-

DRESSING FOR SHEAR CUTS

Mixture of Turpentine, Tar and Oil Is Recommended for Healing and Keeping Files Away.

The following dressing is recommended by the Shepherd's Journal for sheep wounds:

For clean cuts a good dressing, to prevent the fly from settling on the wound, is a mixture of one part turpentine, one part Stockholm tar and The insect known as the alfalfa two parts salad or olive oil. The turweevil (Phytonomus posticus Gyll.) is pentine is cleaning and its strong or the use of county prisoners in road smell keeps the flies off, but being very volatile it would soon evaporate if used alone.

> Tar is healing, and being strong smelling is objectionable to the fly. It also adheres to the wool and flesh and assists to retain the turpentine. Salad or olive oil tends to soften the severe effects of the tar and turpentine, also to a great extent prevents the tar from injuring the wool.

The same mixture is very effective also in destroying the maggots after the sheep are blown, and in healing wounds made by them. Any lubricating oil or ordinary fat will serve as a substitute to mix with the tar and turpentine

Infertile Eggs Keep Longer. Some people still think that hens which run with the rooster lay more eggs than hens that are kept separate. This is not the true state of the case at all, as anyone can test by experiment. But eggs laid by hens with no male mate-infertile eggs, they are called-will keep much longer and at a higher temperature than will fertile eggs. It is really much better for the hens, for the reesters and for eggs that the sexes be separated and kept separate after the hatch season is over.

Manure the Garden. One place on the farm where it pays

to manure the land often and liberally should receive a liberal application every year, for from this acre properly managed and cultivated, more than half the living for the family may be

Hogs as Soil Improvers. We know of no cheaper, easier and more profitable way to bring up the soil than by making a field into a hog pasture for two or three years. It will help matters along also if the grain is fed to the hogs all over the field instead of in one corner.

Make a Creep for the Pigs. By all means make a creep for the ittle pigs, a place where they can get in to be fed where the larger hogs cannot come. And while we are speaking of feeding young pigs let us not forget that too much sloppy feed is not good for them.

Food for Growing Chicks. Do not depend on too much mash food for young growing chicks. Give the growing and developing gizzards something to do, some grist to grind, or they will not develop as they

STUDY OF ROAD CONDITIONS

Department of Agriculture Endeavoring to Discover Points of Excellence in Road Maintenance.

Detailed studies of local road building systems in 100 counties are now being carried on by the agricultural department in co-operation with the state highway departments and local road authorities.

The purpose of this study is to discover the points of excellence and defects in existing local methods of building and maintaining roads which will aid the state authorities to put local road management on a systematized basis. The co-operating state authorities have been asked to designate counties that present typical and

Macadamized Road in West Virginia.

exceptional features as to topography. character of road materials methods of construction and maintenance, administrative organization, methods of road financing, and traffic conditions. From these lists 100 counties will be selected, and in these counties the division of road economics will make intensive studies.

This investigation is prompted by the fact that there is at present very little knowledge as to the most effective and economical methods by which a county can develop its roads. At present the methods of financing local road improvements vary from calling on farmers for a certain number of days' labor in lieu of a road tax. construction, to bond issues or maintenance of roads from dramshop license funds.

The department will study all of these systems with the view to determining what system or combination of systems works best in actual prac-

There is, moreover, at present no standard system of keeping accounts for road building and maintenance. and as a result, while some counties know to a penny the purpose for which money was spent, others have no definite check or reporting system. Among various counties with the same conditions cost for excavation or other labor is anything but uniform, and many counties, because of the absence of definite knowledge, fail to use local and cheap materials, and construct roads which are unnecessarly expensive for their purpose, or which will wear out before the bond issues are redeemed. The investigation will include a careful study of the use of convict labor in road construction.

In connection with the scientific study the department's highway engineers will advise freely with local officials as to improvements, and thus give each county visited the advantage of direct co-operation, engineering supervision, and assistance.

These investigations, it is believed, will yield important economic data bearing especially on the benefits and burdens of road improvement and showing the extent to which financial outlay under given typical conditions is justifiable.

The heads of state highway departments are manifesting great interest and are co-operating cordially in this work. These data when obtained will be published and thus made accessible to all county and state road officials.

Not Contagious. Good road building in the country does not seem to be contagious, more's the pity.

Harvesting Alfalfa. Alfalfa, like all of the clovers, should be harvested for hay before the stalks become "woody," and the leaves turn yellow and fall. This condition of the plant occurs very soon after the blossoms appear.

Feed Potatoes to Cows. When not too expensive, potatoes may be fed to cows in limited quantities. They should be chopped or sliced and fed raw, 20 pounds being about as large a daily allowance as a cow should receive.

Outspoken.

Mrs. Smith's four sons made the life of her old colored servant a burden. One day Uncle Andy was busy in the garden hoeing corn, and for half an hour Tom, the most mischlevous of the quartet, had amused himself throwing clods of dirt at him. At last Andy threw down his hoe and stamped indignantly down to the house.

"Miss Ella," he said, to the little culprit's mother, "Ah jes' has to tell yu dat dat boy Tawm am de meanes' chile yu got-an' Ah tells you fo' yo' face and tells you behine yo' back!'

ECZEMA ON CHILD'S FACE

Marpleton, W. Va .- "When my little boy was one year old he broke out in little fine, pimples all over his face. At times they would dry up and get scaly and peel off, then they would break out fresh again. He would scratch them until his face would be raw. The eczema looked angry and ran blood and corruption. His face was red and disfigured. He seemed restless and I had to be up with him the greater part of the nights.

"I applied various remedies without result. He continued to break out with the eczema until I sent for some Cuticura Soap and Ointment. I used them and the first application eased him. In ten days he was completely cured." (Signed) Mrs. Lizzie Mollohan, Jan. 2, 1914.

Stranger Lost the Confidence of Truthful Fisherman When He made His Inquiry.

Representative Frank Clark, Repesentative Howard of Georgia, and Superintendent George W. Hess of the botanic gardens, were having a friendly argument at Washington.

"Howard," said Clark, banteringly, "I just want to illustrate to you in a story how little you know about this. There is in my district in Florida an attractive village named Cal-

"One day a stranger walking along a road in the country near a creek saw a youth fishing.

'Young man,' said the ministeriallooking individual, 'can you tell me the way to Callahan?" "Yes,' replied the boy, 'take the

first road to your right.' "Instead of proceeding on his journed, the stranger gazed intently at the boy a few moments and said: 'My young friends, don't you know you are wasting your time in a way that is dreadful to contemplate? You are fishing, just fishing, when you ought to be a-studyin' of books to prepare yourself for life's struggle. My boy, you're sure on the road to perdition.'

"'Road to perdition,' replied the indignant youth. 'What in blazes do you know about roads? You don't even know the road to Callahan."

SPUR FARM LANDS

Many farmers are making a hard or doubtful living on high-priced lands in localities cursed with insect pests, or floods, or drought, or weed plagues, or other enemies to successful farming. The end of each year finds time and energy practically wasted-no progress made. Spur Farm Lands offer relief from these conditions.

The tenant on the high-priced lands further east can make a payment and be master of his own acres here. Any good farmer can pay for them from the products thereof. The Spur Farm Lands offer productive, virgin landseasily cultivated—at low prices and on easy terms. Splendid crops are raised without irrigation. No boll weevil ever known here. Altitude 2,000 to 2,600 feet.

Considering the reliable production of these lands, prices are lowest in Texas; new country, settling fast; splendid climate, no malaria, chills or fever; good churches and schools. We offer the homeseeker a wide range for selection and are selling directno commission to anyone. The purchaser receives full value in his lands in dealing direct with the owner as opposed to paying a middleman several dollars per acre.

Stock Farms and Small Ranch Tracts. perfectly adapted to this purpose-one section to fifty—at prices from \$5.00 per acre up. Free fllustrated booklet, giving all particulars, on application to Chas. A. Jones, Manager for S. M. Swenson & Sons, Spur, Dickens County, Texas,-Adv.

Obituary, Mrs. Charles S. Hart large attentive, sympathic

August 12, 1882; died Wednes forever. As other expe day August 19, 1914 at Amarillo, of love and friendship Texas. Mrs. Hart had been they brought, flowers suffering for some two months many. The casket and with appendictis; feeling better were covered with the at times and relapsing. The fi- of filowers. I will say as nal attack came last Sunday word that her life has night was a week ago and she this community and her was carried to Amarillo on Tuesday following for an operation. She only lived a few hours after surrender their lives to the operation. The end came who will bring them to G Wednesday morning at about five Father and heaven at last

She leaves a husband, two sons, father, two brothers, two sisters, other loved ones and a host of friends to mourn her loss. Mrs. Hart was a devoted wife, a loving and tender mother;indeed she was a beautiful Christian character. She made home the happiest place on earth for "Charlie," (as she so familiarly called her husband,) and her two little sons, Jerry and Charlie Jr.

To be in Mrs. Hart's presence was to enjoy the light and life Jesus so beautifully reflected in her life. She was one of our most devoted workers in the various departments of the Metho dist church of which she was member, being treasurer of the Womans Home Mission society at the time of her death, and she had also been teacher of the Womans' Bible class of the Sunday school for some time when posed for pictures. she was taken sick. Oh! how she will be missed. But when we think of our loss compared with the title of this coming the the loss of the husband, children and other loved ones we will not complain but earnestly pray that right on the greatest seriales we may be able to help them bear up under their great sor-
