The public service company provides meters which tell how much water, or gas, or electricity, you use each month.

Why not "meter" your financial expenses in the same way with a check book? Your monthly statement from the bank and your cancelled checks give you the essential records to enable you to tell whether you are getting ahead or not.

You cannot afford to guess, or to pay bills twice because you failed to get a receipt. You should not risk loss by carrying large amounts of cash on your person. Pay by check.

grown his civvies, many a home has outgrown its wiring system.

years ago was called upon only to conduct current for a few low-wattage lights and small appliances like an iron, vacuum cleaner or toaster, today's wiring systems must supply many additional appliances and a much higher level of lighting. Tomorrow's electrical living will place even greater demands upon home wiring. It must be big enough for the job.

Before you build, buy or remodel a home, it will pay you to check the wiring system with your electrical contractor. Make

sure it has large enough wire, enough circuits and enough outlets and switches to take care of your electrical needs, now and in the future. Adequate wiring is the key to better electrical living.

What is adequate wiring?

Adequate wiring simply means a service entrance large enough to bring in as much electricity as your home may need at any time, enough branch circuits of large enough wire to conduct a full measure of electrical energy to your lights and appliances, plus plenty of outlets and switches, properly located.
