THIS grade lobeling dispute that has kicked up such a furn emore consumers, in connection with the price control orders on confoods isn't exactly a new argument. It has been going on for rough; a quarter of a century without getting much of any real solution.

Consider the standards of quality required for tomatocs: The contents of the can must be 50 per cent tomato meat, all tomato material with no water added. The tomatoes must be ripe. They must be peeled and there must be no more than one square inch of peel per pound. There may not be more than one square inch of peel per pound. There may not be more than one-fourth square inch of blem-ishes to the pound. They must meet a minimum standard of uniform red color. If goods fail to meet this standard they must bear a prom-ment label statement, "Below Standard Coulds." nt label statement, "Below Standard Quality-Good Food Not High Grade." Those standards of quality are probably higher than most home canners set for the stuff they put in their own kitchens.
