

MRS. JOHN T. WILSON

## Cook of the Week

Mrs. John T. Wilson graciously consented to be our cook of the week. She and her husband and son, Mike, moved to Friona from Lubbock about three years ago and built a new home in the Lakeside Ad-

dition. Mrs. Wilson's hobbies are sewing and cooking. She is an active member of the Assembly of God Church and assists in the work of the Women's Missionary Council. For several years she served as den mother of a cub scout den.

She has chosen as her favorite recipe one for fried beans, another for a quick cake, and a banana marshmallow pie.

### FRIED BEANS

2 cups cooked pinto beans  
1 whole green chile (Ortega brand)  
1/3 cup shortening  
cayenne and chili powder to suit taste  
1/2 cup grated cheese  
1 tablespoon chopped onion  
Melt shortening in skillet. Add beans, cayenne, and chili powder. Mash with potato masher and cook until bubbly. Remove from heat and stir in grated cheese and onion.

### Banana Marshmallow Pie

32 marshmallows  
1/3 cup canned milk (undiluted)  
1 teaspoon grated lemon rind  
1/4 cup cold water  
1 1/2 cups diced bananas  
2/3 cup whipped cream  
Melt marshmallows in double boiler and add canned milk. Stir to blend and remove from heat. Add lemon juice and rind and cold water. Fold in bananas and chill until syrupy. Whip 2/3 cup of cream and fold into marshmallow mixture. Pour into baked pie shell and chill.

### Easy Chiffon Cake

1 box yellow cake mix  
1 package lemon Jello  
2/3 cup Wesson oil  
2/3 cup water  
4 eggs  
1 teaspoon lemon juice

## Traffic Accidents On Downward Trend

Figures just made available to the Texas Safety Association, reveal that more than 1,500 American lives were saved in traffic during 1957. The number of fatalities, nationally, have totalled 38,000—as compared with 40,000 fatalities for the preceding year.

This downward trend in fatal accidents actually began in December, 1956, the month in which the current national Back the Attack on Traffic Accidents campaign was launched, and has continued in an almost unbroken line for 13 months. The attack program is conducted on a national scale by the National Safety Council and is coordinated throughout Texas by TSA.

This evidence that the traffic toll can be cut supports the premise that improved official traffic programs backed by an aroused public can eventually solve the growing problem of congestion and accidents. It also points up 1958 as really the "decisive year" in traffic safety.

The question that remains to be answered is, "Can these gains be fortified and improved?" J. O. Musick, TSA's General Manager, believes that they can, and supports his belief with the statement that: "A growing influence which may help provide a positive answer to this question is the recognition of the moral aspect of traffic responsibility. While many persons, including clergymen and lay religious leaders, have stressed the need for this concept in the past, these efforts are now being welded into a stronger, more persuasive voice for safety."

Perhaps, at last, man is beginning to realize that he is also his "brother's keeper" on streets and highways.

How seldom we weigh our neighbor in the same balance with ourselves!

—Will Irwin

—Thomas A. Kempis

## The Road Toll

by Jerry Marcus

The Travelers Safety Service

Disregarding the right-of-way increased the toll by 544,600.

## Why Use ...

### LION BRAND ANHYDROUS AMMONIA?

1. You Get More Nitrogen For Your Money... Lion Brand is Guaranteed 82.2% Nitrogen
2. Anhydrous Ammonia Saves You Labor and Hard Work... No more sacks to lift, load, unload, or break when handling
3. Lion Brand Anhydrous Ammonia Resists Leaching... You can apply All You Need for the entire growing season in ONE OPERATION
4. Best of All—You Get Top Quality and Big Yields... Lion Anhydrous Ammonia is unsurpassed as a nitrogen source for your crops and it is placed deeply—in the root zone—where you want your nitrogen.

These are a few reasons why more and more good farmers are using Lion Brand Anhydrous Ammonia

## Fertilizers Should Be Bought by Grade

The real cost of any fertilizer is measured in terms of the per unit cost of plant nutrients applied to the soil. So, before farmers buy a fertilizer, they should look at the grade analysis and see if the same quantity of plant nutrients can be obtained cheaper in a higher analysis fertilizer, advises Bill Bennett, extension soil chemist.

The grade analysis can give a farmer this information because it tells how much nitrogen, phosphorus and potassium each bag of mixed fertilizer contains, he adds. For example, a hundred pound bag of 5-10-5 contains five pounds of nitrogen, 10 pounds of phosphoric oxide and five pounds of potash. A hundred pound bag of 10-20-10 contains 10 pounds of nitrogen, 20 pounds of phosphorus and 10 pounds of potash.

These two grades of fertilizer contain the same ratio of nu-

trients, points out Bennett, but the latter contains twice as much in each 100 pound sack. So, even though the 10-20-10 costs more per ton, it is normally cheaper in the long run because of the quantity of plant nutrients which is obtained.

The cost per unit of plant nutrients is not the only way high analysis fertilizers are usually cheaper than low analysis fertilizers. When one sack of 10-20-10 can substitute for two sacks of 5-10-5, transportation costs are reduced. Not only would transportation costs be lower, but application costs would be less since less fertilizer is needed to supply the same quantity of plant nutrients.

So, low analysis fertilizers cost less per ton, but high analysis fertilizers are usually cheaper in the long run because the cost per unit of plant nutrients is lower, concluded Bennett.

How come gals with cotton stockings never see a mouse? —Coast Guard Magazine.

FRIONA  
WITH JUNE**

Those of us who live on the Parmer and Hub exchanges were very glad to learn that it is now possible for us to dial "Operator" and ask for information for numbers not in our directories and expect to receive this information. In the past it has been necessary for us to call some friend in town, ask them to get the information for us, then relay it back to us.

Some of our friends upon whom we called to do this chore for us from time to time were probably glad to receive the news, too. We are very grateful to everyone who has been kind enough to lend assistance when it was asked for.

A note from the Dean Halls came to the office one day last week. Dean, Ella Mae (who was probably better known as Woody), and their two children are back in Yuma after a five-month absence while Dean was taking training in preparation for his position with the Border Patrol. It was nice hearing from them and we also appreciated the statement they made about how much they enjoy reading the Friona Star. It always gives us pleasure to know that former residents or other readers enjoy the paper.

Have you ever seen prettier lilacs? After seeing them in full bloom all over the country and in many of our neighboring towns, we wonder why more of us don't have them. They make very pretty shrubbery and are not hard to grow. Also simply lovely right now are the tulips in bloom. They have never been more beautiful. The small bed in the corner of the lawn of the new home of Mr. and Mrs. L. R. Dilger is very colorful.

For the past several days we have noticed some dirt being moved between the sidewalk and curb between the Star office and the post office. We envisioned some kind of beautiful plants growing in this space within the not too far distant future. However, our hopes that someone had begun a campaign to make Friona beautiful were soon dimmed.

Postmaster Leo McLellan was getting in his car to go to lunch as we were walking down the street. Upon being asked what kind of plants were going to be planted, he replied, "Concrete." Maybe all of the inclement weather we have had has caused some one to want to get Friona out of the mud.

Picnics! Picnics! Picnics! Don't think we have ever seen so many picnickers. At least not since the close of school one year ago. Everyone you see has either been to a pic-

nic or is going to one. It seems that picnics are one thing school children of all ages never get tired of. When any group of children is given a choice of entertainment outdoor picnics are near the top of the list.

Did you see the seniors of 1958 Thursday? Some of them were almost as cute as the day they entered school. Kid day for the seniors is an annual affair and much time and thought is put into the costume and props for that one day. Judy Barnett looked very cute in a red and white checked dress with matching panties and a pinafore trimmed in white lace. Had anyone asked us, we would have said that Roy Mack Nazworth would have rebelled at the idea of wearing short pants to school. Of course, any loyal senior wouldn't refuse to make the most of the day and Roy Mack's light blue shorts looked very

nice on him. Some of the others that we noticed who looked very much like first graders were Helen Hamilton, Barbara O'Brian, Catherine and Madeline Chang, the Buske twins, Darrell Buske, Linda Gee, Margaret Mabry, Jerry Hinkle, George Terry, Randy Dickson, and Johnny Miller.

Dr. Bill Beene and his two nephews, Jay and Ramey, did a stint of batching several days this week. The O. J. Beenes, parents of the boys, made a business trip to Houston and Dr. Beene rode herd during their absence.

Mrs. Jim Baxter, who is one of our neighbors, has written several poems which have been printed in farm magazines and she has brought her newest one to us. Hope the readers enjoy it.

**CHEER UP FARMER**  
A farmer has to be brave to make a crop these days. He has to stick his neck out to make what really pays. Sometimes I wonder if it's worth the toil and all the sweat. Then I think of city jobs and what these people get.

In these spooknack days and times it seems so hard to tell just what to do and where to turn to get the people well. But one thing sure, if we don't try we'll never make the grade. We can't throw our spade down and lie down in the shade.

We've got to stand on our two feet and take it with a grin. For in the fall, if we live through, we'll get back what we put in. And maybe more. If things go well and we raise a bumper crop, then all these gripes and complainings will really have to stop.

Now, all this lashing in the face, don't pay no mind to that. A little dirt won't kill you, it will probably make you fat. These whirls and twirlers got to come. New comer, please don't pack. For most everyone that leaves comes back.

Now lay aside all worry for this is all a sin. Have a lot of patience. That's what it takes to win. The smell of fresh turned soil—the roots—and chunks of sod—Give the farmer a feeling that he lives more close to God.

With missiles shooting in the sky and all these merry tunes, Let's make fifty-eight a bumper year before they reach the moon.

—Mrs. Jim Baxter

In order to protect the heating elements of electric ranges from damage due to spilled foods and pots that boil over, they are encased in metal tubes. Inconel nickel-chromium alloy is employed for this protective sheathing because it is highly resistant to corrosion and is highly resistant to corrosion and withstands the temperature changing involved in cooking.

**Phillips 66 Ammonia...**

Jack Shelley, Hale Center, Tex., reports: "I picked 847 pounds of lint per acre on cotton fertilized with Phillips 66 Ammonia. This compared to 633 pounds on a check plot that got no ammonia."

J. F. Martin, Hereford, Tex., reports: "I put down Phillips 66 Agricultural Ammonia pre-plant on irrigated cotton and made 2 bales to the acre. I use Phillips Ammonia on all my cash crops."

**More Cotton Per Acre**

From all over the Southwest, successful farmers report higher yields and more profit per acre using Phillips 66 Agricultural Ammonia. They get more cotton that classes higher at the gin... yields of sorghum grain and ensilage are increased... more marketable vegetables are harvested... and profits on wheat are increased through higher grain yields and extended grazing periods.

Phillips 66 Agricultural Ammonia contains 82% nitrogen and gives you more nitrogen per dollar than any other form of commercial fertilizer available.

# Highway 60 Work To Total \$831,000

Although Parmer County got left out of the main or arterial intra-state master road program that was drawn up a year ago, improvements scheduled for this year to Highway 60, which slices from the southwest to the northeast corner, will be substantial.

The county this week was notified by the Texas Highway Department that the \$831,000 will be spent on the highway this year in improvements. O. L. Crain, district engineer, Lubbock, says the road will be widened, improved, and seal coated with the funds.

Official confirmation is lacking, but observers expect the improvements to compare with the stretch in Highway 60 from near Summerfield in Castro

County to Hereford, which was completed last year. This work will not result in traffic substantially more room in addition to a smoother ride. From the Castro County line at the northeast corner of Parmer County, Highway 60 stretches 36 miles across Parmer County, passing through Black, Friona, Bovina, and the top of Farwell.

The highway was widened to four lanes in both Bovina and Friona last year. America's intra-state highway network, drawn up last year, selected Highway 66 (through Amarillo, east and west) and Highway 80, (through Odessa, east and west) as the main four-lane routes for West Tex-

## NEWS FROM Rhea

By MRS. FRANKLIN BAUER

### HD Club Visits In Lubbock

Several Rhea Home Demonstration Club members spent Tuesday visiting in Lubbock with a former club member, Mrs. C. A. Lawrence.

The group enjoyed a covered dish dinner and an afternoon of visiting and watching movies. Those in the group were Ona Patterson, Helen Potts, Mary Gibson, Martha Schueler, Emma Schueler, and Malinda Schlenker.

### ATTEND LLL RALLY

The annual Lutheran Laymen League Spring Rally was at Christ Lutheran Church in Amarillo Sunday afternoon. Those from Rhea attending were Melvin Sachs, Chris Goetz, Florian Jarecki, Walter Schueler and Gilbert Schueler.

### 4-H Boys and Girls Entertain at FB

Miss Jimmie Lou Waincoat and a group of 4-H boys and girls entertained at the regular Farm Bureau meeting Friday night. Demonstrations on "Safety," "Cleaning Sewing Machines," and "Using Milk" were given.

After the entertainment was the regular business session.

Refreshments of punch, coffee and doughnuts were served by the hosts, Mr. and Mrs. Jack Patterson, and Mr. and Mrs. Florian Jarecki.

### Mrs. Gibson Hostess To HD Club

Mrs. Bill Gibson was hostess for the regular HD meeting in her home Monday night.

After the business meeting, Miss Jimmie Waincoat gave an interesting program on "Family Files." Sue Smith brought her family records to use for the demonstration.

Refreshments of coffee, ice cream and cake were served by the hostess to Ona Patterson, Shirley Brown, Velma Schlenker, Malinda Schlenker, Martha Schueler, Nat Martensen, Sue Smith, Helen Potts and Dorothy Bauer. The next meeting will be Monday at 8:30 p.m. in the home of Mrs. Shirley Brown. Demonstration will be on "Kitchen Improvement."

### Colorado Visitors

Mr. and Mrs. Arnold Martensen of Boulder, Colo., visited in the Ray Martensen and Elmer Deyke homes over the weekend.

They are the parents of Martensen and Mrs. Deyke.

Mr. and Mrs. Carl Schlenker and children visited the J. R. Schlenker family in Portales Sunday.

Sunday dinner guests in the Elmer Deyke home were Mr. and Mrs. Arnold Martensen of Boulder, Colo., and Mr. and Mrs. Ray Martensen and family. Afternoon visitors were

Mr. and Mrs. Jack Patterson and girls and Mr. and Mrs. Elden Garber and family.

Mr. and Mrs. E. O. Woolver were weekend guests in the home of Mr. and Mrs. Walter Schueler.

Mrs. F. T. Schlenker and Catherine Chang were members of a group that spent Sunday afternoon in Palo Duro Canyon.

Sunday dinner guests in the Franklin Bauer home were Mr. and Mrs. I. L. Bauer and Junell of Happy and Mr. and Mrs. LeeRoy Bauer and Ricky of Canyon.

Mrs. Gilbert Schueler and children visited in Amarillo Sunday afternoon while Gilbert attended the LLL Rally.

Mr. and Mrs. Oliver Rieken of Friona visited in the Florian Jarecki home Sunday.

It takes more than elbow grease to polish granite. In fact, a special cast iron containing nickel is used for the wheels which cut and polish this rock, one of the hardest in nature.

Palladium, one of the precious metals of the platinum group, was discovered by the English scientist William Hyde Wollaston in 1803. He named the new element palladium after the planetoid Pallas, which had just then been discovered.

To guard against breakage, nickel is often used for lead wire in electrical appliances such as hot plates, ranges and heaters. The nickel wire is strong, tough and resistant to oxidation and corrosion at high temperatures.

## Reduce Delinquency

IV.

### RE-TRAINING DELINQUENTS

(A distinguished Texas judge offers pointers on combating our rapidly increasing juvenile delinquency problem.)

By JUDGE SARAH T. HUGHES

Texas has three training schools—one for boys at Gatesville, one for white girls at Gainesville, and the third for colored girls at Crockett.

Several years ago a bold new policy was inaugurated looking toward restoring youthful offenders to a useful life in society.

First of all, the institutions now look different—the grounds are unfenced, the windows (except in the security units) without bars.

Improvement Results The youngsters look different, too. Formerly they wore uniforms—today there is a wide variety of clothes. They used to march from building to building. Now there are no restrictions as they move around. Vocational training is provided. For recreation there are movies, TV, radio. Discipline is enforced largely by taking away privileges and furloughs.

Escapes Decrease Despite the freedom from the old restrictions, the number of escapes has decreased. There is greater satisfaction with the program, and since 1952 there have been no gang fights or hunger strikes, which formerly were pretty frequent.

The program at all three schools is designed not merely to punish boys and girls, but mainly to rehabilitate them—to make them worthwhile citizens.

My article next week will tell how much too small our correction facilities are—so that delinquents get out too soon.

### The Driver's Seat

Your chances of staying alive on the highway are more than 65 percent greater than they were 10 years ago. To 25,135 drivers in the United States, this means they will live through another year of driving.

These members of the motoring elect—one may be in the car behind you, in the car in front of you or in the one in between—owe their continued existence in the driver's seat to many new life-preserving devices designed within the past 10 years.

Items such as seat belts and padded dashboards on modern cars are significantly cutting down the chances of an accident being fatal to you. Automobile tires are now designed to stand up under the high speeds of the turnpikes and expressways and the strain of old, inadequately paved roads. Highway construction engine-

ers also have safety-bent minds that have produced cloverleaf turns and highway dividers to keep automobiles going at right angles or in opposite directions safely separated from each other. Signs along the highways and city streets have become more effective. No longer considered mere reference marks of mileage, speed, direction and warning for those who happen to be able to spot them, many now employ enlarged, legible letters and reflective background sheeting that springs into view when struck by headlights after dark, in addition to being colorfully visible in daylight. License plates are leading double lives in several states. Aware of the effectiveness of reflectivity on signs, many

transparent roofs. Road plans include controlled access to the road to reduce the horrifying accidents that occur when traffic flow and road capacity are not governed; standard signs in color, to reveal at a glance, day or night, everything the driver needs to know; planned placement of shrubbery in medial areas of highways to cut down on headlight glare; elimination of railroad crossings as through traffic lanes; television to help authorities quickly locate tie-ups; fog dispelling machines; skid proof surfaces. Each year your chances of staying alive in the driver's seat will improve in spite of the facts that you'll be covering more mileage and running competition with more autos.

states are using it on licenses making the plates easy to spot on the highway after dark as they throw back the headlight beams from cars approaching from either front or rear. The progress toward safety made in the past decade is likely to be surpassed by that made in the coming years. If the drawing boards give any clue, auto manufacturers are devising plants to keep their customers in commission by suggesting rear-facing bucket seats for passengers, replacement of the potentially lethal steering wheel by control handles, 180 degrees of undisturbed visibility for the driver, door handles imbedded in upholstery, wrap-around bumpers with shock absorbers, rear-end motors and

"ELECTRIC COOKING IS Easy... EVEN FOR ME!"

says CARL MCKINNON GUYMON, OKLAHOMA

Mr. McKinnon says, "Cooking electrically is easy for even inexperienced cooks like me. I never thought I would actually enjoy preparing dinner for the boys while Lou, my wife, is not at home. Now, when she goes to her church and social affairs, the McKinnon men take to the kitchen. Roger helps with the salad, Doug helps set the table, and Warner, like most four-year-olds, just does a little bit of nothing. Although we're having steaks tonight, the boys ordinarily vote for hot dogs or hamburgers; regardless, our electric grill does a wonderful job, no matter the menu."

"Now, with our steaks, salads, green beans and cake (Lou baked it in our electric oven this morning), we are ready to settle down and enjoy our meal, along with our 'men talk.' With Roger and Doug, that's football—with Warner, cowboys and TV"

Get free certificate for two bug lamps just for watching an electric range demonstration at your Reddy Kilowatt dealer store. Yellow bug lamps, which fit ordinary sockets, eliminate most of the light that insects see, yet provide a soft, comfortable light for outdoor living.

## NEWS FROM BLACK

MRS. DICK ROCKEY

Sharon Dean and Mrs. Weldon Tatum were in Levelland Saturday visiting relatives and friends.

Mr. and Mrs. Leslie Deaton and daughters, Brenda and Glenda, visited in Friona Sunday with their daughter and family, the Ray Stricklands.

Mrs. John Benger was shopping in Hereford Saturday.

Marie Roberson spent Saturday and Sunday night visiting in the home of her grandparents, Mr. and Mrs. O. B. Roberson.

Mrs. Helen Fangman and Mildred Barnett attended the "Kitchen Improvement" training meeting at Farwell Wednesday afternoon.

Mr. and Mrs. John Benger visited with Miss Hanson Saturday evening. We would like to extend our sympathy to Miss Hanson on the death of her mother, Mrs. John Hanson of Brady, Texas.

Mr. and Mrs. Fern Barnett, Judy and Bettie, and Mr. and Mrs. R. E. Barnett all were in Amarillo Saturday to help Minnie Barnett celebrate her birthday. She is a sister of Mr. Barnett.

Mr. and Mrs. Glen Roberson were in Amarillo Thursday on business.

### BLACK HD CLUB

The Black Home Demonstration Club met Thursday, May 1, at the Community House with all of the members as hostesses.

Progressive Home Demon-

stration Club members of Hereford were guests.

The meeting was called to order by the president, Mrs. Dick Rockey, with the welcome following.

Opening exercise was given by Mrs. Woodrow Whitaker. The club song, "Ever Onward" was sung by the group.

Roll call was answered with "What I have enjoyed most about HD work the past year." Council report was given by Mrs. Ralph Price. The Black and Lakeview Clubs will have a joint pressure cooker clinic June 10 at an all-day meeting at the Black Community House.

The program was turned over to Jimmie Lou Waincoat who gave a program on family files. The program was ended with a kitchen prayer by Mrs. Clyde Hays.

Refreshments of lime punch and cakes were served from a beautiful table decorated with a May pole in the club colors, pink and green. Attending were Mesdames Wilma Carmichael, Faye Plank, Marguerite McGee, Gertrude McGee, Lena Hammett, Peggy Billingslea, C. V. Burgess, Leon Coffin, Horace Hershey, Helen Parson and Lillian Lookingbill all of Hereford and Emma Elmore, Altha Presley, Opal Cobb, Mildred Barnett, Lois Whitaker, Helen Fangman, Anna Mae Hays, Geneva Ivie, Anna Lee Sims, Maxine Price, Lucille Rockey, Ann Carthel, Carrie Tatum and Miss Waincoat and one guest from Black, Mrs. Raymond Hughes.

The next meeting will be May 15 at the Community House with Opal Cobb as hostess.

Because it resists spark erosion, a nickel alloy containing about four and one-half percent manganese is used for spark plug electrodes and searchlight carbon holders.

### Relatives Attend Two Funerals

Out-of-town relatives who attended the funerals of Carroll Day Thursday and Will Jones Monday were Mr. and Mrs. Buren Overton of Whitney, Texas; Mr. and Mrs. Jess Jones, Mr. and Mrs. Othell Jones, and Mr. and Mrs. E. R. Day Jr. of Lubbock;

Also Mr. and Mrs. Alvis Day and Mr. and Mrs. Scott Day of Clovis; Mr. and Mrs. Paul Cantrell of White Deer; Mr. and Mrs. Keith DeShane, Mrs. Pauline Brown, Frances Cantrell, Mr. and Mrs. Hayes and daughter, and Mrs. Viola McCleary of Amarillo;

Also Mr. and Mrs. Jim Oliver and Mr. and Mrs. Frank Oliver and daughter of Dallas.

Nutrition experts regard obesity—overweight, that is—as a form of malnutrition, according to the Texas Beef Council. Beef is one of the most complete protein foods, not only building healthy bodies, but helping to maintain proper weight standards.

### Friersons Initiated In Formal Ceremony

The Delta Xi chapter of the Delta Kappa Gamma Society met Saturday, May 3, for a coffee in the home-making cottage in Bovina with the Parmer County members as hostesses.

In a formal initiation ceremony Mrs. Margaret Duggins and Mrs. Valoris Osborn were initiated into the international honorary society for women teachers. The ceremony was conducted by the outgoing president, Mrs. Faun Welker of Dimmitt.

After the initiation ceremony officers were installed for the next term. Mrs. Carmaleet Truitt will serve as first vice-president for this chapter.

Members attending from Friona were Tacy Smith, and Mesdames Truitt, Duggins, and Osborn.

Walden, N. Y., Citizen Herald: "Many early advocates of the St. Lawrence Seaway are now working toward fixing ridiculously low tolls or eliminating them all together. This would turn the Seaway into a taxpayer liability with all of us forced to foot the bill not only for its construction but for its operation as well. Before they do, it would be a good idea to remind our Congressmen of their original intention and demand they prevent the Seaway from becoming another millstone around the neck of the luckless taxpayer."

Ware's

## The Story Behind Mother's Day

World-wide observance of Mother's Day had a modest beginning. The first Mother's Day celebration resulted from the inspiration of Anna Jarvis of Philadelphia, who felt one day a year should be set aside as a tribute to Mother.

She incorporated this idea into the church she attended, plans were made to hold special services dedicated to Mothers, on the second Sunday of May, 1907... and everyone was asked to wear a white carnation in honor of his or her Mother.

It's unlikely that Anna Jarvis dared dream of the far-reaching influence of Mother's Day. The idea caught on and spread. By 1911 every state in the Union and many nations adopted the custom. In 1914 Congress asked the President to issue a proclamation designating the second Sunday in May as National Mother's Day.

# "The High Plains Farm and Home"

## Wheat Looks Good In Parmer County

Some wheat is hurting this week, but on the whole, prospects for a big wheat harvest continue the best since 1949, indications are this week. Dryland wheat, which has been doing extremely well until about a week ago when some of it began hurting for rain, still promises to yield well, although the rainfall of the past few days that has broken into scattered showers instead of general moisture has checked prospects.

Rainfall, high winds and sand insects, and disease are the main factors affecting dryland wheat production on the Plains. Most all of these have been in favor of the farmer this year for the first time in many years.

In fact, this spring has been virtually without sandstorms and insects, and disease, except for mention of rust on the Eastern High Plains, is no problem, either.

Also, there has been no widespread damage from hail—but farmers are keeping their fingers crossed.

Irrigated wheat, which constitutes about half of the crop, is being watered as needed and will continue to make good progress whether rains come

or not. Nearly all farmers are watering wheat this week with prospects of rain so scattered.

Parmer County farmers have about 84,000 acres of wheat up and coming, and unless hail and severe weather intervenes, all of this acreage will be harvested, believes Prentice Mills, county ASC office manager. The county allotment this year was 109,000 acres.

The price of wheat is dropping as the market anticipates a big crop over all the Great Plains and, in fact, almost all the country. USDA predictions are that the crop will be 36 percent larger than last year's crop and 13 percent larger than normal.

The government support program is expected to be the "price" of much of the 1958 crop with this case. In Parmer County, the wheat support price (still unofficial) will be \$1.77 per bushel.

This is the gross support price, and storage and service charges will result in a net to the farmer of about \$1.66 if he does not claim the grain from the loan before it expires.

Last year the support price was \$1.99 (gross) in Parmer County.

Production of nickel-containing stainless steels in the United States occasioned by reduced defense requirements, was less in 1957 than the all-time high record established in 1956. However, the nickel-containing types accounted for a greater percentage of the total stainless steel output during the year than for any year since 1948.

CLOVIS, N. M.

It's cotton planting time on the High Plains again, and Glenn and T. O. Lesly are just like hundreds of others who have been "gettin' with it" this past week. Here they work as a team, seeding eight rows at a time.

The seed boxes must be frequently filled when planting cotton. Here T. O. dumps in a fresh supply of delinted seed. Most farmers have raised planting rates in anticipation of lower germination this spring.

## Rushing Planting Of Area Cotton

Parmer County area farmers are rushing to get their cotton seed into the ground this week as fair weather prevails and, almost suddenly, the days have turned downright warm for this time of year.

In the southern part of the county, where a slight difference in climate plus lighter soils usually starts the season off earlier for the cotton grower, a few stands could be noted by the middle of the week.

An early stand—a really good one—is the pride and joy of every Plains cotton farmer.

Without that good early stand he figures he is waging an uphill battle all year long to produce the maximum amount his land and his labor is capable of producing.

So, the few farmers who had evenly-spaced shoots a-shinin' in the rows were wearing big smiles this week.

Most others, though, were atop their tractors or in the fields near at hand to see that the planting was done just so. It's one of the most important phases of cotton production, especially in this latitude where the chance for error caused by a "tight" growing season is not very tolerant.

Parmer County farmers have a cotton allotment of 47,298 acres this year, nearly all of which will be planted. The soil bank program has made very little difference.

The Texas Beef Council recommends this basic method for braising: brown meat on all sides in fat in heavy utensil. Add small amount of liquid if necessary. Cover tightly and cook at low temperature until tender. Economy fore-quarter cuts of beef are particularly delicious braised.

### THE PARMER FARMER

By W. H. Graham Jr.

Today finds the producer of beef in a position much improved from the one he has been found in between now and about 1952. There have been some ups and downs, but mostly, cowmen haven't been getting their fair share until just pretty recently.

Beef production is one of the few really bright spots in agriculture at the moment. Just how long this will last is uncertain, of course. If anybody really knew, he could make some money.

But prices are good now, and demand is continuing strong as Americans, even though a "recession" is supposed to be gripping the country, continue to ask for red meat at the market.

How is it that the cattle industry has managed to come up in good shape at a time when many other segments of agriculture are gravely concerned about short-term prospects?

There are a number of reasons for this, and some are wholly beyond the reach of both producers and the USDA. Neither the cowman nor the government had anything to do with the drought just now ending, which reduced cattle populations, especially in our own

Southwest, and brought supply more nearly in line with demand.

It is notable that the cattle industry is the biggest part of agriculture still outside the realm of government control, though we are quick to recognize that the government does play a hand in beef production and marketing.

Although producers were sustained with the much-abused drought relief feed program through the lean years and the USDA from time to time made government purchases of beef in the market place to bolster sagging prices, the cattle business has righted itself without production quotas or a support price on live cattle.

Essentially, then, today's good condition of the industry is a tribute to the members themselves, who have ridden out another streak of "hard times" to find things better and their business still their own.

The nation's producers of beef have been among the first to recognize and take advantage of market development and product promotion. They have engaged in an "eat more beef" campaign that has been sustained for several years and is now showing results.

If they pursue the present course, they may expect to continue to see consumption of their product increase, as a result not only of the natural growth of this country and broadening of the market because of an increase in population, but per capita-wise as well, because they are educating Americans to eating more meat.

Just what the producers of wheat, feed grain and cotton want in the way of a farm program for the long pull is a moot question. It is argued that land farmers—the producers of the so-called "basic" commodities—are too many in number and that they are too unwieldy a group to work together for themselves to control production and market their commodities effectively.

That may be perfectly true for all we know. But the cattle industry, whose empire extends to every corner of the country, is pretty big itself, and it seems to be able to average things out surprisingly well.

Agriculture is a business, in addition to being a way of life. The sooner more people come to realize this, the better for the farmer. Science and technology are changing farming just as surely as they revolutionized manufacturing and brought about the industrial revolution.

An offshoot of the new era coming for the nation's growers of feed, food and fiber is what the agricultural economists call "vertical integration." This is a scary term, but it isn't nearly as frightening as it might seem at first. It's a lot easier to think of

it as "contract farming" because that's what it actually is. And it's certainly nothing new, in industry OR agriculture.

Under this system, a farmer contracts with a processor to grow a certain number or a certain amount of products at a set price. The price is agreed to before production is ever undertaken, and holds firm regardless of what happens to the market in the meantime, or how high or how low the production costs may be for the producer.

Contract farming is not way out in the future, either. It's taken over the biggest part of the broiler industry, and is headed out of the chicken yard straight for the hog pen.

Because pork production is not nearly so specialized a business as broiler raising, it will take years to make the change there, but farm economists say the switch is almost inevitable.

Here in the Southwest where we pride ourselves with being first in so many fields, it would not be unreasonable to think that somebody may try contract production of beef, especially since the High Plains has established itself as such a prodigious producer of feed-stuffs.

### 4-H Teams Place Third in District

County boys 4-H teams entered in the district contest at Canyon Saturday placed third in their divisions and will be alternates in state competition later this year.

The teams are Richard Chitwood and James Brown, farm and home safety; and Cooper Young and Calvin Mason, soil and water conservation. All the boys are members of the Lazbuddie club.

Other county members participating in the contests included Barbara Rea, Bovina, dairy food; and Virginia Rea, Bovina, and Judy Billingsley, Farwell, electric.

The young people were accompanied to Canyon by Miss Jimmie Lou Waincoat, county home demonstration agent; Joe Jones, county agricultural agent; and Mesdames Dee-Chitwood, Dee Brown, and J. B. Young of Lazbuddie, Mrs. Gene Rea of Bovina, and Mrs. Leon Billingsley of Farwell.

"The Place Where Most People Trade" Friona, Texas Wednesday, May 7, 1958

The Bill Sheehans left last Thursday for about three weeks of travel, work, and vacation. Their first stop will be Dallas where Mrs. Sheehan's folks live. There they will trade Jack and John for Mrs. Sheehan's nieces, who will travel with them in the little Renault. From Dallas the Sheehans will go to Virginia, where Bill will work and study for two weeks at an officer's training school.

This school will have men from all three of the armed forces studying integration of the navy, army, and air force in case of an atomic attack. Mary and the girls will go sight-seeing in Virginia and round about until Bill's school is over then they all plan to spend a week in New York City. Then they plan to trek back to Dallas, pick up the boys, and return to Friona.

# Bindweed Control Continues In 1958

The noxious weed eradication committee sponsored by the Parmer County Farm Bureau is continuing operations again this year under the direction of Chairman Raymond Schueler, Rhea; and Vernon Symcox, Farwell, secretary.

Members include A. G. Schlabs, Black; A. R. McCutchan, Bovina, Joe Jesko, Lazbuddie; and R. D. Dale, Farwell. Excellent cooperation has been received from County Agent Joe Jones, Prentice Mills and the county ASC committee, the Soil Conservation Service and the county vocational agriculture departments, the committee reports.

The work of the committee has been primarily in the eradication of field bindweed. They are working on the control of all other noxious weeds as the committee realizes the increased trouble that will come as farmers increase and intensify irrigation practices.

Other programs include working out eradication programs for the county, state, and railroad rights-of-way, educational programs in the schools, and regular attendance at the Bushland experiment station field day on weed control.

Cooperation with the commissioners court has been very good, the committee reports. In 1957 the commissioners court made available sodium chlorate to farmers to treat bindweed on the county right-of-way adjacent their farms. The chemical is free to the farmer if he will also treat the bindweed on his own farm. He must pay for the sterilant used on his own land. This program will be continued in 1958.

Cooperation with the State Highway Department has been good, also. In 1957 a group of farmers surveyed the highway rights-of-way in the county and marked each plot of bindweed. The highway department immediately went to work treating all bindweed plots that were on the road way. This is done at no cost to the farmers.

Four years of conferences with the Santa Fe Railway were climaxed in 1957 with the awarding of a contract to Doherty Weed Killers of Plainview to eradicate 2.65 acres of bindweed on the Amarillo branch of the Santa Fe. At a conference in Amarillo on April 24, 1958, a representative of the Santa Fe system told Ray-

mond Schueler they plan to eradicate all bindweed on their rights-of-way in Parmer County before moving into another area.

The railroad requires, however, that the farmer or businessman next to their right-of-way must also clean up the bindweed on his property before they will cooperate.

This leaves the largest area in the county for bindweed infestation on individual farm lands. In a survey taken in 1957 through the cooperation of the county ASC committee, it was found that a minimum of 242 farms have bindweed infestations. This was not a complete survey as the survey was voluntary and less than 50 percent of the farmers cooperated. These infested farms range from a few sprigs scattered over the place to 80 percent coverage on a 1/2-section farm.

Since bindweed spreads 1/3 each year the best time to control it was yesterday but today is the next best time. In 1955 Parmer County farmers purchased and applied sodium chlorate to approximately 400 acres of field bindweed. The 1957 survey shows however there is still a tremendous acreage in the county.

The county ASC committee has agreed to continue paying approximately one half the cost of a soil sterilant where it is used on field bindweed at the recommended rates and time. They emphasize, however, that payments can be made only for application to bindweed plots. Johnson grass or blueweed is not eligible.

Methods of control vary for types of infestations. For the small isolated plot a soil sterilant is the best method of control. Sodium chlorate at the rate of five pounds per square rod is the recommended application. If possible the treated spots should be flooded with irrigation water. This will greatly increase the rate of kill. For the large area infestations where it is impossible to use soil sterilant, the best control method is a five-year program of fallow, wheat, fallow.

The ground must be clean cultivated every 11 to 14 days during the growing season for this program to be successful. It must be emphasized that bindweed is a perennial plant

and haphazard cultivation will not do the job. It must also be emphasized that cultivation during a summer crop will only spread bindweed. Bindweed can be spread either by the seed or roots.

If you are considering a cultivation control program and have not had any previous experience along this line, it is recommended that farmers talk to some of the professional agricultural workers or a farmer who has had experience in this line of control. Suitable cultivation equipment and proper plowing times are the key to the success of this program.

Two bulletins on the control of noxious weeds are available in County Agent Joe Jones' office. Any member of the weed committee or any of the professional agricultural workers in the county will help work out a program of weed control for the farm. Any person who does not know how to identify bindweed can call on any of the above persons for assistance.

Don't overlook using your deep fat fryers for preparing fried pies. A standard recipe for any kind of fried pies has been sent to us by one of our readers and we are passing it on:

**FRIED PIES**  
 1 cup buttermilk  
 1/2 teaspoon soda  
 1 teaspoon salt

## THE HAPPY HOMEMAKER

BY JUNE FLOYD

We need some help. Will someone who has an issue of the Parents Magazine in which the Mrs. America recipes were printed please come to our rescue? For the past two weeks much time has been spent in an effort to locate our copy which contains a Happy Homemaker column. So far we have failed to find it.

If someone will be kind enough to lend us a copy, we will make every effort to keep up with it and return it to its owner after we have finished with it.

Mother's Day is just around the corner and some of us have not bought gifts for our mothers yet. Sometimes it is difficult for us to find something to buy that is different. In one of our newest magazines we ran across an item that would make an ideal gift for any mother who works in her yard.

The name of this particular gadget has escaped our memory, but it was a simply constructed combination holder for small items and knee protector. The main part of it was box like with one side left open. Handles were mounted on each

end and the inside of the bottom was padded with foam rubber.

The tray could be used for packets of seed, small tools, and other items useful in gardening. The foam rubber padding will protect the knees from becoming scratched and bruised.

Anyone who can use a hammer and saw could easily build such a gadget.

Don't you enjoy serving whole strawberries and cherries in preserves? Our grandmothers spent long periods of time making these delicacies, but it is not necessary for us to follow their methods. For quick and easy strawberry or sour cherry preserves, try the following recipe:

5 cups fruit (About 2 1/2 lbs. ripe sour cherries, pitted, or 1 1/2 quarts ripe strawberries)  
 5 1/2 cups sugar  
 1 box powdered fruit pectin  
 Water (3/4 cup for cherries, 1 cup for strawberries)

Measure 5 cups fruit (firmly packed without crushing) into a large saucepan. Add sugar. Bring to a boil, stirring carefully. Remove from heat. Mix powdered fruit pectin and water in small saucepan and boil hard one minute, stirring constantly. Add to hot fruit and mix well. Skim off foam. Stir and skim by turns for ten minutes to prevent floating. Lade into glasses and cover at once with paraffin.

Don't overlook using your deep fat fryers for preparing fried pies. A standard recipe for any kind of fried pies has been sent to us by one of our readers and we are passing it on:

**FRIED PIES**  
 1 cup buttermilk  
 1/2 teaspoon soda  
 1 teaspoon salt

1 teaspoon baking powder  
 1 tablespoon shortening  
 Enough flour to make stiff dough

Cooked fruit  
 Mix and sift dry ingredients together. Cut in shortening and buttermilk to make stiff dough. Roll thin and cut in circle the size of saucers. Spread half of circle with mashed, stewed and seasoned fruit. Fold over other half of dough and crimp around the edges with a fork. Fry in hot shortening until golden brown on both sides. Serve warm.

Our appreciation goes to everyone who writes us letters, cards, or sends in recipes. We are grateful to each of you for your consideration. Maybe some of our readers fail to sign their names to communications because they do not want us to print the names.

We would appreciate it very much if any one of you who care to write would do so, and if you don't wish to have your name in the paper, just let us know and we will be glad to comply with your wishes. However, we'd surely like to know who you are.

Laboratory and field tests conducted by workers of the Texas Agricultural Experiment Station indicate that Terraclor, when properly applied, will give effective control of Southern Blight in peanuts. Details on the tests may be obtained by writing the Agricultural Information Office, College Station, Texas, and asking for Progress Report 2014.

The new "Market-Matic" system installed by the Port City Stockards Company of Houston is a direct result of a recent survey conducted by the Texas Agricultural Experiment Station.

## H. D. AGENT'S CORNER

Jimmie Lou Waincott

On Wednesday, April 20, the Parmer County HD kitchen leaders met in my office for a training meeting on kitchen cabinets.

Storage of all equipment and supplies where you need it, easy to reach, get rid of all things you don't use, store together things you use together, place utensils, dishes, and food supplies so that moving one to get to another is not necessary and other pointers were discussed.

Then the leaders went to my apartment to see the kitchen storage devices that I have in my cabinet. These devices include half and one-quarter width shelves and step shelves placed in the cabinet to conserve space and fit articles that I have to store. For instance, I have service for 12 of china stored in the space of two regular shelves. Knife racks and spice shelves were also shown.

If you are interested in any of the articles contact me and ask for Kitchen Storage Devices You Can Make, MP 209. It will give you some good ideas.

If you're annoyed at tattle-tale gray clothes and a ring in the bathtub, better check the soap you use, according to extension home management specialists.

Whatever you choose—either soap or syndet (synthetic detergent)—should be right for your water supply.

In hard water, soap mixes with the minerals in the water to form a scum. It's hard to rinse this out, so your clothes take on a gray look. However, if you have natural soft water or soften both the hot wash water and the rinse water, soap will do as good a cleaning job as a syndet.

In hard water, syndets do a better cleaning job than soap. They soften the water so that no curd is formed.

Choose the soap or syndet made for the washing job you plan to do. For heavy-duty wash jobs special ingredients added to soaps and syndets give greater cleaning power. Most packages for heavy-duty wash are marked with "all-purpose," "family wash," or "wash everything."

Jobs for the light-duty deter-

gents or mild soaps are marked on the package—"wash lovely lingerie, protect your hands in dishwater, for baby things, etc."

For washing satisfaction, check your water carefully, keep special laundry problems in mind and choose the soap or syndet accordingly.

Even the most reckless driver is not entirely useless, according to the Texas Safety Association, because he can always be pointed out as a horrible example.

Fred Elliott, extension cotton specialist, emphasizes the importance of getting a good stand with the first cotton planting. High quality cotton planting seed, he says, may not be available for excessive replantings. Germination will be reduced, he adds, if the seed are planted in soil which has not reached the proper temperature of 70 degrees F. at a 3-inch depth for 3 successive mornings at 7 a. m.

# Both Nitrogen, Phosphate Needed In Sandier Land

Experimental plots for wheat on the Beryle Nix farm near Lariat offer promise that a combination fertilizer application of both nitrogen and phosphate is the best way to increase yields on sandier lands. This is the second year that tests, arranged in cooperation with the Amarillo Experiment Station, have been run of such land. On the Nix farm, 194 plots 10x50 feet each have been treated with 13 different fertilizer applications. The results of this fertilizer is apparent to even the casual or inexperienced observer.

This sandier type soil probably accounts for about one-third of the total farmland in Parmer County.

## NEWS FROM THE FARM BUREAU

By RAYMOND EULER

Do you think the people who do the work producing the equipment and supplies you use in farming should be allowed to demand and get higher pay for their work when it is known that that increase in pay will be charged to you in purchases you make? If you don't think the above is right, it won't hurt to write your congressman and representative and let them know how you feel. It appears that there are some legislators who will agree with you and it is possible that this uncontrolled monopoly may be weakened, if not broken.

Farm Bureau officially urges Congress to place labor unions under the same anti-trust provisions under which their employers must operate. So there can be no misunderstanding about it, we make this statement: Farm Bureau asked the president to veto the "freeze" resolution on the farm program, and when he had done so, stated that he acted with "courage and good sense." In opposing the price "freeze," Farm Bureau made it clear that it favors price supports where appropriate as an aid to orderly marketing and as a protection to farmers during periods of change and adjustment.

J. Harrel West, Texas Farm Bureau President, speaking to Service Representatives in Waco last week, said that he was

County Agent Joe Jones, who has arranged for two field trips to see the tests, says farmers and fertilizer dealers have been impressed with the difference that varied fertilizing makes. The plots will be carefully harvested by special machinery and the grain weighed before results will be considered conclusive, but there's plenty that meets the eye already.

Close definitions of what's best for the individual farmer should await this harvest, but the trend appears to be headed in this direction:

1. Irrigation alone on sandier soils will probably not raise yields sufficiently to justify expenses.
2. Nitrogen-type fertilizer, the most common kind in use today, will increase the yield.
3. But nitrogen alone cannot produce a yield as great as nitrogen and phosphate in combination.

Most observers agree that the formulas 120-40-0 and 120-80-0 look the most promising at the test site.

These steps were taken on the Nix farm: the land was broke, listed, fertilizer was applied in bands, and the wheat was watered up. It was Tamar.

This is irrigated wheat on the Beryle Nix farm where tests on fertilizer applications are being run on sandy soil. In the top picture, 80 pounds of nitrogen only was applied. That is one of the most common rates and types of fertilizer being used today. In the lower picture, 80 pounds of nitrogen and 40 pounds of phosphate were applied, which made a considerable difference in the appearance of the crop. "Model" for these shots was County Agent Joe Jones. The wheat's height can be noted by where it strikes him and where it strikes the fertilizer markers, which were the same distance from the ground in both cases.

### Political Announcements

The following political announcements are made subject to action of the Democratic Primary of 1958:

**For State Senator, 30th Senatorial District:**  
ANDY ROGERS (re-election)

### SOIL CONSERVATION DISTRICT NEWS

Now that planting time is here, farmers should keep in mind ways that they can keep their farm land productive. One practice that is a step in the right direction is interplanting cowpeas with grain sorghum. This is a summer le-gume crop which will add nitrogen to the soil when inoculated, thus making the nitrogen available for the next year's crop. It will also increase the water intake and the water holding capacity of the soil.

Cowpeas can be interplanted with grain sorghum with a special attachment for this purpose. They should be planted at the rate of 4-8 pounds per acre, at a depth of 1.5-2.5 inches. Attention should be given to the variety planted as some varieties such as **Brabham** tend to cling and climb the stalks. Brabham should be used in feeds planted for silage.

An interesting fact was called to our attention about the effect organic matter has on soil temperature. Two temperature checks were made side by side. One was on land which had cotton burrs applied, the other without. The soil temperature where burrs and anhydrous ammonia were applied was 8 degrees higher. We also know that in soils with high organic matter there is an insulating effect in the summer and soils are cooler, thus have less evaporation.

Organic matter also improved the infiltration rate of the soil. Conserve your organic matter.

**PARMER COUNTY FARM SUPPLY.**  
Bovina, Texas

strongly in favor of working with commodity organizations and other farmer organizations where possible. He said that he thought it could strengthen Farm Bureau, and maybe strengthen the other groups, too, to which he surely had no objection. The main objective is to get farmers more closely united in their principal objective, to gain opportunity for a good net income from the production and marketing of their commodities.

Do you talk with the Farm Bureau director in your community about your farm problems so that he can present them at regular directors' meetings? If not, why don't you just attend one of them yourself, the first Monday night

of each month in the office in Friona?

CONSIDER THIS: To do justice and judgment is more acceptable to the Lord than sacrifice. Proverbs 21:3

At 88 a Tennessee farmer has journeyed to Knoxville, forty-one miles away, for the first time in his life. It must be the gypsy in him.—San Francisco Chronicle.

FOR THE REST OF HER LIFE!

Now! The wonderful NEW **Ironrite "EIGHT 90" Portaway Automatic Ironer**

Take a holiday from hand ironing for the rest of your life with this new, compact Ironrite—complete with important Ironrite features. Also, it folds up and rolls away for storage.

Throw away your wobbly ironing board and sit down to iron. Ironrite does everything in the wash beautifully... leaves nothing to finish by hand. Cuts ironing time by two-thirds!

See the Ironrite "Eight-90" Portaway today, or call us now for your **FREE HOME DEMONSTRATION** on your own wash, at no obligation.

- Two completely usable open ends
- Do-all ironing points at ends of shoe
- Simple knee-control operation
- Folds up and rolls away for storage
