READ THIS ABOUT THE GREAT GULF TIRE

WHY DO so many tires wear smooth down the center, yet still have good rubber along the edges? It's simply because their tread design forces the center area to

bear the brunt of the load. But with the Gulf Tire it's a different story. This tire is designed with a wider, flatter tread that distributes the load of your car more evenly. As a result, the Gulf tread wears more evenly from one edge to the other-lasts far longer.

SURE-FOOTED TREAD WITH SHARP SAWTEETH

With 7 ribs, there's a "riding bar" down the cen-ter of the Gulf tire. Thus, just where the load pressure is greatest, you ride on rubber - not on a groove.

Warranty accompanies every Gulf Tire-is hon-ored by Gulf Dealers
