Nebraska Is Rated as Best in Big Six

A husky football eleven from Nebraska rules as preseason favorite in the Big Six and in the Southwest, with the University of Missouri challenging the Corn Huskers for supremacy.

One of the heaviest teams in the history of Nebraska will represent the school this year. The team will average 195 pounds, it has been predicted, but there will be a lightning fast backfield and a fast charging line.

In the backfield, Cocaplain Blue Howell will be one of the halfbacks with Farley, McBride, Sloan, Witt and Peakes serving as other ball toters. Russell, a 210-pound quarterback, and Scherzinger, speedy halfback, are the backfield candidates coming up from the freshman squad...

Included in the eleven letter men returning from gridiron duty are eight linemen. These are Cocaplain Elmer Holm, guard; Ashburn, end; James, center; Lucas, tackle; Munn, tackle; McMulle, guard; Richards, tackle, and Zuver, guard.

The tough schedule of the Corn Huskers has been the basis of argument in predicting the success of the season. Some contend the hard list of games is an indication that Nebraska officials saw a winning grid machine in prospect and so took on the big boys; others claim the heavy grind will prove too much for the Huskers.

The season opens October 6 at Ames, with Iowa State; Montana State visits Lincoln the following Saturday. Two hard games then follow, Syracuse on October 20, and Missouri on October 27. Later in the season, Pittsburgh comes to Lincoln, November 17, and the following week the

Clearly Seen Road

Never operate a car at such speed that it cannot be stopped within the portion of the road immediately ahead. A clearly seen course is limited by curves and roadside objects upon them; by the brows of hills which are being ascended; by other vehicles; by approaching headlights and the condition of the windshield; by the intensity and direction of projection of headlights and other factors.

Putting Pick-Up Unit Across the Grid Circuit

The phonograph pickup unit is nothing but an inverted loud speaker unit. It transforms mechanical energy into electrical. It does this by mechanically varying the reluctance in the magnetic circuit. As the reluctance is varied according to the record in the groove, the flux in the magnetic circuit is varied. The variation in the flux induces an electro-motive force in the coil wound around the armature.

If the coil around the armature is connected directly into the grid circuit of a tube the entire electromotive force induced in the coil will be impressed on the grid.

If the coil is connected in series with the primary of a transformer the electro-motive force will drive a circuit through the transformer circuit. Part of the electro-motive force will be expended in the armature coil and part in the primary of the transformer.

Only that expended in the primary is useful in producing a signal on the tube following the transformer. It is therefore better to connect the pickup unit across the grid circuit.

AUTOMOBILE ITEMS

Postponing needed repairs only adds to the expense bill.

George Bernard Shaw knows his English. The only way to pronounce the word "automobile" correctly is to call it a motor car, he says.

Two-car owners are becoming more numerous. A recent survey reveals that 20 per cent of car owners in this country have two or more motor vehicles.

Olympic Contests by Wireless

One of the wireless-equipped cars which gave the Dutch people the results of the Olympic rowing events just as soon as the standing was determined.

THIS WEEK

By ARTHUR BRISBANE

KING ALFONSO TALKS. THE ELECTRON IS REAL. THE NEWS MENAGERIE. MAN HAS A SOUL.

The King of Spain has talked for moving pictures, his voice recorded by the Fox Movietone. Millions will be interested in a real king who casually says: "I am very glad to say Christopher Columbus was aided in coming to this country by my ancestors."

He is a practical King, this Alfonso, with his mind on his subjects' welfare. He urges American tourists to come to Spain, telling them they will find good roads and "You may drive as fast as you like. I, myself, have driven too fast for twenty-four years."

Most important is the fact that talking pictures will enable everybody to see, study and know the most important people on earth. That really is progress.

The electron, mysterious, theoretical "smallest division of matter," is no imaginary "dot in space." It possesses definite size, revolving inside the atom, as our earth revolves within the solar system.

We go around our sun once in three hundred and sixty-five days. The electro goes around ITS sun the nucleus at the center of the atom, billions of times every second.

You cannot imagine that, or believe it, and you need, but science proves it to be a fact.

Recent important discoveries are due to an Englishman, Professor Thomson, and an American, Dr. Davison, of Columbia University, and the big telephone company laboratories.

The electrons may not interest moderns, but it interests science and will interest future ages more than this Presidential election will be a good deal more.

A man looking through the news is like a small boy in a menagerie. So much to see you have to run from cage to cage, from the laughing hyena to the snorting hippopotamus, and from the bar-shaking orang-outang to the placid elephant.

Politics may be called the laughing hyena of the human menagerie and the crime wave is the orang-outang.

In his first address as president of the British Association for the Advancement of Science, Sir William Bragg insists that man has a soul. This is like saying there is steam in an engine when it moves, physical life in a man running and talking.

Science cannot PROVE the existence of a soul, but proof isn't necessary.

No man can prove he isn't dreaming as he talks to you, and many a man dreaming has been certain he was awake.

Three things in the universe, matter, force, spirit. Matter and force may be one. At least they take different forms. Force cannot act without matter. And only spirit CONSCIOUSNESS can supply force to matter and make things better.

The earth was a wilderness until human beings, each with his spark of consciousness, came to change it.

No "fortuitous concurrence of atoms" could produce the left hind leg of a field mouse, much less the brain of an Aristotle.

It is man's work that counts, not his ashes.

When kings came back after the French Revolution, they scattered Voltaire's ashes to the four winds. And they picked the right man, for it was he that put an end to the French kings. They are gone. He remains. They never succeeded in scattering him while he lived. He worried them.

An exhibition in London introduces "Eric, the Robot," a man-shaped wooden and metallic machine that rises to its feet, stretches out an arm to command silence, and makes a speech.

The shiny, metallic man-machine, its shining yellow eyes lighted by electricity, frightens spectators.

Some workers who dread the possibilities of competition by machine men. But there is no danger. When modern cloth-making machinery was first used England built forts to protect the machinery from enraged workers, convinced that it would starve them.

 PAUL IN EPHESUS

Acts 19:8-10, 18-20; Ephesians 4:11-16

By
 REV. SAMUEL D. PRICE, D. D.

Closing his work at Corinth, Paul took Aquila and Priscilla who had been his helpful friends there and left them at Ephesus while he went forward to Antioch in Syria. Thus the second missionary journey was concluded.

Soon the third journey was undertaken and Paul found that Aquila and Priscilla had been making good use of their time during the interim in Ephesus. The nucleus of another strong church had been brought together there.

The theory that it does not make any difference what you believe if only you are sincere had its refutation in two similar incidents in Ephesus. Apollous, an Alexandria Jew, had attracted much attention by his eloquent teaching along Christian lines. But when careful attention was given to his messages it was noted that essential truths were lacking. On inquiry it developed that he knew only the baptism of John, which was typical of repentance from sin. He believed in Jesus and proclaimed him, but had no knowledge of the Holy Spirit. Aquila became his special teacher; belief followed and in baptism he entered upon the larger spiritual life. When Paul arrived he found twelve who also knew only about John. They were asked, "Did ye receive the Holy Spirit when ye believed?" They too were apt pupils and were blessed in their greater understanding of spiritual things.

Paul found an indifferent audience in the synagogue and changed his audience room to the school of Tyrannus. Then things began to happen. The central shrine of Diana was the colossal temple in Ephesus. Idol makers grew rich by carving images of this goddess. Others worked on the superstition of the people and sold "writings" that were supposed to be a charm that would offset any evil influence. Naturally Paul's success cut into the shrine and charm business. The people were told that Diana was only a myth and the idols were absolutely worthless. They were instructed in the Jesus way and many believed in Him as their Saviour from sin. The people were called upon to evidence their new faith in a living Christ whom Paul had actually seen when near Damascus, by destroying these Diana idols and the costly charms that each one had purchased. The people showed that they were sincere and relics of great value were brought for burning in the public square. The fire was thus kept up for days. The value of the things thus destroyed was the equivalent of the ordinary pay for 50,000 days of labor, say \$250,000 in the reckoning of today.

The second Scripture portion is from Ephesians, the letter which

 Things You Should Know
 About Your
HEALTH

 Jno. Jos. Gaines, M. D. *****
 REMEMBER:

Disease germs have three avenues of entrance into the human system. They may be inhaled, swallowed, or may get in through or incised wounds of the skin.

In warm weather, when most of our houses are wide open, the danger of inhaled germs is practically nil. Pure air is a wonderful disinfectant, capable, except against the tubercular germ, which should be guarded against at all seasons.

Most acquired infections in summer are of the digestive tract, the bacteria are swallowed with food or water. We should, therefore, be discriminative at this season. Edibles taken raw must be scrupulously clean and thoroughly masticated. Fruits should be ripe, fresh and free from punctures by twigs, or specks of decay. Don't give the child a banana that is green, or part ripened or punctured through the skin. Potato salad that is carried over from meal to meal—better throw it away, or do without the mixture entirely.

Leave your printing orders with the Star office and get just what you want—and get it NOW.

"Going to the Movies While Sitting at Home"

By ELMO SCOTT WATSON

GOING to the movies while sitting at home! Doesn't sound possible, does it? It not only is possible, but, judging from a demonstration made in East Pittsburgh, Pa., recently, that seeming miracle may soon become one of the commonplaces of our daily life.

Recently there gathered in the television laboratory of the Westinghouse Electric and Manufacturing company a group of radio leaders, among them representatives of the Radio Corporation of America, the National Broadcasting company, the General Electric company and the Westinghouse company, who saw motion pictures which, broadcast from a station nearby and transmitted on radio waves, were picked up on a receiver in the laboratory and reproduced before their eyes. It was the world's first demonstration of radio movies and possibly the most astounding of the many advances in the science of radio announced during the past year.

While radio movies are still in the laboratory stage, Westinghouse officials, under whose auspices the demonstration was made, declare that the event heralds the day when the radio listener will sit at home and have that most popular form of entertainment, motion pictures, projected by his individual radio receiving set.

The development of radio movies is a triumph of scientific engineering. During the last summer, the idea came to the mind of Dr. Frank Conrad, in charge of this branch of his company's activities and the fact that in barely two months he brought the device to the laboratory stage in the degree of perfection witnessed at the recent demonstration, is said to have set a record. Radio movies are a step beyond previous developments in television and required the invention of a number of appliances in addition to a great deal of scientific calculation, synchronization of various high-speed mechanisms, and accurate control of light and radio waves.

Although the sending of moving pictures by radio, as may well be imagined, required many complicated and delicate pieces of apparatus, the principles of the art as explained by Westinghouse engineers, are not beyond ordinary comprehension. Photography in its simplest form consists of the reproducing of spots of light and shadow in the same arrangement as they appear in the subject photographed. The screening of a motion picture, of course, requires that a roll of film be operated at a speed which sends sixteen pictures a second before a projecting beam of light. Because of the structure of the human eye, if a series of pictures follow each other at the rate of sixteen or more per second, the human eye sees it as a single moving picture.

All this the broadcasting of radio movies requires, with the addition that the spots of light must be transformed into frequencies, some of which are in the audible range, transferred to a radio wave and broadcast as electrical energy. In receiving the pictures, the process is reversed, the electrical energy is picked up, and the frequencies returned to lights and shadows, which when viewed presents the radio movie.

In the first step of the process a pencil of light traverses each picture,

1. The heart of the television motion picture transmitter. The scanning disc is clearly shown as well as the dot of light which is thrown upon the motion picture film. Above the scanning disc may be seen the synchronizing tube which keeps this disc turning at a predetermined speed.

2. Dr. Frank Conrad, assistant chief engineer, Westinghouse Electric and Manufacturing company and inventor of the television motion picture projector. The scanning disc of the apparatus is immediately in front of him.

or "frame," as it is called, at the rate of sixty times a sixteenth of a second. This process produces a sixty-line picture, as clear as the usual newspaper halftone illustration. The pencil of light is produced by a scanner which is a disc with a series of minute square holes near its rim. The disc is so arranged that all light is excluded from the film except that which goes through the square holes. The disc turns very fast, and as it turns passes the beam of light across each "frame," with the result that an individual beam of light touches every part of the "frame."

The beam of light passing through the film falls upon an electric eye or photo-electric cell, which is not unlike an oversized incandescent lamp. Within the cell, however, is a metal whose electrical resistance varies with the light falling on it. Caesium, a rare metal, is used in the Westinghouse cell. The amount of light falling on this cell determines the amount of current passing through it. The result is that each individual beam of light sends an electrical impulse which varies directly according to the amount of light or shade in the film through which it passed.

The beams of light have now become electrical impulses and are sent on to the broadcasting station. Here the beams assume definite and varied frequencies, some of which are audible. Doctor Conrad states that these frequencies range from somewhere near 500 to approximately 60,000. Since the human ear is limited to frequencies of approximately 15,000, much of the radio movie wave is inaudible.

At the broadcasting station these frequencies are transposed on a radio wave and transmitted exactly as the ordinary music or voice. The radio signals now can be sent across a room, or across the continent. Their distance range is limited only by the broadcasting station's equipment. In the Westinghouse demonstration, the signals traversed a distance of about

four miles; two miles from the laboratory to the broadcasting station by wire and two miles back to the laboratory by radio.

To turn these radio waves back into light, an arrangement which permits the use of a mercury arc lamp is used. By this adaptation the weak radio currents control the action of the many times more powerful current operating the arc lamp. This action may be compared to the action of a radio tube, where the weak radio current on the grid of the tube controls the action of the independent and more powerful plate current.

Thus the mercury arc lamp goes bright or dim as fast as the current changes, and its light at any instant is in proportion to the light that the electric eye sees in the same instant. To return the dots of light to their original pattern, another revolving disc or scanner is also used which is similar to the transmitting scanner. The use of a mercury arc lamp permits the radio pictures to be thrown upon a ground glass or screen, the first time this has been done with television apparatus.

Both these scanning discs turn at exactly the same speed; the hole in the receiving disc must be exactly in the same relative position as the corresponding hole in the transmitting disc. In other words, they must be synchronized.

Westinghouse engineers were the first to develop a feasible method of synchronization, and their method was by means of radio. From transmitting equipment, which may be located in the broadcasting station, they transmit a constant frequency wave of 5,000 cycles. This wave is produced by a tuning fork and transmitted over a special carrier wave from the broadcasting station. The constant frequency note is received on a special receiver and by means of special apparatus controls the speed of synchronous motors, which drive the scanning discs of both transmitting and receiving radio movie equipment. This revolutionary method of controlling equipment indicates, in a measure, the extent to which science must go in order to perfect television or radio movies.

But the developments in radio during the past year, and especially this latest development indicates that the word "impossible" is rapidly being written out of the vocabulary of American electrical engineering genius, and that radio movies for all who care to enjoy them are an assured fact.

Give Her a Radiovisor

Radio movies will be received in thousands of homes next winter. Thousands of amateurs and radio enthusiasts will build their own radio visor receivers and early this fall ready-made radiovisors will come on the market. Radiovisors will be the novel and really smart Christmas gift this year. These are the predictions of those behind the scenes in radio experimentation.

Although only three radio stations are regularly broadcasting radiovision or radiomovies, at least seven more are experimenting or testing and installing radio transmitters. The fall months will see this number increased rapidly.

At present most of the radiomovies are in pantomime only, but increase in "picture quality" will come with experience and perfection of transmitting methods. The recent assignment by the federal radio commission of new and wide bands of short waves

for radiovision will spur on the development.—Science Service.

California's Flowers

Some of the wildflowers of California are: Anemone, California poppy, blazing star, baby-blue eyes, white daisy, blue lupine, Clarkea elegans and wild Canterbury bells; perennials, Indian paint brush, scarlet larkspur, pride of California, scarlet honey suckle, California fuchsia and white evening primrose.

Community Building

Town to Have Novel Home-Life Features

Now a new kind of town has been invented. The first one is being built at Radburn, N. J.

It will consist of a number of units for 600 families each. Each house will have its own individual garden in the rear. From each garden a path will lead to a parkway. Each parkway will be a city block in width and about half a mile in length. Primarily the parkway will be park space, but in each parkway will be tennis courts, playgrounds, a school and a community center.

The cultural life of the 600 families of each unit will center about their own parkway. Every child can reach school by walking along tree-shaded paths and, even if the distance be as much as half a mile, without having to cross any automobile road.

The "limited dividend company" is the practical and powerful tool, through which towns can be built which will solve the perplexities introduced into city life by the automobile age of today. It limits dividends on its stock to 6 per cent. Through economies possible by building hundreds of houses at a time it has been able to pay 6 per cent and yet to develop home regions not for speculative profit but to provide generously for home life and community well-being.

One novel feature of the Radburn plan is that all homes front on side streets—dead-end streets—which will be used only by the automobiles that are going to houses in the particular block. Through traffic is restricted, therefore, to streets definitely planned as motor highways, and hence made wide enough in the first place to accommodate traffic.

Brick Veneering Held as Good Construction

Brick veneer, perhaps, classifies as neither fish, fowl nor good red herring. Nevertheless it is considered sound construction and its practicability has been demonstrated in many years of satisfactory use. But strictly speaking, a brick veneer exterior finish is a shell—a shell of brick protecting some form of backing, such as wood sheathing, mineral sheathing, concrete or other material.

The major purpose of a brick veneer exterior is to carry out the architectural design of the structure. In itself, brick veneer is without structural strength. It is laid up over one of the standard bases, generally in what is known as a "running bond."

Around the lower "course" or any small projecting cornice, the bricks are likely to be laid in what is known as a "soldier course." In this course the bricks are stood on end, with the narrow length exposed, like so many soldiers in a stiff row.

There are a great many bonds for the laying up of solid brick walls, but most of them are not applicable to brick veneer construction because the narrowness of the brick veneer walls makes it necessary to break the brick to carry out the designs of most of the bonds.

Brick's Value Appreciated

While the ancients knew how to use brick structurally and left commendable examples of their skill, they were handicapped in achieving the beautiful effects possible today because the wide range of colors and textures as manufactured now were not then available.

It is gratifying to know that our own country has far outstripped the rest of the world in providing this versatile material in such a variety of colors and textures. And that the architect is thoroughly appreciative of the opportunity it affords in the way of artistic effects is evidenced by his lavish use of face brick, not only for exterior walls, but interior finish as well.

Country Life

True liberty, independence, the practice of virtue, where do they flourish in such amplitude as in the country, where the farmer is master and lord in his own domain; where life is more healthy, moral, and simple; where love is kindled in happy homes; where children are brought up in a more Christian way; where bad examples are rarer, vices more unknown, and subsistence more assured; where upright as and the love of honest toil and thrift are cultivated; where nature herself is more beautiful, "the air purer, heaven closer, and 'God nearer'?"—Prince Albert Patriote de l'Ouest.

Progress and Taxation

If we are to enjoy "real" tax reduction, it is not necessary to cut out progress and needed improvements, but it is necessary to cut out non-essentials, experiments and political hobbies which add to the overhead of government without giving added advantages comparable with their cost.—Exchange.

Worth Remembering

The resale value of the home made attractive by a well-thought-out grounds plan will be materially increased.

HATS KEEP COLOR SCHEME; YOUTHFUL PARTY FROCKS

HAVING purchased a new coat or coat dress, or a velvet ensemble, the next step is to betake one's self to one's milliner in search of a chapeau to accurately match the color of the newly acquired costume. Fortunately, a perfect color match need not necessarily imply an expensive hat.

The beauty about the millinery program this season is that even the simplest popular-priced felt shapes come in rich, handsome colors which accurately repeat the tones and shades of either the new dress fabrics or cloakings or the fur with which they are trimmed. It is not at all unusual for a woman to order several inexpensive felts, so as to top each of her early fall costumes with a matching hat.

The modish browns and allied shades are foremost in fall showings. When one enters a shop it almost seems as if autumn browns of every degree had taken possession. The range extends from dark African brown or most alluring coppershades which fairly dazzle the eye with their brilliant highlights. However, the brown tones have much competition, particularly in the deep wine shades which enter so handsomely into the autumn picture. Then there are the new dark greens, jungle green being outstanding. Light canna and pinky beige, too, are widely sponsored.

When millady tours the shops seeking "perfect-match" colorings, she finds three types of hats are outstanding, namely, the beret, the poke-cloche and toques, the latter including many sorts, from cap shapes to those which are intricately draped.

A dark brown velvet beret, such as one as shown at the top of the group

woman who is "fair and forty" the news of a changing silhouette is anything but welcome. Perhaps one of the reasons the younger set is so delighted with the idea of a raised waistline is that in it youth sees an opportunity to accent youthfulness.

To her elders, whose avoirdupois is ever a source of worryment, the young women of svelte figure fluttering about in the simple house dresses so fullskirted and shortwaisted during the summer, were an object of envy. And the pretty, dainty silks, with their short-waisted semiffitting sleeveless bodices with bouffant skirts sewed on at the waistline, how they do differentiate youth from its elders! In seasons just past, swart-sixteen and women of mature years dressed alike, the present trend is toward making a decided distinction between styles for the flapper age and those for the matron.

The charming dress illustrated is one whose semi-fitted fashion tunes to young waistlines. In this quaint frock of lace and cream-colored mousseline de soie, winsome Mary Nolan, a favorite among Hollywood's screen artists, looks her prettiest. The lace capelet is in keeping with the trend of the vogue as is also the mesh of very wide ribbon, which sets in huge loops and streamers at the side.

The importance of the bow theme in the realm of fashion cannot be overstated. Indeed, bows have become the

Frock Accentuates Youth.

pleured, with a wisp of a matching veil to shade the eyes, will top the autumn brown costume to perfection. It would be equally as effective in a deep wine tone.

Just the thing for a "first hat" is a simple felt poke-cloche like the one to the left herewith. Notice how its brim is longer at the sides than in front, which is characteristic of the newer silhouettes.

Quite a few satin hats are being shown in fall collections. The one here is in black. The motifs of satin which achieve the popular over-the-ears effect are outlined with rhinestones.

plything of those who create formal modes, who give to them every possible intriguing interpretation. So conspicuous are bows, a single one dominates the entire frock. While it is very smart fashion to wear a huge bow at the side as pictured, of late the sentiment seems to be to move toward the back, which hints strongly of the return of the bustle effects. Soft taffeta ribbon is particularly well liked for the bustle-bows, and they are caught up over the arm while dancing.

"DO RIGHT AND BE REWARDED"

(By D. J. Walsh.)

WHEN Eloise Gurney married Edward Brown she thought her life promised to be just one long bright vacation. She had met Edward while they both were attending a coed college, and it was a case of love at first sight. Edward was a big, wholesome, light-colored man with an honest smile and an unlimited fund of good humor which, however, concealed a lot of common sense and a great deal of firmness. Eloise was exactly his opposite, dark, thin and, when opposed, stubborn. Her parents had died when she was a mere child and she had been brought up in the home of an adoring aunt who had believed Eloise to be just about perfect, and in consequence had always allowed her to have her own way. The only thing necessary to perfect happiness was for Eloise to marry the right man and Edward was surely the right man.

After the wedding, which was a very pretty affair, Edward took Eloise home to his people. They were all going to live together, because the elder Browns were getting to an age where they were glad to shift the responsibility of the farm to younger shoulders and they themselves take a much-needed rest.

Poor Eloise! The first look at her new home took the smile from her face. But the inside of the house was even worse than the outside had been. As she entered the dim sitting room lighted only by a kerosene lamp the first thing her eyes rested upon was a tarnished fly-specked gilt motto card bearing the admonition, "Do Right and Be Rewarded." It was evident that her mother-in-law placed a stern reliance upon visible precept. Before she could more than cast a quick glance around the room she was met by a sharp-faced woman who had lingered to assist his father in carrying in their luggage, entered the room and crossing to where the sharp-faced woman stood, gently drew her toward Eloise.

"Mother," he said in his hearty way, "This is Eloise. Eloise this is our mother. I want you two to love each other as much as I love you both."

Never, perhaps, were two women more opposed than these two; the difference between them being antipodal in its extent. Mrs. Brown, the elder, was a tiny wisp of a woman with eyes that looked through and through, and gave no friendliness until she was sure it was well deserved. She wore a gray calico dress of an ancient cut and a worn oilcloth apron was strapped about her shapeless figure; her feet were thrust into a pair of ragged red felt slippers. Eloise in all her fresh bridal finery moved in an atmosphere of French perfume, which, struggling with the strangling airs of the kitchen, seemed entirely out of place.

"Well, so you've come, have you? We are poor folks here and you will have to take us as you find us," said the elder Mrs. Brown, peering at Eloise through her near-sighted eyes. "But I says to pa what is good enough for us will be good enough for Edward's wife. You will see," she added after another sharp look at Eloise. "We don't put on no style. Well, Edward, my boy, how are you? Get your things off and come right in to supper." And she turned and led the way into the dining room.

The dining room had unmistakably been a small bedroom. Young Mrs. Brown seated herself at the table covered with its red tablecloth, which had very evidently been ironed with out first being sprinkled. The table was uninviting to say the least. Under old Mr. Brown's plate, was a newspaper which, by its rumpled and greasy appearance had seen several days' service as a tray cloth. The dishes were heavy and the glazing was worn from the edges of the thick cups. The food was plentiful and looked well cooked, but to Eloise, suddenly heartsick for the daintiness she had long been accustomed to, stomach sickness and repulsion were added to make her wretchedness more acute.

Eloise made a very poor supper. She nibbled at a bit of bread and tried to wash down the big lump which persisted in coming up in her throat by gulping down huge mouthfuls of the black tea which had grown bitter with long standing.

For a week Eloise tried to make the best of the situation. She went around the farm with her husband as much as she could. She stayed with him while he was milking the cows in the big barn and the rest of the time she remained in her room holding herself aloof from the old people. All the time she was torn between her love for her husband and a desire to leave everything and go back home to Aunt Molly. For hours she gazed at her wedding ring, which was a symbol of fidelity, but the more she looked at it the more it began to look like a shackle which was binding her to a condition the thought of which was fast becoming unbearable.

One morning as she sat by the window in her bedroom she was startled by a timid knock at her door. Going to the door she opened it upon the bewildered face of old Mr. Brown. He was a dark, common-looking old man who wore a coarse black shirt and

patched trousers; yet this unattractive apparel and the scarcely less presentable shell of mortality contained a personality that was pure and fine if Eloise had taken time to find it out. He looked timidly and pleadingly into the eyes of his daughter-in-law.

"Honey," he said, "I am sorry to bother you but Ma just tipped a pail of hot suds over herself and I guess she is fearfully burned. She didn't want I should tell you, but I want help. Can you come?"

Of course, Eloise went to the assistance of the old pair. What else could she do? They got old Mrs. Brown's wet clothing off and underneath some horrible burns were revealed. Eloise had had a course in first-aid and was able to make the old woman fairly comfortable until the doctor could be sent for.

When the doctor came he gave Eloise a quick glance and in a matter-of-fact way, which left no doubt of what he expected of her, gave some minute instructions in regard to the care of her mother-in-law.

Old Mrs. Brown was ill for several weeks, during which time Eloise was obliged to care for her and, with what help the men could give her, the house as well. There was much to do through all that time and Eloise had no time for self-pity; she was too busy. She made her mother-in-law as comfortable as she could, and indeed she grew almost to love the brave old woman who never uttered a word of complaint and was so perfectly grateful for everything everybody did for her. As for old Mr. Brown, he simply worshipped Eloise in his shy way for the care she gave his wife, and the more his daughter-in-law watched him the more she could see that her husband was like his father in temperament.

As for the house, Eloise in order to live there had to revolutionize the whole place. First she packed away the heavy old dishes and brought out her own beautiful china and linen and silver—her wedding presents—which she had thought so entirely out of place in this house. One thing led to another, and by the time the elder Mrs. Brown was able to leave her room the house was as fresh as new paper and paint and plentiful scrubbing with soap and water could make it, and Eloise by the labors of her hands had created a home spirit that was to sweeten and enrich all their lives for many years to come.

As for Mother Brown, as Eloise had learned to call her mother-in-law, she fairly bloomed in the glory of the pretty home Eloise had evolved and gladly enough gave over the reign of the house to her efficient daughter-in-law.

Great Britain "Home" to Her Colonist Sons

A Scottish minister was speaking at a gathering on "The Love of Home," when he related an incident that happened during the World war which brings the idea of home very forcibly to one. He mentioned that in a letter received from France the writer stated that a number of officers belonging to a Scottish regiment, when in their billets behind the firing line, had invited amongst others, an Australian officer to have dinner with them. The party wore on, and they were sitting round a wood fire, with candles as the illumination, when the Australian officer remarked: "Would you Scotsmen like to know why we have come all the way from Australia to fight along with you?" Naturally, the Scotsmen answered that they would like to know. The Australian, who was a mandolin player, and had brought his instrument with him in order to entertain the party, remarked: "Then I will tell you how it is." Stepping forward, he blew out the lighted candles one after the other until nothing lighted the room but the wood fire. The Australian then sat down in a shaded corner, picked up his mandolin, and played "Home, Sweet Home." The incident greatly touched the officers.—Montreal Family Herald.

Stone Sack Prized as Relic of Roman Era

Among the interesting curios to be found in the museum at Oxford, England, is a huge stone sack. It is carved as though fresh from a man's back; it bears the mark of a rope which once encircled it in two places, and has the usual puckers at the mouth, where the string once secured the opening. All over the stone can be seen the marks of the coarse sackling which once covered it. Its history is curious. Some years ago it was fished up in the Thames below London bridge, where it must have lain for centuries. Some workman in the time of the Romans was carrying this sack of cement from a boat to the shore, when the burden slipped from his shoulders into the water. There, under the action of the water, it became solid, and as years passed away, the sack at last rotted off, leaving only the hardened cement within.

Rare Pearls

From earliest times pearls have been regarded as things of value. Cleopatra is reputed to have dissolved a pearl and drank it, and according to records of its shape and size it is computed that the jewel so destroyed was worth over \$80,000—rather an expensive beverage! The shah of Persia gave \$180,000 for a pearl, and the Empress Eugenie was the possessor of a famous necklace of matchless black pearls. The largest pearl ever found, however, was the Beresford-Hope pearl, which weighed 1,800 grains—over six times as much as the oyster that produced it.

Constipated Since Childhood; In Fine Shape Now

"I just couldn't resist any longer telling you of your wonderful medicine, Milks Emulsion. I have been constipated as long as I can remember. Had typhoid fever when I was eight years old and since then my bowels haven't moved freely. I have taken pills, salts, castor oil, and everything a person could think of.

"Now, whenever I hear anyone say they are constipated I immediately sell them of Milks Emulsion. I have taken about 12 large bottles, not all of them regular. Now I keep Milks Emulsion in the house and take it regular. I have taken so much medicine that I thought it was all alike.

"I had a sallow complexion, no color, and felt miserable all the time; but now I have the color of health, and health is something I wouldn't exchange with anyone for a fortune. I wouldn't take ten times the price I paid for Milks Emulsion for the results I have obtained.

"I am 19 years old and weigh 105 pounds, during which time Eloise was obliged to care for her and, with what help the men could give her, the house as well. There was much to do through all that time and Eloise had no time for self-pity; she was too busy. She made her mother-in-law as comfortable as she could, and indeed she grew almost to love the brave old woman who never uttered a word of complaint and was so perfectly grateful for everything everybody did for her. As for old Mr. Brown, he simply worshipped Eloise in his shy way for the care she gave his wife, and the more his daughter-in-law watched him the more she could see that her husband was like his father in temperament.

"You may publish this letter if you wish and anyone that wants to ask me about your medicine may do so. I promise to answer every letter. In fact, I couldn't do enough for Milks Emulsion to repay them for what their medicine has done for me." ROSIE-MOND BOWEN, Frontenac, Kans.

Sold by all druggists under a guarantee to give satisfaction or money refunded. The Milks Emulsion Co., Terre Haute, Ind.—Adv.

Or at Curses

Why do we men like so well to talk about ourselves? Maybe because we haven't looked closely enough at other people.—Evansville Journal.

No ugly, grimy streaks on the clothes when Red Cross Ball Blue is used. Good bluing gets good results. All grocers carry it.—Adv.

Epigram existed long before wisecrack but those who invented "wisecrack" didn't know it.

NURSES know, and doctors have declared there's nothing quite like Bayer Aspirin for all sorts of aches and pains, but be sure it is genuine Bayer; that name must be on the package, and on every tablet. Bayer is genuine, and the word genuine—in red—is on every box. You can't go wrong if you will just look at the box:

Aspirin is the trade mark of Bayer Manufacture of Mannesmann & Co. of Salzigrodt.

WINTERSMITH'S CHILL TONIC

For over 50 years it has been the household remedy for all forms of Malaria, Chills, and Fever, and Dengue. It is a Reliable, General Invigorating Tonic.

Light Manufacturing Machinery for Sale. Large earning capacity. Staple article. Established merit. Get in business for yourself. "BHOPE," 542 Monachock Bldg., Chicago, Ill.

THE TIGER TRAIL

by Edison Marshall

(Continued from Last Week)

We thought about it as we walked back toward the house. And I thought of many things else, particularly those never-to-be-forgotten words of the elder Southley:

"My daughter is going to marry Vilas Hayward," the old man had said.

Her face had given no sign whether or not he had spoken the truth. In the seconds that followed it might have been that she glanced at me. But she didn't hold the glance long enough for me to tell for sure. Her face as it had been was still before my eyes, softened, shadow-eyed. And I was scornful at my senseless optimism that I even presumed to doubt that her father had spoken the truth—that I was even fool enough to hope otherwise.

Of course she had loved Vilas from the first. Nothing else mattered. She was the kind of woman whose love subjugated all other things. Her kindness to me, the gentleness with which she looked and smiled might have been simply the expression of a sweet girliness such as most men, some time in their lives, are fortunate enough to know. And again it might have been contrivance design, the purpose of which was hidden in the intricate web of the mystery. Perhaps unconsciously I was playing a part of the drama of the old house, and her relations with me were in some mysterious way involved.

Yet I couldn't bring myself to question her motives. It was simply impossible for me to accuse her of actual craft.

But in the test her true feelings had stood forth. She had shown where she really stood. The fact that I was to leave the house in disgrace meant nothing to her. Her love had spread its wings above all such things as this. I had not mattered a grain of dust on the window-sill. Of course I hadn't forgotten her hesitancy. Perhaps there had been regrets—indecision—but the truth had come out in the end. And it had come out again in the little scene beside the marsh, when I had been ready to leave the estate with the coroner. It was not to be forgotten that her lips had told the detective of my dispute with the Haywards, bringing down upon me a certain measure of suspicion.

I remembered how she and Vilas Hayward had always been together. And it only cost a laugh to remember that I had attributed this fact to the mysterious forces that were at play in the old mansion, rather than to her own wish. Her love for him was evidently the most passionate, intense kind, hardly to be expected in the slender, appealing girl. She showed this fact in her willingness to sacrifice for him.

But why had she been ready to kill him that night in the den? The look in her eye as she leaned across the table could not be mistaken. Yet many times before in the long years of the world, women have killed the men they loved. Conditions have arisen in which love itself was the power that pressed back the finger against the pistol trigger. It was not for any man to say. The question went deep into the mystery of a woman's heart. She had tried to kill him and yet she loved him. He had brought sorrow to her eyes, and yet it had made no difference. It was seemingly a love not to be measured. And I wished that I could go beyond the dull, strange, reaches of the swamps and never return to Southley Downs again.

"After all," I heard Inspector Freeman saying, "I don't see why I should worry about these things, such things as the tracks that the niggers tell about in the road—and that chap who ran away from us on the hill—and all the rest of this funny business. I've got my man and that's the only thing that matters."

I don't know how much he had said that I had not heard. My thoughts had been too busy.

"So you're sure of it, are you?" "It's a clear case. Blood-stained shirt, ancient enmity—above all things, the fact that he's the only man, except of course, Hayward's own son, that hasn't an alibi. He went outdoors with him. Nothing to it at all, Long."

We climbed the steps of the big house and parted in the hall. The detective took the clod that held the imprint up to his room to deposit with the shirt. He was to meet me in the library immediately after.

I waited a long time for him to come. And when at last I heard him on the stair he walked as slowly as pall-bearers with a bier. Every step was distinct and slow, instead of the usual tap-tap of his quick motions.

Then I saw him in the candle-light at the door of the library. Never have I seen such bewilderment upon the face of a human being.

"This is the damndest house I ever saw!" he cried.

He stalked into the room with amazement. He sat down in a great chair and rocked himself back and forth, his eyes on the floor. And now and then he swore gently, dazedly. And I have seen the same look, in my professional experience, in the faces of men just picked up alive after startling automobile accidents.

"You look a trifle upset, inspector," I said. "What's the matter now?"

He turned slowly, still numbed and dazed. "I say the damndest. No case I was ever in had quite the devilish, upsetting, aggravating features that this one has. When I started to put away that clod that held the footprint, I opened the drawer where I had put the stained shirt."

"Yes?" "Somebody had unlocked that drawer with a screw-driver!"

"And the shirt was gone?" "Gone nothing! Some one had just torn a solid square foot out of the front part of the shirt-tail. And it dazed me so that I dropped the clod."
