HOW TO MAKE LIGHT WORK IN THE KITCHEN

Properly planned lighting in the kitchen makes meal preparation easier, more pleasant and more efficient. It helps eliminate little annoyances like misread recipes . . . dishes (or vegetables) that have to be washed twice. For a well-lighted kitchen you need two kinds of lighting:

GENERAL LIGHTING

5.. to provide a pleasant level of over-all room illumination without glare or shadowy areas. As a suggestion for the average rectangular kitchen, a 12-inch enclosed ceiling fixture with a 150-watt bulb, or a shielded fluorescent fixture with two 40-watt tubes usually will provide adequate light.

LOCAL LIGHTING

. . to eliminate working in your own shadow at the sink, range or work counters. Use over the sink either incandescent or fluorescent lamps, shielded behind a facing board or recessed into the ceiling. A shielded fluorescent wall bracket is recommended over the range. Shielded fluorescent tubes un-der the cabinets will provide ample light on counter tops.
