

## Muleshoe Irrigation Attracting Thousands

The Muleshoe country receives as much rainfall as any other section of West Texas, and for the past two years we have had a little more moisture than any other section surrounding us, but we are so situated that we can avail ourselves of shallow water and can irrigate our farms and by irrigation can insure a big crop every year. The time is coming and coming fast when we are going to be able to handle the pumping proposition with electricity in the Muleshoe country. The Texas Utilities Co., will be stringing high lines all over the shallow water belt, and as soon as the demand is sufficient they will be able to supply the farmers with electricity to pump irrigation water from the shallow wells onto the crops.

The world outside are just now beginning to realize that the shallow water belt is the best farming country of all Texas, they don't realize what it means to see 2,000 to 3,000 gallons of pure water spurting from a well every minute until they come to this section and actually see these wells in operation. The advantages of irrigation in this section discounts all other irrigation districts. The water here does not have to be treated before it is put on the crops, it is 99 per cent pure. Every person who has a foot of land can have an irrigation well, as the entire section is underlaid with a vast lake or underground river of running water. No channels, canals, etc., are necessary, and you can get your own water at any time by merely cutting on the pump. The day is not far distant when there will be a farmer on every 40 to 80 acre tract in the Muleshoe country, and practically every acre will be in cultivation as the ground is level and there are no rocks, creeks, hills or other obstacles to keep all the land from being farmed.

## Johnson Barber Shop Making Improvements

D. Johnson, owner of the Johnson Barber Shop is making some extensive improvements this week. He is having his entire shop overhauled and adding up-to-date shower bath. Mr. Johnson is building up a fine business.

Buick six volt thirteen plate battery, \$18.50 at T. B. Fry.

The Journal is only \$1.50 per year

## PAO CHUN I

Mr. I, whose home is in Hangchow, China, and who is a senior at the Johns Hopkins medical school, has the world's shortest name, as it is composed of but one letter and that letter displaces less ink than any other in the alphabet. Mr. Pao Chun I, who pronounces his surname "E," is twenty-four years old.

## Farm Loan Ass'n Answers Criticism

"A recent summary of a list of federal and joint stock banks discloses the fact that foreclosures and losses are rapidly increasing. In fact seven years of their existence the banks began foreclosure proceedings on 2,910 farms and acquired 852 farms, of which they sold 128, making net gain of farms sold of \$27,065.38.

"In the single year of 1924 the banks began foreclosure proceedings on 2,226 farms and acquired 423. They sold 118 farms at a net loss of \$28,731.54, thus consuming profits made on foreclosing farms during first seven years and creating an additional loss of \$1,666.16.

"It takes more than cheap federal loans to make good farmers."

The above articles has been published in numerous papers of the State, with a circulation principally in the Black Land Belt.

What are the facts?

The Federal Land Bank, of Houston, has loaned over one hundred seventeen million dollars to over forty thousand farmers in Texas, and at the present time has only 1-5 of 1 per cent of the annual installments delinquent. In eight years of operation there have been only twenty-one foreclosures. Less than an average of three a year with over forty thousand borrowers, or about one out of every two thousand loans, and to this date nothing lost on resales of foreclosed farms.

In the whole of the United States the banks in the Federal farm loan system have loaned over one billion six hundred million dollars to over four hundred thousand farmers.

A few foreclosures—Yes; because all farmers do not succeed; but the number compared to the vast volume of business that has been done is insignificant.

Newspaper propoganda of the old line loan companies which have fought the Federal farm loan system can not scare the real farmer away from his own

co-operative farm loan bank. The memory of 8 and 10 per cent short-time loans with continuous expense of renewals is too fresh in his memory. It is the Federal Land Bank that has given him his long-time loan at an interest rate much below what he has ever before enjoyed. No other organization making farm loans can show a record equal or comparable to it.

Cheap federal loans may not make good farmers, but good farmers always take advantage of the Federal Land Bank loan because they know it is economical and because their Government established the system to serve them with the cheapest rate possible and with more convenient terms at a minimum of expense with optional features to pay off the loan in whole or in part.

## Wonderful Rain Falls Over This Territory

Tuesday night this country was drenched with a wonderful rain. The weather man reported 1.43. This rain comes at a time when the early crops were just ready for another good rain and will enable the farmers to complete their planting.

Try a pair of Panco soles and heels, guaranteed to be as tough as an elephants' hide. Modern Shoe Shop, G. E. Odell, owner.

Cut out the cut outs.

## July 3-4 Celebration Is Gaining in Popularity Over This Part of State

For the past few years the Muleshoe Celebration has been looked forward to by the old and young as one of the big events of the year. People come for miles--bring their camping outfits and stay the entire time

This year the managers are going to make it far better than ever before. Money and time will not be spared.

M. P. Smith, who is well known over west Texas will be business manager. Mr. Smith said he was fortunate in securing T. C. Hennington to barbecue the 7,000 pounds of fine fat beef. Hennington has the rep of being the best cook on barbecue of any one in this country.

## Agricultural Contest Attracts Many Farmers

The Agricultural Contest being put on by the Chamber of Commerce is attracting many of the farmers. Several have called for rules and regulations. Cotton is the leader, then sweet potatoes and maize. Several acres of potatoes have been planted since last week.

The rain has come, so now do your best to win them all. You can do it.

Best 10 acres of cotton \$100 cash.

Best 10 acres of maize \$50 cash.

Best 1 acre sweet potatoes \$50 cash.

FOR SALE—Maps showing Bailey County, part of Lamb, Parmer, Castro and Cochran counties. Send 50c and we will mail you one. This is a late map, just completed showing the school houses, and Post Offices over the various counties. Sections and surveys are also shown. Map is 8 1-2x11 on good paper. Journal Office.

## NOTICE

All man, young men and boys are most earnestly requested to be present at the Men's Gospel Meeting at three o'clock, p. m., Sunday at the Baptist Church.

Subject Joseph: Beloved, Hated, Exalted. S. E. Axtell leader.

Bill Pressly will be the Rodeo Manager. Bill has been following this line of business for several years and knows just what it takes to attract the boys and please the public.

All forms of bronc riding, calf and goat roping, bull dogging, wild cow milking contest, racing and in fact, one of the keenest rodeo programs ever put on in this part of the state or Eastern New Mexico.

There will be fine music, big platform dance each night, plenty of camp grounds, shade and worlds of water.

Don't miss this one, or you will regret it all your life.

## Miss Kathryn Smith Receives Honors

Miss Kathryn Smith, daughter of Mrs. Daniel K. Smith, of Muleshoe, will receive the Kindergarten-Primary diploma at the 39th annual commencement exercises of the National Kindergarten and Elementary College, at Chicago, which was held on Wednesday afternoon, June 10. Miss Smith will return to Chicago next year to complete the third year of training, upon completion of which she will be eligible for a position as director of kindergarten or as teacher in the elementary grades.

Miss Smith, who was president of her class last year, was elected president of the Student Government Association of the dormitories this year, and has done a remarkably fine piece of work in this position. She has been prominent in many of the activities of the college, and took part in the festival "Persephone" given by the junior and senior students as a benefit for the Building fund for the removal of the College to its new campus in Evanston. The festival is an annual event, and this year the choice of the old Greek myth, together with the students' exquisite interpretation, made it unusually lovely.

Dinner every Sunday

## Flagg is Newest Town on Plains

Flagg is the name of the newest town in the Panhandle.

The new city is to be christened Saturday, June 20, when a big celebration will be staged on the townsite, eleven miles southwest of Dimmitt.

Flagg is located in the center of the noted Flagg farm lands, and is in the heart of a large triangle formed by three lines of the Santa Fe with Amarillo, Lubbock and Farwell as the points.

The new city is on land owned by Col. C. T. Herring of Amarillo.

Gov. Miram A. Ferguson, Congressman Marvin Jones, Hon. Lee Satterwhite, speaker of the house, Lynch Davidson and other noted men of Texas have been invited to participate in the opening celebration.

Flagg is located in the heart of as fine a body of agricultural land as can be found in West Texas. Hundreds of new farms have been broken out there in the past few years and many more are being purchased. The Flagg farm lands on the old Flagg ranch has been cut into small tracts and is being sold on long time with a small cash payment.

Plans for the opening celebration call for a big basket picnic at noon, public speaking, a base ball game and other contests, a trip over the Flagg farm lands and a visit to new farms in that section and the giving away of a choice lot in the heart of the new town.

A large hotel has already been erected by Col. Herring in the heart of the new town and this will also house a store and the land office.

The Panhandle Lumber Company has purchased a half block of land in Flagg and will erect a lumber yard there. A number of other business houses are expected to be under construction by the opening day.

## Civic Club Entertains At Lawrence Home

The Civic League entertained their members and the Chamber of Commerce members Monday night at the beautiful country home, of Mr. and Mrs. Sam Lawrence. A very large crowd was present, delicious refreshments were served and a fine musical program was rendered. A charming time was had.

1. Talk on Significance of Civic Club—Mrs. W. A. Milligan.
  2. Violin Solo—Cloe Roubinek accompanied by Mrs. Walker.
  3. Readings—Mrs. Scott.
  4. Vocal Solo—Mrs. Jones.
  5. Readings—Mrs. Corbin.
  6. Readings—Billy Daniel.
  7. Piano Solo—Mrs. Lathy.
  8. Reading—Mildred Lee.
- Music furnished by Roubinek Orchestra.

## Faulkner Swimming Pool To Be Completed

R. L. Faulkner let the contract to E. E. Douglass for the completion of the swimming pool. It will be 40x100, concrete throughout, and up-to-now from every standpoint. It is to be completed by July 4th.

## District Court Is In Session This Week

Monday morning the court house took on a scene of real business when District Attorney Chas. Clements called court to order with an overflowing docket. Many out of town Lawyers and people are here. Hotels and eating places are crowded.

## Muleshoe Wins Hard Fought Battle Sunday

Muleshoe was entertained and thrilled with victory last Sunday afternoon when Amherst Base Ball Club came down expecting to carry home the bacon but failed. The game was played on the Muleshoe ball park just across the track from the depot, witnessed by many hearty, boosting and rooting ball fans. The game started off with both teams full of pep, enthusiasm and optimism, fighting for every score available, and a live bunch of Muleshoe boosters helping through the entire game, showing the spirit of patriotism, full of vim, vigor, and vitality.

The first to bat was Amherst, running in three scores which only gave Muleshoe a more determined fighting spirit to win, Muleshoe failed to score in the first inning, but did some hard swatting which unfortunately fell in a well; Amherst scored again the second inning; but alas, Muleshoe also scored one in the second, Amherst then failed to score again until the sixth inning and then only scored two, altho' while all these Amherst boys were failing to hit our (keen lightning) Moore and get anywhere with it, Muleshoe was making a race track out of the park, scoring five in the third inning making 6 and 6, then the boosters sure opened a keg of nails. The home nine scored again in the ninth making it 6-7 in our favor.

Erick Moeller made a Amherst player sick of his business when he dived under him while he was holding the ball waiting to touch Erick and was safe on third.

Dutch made himself notorious by playing real ball Sunday always to be found backing up the base players, Dutch also wholoped the ball for a three bagger when three men were also on bases.

Moore threw such a wicked ball that Amherst felt real lucky to even get a smell, but did we must admit get a few.

Slack our new catcher was more than behind the bat but shot the apple to second in grand style. In fact our boys covered the entire diamond like a carpet when it comes to grabbing the ball and delivering it to the correct place.

Amherst will some day be a fair nine if they only get enough practice.

Go to Littlefield Sunday and with Muleshoe Base Ball nine strut her stuff, with (keen lightning) Moore on docket.

BOB HARRIS

From Lamar, Colorado, will be here with his bunch of horses. Come on and you know your st

### Marked Decrease of Work Animals

#### Acute Shortage Seems Certain Within Five Years, Says Department.

(Prepared by the United States Department of Agriculture.)

A marked decrease in the number of horses and mules of working age that may amount to an acute shortage seems certain within five years, says the United States Department of Agriculture. Unless more horse and mule colts are raised during each of the next five years than were raised in 1924, the number of horses on farms five years from now will be only 66 per cent of present numbers and of mules 74 per cent.

##### Larger Crops Expected.

While present replacements of colts and of young horses and mules are entirely inadequate to cover decreases in the present numbers of work animals, reports coming to the department from various sources indicate that increased breeding and larger colt crops are to be expected. Reports from state stallion registration boards especially emphasize this improved confidence of breeders. A rather marked advance in horse and mule prices during the last few months indicates that the shortage may already be making itself felt. This may be expected to increase further the interest in horse breeding.

In order to get a picture of the present situation the crop reporters of the department were asked to report the ages of all horses and mules on their own farms. Nearly 23,000 reports were tabulated. From these tabulations the percentages of animals of different age groups were computed for the United States by states and regions. The above is the situation if the conditions on the farms of these reporters are typical of all farms.

The study shows that the largest age group of horses is now the eight and nine-year-old group, this making up nearly one-fifth of the total; on the other hand colts under one year make up only 3 per cent and colts one year old only 2.3 per cent. If horse production were on a replacement basis colts under one year would be the largest group.

Of all horses only 11.4 per cent are under four years, 45.6 per cent are from four to nine years and 43 per cent are over ten years with the average age 9.8 years; of all mules 16.5 per cent are under four years, 51.9 per cent are from four to nine years and 31.6 per cent are over ten years with the average age of 8.4 years. Five years from now, for animals of the most useful age, four to nine years, there will be only 191 head of horses for every 450 head now on farms and only 278 mules for every 519 at present.

##### Pure Breds Increase.

While the reports of the stallion registration boards show fewer stallions registered in 1924 than in 1923, the percentage of pure bred in the total shows an increase. Registrations for 1925 are coming in earlier than in recent years, and these are accompanied by comments that show that owners are much more hopeful and that there is increased inquiry for good quality breeding animals.

While for some years the numbers of horses and mules have been more than adequate and prices last year were the lowest in over 20 years, such reduction as here indicated seems much too great. Even with a substitution of other forms of power for work animals on farms, the prospective numbers are probably below future minimum requirements.

In planning breeding operations, the department says, farmers should study the present situation to determine regions where the shortage will probably be felt the soonest and where substitution of other forms of power will be the least practicable. Types of animals suited to these areas probably will be in greatest demand. Brood mares should be carefully selected and should be mated with good stallions and jacks of the types best suited to produce high quality colts of the kind desired.

##### Brown Rot of Peaches

Investigators who have been experimenting with brown rot of peaches in Georgia have reached the conclusion that the control of curculionid means practically the control of brown rot also. Dr. H. W. Anderson, who has been working on brown rot in Illinois, has come to the same conclusion. It appears that the principal method of infection by the brown rot fungus is through wounds made by curculionids.

##### Protection for Farmer

In a recent survey of farmers it was found that many are making a mistake in setting the farmer. Part of the trouble is in the way the farmer sets the traps. The farmer should set the traps in the way that the rodent will enter from the side or the back of the trap.

##### Stop Crows Pulling Up Corn

Coal tar is the best preventive against crows pulling up corn, a table-spoonful being enough to treat half bushel of the seed. The corn is sown in small or tub and covered with a layer of soil about 100 degrees. As soon as the

### Airplane Dusting for Large Orchards

#### Peach Is Latest Crop to Receive Attention.

(Prepared by the United States Department of Agriculture.)

The commercial peach orchard is the latest crop to receive treatment by the airplane dusting method for controlling insect pests. According to a report received by the bureau of entomology of the United States Department of Agriculture from its field station at Fort Valley, Ga., this process was tried for the first time in March of this year. Airplane dusting for cotton fields has been a demonstrated success, and the outcome of this type of control for insects affecting peach trees will be awaited with interest.

It took an hour and fifty-five minutes to dust 10,000 peach trees with a mixture of arsenate of lead and hydrated lime. The time recorded included all trips to the landing field to refill the hopper. For several months the bureau representatives at the Fort Valley laboratory have been giving attention to the perfection of the technique for using airplanes in this way, with the co-operation of those who have had previous experience in the work at the boll weevil laboratory at Tallulah, La. It has been necessary to make adjustments of the feeding mechanism of the planes so that the heavy dust used for peach insect control work would be evenly distributed. A thousand acres of peach trees in Georgia will be treated by airplane during the season, under the supervision of the Fort Valley laboratory. It is expected that this work will yield valuable data on the results, cost of operation, and other points.

#### Activity in Live Stock Improvement Operations

(Prepared by the United States Department of Agriculture.)

In a report on live stock improvement under the better-sires plan, just issued by the United States Department of Agriculture, California receives mention among the states noticeably active in such work. The principal other states, mostly in the central west and east, are: Kentucky, Ohio, Nebraska, Vermont, South Carolina, Oklahoma, New York and Pennsylvania.

Live stock owners who place their breeding operations on a basis which includes the exclusive use of pure bred sires receive a suitable sign for their premises and helpful literature on animal breeding.

During the early part of the year live stock owners in the following California counties qualified for participation in the work: Los Angeles, Orange, Sonoma and Ventura.

The activity of the Golden State in this means of live stock improvement is due chiefly to the interest and energy of county extension agents in the counties mentioned. The work is of an educational nature and involves no expense aside from that incident to the purchase or use of pure bred sires, which the department urges in the interest of improved domestic live stock. Experience shows that good breeding results in numerous benefits and greatly increased financial returns.

#### Horse-Radish Thrives on Soil of Medium Texture

Horse-radish, like other root crops, will thrive on a soil of medium texture. Either a loam or a silty clay loam containing a good supply of organic matter and plant-food will give good yields. On a moist, but not wet, soil, the roots will develop to a good size and be of fine quality, while on a dry location they will be small and woody, and will lack to a large degree the characteristic sharpness. An ideal soil is one which is free from large stones, which can be easily cultivated, and which reaches to a depth of 10 to 15 inches, underlaid by a clay subsoil. These conditions make possible a check in the growth of the roots when they reach the subsoil, while on lighter soils the roots often grow to a depth of four to five feet, which is very undesirable.

### FARM FACTS

Evergreens should be moved just before the buds start.

Most cream separators will do much better job of skimming the milk when it is warm.

As a soil provider sweet clover is excellent both on dry land and irrigated lands.

Dig out the barberries, roots and all. Dig them carefully and watch for sprouts for several years.

Curing of clover hay is more difficult at the full-bloom stage because of the higher natural moisture it then contains.

The production of good clean cream is the most important step in the manufacture of high-class country butter.

Spray the currant bushes early for plant lice. They are nurseries for them and the lettuce will be next on the list and then the green peas.

When it is desired to have the second crop of red clover for seed, then a better plan is to get the first crop off the land somewhat early, before the seeds turn brown.

### Tuberculin Test Is Gaining in Favor

#### Clean-Ups Rapidly Coming to Be Order of Day in Various Sections.

(Prepared by the United States Department of Agriculture.)

Wholesale clean-ups are rapidly coming to be the order of the day in the nation-wide campaign against cattle tuberculosis waged by the state and federal governments. The area plan of purging a whole county of TB, at one swoop instead of proceeding on the hit-and-miss style, or the herd-by-herd method with which the campaign started, is finding favor all over the country because of its economic merits and other features of speed, efficiency, and success.

##### Many Counties in Move.

Five hundred and thirty counties are now actively engaged in a county-wide movement to remove the last trace of the infection in the cattle within their borders and thus win for themselves the coveted title and reputation of "modified accredited areas." To date 69 counties, representing 14 states, have achieved that standard of cleanliness. The most recent areas to be added to the list, issued monthly by the United States Department of Agriculture, are Jasper and Pottawattomie counties in Iowa, Moore and Polk counties in North Carolina, and Barnes and Benson counties in North Dakota.

The state of New Mexico is even more aggressive in its attitude toward tuberculous cattle and is planning a campaign to test all the cattle within the state so as to establish the whole state as a modified accredited area. Several of the state legislatures now in session have provided adequate laws and appropriations for carrying on the area work. The New York legislature, recently adjourned, appropriated \$2,000,000 for the payment of indemnities for tuberculous cattle condemned during the last six months of this year. It is expected that a like amount will be appropriated for the first six months of 1925.

##### Popular Area Plan.

The gradual change from the herd-to-herd method of fighting the disease to the popular area plan is indicated by some comparable figures gathered by the department. During February of this year 35,818 herds of cattle were tested under the area plan and only 7,532 herds tested under the accredited herd plan. The number of cattle tested in the area work amounted to 380,875, and the number in the individual herd testing amounted to 148,495. From July, 1924, to and including February, 1925, under the area plan there were tested 2,899,686 cattle, while under the accredited herd plan there were 1,284,927 cattle tested.

#### Prevent Loss of Chicks by Proper Management

The pig's liver chopped into small pieces is the best cure for toe and tail picking among small chicks confined in brooder houses. Toe and tail picking is one of the three most common troubles among young poultry stock and is caused by confining the chicks too closely to the brooder without sufficient litter and exercise.

Toe and tail picking in mild cases may be cured by getting the chicks out on the range as soon as the weather permits. In extreme cases the advice is to dab tar on the picked parts and feed pig's liver to the entire flock.

Crowding and leg weakness are the other two troubles among spring chicks. When the brooder house is allowed to get too hot or too cold chicks are likely to crowd. Fright or improper wearing from the heat of the brooder stove will also cause them to bunch together in corners. The obvious remedy is to decrease the heat gradually and get the flock on low roosts as soon as possible.

#### Control Tomato Disease by Eradicating Weeds

That the eradication of bull nettles and ground cherries in and near the plant beds will effectively control tomato mosaic, one of the three worst tomato diseases in Indiana, has been demonstrated on the farm of Ralph Kemp, of Tipton county, formerly president of the Indiana Cannery's association and one of the largest growers of tomatoes in the largest tomato-producing state in the Union, says the Indiana Farmers' Guide.

The young weed sprouts in the plant beds originate from diseased roots and the malady is readily carried to the tomato seedlings by means of insects. If bull nettle and ground cherry sprouts are not permitted to develop, the roots will die.

##### Biennial Sweet Clover

Biennial sweet clover grows only from the stem and not from a crown as is the case with alfalfa. Early in the fall the second-year buds have not yet formed. Plow the green growth under then and the buds do not develop. But examine a plant later in the fall and the second-year buds have developed remarkably and show green shoots. If these are turned under, they will surely come through and bother in the spring.

##### Lamb Discriminations

The market discriminates very severely against lambs that have not been castrated, and against lambs that have not been docked. These discriminations are simple and can be avoided while the lambs are still in the pen.

### Destructive Gypsy Moth Being Checked

#### Spread of Insects Occurs When They Are Young.

The gypsy moth has proved such a destructive insect in New England and New York that the New York State Conservation commission, in co-operation with the federal government, has established a barrier zone in an attempt to stop the westward spread of the pest. In spite of the fact that this moth is a winged insect, it does not occupy new territory through its power of flight. On account of the extreme weight of their bodies the females are unable to fly.

The spread of the moth occurs when the young caterpillars are first hatched from the eggs. The caterpillars have long hairs growing out of their bodies. These hairs, it is thought, together with the silk which the caterpillars spin, help to buoy them from a half mile to five miles from their starting place.

Last year, in order to learn about the winds which caused this gradual spread of the caterpillar aeronauts, 7,000 hydrogen-filled balloons were sent up by the commission. Each balloon bore a numbered tag requesting the finder to return it with a record of the time and place where it was found. Over 400 of these tags were thus recovered by the end of the season. They were found practically throughout southern New England, a number being picked up on both the eastern and southern coasts. One balloon was found off Yarmouth cape, Nova Scotia, proving a drift of about 400 miles in eighteen hours. Seven covered distances of 110 to 145 miles. One drifted 65 miles at the rate of 100 miles an hour. Another remained in the air six and a quarter hours and then dropped at the point of release, evidently carried back by a counter current.—Scientific American

#### Stable Manure Valuable Fertilizer for Rhubarb

Rhubarb is the strongest feeder of all vegetables. Stable manure, especially cow manure, is valuable because it supplies the humus, conserves moisture and furnishes plant food. Intensive and successful growers use from 25 to 40 tons or more per acre. Manure is probably most effective when applied in the early fall, although spring dressings are often made by successful growers. During the early spring this manure is supplemented at from two- to three-week intervals with heavy applications of nitrate of soda. This is to force the leaf-growth and to produce large stems.

Where the manure cannot be obtained in such large quantities, a commercial fertilizer containing 4 to 8 per cent of nitrogen, 5 per cent of phosphoric acid and from 6 to 8 per cent of potash, should be applied at the rate of 1,000 to 2,000 pounds per acre, depending on the character of the soil. This application of fertilizer is supplemented by applications of nitrate of soda at intervals of four to six weeks.

#### Reduce Danger of Bloat by Careful Management

While there is always danger from bloat when cattle are on alfalfa or clover pasture, this danger can be very much reduced by careful management. The danger of alfalfa is perhaps no greater than that of clover.

When cows are turned on clover or alfalfa pasture the first time, they should not be turned on it until all the dew is dried off. The cattle should be well fed before they are put onto the clover or alfalfa. Leave them on the pasture for a short time the first day and then each day they can be left a little longer until they have become used to it after which they should be left on the pasture all the time, both day and night.

Until they have become used to the pasture they should be closely watched so that if any should bloat they can be treated before it is too late.

### Farm Hints

A good fanning mill is the farmer's best weed getter.

Even three-leaf clovers bring good luck if you have plenty of them.

Sweet clover should be cut for hay before it blossoms and should be cut high.

Weeds should be cut and pulled along fences and in odd spots on the farm so their seeds cannot be blown or washed onto the fields.

When corn and soy beans are to be planted together for ensilage, use from four to six quarts of soy beans and the usual amount of corn.

Good pasture and forage crops will help to reduce pork-producing costs. Pigs on green feed are more thrifty than those raised in dry lots.

Sweet clover seeded in the spring usually gives trouble if it is plowed under the first fall. The second-year buds force themselves through in the spring.

Whether or not tomatoes should be staked and pruned to a single stem or at least partly pruned is subject of argument yet among tomato growers. Probably it is a good idea to try them both ways and test it out.

## FARM STOCK

### MILL FEEDS FINE FOR SPRING PIGS

Wheat by-products, such as middlings and red dog flour, can be used to advantage with a ration of corn and tankage under price conditions which have prevailed during the past two years, according to feeding tests which have been made at the Minnesota station. Spring pigs were used in the tests, and four lots were fed during each of two summers. Each year one lot of pigs had a ration of 90 per cent shelled corn and 10 per cent tankage until they reached 100 pounds, after which the ration was changed to 95 per cent corn and 5 per cent tankage. The ration for each of the other three lots each season before reaching 100 pounds in weight was 65 per cent corn, 30 per cent wheat by-products and 5 per cent tankage. After passing the 100-pound mark, these pigs had 75 per cent corn, 23 per cent wheat by-product and 2 per cent tankage. The three wheat by-products compared were standard middlings, flour middlings and red dog flour.

Gains made on the rations containing the wheat mill-feeds were slightly higher than on corn and tankage. On each 100 pounds of gain, 80 to 85 pounds of the mill-feeds saved from 60 to 85 pounds of corn and about 9 pounds of tankage.

Tankage used in the tests cost \$60 per ton, while the corn averaged about 95 cents per bushel. The grade of standard middlings fed cost \$26 per ton. Flour middlings were slightly higher, averaging about \$30 per ton, while the red dog flour cost an average of about \$35 per ton.

At these prices, the pigs which had the two grades of middlings made a little cheaper gain than pigs fed corn and tankage, the savings amounting to 25 to 40 cents on each hundred pounds of pork. In one case the gains made by the pigs which received red dog flour were a little cheaper than those made by the corn and tankage lot, while the other year the red dog flour added a little expense to the gains. The tests indicate that when the wheat by-products, particularly middlings, can be bought at not to exceed half the price per ton of tankage they can be used with corn and tankage to the extent of about one-third of the ration for pigs which are on good pasture.

#### Hog Will Keep Clean if Given the Opportunity

Many of the failures in hog raising may be attributed to the mistaken idea that a hog is a filthy, obnoxious beast and should be treated as such, according to D. A. Weber, instructor in animal husbandry at the Kansas State Agricultural college.

"A hog will be as clean as the owner will allow him to be," said Mr. Weber. "If given an opportunity the hog will be a clean housekeeper."

"It is true that hogs like to wallow. They have no means of perspiring and must wallow to keep cool. However, they will not object to a clean wallow filled with fresh water. Care should be taken not to pour cold water on the back of an overheated hog. It is very likely to cause death."

"Obstinacy is a trait of the hog, and patience must be used in handling the animals. They are also home-loving creatures, and frequent changing of quarters often causes them to become chronic fence breakers."

##### Value of Skim Milk

One hundred pounds of skim milk is ordinarily worth the equivalent of ten pounds of corn plus five pounds of tankage for fattening hogs. With suckling brood sows or young pigs or fall pigs which are not doing well, it may be worth more than this. With corn and tankage at present prices skim-milk would seem to be worth about 35 cents per 100 pounds for fattening hogs.

##### Friends of Farmer

Weeds are the enemies of the farmer and sheep are the enemies of weeds. Hence—sheep are the farmer's friends—especially in these days of meat and wool shortage. The farmer with a good flock of sheep is sitting pretty. The farmer who is not sitting pretty had the same chance to get started with sheep when the starting was good. It's not too late now, at that.

##### Producing Better Stock

Before good live stock can be produced in large numbers there must be a wide appreciation of the utility value of good breeding coupled with the actual use of high-class pure bred sires at the head of herds and flocks. The better-sires—better-stock campaign undertakes to supply this need in an educational way.

##### Consumption of Mutton

The sheep grower must depend upon home consumption to use the lamb and mutton produced. There seems to be room for a great increase in the demand. The average yearly consumption of mutton and lamb per capita in the United States in the decade preceding 1921, was 6.2 pounds 4.35 per cent of the meat eaten. In Great Britain, it was more than 20 pounds, 22 per cent of the total meat eaten. As a whole, our greatest consumption is in the cities.

### ALL WORN OUT?

Are you lame and stiff; tired, nervous and depressed; miserable with back-ache? Have you suspected your kidneys? Good health depends upon good elimination. But sluggish kidneys allow impurities to accumulate and upset the whole system. Backache is apt to follow; stabbing pains, depressing headaches, dizziness, and other annoying kidney irregularities. Why experiment? If your kidneys are sluggish, why not use Doan's Pills. Doan's is a harmless stimulant diuretic. Used the world over. Ask your neighbor!

**DOAN'S PILLS**

### RUSTLERS

**SYNOPSIS.**—Kate Cathrew, "Cattle Kate," owner of the Sky Line ranch, on her way to McKane's store at Cordova, seemingly infuriated by the sight of a girl plowing in a valley below, places a rifle bullet near the horses' feet. The girl takes no notice. Kate goes on to town, where her presence brings on a fight between McKane, the trader, and Sheriff Selwood. Nance Allison, the girl on whom Kate Cathrew had vented her spite, is with her widowed mother and crippled brother Bud farming land taken up by her father, killed a short time before in a mysterious accident. Bud is the victim of a deliberate scheme to maim or kill him. Kate Cathrew wants the farm for pasture land, and is trying to frighten the Allisons into leaving. Big Basford, Sky Line rider, desperately in love with Kate, picks a quarrel with a fellow rider, Rod Stone, Kate, to part them, lashes Basford across the face with a quirt. Nance discovers in a cave a fine collier dog, evidently guarding a child. She goes home mystified. Next day Nance returns to the cave with food and makes friends with the dog and the small boy, Sonny. He tells her "Brand takes care of him and Dirk," the collier. Selwood is certain Kate Cathrew is the head of a "wattle rustling" gang, with Lawrence Arnold, her partner, who rarely visits the ranch. Minnie Pine, half-breed at the Sky Line ranch, is in love with Rod Stone.

### CHAPTER VII

#### The Shadows Thicken.

Old man Conlan was, as McKane had said, half crazy with the loss of his cattle. They were not so many, only a matter of some twenty-two head, but they meant a lot to him. He owned no patented land. He was merely a squatter in the lower fringes of the Upper country around at the western end of Mystery ridge where Rainbow cliff stopped spectacularly. He lived with his wife in a disreputable old cabin and worked beyond his years and strength in the white fire of an ambition—a laudable ambition, for he had a crippled son back East in college. He ran cattle in the hills and he knew every head of his brand to the last wobbly calf, an easy matter, since they were few.

At the store in Cordova he told his woes to the countryside, and he had an attentive audience, for his issue was theirs, and in a broader way.

On a pleasant day in late June, the old man reiterated his grievance, pulling his long gray beard and flailing his gaunt arms in eloquent gesture.

"Whoever they be that lifted my steers," he said grimly, "I d—n their souls to h—ll! I'd d—n their bodies, too, believe me, men, if I knowed 'em an' could throw my gun on 'em. Sheriff, here, might take me to jail next minute an' I'd go happy."

Selwood, sitting at a table desultorily playing cards, pushed back his hat and smiled.

"Nobody's going to take you to jail for killing a rustler, Jake," he said, "we'd give you a reward instead. I'd give a lot to have the chance myself."

"Why don't ye hunt fer it, then?" demanded Conlan testily, "ef I was sheriff—"

"Yes?" said Selwood, laying his cards flat on the table for a moment and facing him, "what would you do if you were sheriff?"

"I'd try, anyway," said the old man, with a touch of scorn, "to find a trace of somethin'. I'd not stay on my ranch an' let th' world go hang! I'd ride th' hills, 'tenny rate."

A slow paleness crept into Selwood's face, giving it an ashen hue, like a candle. He laid down his hand definitely and looked round at the ten or twelve men lounging in the room.

Among them were Bossick and one or two others who had suffered at the hands of the mysterious thieves of Nameless.

"I know that Jake here voices the feeling which has been growing against me for some time," he said evenly, "and this is as good a time as any to speak about it."

"You're our sheriff, Price, an' a d—d good one," spoke up Bossick loyally, "an' I for one have nothing to say against you. I know—no one better—what you're up against. I trailed my own stuff into that river with you, an' I know that they simply vanished. I've done my own darndest to unravel th' mystery, an' I can't see what more any man'd do, sheriff or not!"

Selwood smiled at him.

"Thanks, John," he said, "I'll not forget that. But I hate to have my friends think I'm laying down on the job. I haven't said anything about what I've been doing, preferring to wait until I had something to show, but that time seems far off still. This is the smoothest work I ever saw, baffling—. It don't stand to simple reason. We know beef cattle don't fly— and yet that seems the only way they

could have got out of the country. They go—and they leave no trail. I know, for I've ridden the hills, Jake, notwithstanding, in dragnet fashion. Ask my wife how many nights I've slept at home since the last raid. Take a look at my horse out there. He's hard as iron and lean as a rail. And there's another at home that looks just like him. If I haven't found anything it's not because I haven't traveled."

Several men stirred and one spoke.

"I don't think many of us blame you, Price," he said, "but it does gail a feller to lose stock an' have to stand helpless."

"And how do you think it galls me to fall to catch the lifters?" asked Selwood quietly. "It's my job—my honor."

He picked up his cards again and turned to the table.

"But no matter what is said, or thought about me," he finished, "every day of my further hold on office will be given over to the same hunt—until I find what I'm after, or give up as a failure."

Hink Helsey, the bearded man who had sat on the store porch that day of the fight between Selwood and McKane, now dropped the forward legs of his chair to the floor and sat up, doubling his knife and putting it away in a pocket.

"Sheriff," he said, "I'm stackin' on you, along with Bossick. I think you'll ketch yer game—an' I think you're already on th' right trail."

McKane looked at him as if he could kill him and his tongue itched to flail both men, the speaker and Selwood, for he knew that they meant the same thing.

There was one listener, however, who said nothing and whose sharp eyes scanned each face in the room with painstaking thoroughness. This was Sid Provine, a rider from Sky Line who had come down for the mail.

The Sky Line men never stayed long at Cordova, except as they came now and again for a night at play.

When the talk had changed from the all-absorbing topic of the stolen cattle, this worthy rose, took his sack and departed.

Several pairs of eyes followed him, but no one spoke of him.

There was something about the Sky Line riders which seemed to preclude discussion in the open.

Price Selwood had told the truth. There was not a night of the long warming weeks of spring which had not seen him, a shadow in the shadows, riding the slopes and flats of Nameless. Sometimes he sat for hours high on some shoulder of the hills watching the bowl beneath with the moonlight sifting down in a silver flood. Again, when the nights were dark, he rode up under the very lip of Rainbow cliff and watched and listened, his every sense as acute as a panther's. There were times when he sat for half a night within hailing distance of Kate Cathrew's stronghold, and once her dogs, winding him, yammered excitedly. This brought out a stealthy listener, whose only betrayal was the different note in the dogs' voices.

But someone was there in the darkness of the veranda, and Selwood out-stayed him, whoever he was—out-stayed the animals' excitement, their curiosity, and left with the hint of coming dawn to drop back down the slants and sleep the day away at home.

Night again saw him traveling, and always his one obsession traveled with him—the hard-and-fast presentiments.

But someone was there in the darkness of the veranda, and Selwood out-stayed him, whoever he was—out-stayed the animals' excitement, their curiosity, and left with the hint of coming dawn to drop back down the slants and sleep the day away at home.

trail, perhaps a secret branding fire. But he had found nothing. So he fell back on his night riding again, and as always this led him instinctively into the region of Sky Line ranch. He had crossed the river near the head of Nance Allison's tilled land, and had sat a moment peering down the length of the brown stretch where the rows of young corn were springing bravely.

It pleased the sheriff to see this promise of a fair crop, for he knew the girl, and had known her father for an honest, straightforward man. The hard effort of the family to get along was known to all the ranchers and earned its meed of admiration in a land where work was regarded almost as a religion.

Nameless could condone wrong, but not shiftlessness.

And this girl was not shiftless. Instead, her sharp management and her heavy labor were matters of note. So the sheriff took special cognizance of the look of her big field of corn and nodded in pleased satisfaction.

Then he moved on up into the blue-brush that clothed the slants by the river and made for the heights.

Three hours later he was sitting sideways in his saddle beside the well-worn trail which led up to Sky Line. He was not too close, being ensconced in a little thicket of maple about fifty yards back and above. He had spent many an hour here before.

It afforded a good view of the trail, and better still, a splendid chance to hear.

Twice in the last month he had heard and seen a bunch of Kate's riders coming home from Cordova where they had gone to gamble. But this fact had been unproductive of anything sinister.

They had ridden boldly, as behooves innocent men, their horses climbing slowly with rattle of spur and bit-chain, the squeak and whine of saddles.

Selwood had reached a hand to his horse's nose to preclude its neighing and had seen them pass on up and disappear.

Next day he had unostentatiously made sure that these men had played at McKane's—in both instances.

And now he waited again, seemingly in a foolish quest.

He knew it would seem so to an observer. It seemed so to him when he regarded it with reason. But reason was not actuating him. It was instinct—hunch.

So Sheriff Price Selwood—whom Kate Cathrew quite frankly hated—sat in the darkness and watched and listened beside her trail, a lost little thread on the vast expanse of the wooded slopes.

A long hour passed, filled with the soundful silence of the wilderness. It heard an owl call and call in mournful quaver from far below, another answer. He knew that some hunting animal was abroad in the manzanita to his right, for he caught a thud and rustle, the pitiful, shrill scream of a rabbit. A night bird gave out a sweet alert note from time to time and an insect drummed in a pine tree.

And then he heard, or thought he did, another sound.

It was so far off and faint that he could not be sure, and for a time he fancied he might have been mistaken. Then it came again—the crack of hoofs on stone, and once more silence.

He held his breath, listening.

Once again he heard that cracking of hoofs—and this time he knew them for cloven hoofs. A cattle-brute was coming up the trail toward him. There was nothing in that fact to cause undue excitement—except one thing.

Under ordinary conditions that steers would be lying in some snug glade chewing its cud. In no natural case would it be coming up a trail at a smart pace—with a horse behind it!

Selwood lented forward, gripping his own mount's nose, and strained his eyes in the illusive half-light. Presently he saw what he knew he would see—a rider, driving one lone steer up the trail to Sky Line.

It was too dark to see anything else—who the man was, or what manner of steer he drove, or what horse he rode.

And though he waited till the cooler breath of the night warned him of coming day he saw nothing more.

He spent the next day at Cordova, listening, but though several cattlemen came in, there was nothing said of a loss among them.

But the day after old man Conlan was in and fit for durance. He threw his ragged hat on McKane's floor and jumped on it, reviling the law and all it stood for.

"Two more!" he belted with a break of tears in his old voice. "By—! of this ain't th' limit! I only had sixteen left an' th' two best out th' lot come up missin' this mornin'! Ain't no trail agin. They's tracks all over, sure—but th' other stock is on th' slope an' this time there just ain't nothin'!"

Barman, from up on Nameless, was at the store and he and McKane tried to calm the old man down, though the cattlemen's own blood was rolled.

"It is a d—d dirty shame!" he said indignantly, "have you told Selwood?"

"Him?" grunted Conlan. "H—!"

"He's here now," said McKane. "Just getting down."

Price Selwood entered in time to hear the last of the old man's tirade, to catch the drift of what had happened, and his eyes glowed for a second.

He laid a hand on Conlan's arm.

"Jake," he said, "hold in a little longer."

"Hold h—!" said the other shaking off the hand, "I'll be ready for the county house in Bement in another three months!"

"Course. Plain as day. J.C. on right hip, swaller-fork in left ear. One was roan an' tother a bay-spot."

Selwood turned without a word left the store, mounted and rode away.

"Jest like him!" said Conlan bitterly, "goes a'ridin' off all secret-like an' snappy—a if he knowed somethin' or wanted us to think he did."

"Mebby he does," said Barman.

Sheriff Selwood rode straight up to Sky Line ranch. It took him a good three hours, going fast, and it was far after noon when he pulled rein at Kate Cathrew's corral gate and called for her.

She came, frowning and inhospitable.

"What do you want of me?" she asked coldly.

"Nothing," said Selwood, "except to tell you I'm going to take a look around your place."

"Look and be d—d!" she flared. "What do you think you'll find?"

"Well—" he drawled, smiling, "I might find a couple of steers branded with J. C. on the right hip."

For one fraction of a second the black eyes burning somberly on his flickered, lost their direct steadiness.

Selwood laughed, though he was alert in every nerve and his right hand was on his thigh near to the butt of his gun that hung there. Caldwell.

"Think I Need Escort, Caldwell? He Asked Sarcastically.

well and several other riders stood close, their eyes on him. He thought of John Allison, found dead at the foot of Rainbow cliff, to all intents the victim of accident.

"What's the matter, Kate?" he asked pointedly. "Suffering from nerves? Didn't think you had any."

And he turned to ride over toward the corral.

Kate's flaming orbs sought the face of her foreman.

"Go with him," they telegraphed, and Caldwell went.

Selwood covered every foot of the home place of Sky Line in a grim silence, looking for anything. He looked into corral and stable, brush pasture and branding pen, but found no sign of the stolen steers.

When at last he rode away it was straight down along the face of Rainbow cliff toward the west. He did not know why he skirted the rockface, since it was hard going. The earth at the foot of the great precipice was slanting and covered with the loose stone that was forever falling from the weathered wall. It was rough on the horse's feet, but he held him to it—and he was surprised to find that Caldwell was still with him, and riding inside next to the cliff.

"Think I need escort, Caldwell?" he asked sarcastically.

"Mebby as much as we need spyin' on," returned the other and rode along.

Three miles further on the sheriff turned down the mountain and the foreman reined up, sitting in silence to watch him out of sight.

"Wings is right," said Selwood to himself, "those steers must have them—but that woman's eyes were gully, or I'm a liar."

At the same moment Caldwell was heaving a long breath of relief as he pulled his horse around and headed home.

"This here sheriff is gettin' a little bit inquisitive," he thought, then grinned sardonically.

"But if he never gets any wiser than he is now he won't set anything on fire. In fifteen feet of th' Flange an' never saw a thing! Holy smoke! Some sheriff! An' yet—can't blame him—the Flange'd fool th' devil himself."

Here's certainly a double mystery. Who rustles the cattle? and what becomes of them? Is it Kate?

(TO BE CONTINUED.)

**Have Faith in Time**

Tennyson once wrote this wise line: "Walt: my faith is large in time." Well might it be. If we work faithfully, time will bring good results. If we have sinned and repented, time will remove the consequences of our sin. If some great sorrow has come to us, time will heal the wound. If we are misunderstood, time will show of what sort we are. Time is the great healer. Time brings results. Time has done so much that it may be trusted to do much more. Have faith in time.

MARY GRAHAM BONNER

### LITTLE MR. DOWNY

"It seems only yesterday that they were only five white eggs," said Mother Downy Woodpecker as she looked at her five little birdlings. She could hardly believe that they were growing so fast.

"Well," said little Mr. Downy, "in a way it is no wonder that they have grown, for they've had such huge appetites and have eaten all we've brought them.

"We've been kept busy bringing them good things to eat too."

"But they have grown very quickly," said Mother Downy. "Truly they will not be babies any more."

"They can't be babies always," said Mr. Downy. "In a wise and manly fashion."

"True!" sighed Mother Downy, "but it seems only yesterday that they were!"

"My dear," said Mr. Downy, "I am invited to a banquet today of caterpillar eggs in the orchard. I was told to bring my friends, so you must help me tell the other Downy Woodpeckers about the feast."

"You know we must save the trees for the fruit growers and not let the caterpillars and wood beetles have a chance."

"Then as dessert they are going to have a pudding of weed seeds and a few pokberries, I am given to understand."

"Of course it will be a most informal banquet. Self-service, you know. We'll all pound the trees ourselves so we can tell just where the meal is to be had."

"We should do that for the people who own this orchard. Think how they looked after us with us when it was cold and food was scarce. They made life jolly and happy for us and for the Tufted Titmouse family and for the chickadees."

"Oh," said Mother Downy, "speaking of the chickadees reminds me that

Mr. Downy and Mrs. Downy.

they have one of our old nests in the bottom of the tree we had as our last home."

"Good," said Mr. Downy, "they will be safe there, the little dears. It's hard for them, with their weak bills, to build a nest where they can hatch out their little ones and be safely hidden away from old Blue Jay enemy."

"That is one of the nice things about having many homes—we can let others have them when we leave."

Mr. Downy and Mother Downy were two of the dearest woodpeckers you could hope to see. They were not very large and they did more good than any other woodpeckers and they never did any harm. Sometimes unkind things had been said about them gathering sap from trees, but it was nothing but idle gossip.

Mr. Downy wore a handsome black-and-white suit, beautifully decorated with white spots, and as a decoration for his head he had a touch of red on the back of his cap. Mrs. Downy didn't wear the red, as she was not fond of bright colors on herself.

"Leave that to the male birds," she said.

They had a cousin, Mr. Halcy Woodpecker, who was larger and who loved the quiet woods and was not so sociable as they were.

"People have said they thought it strange we didn't eat any fruit at all when we were so careful to look after the orchard," Mr. Downy remarked. "But we are satisfied with what we get protecting the fruit trees. We relish little insects."

"We don't need fruit."

"That is true," answered Mother Downy.

"Ah, what a beautiful time of the year is summer," Mr. Downy said. "There is so much that is good to eat. It is warm and pleasant, and now the babies are getting less helpless each day."

"But," he added, "the winter was fun. Often when it was cold I stayed rather late in my bed in the old hollow in the winter home tree, but there was nothing to rush about for then."

"You weren't such an early riser, either, in those days. But we couldn't hide ourselves completely away, even in the winter. We always have to be about and have a sociable, friendly time."

"Oh, yes," said Mother Downy. "Life is so much more fun when one just enjoys every little thing. And it's so much more fun to be friendly with everyone. I must teach the children that happiness is not to be found after a great and mighty search, but it is right within each little feathered breast."

- New disc clutch, requiring no lubrication;
- New rear axle with larger, stronger gears and one-piece banjo-type housing;
- New semi-elliptic springs of chrome vanadium steel, with rear springs underlugs;
- New frame, longer and stronger, of deep channel steel construction;
- New bodies, roomier, more comfortable, of modern design—closed models have beautiful Fisher bodies;
- New windshields, with very low bottom glass panel on open models, one-piece VV type on closed models;
- New finish, lustrous, durable Duco in beautiful colors;
- New motor refinements, heavier crankshaft, improved construction for carburetor and manifold.

### Chevrolet Company Puts Cars To Test

In an unremitting search for possibilities of further improvement, Chevrolet cars are being driven constantly around the four-mile "speed loop" of the General Motor Corporation proving ground near Milford, Mich.

The driving test, which is routine in the Chevrolet policy of continuous effort at refinement is being made night and day, winter and summer, regardless of weather conditions.

At present seven Chevrolet cars are piling up a total of 75,000 miles monthly. The tireless whirl provides unusual driving strains in the quest of Chevrolet engineers for further opportunities to improve the sturdy chassis under conditions to which cars would ordinarily not be subjected by the average owner. All models are included in the test group.

Two shifts of drivers maintain a pace of between 35 and 40 miles per hour, stopping only for gasoline, oil and inspection. The day shift drives from 7:30 a. m. until 5:30 p. m., with a half hour for lunch, while the night shift drives from 7 p. m. until 5:30 a. m., with a midnight lunch period.

The "speed loop" includes three miles of gravel track, banked high at the turns, and one mile of level concrete straight-away. There are no speed restrictions. One portion of the road leading from the "speed loop" to the inspection shop has a grade of 11.6 per cent.

Each noon and night the cars are inspected and filled with gasoline and oil. At every 1,000 mile mark the machines are washed, driven into the shop and given a thorough inspection, the results of which are listed in a report form. It is only during these inspections that the cars are under cover. At all other times they are out of doors.

Chevrolet trucks also are under continuous test, being driven on "Bump Boulevard," an old farm road which crosses the 1,146 acre proving ground. The defects and irregularities of this road purposely have been left intact. The test cars and trucks use about 4,500 gallons of gasoline monthly.

After being driven 40,000 miles or more, each car is taken into the shop and torn down for precision inspection by the engineers. They may find nothing of interest. Possibly the test may reveal an opportunity for some minor refinement. If it does, no detail is too small or insignificant for consideration in the general policy of continuous improvement.

GARMENTS DEMAND PROPER ATTENTION

One of Essentials to Have Clothes in Condition.

(Prepared by the United States Department of Agriculture.)

Garments even of the best quality, design, and workmanship will soon become shabby through lack of care; while those that may perhaps have cost only half as much may be kept fresh looking for a considerable length of time by the painstaking care of the wearer.

One of the greatest helps in keeping clothing in good condition is to give immediate attention to the repairs, such as mending rips and torn places, sewing on loosened buttons, fasteners, and trimmings, and reworking worn buttonholes. Also "preventive" darning may lengthen the period of service of many a garment. This is done by re-enforcing a worn place with rows of fine stitches, or by laying a piece of cloth (like the garment if possible) under it and darning it down with ravelings of the material.

Cleanliness demands that all outer clothing should be rid of the accumulation of dust and dirt immediately after wearing. Silk and woolen garments and hats should be brushed. If one can afford them it is well to have a collection of brushes suited to various materials, for example, one with rather short stiff bristles for heavy woolen

Different Shaped Tailors' Cushions Can Be Made at Home and Make Pressing Easier and Results Better.

outer clothing, a whiskbroom for general brushing, a softer bristle brush for velvet or silk, and a specially shaped soft brush for hats. A piece of velvet is also good to use for brushing dust from silk or satin.

Underclothing and all other washable garments should be washed before they become so soiled that hard rubbing is necessary. Cleanliness increases the length of service from a garment and hence is real economy. This is particularly true of stockings. Frequent washing prolongs their life for two reasons: It removes perspiration and grit, which damage the fibers. It changes the place where the strain of wear comes.

All clothing, including shoes, should be aired after wearing. Perspiration will cause wrinkles and disagreeable odors and tend to rot fabrics, unless the garments are placed in a good circulation of air before they are put in closets and boxes. Brushing and airing clothes often, and when possible out-of-doors, will do much toward keeping them fresh and clean and should supplement the nightly-aiiring needed by garments in constant use.

The immediate removal of spots, especially from woolen garments, is desirable because dust settles in them and makes later cleansing more difficult. The care of clothing is less expensive if one can press the garments at home. To do this easily requires special equipment, with the addition of a heavy cotton cloth to use in pressing woolens. An ideal equipment, which might be acquired by making occasional additions to the appliances already in the house, according to Farmers' Bulletin 1085 Selection and Care of Clothing, is as follows:

Iron after waxing, a press cloth, cheesecloth or old thin muslin, and an old bath towel.

The seam board is a triangular board, about 18 inches long, and has the upper edge slightly rounded; it is slipped into sleeves when seams are to be pressed open. The tailor's press board is supported by two upright pieces set on a heavy base. It may be used on any table and is excellent for pressing shaped and tailored garments, such as coats. The tailor's cushion, sometimes called a ham, is oval in shape and narrower at one end than at the other; it is made of heavy cotton duck, stuffed very tight with wet woolen rags, then dried in the hot sun or in a cool oven to prevent mildew.

A strip made of heavy cotton duck 1 1/4 yards in length makes a satisfactory press cloth, because when thoroughly wet it does not dry out quickly under the heat of the iron. An old bath towel provides a soft surface for pressing embroidered garments; it may also be used to wrap up silk waists immediately after rinsing and thus to absorb some of the water before they are ironed.

EGGS ARE VALUABLE FOR THE CHILDREN

Fine Source of Building Material and Energy.

Easter day for Easter eggs, Christmas day for Christmas presents, and the Fourth of July for firecrackers! So runs the calendar for the children. But luckily for their good nutrition, eggs are not restricted to Easter Sunday in quite the same way that presents belong to Christmas and firecrackers to the glorious Fourth. Eggs are so valuable in the building of healthy little bodies and lend themselves to so much variety in preparation that mothers should think of them as running a close second to milk in the children's list. This is easy to accept in view of the function which each of these foods is primarily intended to fulfill. Cow's milk is secreted to make the young calf grow, and is therefore rich in properties which promote growth. But eggs are produced to create baby chicks, and when one remembers that an egg kept at the right temperature for about three weeks produces a chick so well developed that it begins to walk and eat at once, it goes without saying that eggs are a fine source of building material and energy.

And just now when even popular advertisements ask, "Have you had your iron today?" it is worth knowing that egg yolks are the richest source of this mineral so essential in making red blood corpuscles. At the same time they provide other minerals needed in the construction of muscle, bone and blood. Nor are they found lacking in vitamins! In fact, one learning his A B C's in the vitamin alphabet might well begin with a study of eggs since at least two or three of these elusive substances so vital for proper growth and development are present in the yolk and white.

Though eggs are a valuable source of these food elements, they must be introduced into the diet of young children gradually because they are such a concentrated food. Otherwise they are likely to cause digestive upsets and come to be forever barred from the menu of the child who most needs them. A half a teaspoonful of egg yolk seems very little to give at first but in many cases it is better to begin with even less. Some doctors recommend that the tines of a fork dipped in egg yolk should be whisked through the baby's orange juice or cereal gruel until the infant becomes adjusted to handling this concentrated food. Increasing the amount steadily, the child of a year and a half takes a whole egg yolk easily and without any occasion for complaint.

After eating two eggs for breakfast along with a lot else and then finding egg in the muffins, salad dressing, cream pie, etc., throughout the other meals of the day.

Adorning the Knitted Frock; Lovely Gowns for Matrons

CROSS the palm of the itinerant fortune-teller with a piece of silver, and let our past, present and future will be revealed. Knitted outerwear fashions are like that this season—responsive to the magic touch of silver. The stylist trims our sweaters and knitted two-piece suits with silver buttons and gilded trappings and behold! a revelation of entrancing modes. To the woman of smart fashion,

hats, wraps and gowns they present, created to suit matrons (both young and older) seem to indicate a preference that way. But, of course, one must consider that the main demands on them come from matrons and it is most important to please them. Whatever the reasons, the modes of the French reach their climax in apparel for women who have left girlhood behind them. One reason is that

Exquisite Sports Frock.

silver and gold trimmings, as applied to things knitted, present a most interesting innovation.

All sorts of intriguing ideas are expressed with gilded leather as a medium for motifs, bandings, collars, cuffs and belts on the latest knitwear modes. Illustrative of this new style trend is the exquisite sports frock here pictured. It is knitted of mist-blue rayon, its drop-stitch contributing a note of interest. There is a bordering of silver with bright gilded buttons. Surely a sports costume which will make appeal to every queen of fashion!

Added to its comfort-giving qualities, is the beauty of the coloring expressed in knitted rayon or fiber silk as you may choose to call it. The new knitted rayon suits, which are the last word in fashion, abound in lovely flower shades, such as rose, cyclamen, flax.

Then too, the prediction that lacy stitch will feature throughout summer knitted outerwear fashions becomes

nothing is too subtle, too sophisticated or too splendid to help in contributing to the charm of women who have attained poise.

A fine example of French art in matrons' gowns appears in the sketch shown above. It has been created with special reference to June weddings, as suitable for the matron of honor, among the bride's attendants, or to the mother of the bride or groom. It is of lace and georgette and very adaptable—suited to young and to older matrons. It has several marks of the present season to distinguish it and is a beautiful exponent of current modes, notably in the uneven hemline, the jabot-panels at each side of the skirt joined to the georgette with a heading of small beads. A deep yoke in the bodice has a "Y" shaped neck opening and the sleeves are very short. Laces dyed to match are used with georgette in frocks of this kind, and blond

Fine Example of the French Art.

realization in the latest rayon-knit jumper suits. It also adds to the prestige of the newer knitted frocks, that they are two-piece, for without a doubt the skirt with overblouse leads in point of style importance. The blouse may be long-sleeved and high-necked, or a matching scarf, for all these points of fashion are emphasized in the newer knitted modes.

lace is used with contrasting colors. The hat is depended upon to suit these soft and elegant afternoon gowns to the years of the wearer. Younger women wear the wide-brimmed models, often with flower trimmings, but the older matrons select smart, small shapes. The hat pictured is of hair braid with handsome mouture of astrakhan feathers at one side which adds greatly to its beauty.

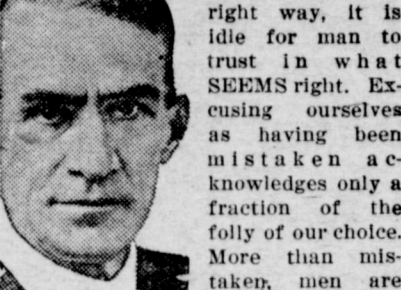

JULIA BOTTOMLEY. (© 1929, Western Newspaper Union.)

A Way to the Ways

By REV. H. OSTROM, D. D. Extension Department, Moody Bible Institute, Chicago.

TEXT—There is a way which seemeth right unto a man, but the end thereof are the ways of death.—Prov. 14:12.

Let us place over against that word "SEEMETH" the word "READETH."

Rev. H. Ostrom, D. D.

For, since God states what is the right way, it is idle for man to trust in what SEEMS right. Excusing ourselves as having been mistaken only a fraction of the folly of our choice. More than mistaken, men are "deceived." That is why the wrong way seems right. "An enemy hath done this." With the sign boards all along the way to give accurate warning it is sin to trust to "seeming!"

But substitute "readeth" for "seemeth." "How readeth thou?" "What saith the Scriptures?" In science what distress and woes would men escape if they humbly observe what God says in His Word! The science of faith would then take the place of the dream of seeming. There is indeed the "science of faith," for the word "science" is derived from SCIO meaning, "I know."

But there comes an end to the choice of ways based upon man's seeming. The dream becomes interrupted and the reality is found out. At the end of the seemed-right-way are "the ways of death." And thus, what was a way eventuates into ways. Now death in the Bible is plainly defined. It never means annihilation, it does mean separation. If it speaks of physical death it means separation of the spirit from the body and if it speaks of spiritual death it means separation of man from God.

The man in whose body are the seeds of physical death, has in his soul that which produces neglect, disobedience, hardness, darkness and doubt. All this man carries with him here. Little wonder that the outcome is stated as a variety—"the ways of death."

And surely it is but reasonable to inquire to what destination does the road we travel lead? What a mistake we make, if, as we journey, we soothe our consciences with a mock simplicity only to find later that it all leads to terrible complexity.

Death in sin leads later to death for sin. That death means the very opposite of simplicity. It means penury. When Jesus told of the man who had come to it He described him as too poor to afford a drop of water. Although the man had owned property and lived in luxury when he was content with the "SEEMING" way of life, he had now come to experience the reality of one of the ways of death. He found it to be abject poverty.

It means guilt. In all the Bible God never leaves an uncertain note as to His righteous program with man, here or hereafter, and, therefore, the Bible never tells of a guiltless person suffering judgment. While our "seeming" may allow us to lightly estimate our responsibility and pass on carelessly through the dreamy days, and while we lull ourselves with theories of brotherliness and kindness, the guilt remains. Man must be godly. He must be at peace with God. He cannot plead fairness with his fellows while ignoring God Almighty. Falling at this point, his path issues into enduring guilt.

It means despair. And that is not easy for a man to picture, particularly if he is well fed and clothed and housed. Is this the reason why the Bible in describing this awful state so often uses the word DEATH? There is in it such a measure of the unescapable. It is a word of such import of relentlessness.

It means destruction. And O, the ways of death are more numerous than all these! But such words as those which we have employed are among the many that describe "the ways of death." They never mean annihilation. If we trace their use throughout the Bible we see that they are used to describe conscious men. Destruction, for instance, is employed as a word to describe the disobedient people of Israel while God is yet calling them to receive his help.

"Awake thou that sleepest" is the word of mercy which comes to us in our drowsy "seeming." And like the voice of thunder we hear the insistent call "O soul, cease 'seeming' and begin believing." Abandon the cheating dream and believe the WORD that Christ, who died for our sins, leads the way home.

True Religion

Religion is not a perpetual moping over good books. Religion is not even prayer, praise, holy ordinance—these are necessary to religion—no man can be religious without them. But religion is mainly and chiefly the glorifying of God amid the duties and trials of the world; the guiding of our course amid adverse winds and currents of temptation by the sunlight of duty and the compass of divine truth, the bearing up manfully, wisely, courageously, for the honor of Christ, our great Leader in the conflict of life.—John Caird.

Daddy's Evening Fairy Tale

MARY GRAHAM BONNER

THE SNAKE

Tommy had started on his adventures to see an old man who was supposed to live at the top of a mountain. He had gone forth on his adventure all by himself so that he certainly felt like a real adventurer.

He knew he would have a long climb before him but he was looking forward to everything that would happen on the way.

The first creature he had met had been a snake.

He had almost stepped on the snake by mistake, and the snake had been so relieved to find that Tommy was friendly.

He had said that it was a great relief to him, and Tommy, not knowing what he had meant at first, had said: "What's a relief?"

"I guess you wouldn't ask such a question if you'd been in my place," the snake chortled.

"It's a relief you didn't strike me with that stick. Wouldn't it be a relief to you if you'd escape being killed?"

"I should say so!" Tommy cried. "It's too bad," the snake said, "but so many don't like us. The old man does though. He knows how we help the farmers and protect the crops for them. He knows how few of us would do any harm, and even old Rattler won't attack anyone unless he's cornered."

"But just because we're snakes they hate us. Aren't you thankful you weren't born a snake?"

"I'd hate to be a snake," Tommy said, and then thought that was pretty rude. "I mean," he explained, "considering I'm a boy."

"I don't suppose you change your skin when you need a new suit, do you?" the snake continued. "Well, I'm smart enough to grow my own suits—I grow a new one under my old one and when I outgrow the old one I've a new one all ready to wear."

"I don't cost my family a cent in clothes." "But I've an engagement. I must hurry. Are you going to see the old man?"

"I'd like to," Tommy said. "Are you going there?"

"No, not now," the snake answered. "But you're on the right way—so am I. Only I'm going to stop and have a nap in the most wonderful napping place of all."

"I've just had my meal and as a reward for helping the farmer so much

"Please Take Me There," Tommy Said.

the old man said I could go and have my nap there.

"Perhaps you'd like to see the place. You wouldn't have to stay as long as I did."

"Where is it?" Tommy asked.

"It's where the wind goes when the wind dies down and is still."

"Oh, please take me there," Tommy said. "I wonder where the wind goes at such times," he added as he followed the snake along.

"It's quite a little trip from here," the snake said.

"I don't mind at all," Tommy said. He thought it would be so wonderful to see the place where the wind went when the wind died down.

"So you won't be tired," the snake said. "I'll sing you our hissing melody as I go along. Do you know it?"

"I don't believe I do," Tommy said.

"Well, I'll sing it for you."

And the snake began to sing in a hissing tone of voice as it wriggled its way along with Tommy following:

Hiss, hiss, hiss, When you see a snake, Miss, miss, miss, Don't hit a snake, Miss it, miss it, Hiss, hiss, hiss.

"I don't believe," the snake said. "I'll have time for any more. I had almost forgotten we were so near."

"You'll see the Palace of the Wind. The sky is his roof, a warm sunny field is his bed. Do you wonder the Wind likes to go to such a place and have a rest?"

"I don't wonder at all," said Tommy. "I feel almost as though I'd like to join the Wind in such a place myself."

"Hiss, hiss," said the snake. "Well, take a nap if you like. No one is going to object that I know."

True to Form

"There's been quite a rumpus in the school yard. What's it all about?" asked the professor.

"Why," explained Harold, "the doctor has just been around examining us, and one of the deficient boys is 'nocking the stuffing out of a perfect

# DADDY THE DAIRY

## DECREASE IN FAT TEST IS EXPECTED

The appreciable falling off in the butterfat content of milk at this time of year when cows are put on pasture causes considerable consternation among some dairymen, and may lead them to believe that errors have been made at the creamery test. The dairy department of the New Jersey State College of Agriculture, New Brunswick points out that the change to pasture causes an increased milk flow which necessitates the butterfat's being distributed through a larger volume. This makes its percentage look smaller, but the total quantity is not less.

The college makes a few suggestions to aid in getting good samples. One must be sure that the sample is truly representative of the lot of milk from which it is taken. Cows should be milked dry and the milk poured several times from one container to another. The sample should be taken immediately. Enough milk must be procured for two fat tests. This requires about one-fourth pint.

Care must be taken to prevent the sample from souring before it reaches the laboratory. To insure against souring, a preservative is added. Bichloride of mercury tablets are the most efficient and one-half tablet is enough. Formaldehyde or formalin may be used at the rate of three drops to a sample. In each case the preservative should be mixed thoroughly with the milk.

One of the most important steps is that of filling the sample bottle to overflowing before inserting the cork. If the bottle is not full the milk will be agitated in transit to such an extent that churning will result. When butter granules are once formed, it is difficult to get a reliable test. If small medicine bottles are used, it is the practice to make a hole in the cork with a nail. Fill the bottle entirely full of milk. Insert the cork and seal it by pushing a match into the hole in the cork. This will prevent the cork from being forced out by either gas or air escaping from the milk.

When these few directions are observed, there is no difficulty in obtaining an accurate determination of the fat content of the milk.

## How to Feed Dairy Cows to Obtain Big Profits

Feed all the roughage a cow will eat. This should include succulent feed and a legume hay.

With a good roughage—as alfalfa, soy bean, or clover hay—feed a Jersey or Guernsey one pound of grain to each two and one-half to three pounds of milk; a Holstein, Ayrshire, Brown Swiss, or Shorthorn, one pound of grain for each three to three and one-half pounds of milk.

With a poor roughage, such as timothy or wild hay, feed a Jersey or Guernsey one pound of grain for each two pounds of milk; a Holstein, Ayrshire, Brown Swiss, or Shorthorn, one pound of grain for each two and one-half to three pounds of milk.

These rules for feeding dairy cattle are laid down in Bulletin 218, "Feeding the Dairy Herd," prepared by C. H. Eckles and O. G. Schrader of the dairy division, University of Minnesota, and just issued by the Minnesota agricultural experiment station. Copies can be obtained by addressing the Office of Publications, University Farm, St. Paul.

The good dairyman, the bulletin says, tries to maintain summer conditions the year round. The conditions of early summer which make possible maximum production are: Abundance of feed, palatable feed, a succulent ration, a sufficient amount of protein, moderate temperatures and comfortable surroundings.

## Stringy Milk Caused by Certain Bacteria Form

Stringy milk, or milk that gets thick after standing awhile, is caused by a certain form of bacteria that get into the milk, either through the water used in washing the milk utensils, from the udder of the cow or cows, or from the dust of the feed given the animals. The source of the infection may be the cream separator, especially if care is not used to have this utensil carefully cleaned and sterilized each day. It may be well to keep the milk from each cow separate for a few days to determine whether or not the infection came from a single cow. It may take some investigation to discover the source of the trouble, and in the meantime all vessels used for the milk should be washed thoroughly and scalded after each using.

## Varying Temperatures

Warm cream should never be mixed with cold cream as this will not only hasten the souring process, but will also give the cream an off-flavor. The proper way to mix the morning's cream with the cream of the evening before is to thoroughly cool the warm cream before it is mixed with the cold cream. While the cream cooling the cover should be slightly sed to allow the animal flavor to escape and the cream should be red.

**Freshen a Heavy Skin**  
With the antiseptic, fascinating Cuticura Talcum Powder, an exquisitely scented, economical face, skin, baby and dusting powder and perfume. Renders other perfumes superfluous. One of the Cuticura Toilet Trio (Soap, Ointment, Talcum).—Advertisement.

"What would you do if you could play like me?"  
"I'd take lessons."

## Thousands Have Kidney Trouble and Never Suspect It

### Applicants for Insurance Often Rejected

Judging from reports from druggists who are constantly in direct touch with the public, there is one preparation that has been very successful in overcoming these conditions. The mild and healing influence of Dr. Kilmer's Swamp-Root is soon realized. It stands the highest for its remarkable record of success.

An examining physician for one of the prominent Life Insurance Companies, in an interview of the subject, made the astonishing statement that one reason why so many applicants for insurance are rejected is because kidney trouble is so common to the American people, and the large majority of those whose applications are declined do not even suspect that they have the disease. Dr. Kilmer's Swamp-Root is on sale at all drug stores in bottles of two sizes, medium and large.

However, if you wish first to test this great preparation send ten cents to Dr. Kilmer & Co., Binghamton, N. Y., for a sample bottle. When writing be sure and mention this paper.

## Sure Relief FOR INDIGESTION

## More Chickens

Poultry farms in the United States last year produced 678,300,000 chickens, or 29,400,000 more than in 1923, according to the federal Department of Agriculture, but the increased demand took care of them all.—Wisconsin Agriculturalist.

Strong reason makes strong actions.

## NOW DOES ALL HER WORK

Has No Backache, No Bad Feelings Because Lydia E. Pinkham's Vegetable Compound Drove Her Illness Away

Milwaukee, Wisconsin.—"I was in a badly run-down condition and I would get weak spells and terrible headaches. I felt so badly last year that I could not do any housecleaning. The minute I would lift or stoop it seemed as if I was going to fall to pieces. I told a neighbor how I felt and she said that Lydia E. Pinkham's Vegetable Compound was surely the right thing for me. I took four bottles then and in the fall of the year I took three. I had been treated by a doctor but he gave me an iron tonic and that did not help me. It seemed that the tonic did not have in it what the Vegetable Compound did. That gave me the strength and ambition I needed and I have gained in weight. This year before I started to clean house I got four bottles of the Vegetable Compound and am taking it right along. I tell all my friends about it and how much good it does me. They can notice it because I have gained in weight. I weigh 118 now and do all my work myself again."—Mrs. EMIL O. BRANDENBURG, 651 37th Street, Milwaukee, Wisconsin.

## HEALS RUNNING SORES

"I feel it my duty to write you a letter of thanks for your wonderful Peterson's Ointment. I had a running sore on my left leg for one year. I began to use Peterson's Ointment three weeks ago and now it is healed."—A. C. Gilbrath, 703 Reed St., Erie, Pa.  
For years I have been selling through druggists a large box of PETERSON'S OINTMENT for 35 cents. The healing power in this ointment is marvelous. Eczema goes in a few days. Old sores heal up like magic; piles that other remedies do not seem to even relieve are speedily conquered. Pimples and nasty blackheads disappear in a week and the distress of chafing goes in a few minutes. Mail orders filled. Peterson Ointment Co., Inc., Buffalo, N. Y.

**HINDERCORNS** Removes Corns, Calluses, etc., stops all pain, causes comfort to the feet, makes walking easy. 10c by mail or at Druggists. Hillsco Chemical Works, Patheogue, N. Y.

**Dickey's OLD RELIABLE Eye Water** relieves sun and wind-burned eyes. Doesn't hurt. Genuine in Red Polishing Box. 25c at all druggists or by mail. DICKEY DRUG CO., Bristol, Va.—Tenn.

**Shoe-Shine Machines**  
Penny-in-the-slot shoe-cleaning machines now are in use in several cities. The penny starts a brush revolving which shines the shoes.
