HOW TO APPLY PAINT.

Greatest care should be taken when painting buildings or implements which are exposed to the weather, to have the paint applied properly. No excellence of material can make up for carelessness of application, any more than care in applying it can make poor paint wear well.

The surface to be painted should be dry and scraped and sandpapered hard and smooth. Pure white lead should be mixed with pure linseed oil, fresh for the job, and should be well brushed out, not flowed on thick. When painting is done in this manner with National Lead Company's pure white lead (trade marked with "The Dutch Boy Painter") there is every chance that the job will be satisfactory. White lead is capable of absolute test for purity. National Lead Company, Woodbridge Building, New York, will send a testing outfit free to any one interested.

San Antonio, Texas, April 22, 1907.

Dr. C. F. Simmons, San Antonio, Texas:

Dear Sir—I have just returned from a trip over your Atascosa County property, and to say that I am surprised at what I saw, but fairly expresses my feelings. I had expected something pretty good, because I have considerable faith in your agents, whom I happen to know; but what I saw is far herord, my expectation. beyond my expectation.

I drove hurriedly over probably twenty-five miles of ground, passing sereral of your flowing wells and tanks, and I don't believe that there is an acre of ground that is not fit for first-class cultivation. Upon my return to Little Rock I shall take out several more shares before they are gone, and will advise my friends all to take as many as they
