GOOD BUSINESS

BY EDGAR A. GUEST

If I possessed a shop or store, I'd drive the grouches off my floor! I'd never let some gloomy guy offend the folks who come to buy; I'd never keep a boy or clerk . . . With mental toothache at his work,

Nor let a man who draws my pay drive customers of mine away. I'd treat the man who takes my time . . . and spends a nickel or a dime

With courtesy, and make him feel that I was pleased to close the deal,

Because tomorrow, who can tell? He may want stuff I have to sell, And in that case, then glad he'll be to spend his dollars all with me.

The reason people pass one door . . . To patronize another store, is not because the busier place . . . Has better silks, or gloves, or lace

Or special prices, but it lies . . . In pleasant words and smiling eyes;

The only difference, I believe, Is in the treatment folks receive!

Atomic Energy Must Compete

Walter Janssen, chief of the metals and minerals branch of the Bureau of Foreign and Domestic Commerce, has released some down-to-earth figures for the dreamers who see atomic energy doing all the world's work.

"It is entirely possible," Mr. Janssen says, "that one day atomic energy may find application as a source of heat for the production of steam or hot gases and of mechanical and electrical power. But even in this utopian thinking we do have to come down to earth and think in terms of how much it will cost and whether will come the uranium.

"It has been computed that, in order to compete with 8-cent fuel oil, the comparable price per pound for U-235 would be \$20,000 and in the case of gasoline at 30 cents a gallon, the price would be

RELIEF FROM SUFFERING

Scientific, Drugless, Non - Surgical Treatments

SPECIAL HEALTH WEEK

INCLUDING CONSULTATION AND EXAMINATION WITHOUT CHARGE OR OBLIGATION

Beginning Monday, May 13, Through Friday, May 17

New Equipment Installed

Many eminent authorities contend that 90% of all chronic diseases are due, in most cases, to pollution of the blood stream, contributing causes of which are constipation, improper elimination, over-taxed liver and kidneys, etc. In most cases a functional disorder causes constipation. To aid in getting at the bottom and basic cause of a large number of ailments that have hitherto resisted the best efforts of all branches of healing, I have installed the TOX-ELIMINATOR, a remarkable advanced modern instrument which has been used in other sections of the United States for several years with remarkable results prior to its introduction in this area. The TOX-ELIMINATOR treatment, by helping remove the disease-producing materials at their source, together with our other drugless methods helps the body to stop further damage and to rebuild the affected parts and restore them to normal. The TOX-ELIMINATOR treatment is pleasant and not embarrassing. It is leak-proof and odor-proof because the entire process takes place under water-tight and airtight conditions. It has no disagreeable features whatsoever, nothing that might offend a person of the most fastidious taste and sensitiveness.

More Production The Cure Says Telegram

The members of the National Retail Dry Goods Association wish to restate the position we have consistently maintained with reference to the Price Control Act.

1. We recognize the temporary need for a short-term extension of the Act.
2. We believe the present administration of OPA has discouraged and stopped production of needed goods. It has forced scarce commodities into black markets. Production is the real cure for price inflation and we urge that every possible measure be taken to encourage production.
3. We believe that definite standards for the removal of controls should be established by Congress and not left to administrative discretion.
4. We believe that for the good of the country, Congress must clearly state its intentions and its policies for the guidance of the Price Administrator so that ob-

NEW FRONTIERS

"History repeats itself," says Gov. John C. Vivian of Colorado. "New frontiers have again been opened in the west. The frontiers of which I speak are concerned with oil, which, in the machine age following victory will play an increasingly important part in the life of every human being and in the economy of every nation."

stacles to full production may be quickly eliminated.

5. We urge that Congress amend the law as to allow the productive capacity of American industry to supply the needs of American consumers to the same full measure that it supplied our war needs.

GI Question And Answer Dept.

Q. Is there any restriction on the use of the money secured from a loan guaranteed by the Veterans Administration?

A. Yes. Funds secured from a loan may be used only to purchase, build, repair, alter, or improve a home or farm to be occupied by the veteran, or to purchase a business property, or equipment to be used by the veteran for the purpose of earning a livelihood.

Q. In an emergency, how can a veteran secure admission to veterans hospital?

A. Before proceeding to a Veterans Administration Hospital, the veteran or someone acting for him should communicate with the nearest VA contact unit or hospital by telephone or telegraph, and request authority for admission and for transportation, if necessary. Prior authority is needed before a person can be reimbursed for any expenses incurred in such travel.

Q. Should a man who obtains National Service Life insurance from the Government while in the military or naval service retain such insurance after discharge?

A. By all means, because the premium rates are low in comparison with the rates of private insurance, especially in view of the valuable protection granted. After separation from active service, veterans cannot apply for new National Service Life insurance and the obtaining of new insurance with private companies will have to be accomplished at his present age for which rates would necessarily be higher. Furthermore, the additional medical examination which would be required for a new non-government policy might disclose some impaired health condition which would bar the granting of new insurance by the private company. If the veteran has let his National Service insurance lapse, he should seek its reinstatement at once.

MAKE YOUR COTTON PLANTING SEED GO FARTHER

Here Is How

Planting Attachments

Let us delint your seed by the Kemgas Process then you can plant half as many seed and secure a better stand.

No special planting attachments are required—just an ordinary corn plate will plant these seed.

Why Is This True?

Planting Seed Scarce

The Kemgas Process removes all the lint then recleans, grades, and treats the delinted seed with eeresan. Seed processed in this manner will germinate 3 to 5 days quicker than fuzzy seed. Tractors plant 25% more seed land in a day because there is absolutely no lint to choke planter boxes and one filling of the planter box will run 3 to 4 hours.

Good planting seed is scarce this year. Get the most out of your seed by letting us process them. We are equipped to do a first class job We are able to supply a limited amount of Kemgas Delinted Seed in the following varieties

erate in the interest of agriculture. The Commodity Credit Corporation is perhaps the most powerful Government Corporation which deals with agriculture. The CCC operates the price support and loan programs for cotton and grain and numerous other agricultural crops. Congress has guaranteed a support price, or loan, of 92½ percent of parity on cotton for a two-year period following the year in which the official end of the war is declared. A support price of 90 percent of parity is similarly provided for other basic crops.

Loans and purchases through the years by the CCC on cotton, wheat, corn, peanuts, eggs, and other farm products run into the billions of dollars, but the CCC has sustained relatively few losses on crop loans and purchases. On cotton the CCC has made a net profit of \$147,000,000. Cotton farmers will rejoice over the fact that practically all Government-owned cotton will have been disposed of prior to August 1st. This is particularly gratifying when it is recalled that at one time the CCC had on hand over 11,000,000 bales of surplus cotton.

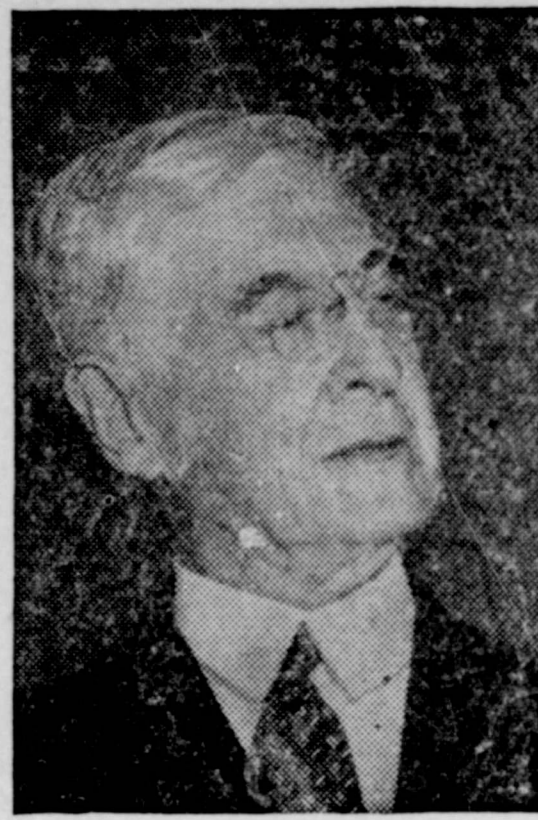

Governor I. W. Duggan of the Farm Credit Administration has appeared in support of the four Government Corporations under his supervision, all having a direct bearing on the year to year operations of millions of American farms.

Governor Duggan expressed alarm over the sky-rocketing of farm land prices. However, in contrasting the rise in farm real estate during World War I and World War II, he pointed out the encouraging fact that while the mortgage debt of farmers rose sharply during World War I, the mortgage debt of farmers went down during World War II. The mortgage debt of farmers is now 5 1/4 billion dollars, the lowest since 1916.

The remarkable war record of the farmers of America was made in spite of manpower and machinery shortages and often in the face of inadequate prices.

According to Governor Duggan, the total assets—real estate and otherwise—of farmers have increased from 53 billion dollars in 1940 to 90 billion dollars in 1946. He said that American farmers are now indebted for all purposes only to the extent of 10% of their assets. It is estimated that in cash, Government bonds and bank deposits the farmers of the Nation have a total of 15 billion dollars.

Of course, what we need in West Texas right now is not agricultural statistics but a good rain. Quite often these days Members of Congress from agricultural areas can be seen standing in front of a weather map which hangs just outside the House of Representatives and which records weather conditions throughout the

Tech Man Advises Spraying of Fruits

Lubbock — Fruit crops in the South Plains area should be protected against worms this year, according to Dr. W. W. Yocum, professor of horticulture at Texas Technological College.

A spray of lead arsenate, composed of about one to two table-spoons of the compound to one gallon of water, should be used, Yocum says.

Apple trees particularly should be sprayed at once in order that a dose of poison may get into the blossom end of the apple before it closes. The worms try to enter there, and unless spraying is done before the blossom end closes, the poison will be ineffective.

Mumps Now On Upgrade In Texas

Austin, Texas — With a total of 5,906 cases of mumps having been reported in Texas in the first seventeen weeks of this year, Dr. Geo. W. Cox, State Health Officer, has issued a statement stressing the fact that the contagion factor exists before symptoms appear, and urging strict isolation of all patients, in order to control the spread of this disease.

Mumps is transmitted by direct contact with an infected person and with articles freshly soiled by the secretions or discharges from the mouth or nose of persons having the disease. It takes from 12 to 26 days for mumps to manifest itself after the infection takes place. The disease can be easily transmitted, but one attack usually establishes immunity although second attacks sometimes occur.

The most easily recognizable characteristic symptom of mumps is a painful swelling of the salivary glands. Sometimes there is an involvement of other portions of the body causing disturbances in the digestive, nervous, circulatory, and genito-urinary systems. The disease is usually accompanied by a temperature rise which more often than not is mild.

"The patient suffering with this disease should be isolated from other members of the family immediately upon the suspicion that mumps exists, and the family physician should be called promptly," Dr. Cox advises. "In the meantime, complete rest in bed is in-
