# ProductionThroughProfit-Sharing

There is obviously no single or sure method of bringing down the present rising prices of most commodities. Butt in the industrial section of the inflationary spiral there are two remedies which, it is generally conceded, would be helpful if they could be applied. They are better labor-management relations and increased produc-

The two go hand in hand. And a possible means of achieving both is found in the Trubey profit-sharing system-which has been attracting considerable attention cecently-or in some other plan embodying the same general ideas.

The Trubey system is not new. Developed by R. R. Trubey, a Fremont, O., capitalist, it is based on a profitsharing plan devised by his associate, Joseph A. Roeder. The Roeder plan has been installed in more than 70 plants in the last 18 years, and is still operating in all except one.

The Trubey system is explained thus in an article on the Ohioan in Look magazine: "Any employe from president to cleaning woman, with the company for two years, becomes eligible, with one year retroactive. He then contributes an automatic five per cent raise, but no more than \$200 annually, to a fund.

So the interest that the Trubey plan is arousing seems Declaration of Independence. only natural. It presents a hopeful method of increasing production fairly and quickly, at a time when a still unfulfilled demand for many goods remains a large factor in our high cost of living. It also promises long-range benefits to all concerned-management, workers, labor unions, and the general public

# Identical Twins

That valiant foe of communism, President Juan D. Peron of Argentina, already has taken over all branches of government, sewed up the labor unions, intimidated and imprisoned his leading opponents, and threatened to tax opposition newspapers out of existence. Now he wants a veto power at the Rio de Janeiro conference.

The trouble with dictatorships nowadays is that you can't tell the Communists from the anti-Communists without a scorecard.
