The Sanderson Eagles, light but able football team, revealed their ability on the striped field last Friday night in the defeat of the favored Fabens Wildcats by a score of 13-0. It was a very decisive victory for the Eagles in that the game was void of any of the so-called breaks for either team and one which clearly showed that the Eagles' brand of football and their method of play was far superior to that of their opponents.

This was the district championship playoff game and gave the Eagles their first win of such honors for a number of years. Their next game will be against the Crane Cranes. This game will be played in Crane, Friday, December 5, at 2 o'clock in the afternoon. It was agreed upon by mutual decision.

In the game Friday night the Eagles kicked off first to the Wildcats who were held for four downs in their own territory and were forced to punt on the fourth down. After the Eagles made no headway in three downs they returned the punt. The Wildcats took the ball and made three successive first downs and were headed down the field at a fast pace when the Eagles intercepted a pass. Sanderson made two first downs in the first quarter to the Wildcats' three. Both teams attempted one pass, the Eagles' was incomplete and the Fabens pass was intercepted.

At the beginning of the second quarter the Eagles were still in possession of the ball and made two first downs before losing the ball on downs. Fabens remained in possession of the ball.

ball for three downs and had a pass intercepted. The Eagles carried the ball into Fabens territory and on an attempted pass the Wildcats were penalized to their own 1-yard line for clipping. This was on the third down and left two downs to attempt to cross the pay stripe. These

attempts failed and they lost the ball to Fabens on their own 1-yard line. Fabens punted out in the closing minutes of the first half.

Fabens kicked off to start the second half and Sanderson rumbled early in this period. Fabens failed to make a first down in four plays and lost the ball on downs. Sanderson kept the ball for only three plays and punted

to Fabens. Fabens attempted a pass which was intercepted giving Sanderson possession of the ball. Sanderson made one first down and on a wide end run around his own left end from the 44 yard line, Homer Hill, Sanderson back, made a brilliant run of 55 yards down the sideline for the first Eagle score. The extra point was kicked by Thompson. This period ended with a score of 7-0 in favor of the Eagles.

Fabens lost the ball on downs deep in Eagle territory in the fourth period. The Eagles met a solid wall on scrimmage play and a quick kick put the ball down deep in Fabens territory. Fabens was unable to get out of their deep field and punted. The punt was blocked and recovered by the Eagle team. On a pass from Homer Hill, Sanderson back, to Harrell, Sanderson scored their second touchdown of the game. Harrell was unopposed when he snagged the pass standing still in the end zone. The attempt at conversion failed. After Fabens received the ball on the succeeding kickoff it was one pass after the other until the final whistle of the game.

Sanderson made seven first down to Fabens' 10, each team had one penetration besides the two Sanderson made in scoring. Sanderson attempted 3 passes and completed 1. Fabens attempted 15 and completed 5. Sanderson was penalized 20 yards and Fabens 40 yards. Sanderson intercepted 4 of the Fabens passes.

Joe Ramos, center for the

Fabens team was taken out of the game in the fourth period with an injured leg. His knee had been twisted previously in the season and it was a recurrence of the same injury.

The Fabens team used the Single and Double Wing, with variations from the Box formation, which was not as deceptive or fast breaking as the T formation used by the Eagles. This formation has really proven a boon to the light, flashy

Eagle squad this year as it has proven very effective against all of their opponents.

The winner of the Sanderson-Crane game will play the winner of a bi-district tilt in central Texas for regional championship. It is not known who these contenders are since the results of last week's games have not been learned, says C. G. Bradford, local superintendent.

## He's Looking into Your Future

The scientist in the agricultural laboratory is as truly a pioneer as our grandfathers who fought their way westward to the rich farmlands and the broad ranges of the west. He's looking into your future . . . seeing greater things! His findings, put to use by practical livestock men and farmers, are resulting in thrifter, faster-gaining cattle and lambs, grazing the Great Plains . . . higher yielding crops enriching the Corn Belt . . . new immunity from disease for your livestock. He is pioneering a better and more abundant life for you through new markets for your output, improved products for you to sell.

Miracles like hybrid corn seldom happen by chance. Into its development went more than 30 years of patient research. It cost federal and state governments about ten million dollars. Experiments on individual farms cost unknown amounts. But last year alone hybrid corn added more than \$750,000,000 to farm income. Thanks to research, we now have such chemicals as DDT. Chemists searching for an insecticide to protect our armed forces from malarial mosquitoes found this potent bug killer. Already, DDT has made livestock producers many extra millions through increased production of meat and milk from fly-free herds. One ranch reports an extra ton of beef for every pound of DDT used. What a return on a half-dollar investment!

There are similar thrilling stories being written in every phase of agriculture. Many of the new developments come from colleges and experiment stations (largely financed by taxes paid by individuals and business) or from laboratories supported by private industry. From them you get improved varieties of crops, better control of

pests, parasites and diseases, and many another aid to production. The man who keeps abreast of scientific progress and applies it on his farm or ranch usually profits most. Your county agent, vocational agricultural teachers and farm and ranch publications are your helpers to keep you abreast of latest research information.

Swift & Company, for many years, has engaged in extensive research on agricultural products. It enables us to develop new products; to improve existing ones; to produce better nourishment for your family, your livestock and your crops.

**From the Editor's Notebook**

Since the days of the Pilgrim fathers, Thanksgiving has been a heart-warming day for American families. This year we, more than any other nation, have cause to be thankful for an abundant harvest. In helping to feed America, we are thankful that we can add our efforts to those of the hard working farm and ranch families who produce our food.

If you plan to visit the International Livestock Show in Chicago, November 29 to December 6, plan also to visit us at Swift & Company. Competent guides will gladly show you along the Visitor's Route through our plant. All of us in the Agricultural Research Department cordially invite you to drop in for a chat. We'll be looking for you!

Producers who attend the International Livestock Show, particularly those who come in from distant points, will quickly realize why the livestock-meat industry needs nationwide meat packers, like Swift & Company. Two-thirds of the nation's livestock is produced west of the Mississippi River, but two-thirds of the meat is eaten east of the Mississippi. This means that, on the average, there is a gap of more than 1,000 miles between major producing areas and major consuming centers. There has to be somebody to bring the producer and the consumer together. Helping to bridge that gap between the western range and the kitchen range efficiently and economically is one of the chief services performed by Swift.

**Size of Business**  
by J. L. Tennant  
Rhode Island State College

A farm business should be large enough to pay operating costs, interest on the investment, and family living expenses. A southern New England dairy farm, for example, should have at least 18 cows per man; a poultry farm, 1,500 layers; a market-garden farm, 10 acres; a potato farm, 40 acres; and an apple farm, 20 acres.

Doing more business with the same capital investment is one way to lower costs and higher profits. With the larger business, the operator can spend more of his time at productive work. For example, workers on a dairy farm with 9 to 10 cows per man will be just as busy as on a farm with 15 to 18 cows per man. The gross sales and net income on the larger operation will be much higher because more of the time is used in producing milk. Reducing costs per unit puts the farm operator in a stronger competitive position.

If more crop land cannot be bought, perhaps it can be rented. Another plan is to check means by which crop production on present acreage can be increased. Ways to do this include: the use of lime and fertilizer; winter cover crops; higher yielding varieties; double cropping; drainage and terracing.

Another step toward efficiency is to install modern equipment which enables one person to produce more per hour. Overhead costs per unit of product can be lowered when each machine is used profitably for as many hours as possible.

**Track Down the Facts**

Old Ringtail, the racoon, holes up in hollow trees. He's hard to track down without trained 'coon dogs . . . similarly, there are some hard-to-locate facts about any business. But no one needs any special "fact hunting" to get all the facts about what determines livestock prices.

A recent top price for beef steers on a mid-west farm was \$35, with an average of near \$30; best lambs, average \$23, and hogs were selling up to \$30, with an average. These prices for livestock are unusual but, in general, they are due to the demand for meats being greater than the supply. They reflect what the consumer is able and willing to pay for meats. All farmers and ranchers should remember these basic facts, whether prices are high or low. The price producers receive for their livestock is governed by what the packer can get for the meat and the by-product.
