Mulshoe, Bailey County, Texas, Friday, Jan. 15, 1926.

Plains Circuit Poultry Show to be Next Week

Beginning Jan. 21, the Plains Circuit Poultry Show will be held in Clovis. The show consists of seven counties in Texas and New Mexico which have been combined to put on one real show that will be of great value to all exhibitors as well as those who attend.

A fine premium list has been published and is available to anyone who makes request to the secretary of the Show in Clovis, N. M.

Handsomely embossed ribbons are provided for first, second and third places in all classes and purple ribbons for sweepstakes places have been provided, besides cash prizes and a Silver loving cup for the best exhibit by anyone breeder, considering number and quality on entries. Plans are going forward at a rapid rate and an entry of 500 birds is expected in this show.

This should be the largest and best exhibit of poultry ever displayed on the Plains. An egg display, in which farmers are invited to bring one dozen of white or brown shelled eggs will be a feature of the Poultry show. Egg grading and other demonstrations will be conducted during the show for the benefit of those attending.

An Epistle of the Narrowness in the Small Towns

"What do you consider the greatest drawback to the average small town?" was the question I put to a prominent business man of one of our large western cities while in conversation with him several days ago.

"The greatest drawback, the one that causes such wrecking of compatibility is without a doubt narrowness, this, also, is the hardest of sentiments to fight for people who become so 'set' and entrenched in their ways of thinking are as a rule so hard-headed, stubborn and ignorant that even though you are able to convince them, within themselves that their narrow views are unjust they will not admit it publicly, even when they realize that their obsolete way of thinking are keeping a small town from growing and developing."

"And what do you think is the cause of this narrowness?" I asked. "The cause is obviously cliques. Cliques and jealousy. There is one class of people who fail to realize that everyone has the right to think and act as they please as long as they obey the law, just as everyone has the right to worship as they like. These people band themselves to each other thru jealousy against those who realize, appreciate and take advantage of their rights" he answered.

Thus it is that the town cannot grow. The cliques of the evil mind are so busy attending to the business of others that they have no time for their own. Consequently instead of improving the town they choke it to death. By one who approves of and takes advantage of our personal rights.

L. J. Stokes, L. W. Brooks and H. W. Goolsby of Childress, were here this week looking after land interests. They were in town Wednesday figuring on some building material.

County Nurse is Busy With Communities

Miss Wentland, county nurse, has been busy since Xmas with school work at West Camp and Mulshoe schools. She hopes to complete her school inspection in about two weeks and then devote her time to class work and to individual work in the county. She wants to extend a cordial invitation to all the mothers in the county to bring in their babies and have them weighed and measured. Miss Wentland will be in office every Saturday and will be glad to meet with all the people in the county. There is nothing more important than the health of our children, so come in and keep track of their weight, also your own.

Miss Wentland attended a meeting at the Wilson school last Friday and helped organize a Community club. This club is to take in all of the people of that community and is for the betterment of the district.

Miss Zola Coventry Marries in Plainview

On Jan. 5 at the Presbyterian church in Plainview, Mr. Dan Scott and Miss Zola Coventry were joined in matrimony.

This marriage came as a very great surprise to everyone, especially to the parents of the young couple. Miss Zola Coventry is the beautiful and accomplished daughter of Mr. and Mrs. Wm. Coventry and is much beloved by everyone in this community. It is needless to say that she has a host of friends here who wish her every happiness that this world can give. Dan Scott is the son of A. J. Scott of Hurdley. He is a graduate of Leland Stanford University of Cal. and the only 23 years of age has perfected several useful inventions among which is a collapsible oil drill for which he has been offered a small fortune. He has traveled extensively and last fall was offered a good position in India by a large oil concern. He has been employed by some of the largest oil companies in this country and has many friends among men. We wish this young couple all the joy possible.

Furniture is Installed in New Court House

A. M. McElwee finished installing the wood furniture in the court house Tuesday. This is one of the keener jobs on the South Plains and we are proud to announce it. Mr. McElwee is from Ft. Worth and represents the A. M. McElwee & Co.

The steel furniture will arrive the latter part of the month and when the job is completed will be one of the best on the Plains.

R. L. Brown Erecting New Office Building

R. L. Brown the land man is having an office building erected just back of the McCarty building. The building will have a lobby, private office, bed room and a garage in connection.

We are glad to see the new office going up, for we have looked forward and planned for much improvement the past year. We understand several other buildings will go up soon.

Miss Ollie Sweet at the Hotel James has been suffering with a bad hand this week. Caused by sticking a nail file in her hand.

M-1, British Submarine. Sinks With 68 Men

The British submarine M-1, with 68 officers and men, now lies at the bottom of the English channel, off Start point on the Devon coast where it dived a few days ago during maneuvers and did not reappear on the surface. The M-1, built during the war, was one of the few which mounted a 12-inch gun of the type mounted by dreadnaughts.

E. R. Hart's Office Building Burns Tuesday

Tuesday morning about 10 a. m. a fire broke out in the roof of the office of the E. R. Hart Lumber Co. A defective flue is said to be the cause of the fire. The alarm was given by city Marshall Joe Rutherford, firing three shots from his six-shooter. In a few minutes a bucket fire department was organized and the water was coming from many directions. A hard fight was put up but the flames were soon beyond control. Part of the office equipment was saved and the two store rooms were stripped even to the shelving and the goods were carried to safety. A fire wall was constructed of sheet iron and salt was spread on the roof of the lumber shed next to the burning building. The wind was in favor of the firefighters or the entire town could have gone up in smoke.

The loss was estimated around \$15,000. The building and stock were insured.

We understand Mr. Hart will build a brick soon. They are making room in the new warehouse for a temporary office.

Judge Joiner Announces for District Judge

Judge R. C. Joiner of Plainview advised The Journal of his intentions to be in the race for District Judge of the 64th Judicial district to succeed himself and asked the Journal to carry the announcement.

Judge Joiner's qualifications for the office are recognized as excellent, his record as a trial judge being among the best in this section of the state. He is well known over the county both personally and from his long service as a judge of the District Court in this county.

Should he be re-elected he can be depended upon to continue giving all his efforts to the proper conduct of his office. He will be a candidate subject to the Democratic Primary in July this year and asks your consideration when you come to cast your ballot. The duties of his office will practically preclude an extensive campaign in the counties comprising his district, although he will give as much of his time to campaigning as his duties will permit.

H. C. Henington is stringing up a new radio set this week. They will be keeping late hours after the radio bug gets a good grab on them.

Sante Fe Making Many Improvements

The Sante Fe has a bunch of workmen here under the able foreman, R. L. Jones. They have extended the warehouse 32 feet and the platform 28 feet. No changes will be made in the waiting room we understand. An up-to-date treating plant is 90 per cent completed and will add another large steel tank 48 feet high and 24 feet in diameter. This will give two tanks of this size.

Due to the increasing business at this point they were forced to make these improvements in order to continue to give the usual good service by this company.

Gardner Dry Goods - Putting on big Sale

Gardner Dry Goods Co. is announcing with a page ad in this issue their January Clearance sale. The firm has put out many colored circulars this week all over the territory. The big sale will start Saturday and close on Jan. 30th. This is going to be a real old time sure enough and it will pay you to drive many miles and stay until you have filed the complete order. J. M. March the manager said.

Texas Utilities to be in Mulshoe Soon

Representatives from the Texas Utilities Company were here Wednesday and the city and the county signed charters for them to do business in the city and county.

The charter states they will be here in 60 days and not longer than six months. The line is completed to Amherst and the poles are at Sudan to complete the line to Farwell, then the light and power can be turned on.

The people of Mulshoe have been longing for this announcement. It has been somewhat of a dream to some of the citizens but now they can see that it takes a little time to accomplish such big tasks as this one. Just watch Mulshoe make tracks, will you?

E. M. Wilder Dist. Mgr. of the Bennett Mfg. Co. was here the first of the week looking after the yard. He stated he was well pleased with the business Mr. Sanders reports.

Mrs. L. D. Griffin of Plainview was over the first of the week the guest of the J. H. Johnson home. Mrs. Johnson returned with her Thursday to visit in Plainview a few days.

SEE AMERICAN LEGION MINSTREL TONIGHT FRIDAY 15

C of C Banquet Well Attended Tuesday Night

Tuesday evening the Mulshoe Chamber of Commerce held its annual banquet at the high school building. The ladies of the Baptist church served the big feed. It was delicious and the table was as pretty as we have ever seen. It was attended by local people and a number of visitors were present from South Plains towns. The out of town visitors were S. D. Holman, editor of the Hereford Brand and a prominent West Texas Chamber of Commerce worker, D. T. Moss, secy. of Hereford Chamber, Rev. J. O. Haynes, Methodist pastor and D. T. Ashbrook a business man. The following business men of Clovis: S. A. Jones, Citizens Bank, Daniel Boone, Clovis International Bank, L. W. Johnson, Sones & Lindley, Fords, W. H. Duckworth, Southwestern Drug Co., Geo. O. Roberts, Roberts Dearborne Hdw. Co., W. J. Stalcup, Barry Hdw. Co., F. S. Burns, Real Estate, Paul Williamson, H & H Grocery & Market, G. A. Campbell, Campbell Ice Cream & Bottling Co. B. W. Johnson, Johnson Bros. Furniture & Undertaking Co. Hugh Williams, Electric Filling* station, D on Weatherford, Secretary Chamber of Commerce. E. M. Wilder of O'Donnell, A. M. McElwee of Ft. Worth representing the McElwee & Co., dealers in high class wood furniture. Mrs. L. D. Griffin of Plainview was a guest of the J. H. Johnson family.

A number of snappie addresses were delivered by the various visitors. Taylor White acted as toastmaster.

The following were elected as directors, they are to meet on Jan. 22 and elect a president, vice-president and Secretary out of their membership of nine. J. E. Aldridge, E. R. Hart, K. J. K. Smith, D. E. Cox, Levi Pressly, L. S. Barron, Taylor White, A. V. McCarty Jr., M. P. Smith, and R. L. Faulkner. The last four tried, the body may vote the tie off as they see fit.

A wonderful program is being worked out for this year. This will likely be made known at the next meeting.

F. P. Parker of Trinity, was here the first of the week and purchased a number of business lots on the square north of the Court house. We understand he will build on the corner lot soon.

Mrs. Elmer Hoskins left Monday for Lubbock, where she underwent a n operation at the West Texas Sanitarium. She is reported doing nicely.

Mulshoe 100 Per Cent Record

The Mulshoe Public School teachers boast a 100 per cent enrollment in the Texas State ass'n. The following letter has just been received from R. T. Ellis, Secy. of T. S. T. A.

Mr. Smith: "We congratulate you and your teachers in making Mulshoe 100 per cent so early in the year. Indications are that this will be the greatest year educationally Texas has ever had."

R. T. Ellis, Reey. Floyd Golden, Supt. of the Miami Schools, and the vocational Agriculture Instructor at that place visited the highschool here recently.

Supt. Golden was much impressed with the new highschool building here. He said Miami would put up a good highschool building before next school term.

We have just received most of our library books. They have been needed and will be used very much from now on. We have a Nelson looseleaf encyclopedia, \$148 and about \$500 worth of additional library books. These books are required by the State Department of Education of any highschool seeking affiliation.

Mid-term examinations are now over. A, B and C are passing grades. D is conditional failure, F is failure. Any student making a D or an F still has a chance to making a passing grade if he works hard from now on until school is out. Final examination will be given the last week of school. Bear in mind that Mulshoe High School is a Class A school. We are asking for affiliation in 10 subjects (12 units.) This means higher standards of school work better trained teachers than the unaffiliated high schools. Higher standards mean more work and consequently lower grades in some instances.

A number of Highschool students are working on the literary events in the Interscholastic League. These events comprise debate, declamation, essay writing, spelling, journalism, extemporaneous speech and music memory. The school will have strong basketball squads and track and field men.

Come out to the P. T. A. meeting Friday, Jan. 15 at 4 p. m. A grade program will be given in the high school auditorium just before the meeting. Parents and friends are cordially invited to attend.

Hurley Ind. School Dist. Building Brick

The Hurley Independent school district No. 1 is building a modern brick to cost \$15,000. It will be 70x55 with a basement. The Bryson Construction Co. of Plainview has the contract and the material is coming thru the Whaley Lumber Co. of this city.

This building is located on the town site of Progress between this city and Lariat.

L. S. Barron, the Abstracter, is the owner of a new Chevrolet Coach, purchased from the Valley Motor Co.

J. A. Morgan and wife returned from a flying trip to Tahoka, Wednesday.

Lester Ashley of Clovis, has purchased the old McCarty Dr. Store building and has rented to H. B. Ney, who will conduct a new store, when the y moves to his beautif

CARE OF FOOD DURING WINTER

Cold Box Built in the Side of a House—1. Situation of a Cold-Storage Box in the Kitchen Wall—2. Interior View of Ventilated Cold-Storage Box—3. A Ventilated Closet Like This Is Good for Storing Food in Winter.

(Prepared by the United States Department of Agriculture.)
 During the winter season sometimes the housekeeper's vigilance in the care of food supplies becomes relaxed. She places the same reliance on Jack Frost that was formerly accorded to the ice man, and does not always do a fair share of the work necessary to keep foods in good condition.

Successful care of food in the home depends very largely on whether there is a good storeroom, suitable containers, and an icebox or some other means of keeping foods cool. The United States Department of Agriculture points out. Merely keeping perishable foods cool, however, does not eliminate the need for frequent inspection and picking over, discarding wilted leaves on vegetables and salad materials, for example, selecting for first use those pieces of fruit most likely to become over-ripe, and otherwise exercising the same care that one would in summer or any other season, to provide sanitary conditions where food is stored.

Set Box Outdoors.
 When it seems no longer necessary to buy ice, foods can be kept cool in various other ways. If the refrigerator is used as a winter cold box without ice, it should be set out of doors, preferably on a screened porch, and ventilated by propping open one of the doors at all times. It should be cleaned and cared for regularly, as usual. In freezing weather food cannot be kept out of doors, however, and some unheated, protected place must be found for it.

If the cellar must be used as the chief storage place for food in cold weather, a dumb-waiter on which sup-

plies can be lowered and raised soon pays for itself in time and strength saved. Since the bottom of the cellar is the coolest part, foods often keep best if set on the floor, provided it is clean and dry. If the floor is damp and earthy, a layer of clean bricks may be arranged under the food. If there is a furnace in the main part of the cellar, it is generally too warm and dry for the winter storage of fruits and vegetables, but a storeroom can often be partitioned off and so ventilated that the temperature is kept constantly cool.

In a cold, dry climate food may be successfully kept in an air-shaft extending from the cellar or the lower floor of the house to the roof, and equipped with a door opening into the kitchen or pantry and wire or perforated shelves of convenient height. Both ends of this shaft should be screened. It will be usable for the greater part of the year.

Best Cold Box.
 One of the best cold boxes for storing food in winter is the type projecting out of a kitchen window or built in the side of the house, with a door opening into the kitchen. Such a cold box should be closed entirely when food is in it, except for screened openings allowing a current of air to pass through it at all times. These openings should be placed so that dust will not blow upon foods in the cold box.
 All foods and food materials that are to be used without washing, such as butter, cheese, or sugar, should be wrapped or kept in covered receptacles, whether stored in the refrigerator or in the pantry, cellar or any other place.

ROSETTES DECORATE DRESSES; PASTEL VELVET RIBBON POPULAR

ROSETTES on dresses have become a favorite theme of the fashion-ist. Not only do they fill a decorative part on filmy evening and dance frocks but in a tailored way they are a success on street frock and coat as well. It all depends upon the medium and manner of placement.
 Perhaps the simplest treatment is the shirred rosette, which may or may not be of the same material as the frock it trims. The picture shows an effective placement of the ruffled or shirred rosette. It is interesting to note that this frock presents a two-piece appearance in that the blouse

is finished with the circular edge of the skirt to form scallops. A second row flanked these at the top so that a complicated effect was attained, resolving into scallops about the lower edge as well as outlining the shirred border at the top, where it met the dress.
 A look into the book of millinery prophecy reveals a future in which pastel color is to play a leading role. Nor are we to be kept waiting for a realization of this promise, for the first between-now-and-spring hats bring a message of color loveliness.

In the mid-season chapter of the fashion book, it is pointed out that the medium employed for the forming of the clever trimming on the first hat in the picture. It is intriguingly folded into triangles which somewhat cover the crown.

Showing Effective Use of Rosettes.

velvet ribbon, which are crowding upon the millinery scene, refreshing color denies winter as it gives notice that spring is on the way. One of the most important themes throughout costume design is that of pastel coloring.
 The use of velvet ribbon is very pronounced both as dress trimming and for hats. Toques are made all of wide velvet ribbon in manner defined in the model shown last in the group of mid-season hats pictured here. The original is in silvery gray, for gray millinery is very popular just now.
 Another color exploited is green, the tones which bespeak the freshness of spring. That cunning suede hat with the perky bow which you see in this group is delightfully springlike, because of its dainty green coloring. Its trimming discloses a brim bordering of velvet ribbon arranged in cartridge plaits. The ribbon is in the exact green shade of the felt.
 For the hat shown in the lower left of this group two shades of velvet ribbon are used together. Artful color-

Daddy's Evening Fairy Tale

By Mary Graham Bonner

MAKE-BELIEVE DENTIST

Little Daddy Fenwick awoke with a dreadful toothache. At once they knew he had eaten too much candy. There had been a candy grab bag and some of the other parents had treated little Daddy Fenwick too often. He had a very bad toothache, but it got better the minute Parent Robert said that Parent Billy Mahon would take care of it.

However, Parent Robert still said he must go. Parent Robert had heard of many a toothache which had got better the minute a person suggested the dentist. Maybe he even remembered more than he realized! Maybe even Daddy Fenwick remembered when he had treated Robert in just the way he was now being treated. Somehow the phrase, "it's only for your own good, son," had a familiar sound.

"Yes, son, you must go," Parent Robert kept repeating. "Doctor Billy is a very kind man, and he won't hurt you. Besides, do you want to lose all your teeth and not be able to chew. Just suppose you never were able to eat anything but eggs and junket and oatmeal and milk all your life?"

Daddy Fenwick didn't think he'd ever mind anything if only he could escape going to Parent Doctor Billy now. He wished he could make some one else go to the dentist's in just this way, and somewhere in his thoughts he had a disagreeable feeling that he had. Yes, and that he had insisted in just this fashion, and had said it was for a person's good to attend to the teeth.

There were several other daddies and mothers waiting with their parents in Parent Doctor Billy's outer office. The outer office was filled with picture books—old picture books Daddy Fenwick had read, and other dull books he didn't care to see again.

There were no stories that looked interesting, and there were a great many booklets on the care of teeth which were filled with pictures showing teeth which had been neglected. Parent, Sally had come with Daddy Fenwick and she, too, seemed a little nervous as they waited.

There came a sizzling sound from the inside room. Then there was quiet. And then they could hear Parent Doctor Billy saying:
 "That will be all for today then. But you'll have to come next week. How about Wednesday at four o'clock, right after school, for an appointment?"

The door opened and Parent Doctor appeared in the doorway. He said goodby to little mother Kathleen Banks, who had been his last patient, while with one eye he looked over the patients in the waiting room.
 Daddy Fenwick huddled down in his chair and hoped he wouldn't be noticed. But Doctor Billy had spotted him.

"Ah, come right along, Daddy Fenwick. You may come into the office now. Just so we can have a look and see what the trouble is."
 Daddy Fenwick walked into the inside room. It was just the same as Daddy Mahon's office had always been except the case with the instruments was in front of the patient's chair.

Daddy Fenwick shivered.
 "Now open, just a little wider," Doctor Billy said, after he had put the white cloth around Daddy Fenwick's neck.
 "Oh dear, oh dear, this is too bad!"

"Whazz-it—t-b-a-d?" asked Daddy Fenwick as well as he could with a large dab of cloth in his mouth.
 But Parent Doctor Billy didn't seem to notice, for he went on talking and asking questions just as though Daddy Fenwick had nothing in his mouth to keep him from answering.

Then Doctor Billy put his foot on a bulb which started the zizzing machine going. He seemed to be starting to use it many times but never actually did. He merely poked all about Daddy Fenwick's mouth with one of his daddy's silver mirrors, and picked up instrument after instrument from the case as though each had some very particular purpose which was, in the end, a deep secret.

"Now," exclaimed Doctor Billy, as he pulled off the napkin from Daddy Fenwick's neck and pulled the dab of cloth out of his mouth, "take a little water."
 "I think you may go now, but this evening before you go to bed take out the little pieces of cotton I've put in your sore tooth. I think your tooth will be all right by then. Glad you came before it got too bad. Your teeth aren't too strong. You'd better come back in a month."

When Daddy Fenwick got home he found that his teeth were all right. He was glad to hear that. He had been a little nervous when he went to the dentist's office, but he was glad to hear that his teeth were all right. He had been a little nervous when he went to the dentist's office, but he was glad to hear that his teeth were all right.

ties over the deep founce in the front. Sometimes lace rosettes are formed of edging sewed row and row in large wheels. These are ranged about the hem of the colorful crepe de chine evening frock to form scallops. This treatment is very adaptable to junior modes.
 The rosette idea is more and more being elaborated upon. Creative genius is devising whimsical rosettes of novelty ribbon, and of plaited velvet

Group of Midseason Hats.

ribbon, using these on party frock to charming advantage.
 Flat rosettes of narrow grosgrain ribbon are applied to cloth gowns as well as silk in most effective manner. The latest flat crepe daytime dresses make much of the rosette form of trimming which either matches, blends or contrasts the coloring of the fabric of the frock.
 In the instance of a very charming hols de rose flat crepe frock, the scalloped idea was carried out through adroit rosette positioning. These rosettes were nothing more or less than large flat wheels sketched of the same material as the dress. They were ap-

combination is another noteworthy promise for the future. In the instance of the pretty hat here shown fuchsia is contrasted to lavender. This colorful model tops a fur coat most becomingly.
 Ombre or degrade velvet ribbons are especially indicative of the blended color schemes proclaimed for spring. Brown ombre velvet ribbon is the medium employed for the forming of the clever trimming on the first hat in the picture. It is intriguingly folded into triangles which somewhat cover the crown.

OLD FOWL SERVED AS FAMILY TREAT

Chicken and Vegetables Form Delicious Blend.

(Prepared by the United States Department of Agriculture.)

When some of the older birds are being culled from the poultry flock, plan to treat the family to fowl en casserole with vegetables. The chances are that the oldest rooster will not be recognized in this combination. The long, slow, moist cooking in the covered dish makes even drumsticks tender, while the flavors of chicken and vegetables form a delicious blend. This is also the kind of "dinner in one dish" that is easy for the homemaker to prepare long in advance of the meal hour.

The United States Department of Agriculture gives the following directions for preparing fowl en casserole with vegetables:

- 5-pound fowl
- 2 stalks celery
- 2 carrots
- 1 green pepper
- 1 onion

Cut the fowl into convenient pieces for serving. Slice or chop the vegetables into very small pieces. This can be done quickly on a tin vegetable slicer. Dust the pieces of chicken with flour and brown them delicately in a small quantity of fat. As the chicken is removed from the frying pan, place it in the casserole. Then pour the chopped vegetables into the frying pan and let them absorb all the browned fat from the chicken, before playing them in the casserole. Add enough hot water to keep the mixture from sticking to the dish, place the cover in position, and cook for three to four hours, or until the fowl is tender. Just before serving, remove the pieces of fowl, add a cupful of milk which has been blended with one and one-half tablespoonfuls of flour, and cook for ten minutes. Pour this sauce over the chicken or replace the chicken in it and serve from the casserole. Flaky boiled rice, baked or plain boiled potatoes are a good background to serve with this tasty chicken dish.

Bologna-Style Sausage Is Easily Made at Home

It hardly pays to make up a quantity of bologna-style sausage smaller than 25 pounds, but when considerable beef is on hand, this product can well be made for the sake of variety. The United States Department of Agriculture tells how to make it:

In making bologna, for each 20 pounds of beef, 5 pounds of fresh pork may be added (one-half beef and half pork makes a richer product). Grind the meat coarse, then add the seasoning and grind through the fine plate. The sausage will keep long if the beef and salt are ground together and allowed to cure for 24 to 48 hours. For seasoning 25 pounds of meat, 1/2 pound of salt, and 2 1/2 ounces of pepper are usually satisfactory. Garlic or coriander may be added if desired. From three to four pounds of water may be added to the above mentioned quantity of meat. Mix with the hands until the water is entirely absorbed by the meat and the whole mass becomes quite sticky. When thoroughly mixed, stuff it into soaked beef casings or "rounds" and smoke the bologna from two to three hours at a temperature of from 60 degrees to 70 degrees Fahrenheit or until the casings are a rich mahogany brown. After smoking, cook the bologna in water about 165 degrees Fahrenheit, until it floats; 45 minutes to one hour is usually sufficient. After cooking plunge the bologna into cold water to chill and then hang to drip and dry. The sausage should be kept in a dry place for immediate use, or it may be canned by packing in cans, covering to within one-half inch of top with the liquid in which the bologna was cooked. It should then be heated to a temperature of 250 degrees Fahrenheit for 45 minutes, or a 15 pounds steam pressure.

Food Value of Corn Equal to That of Other Cereals

Corn is one of the most important cereal foods in the United States. It is in more general use in the southern than in the northern states. Its food value is very similar to that of other cereals. When used in a diet that also supplies dairy products, flesh foods, and vegetables or fruits, the choice between the various cereals depends more on personal preference and price than on the nourishment supplied. If corn is abundant and cheap, or if wheat, rice, or other cereals are scarce and dear, corn may be safely substituted for them.

Synthetic Gasoline
 Synthetic gasoline is being invented in nearly every civilized country in the world. The latest contribution is a new fuel invented by a Norwegian civil engineer. It is known as "Norsk Kraft Olje." The process under which it is made has been patented.

Two Soaps That Lather Freely
 A great many persons who have been using "That Good Old Pine Tar Soap" for all or part of the time since 1878 do not realize that Grandpa's Wonder Soap comes also in both White and Green.
 Grandpa's Wonder White Soap is a cocoanut oil soap that lathers freely in any kind of water, whether it be hot or cold. After all, it is lather that makes a soap and this has a rich, creamy lather that reaches right down into the pores of the skin and grabs every last particle of dirt.
 Grandpa's Wonder Green Soap is a combination of cocoanut, palm and olive oils that has an especially delightful effect on tender skin. Either burned or chapped skins find this soap both soothing and cooling.
 Most dealers handle Grandpa's Wonder Pine Tar Soap and sell also both the White and the Green, in either medium or large size cakes, at popular prices.—Adv.

CATARRH NEGLECTED CAUSES DEAFNESS
 Read How You May Get Rid of It by a Safe Reliable Way.
 If you have catarrh you are in danger of losing your hearing; the first symptoms of catarrhal deafness are roaring or buzzing sensations and a stopped-up feeling in the ears. A neglected cold, or an uncured cold, leads to catarrh, and as everybody knows catarrh affects the eyes, ears, nose, throat, lungs and frequently undermines the general health.
 The secret of the successful medication of these hidden parts was discovered by Dr. Blosser in his medical practice. This remedy is applied by smoking a certain combination of medical herbs (containing no tobacco) in a pipe or cigarette. Dr. Blosser's Remedy produces a dense smoke vapour which is inhaled or forced into the Eustachian tubes leading to the middle ear. It penetrates to parts impossible to reach with balm, ointments, sprays, douches, pills, tablets and so-called "constitutive" treatments. This Remedy is absolutely harmless and is being used successfully by men, women and children.
 If you suffer from catarrh, asthma, catarrhal deafness, or if subject to frequent colds, you should try Dr. Blosser's Remedy in which may be had at any drug store; or if you desire proof of its beneficial and pleasant effects, send ten cents (coin or stamp) to The Blosser Co., 72 G. H. Atlanta, Ga., for a trial package.

**Marketing Aids
Used by Farmer**

**Good Evidence That Better
Business Methods Are
Being Employed.**

(Prepared by the United States Department of Agriculture.)

There is every evidence that farmers generally are using better business methods in handling and marketing their products, the bureau of agricultural economics points out in its annual report to the secretary of agriculture. "This is shown," says the report, "in the manner in which farmers have rebuilt their business from the depression of five years ago. It is shown, also, by the steadily increasing call for information on standardization and inspection of farm products, farm management, credit facilities, and both domestic and foreign market news."

Is a Service Bureau.

The bureau is organized to obtain by research and investigation facts on practically all phases of the economics of agriculture from problems in farm management to the final distribution of agricultural products to consumers. It is essentially a service bureau to give farmers the best available information on these subjects.

Federal standards are now in use for 32 leading fruits and vegetables, 8 grains, 7 varieties of hay, cotton, wool, tobacco, butter and eggs, and for a number of classes of live stock and dressed meats. The American cotton standards are now used throughout the world, and the bureau is endeavoring to effect similar uniform standards for wool.

Market news reports on shipments, supplies and prices of farm products in the leading market centers are used by farmers everywhere, a nationwide service on collecting and disseminating this news by telegraph and radio having been organized. The bureau operates the largest government leased wire circuit in the world in connection with this service.

Much Help to Farmer.

Facts provided farmers on the outlook for specific farm crops, it is considered, have done much to enable them to plan their operations. The pig surveys by the bureau have been used widely in an effort to reduce the ups and downs in the hog industry.

"Special effort is made in the marketing work of the bureau to determine the kinds, quality and quantity of products which are and which should be offered for sale. In the process of distribution questions of standardization, packing, assembling, transporting, warehousing, financing and finally of retailing all call for special studies and services.

"Without broad information in regard to general economic conditions, the farmer is not able to meet the changing conditions in domestic and world markets. Hence the need of closely co-ordinating the facts of national and world production, movements and prices for the purpose of providing a basis upon which farmers may plan their programs of work."

Alfalfa Proven Success

as Protein for Cows

Alfalfa is no longer an experiment; it is a proven success. With alfalfa the dairyman has good financial possibilities, but without it the future holds but little hope. Few as yet really appreciate alfalfa or they would be growing a larger acreage of it. Alfalfa yields twice the tonnage of other hays and several times the amount of protein. Rightly handled it does not need to be seeded nearly as often. In total feeding value it is surpassed only in yield by corn silage and the two should go hand in hand as one balances the other. They are by far our most profitable crops, although sweet clover pasture and corn for husking are likewise profitable.

Alfalfa will do well on any good corn soil that is well drained and supplied with lime. Land manured for corn the previous year is preferable. Fall plowing insures a firmer seed bed and is to be preferred for seeding down. Rolling of spring plowing is next best. In any case it will pay to fit the soil well.

If the soil lacks lime, and a test will show whether it does or not, the lime can be applied any time after plowing in the fall, winter or spring. Later it should be disked in.

**Easiest and Humane Way
to Dehorn Young Calves**

The easiest and most humane way to dehorn calves is by the use of stick caustic potash when they are but a few days old.

When the calf is four to seven days old the hair over and around the knobs that later produce horns is clipped close. The moistened end of a stick of caustic potash is then rubbed over the horn until a spot about the size of a dime becomes raw.

Grease may be applied to the outer edge of the spot to prevent spread of the caustic and making the sore larger than necessary.

The calf should be kept in the dry a few hours after the treatment. Following the successful application of the caustic a seal will form over knob and drop off in a few days. Stick caustic potash can be procured at a drug store for a few cents and may be kept for some time in a tightly stoppered bottle. While handling the caustic it should be wrapped in paper to prevent injury to the hands.

**Paper Best Suited
for Wrapping Fruit**

**Should Have Good Strength
and Flexibility.**

(Prepared by the United States Department of Agriculture.)

Practical tests to determine suitable papers for wrapping fruits and vegetables conducted by the bureau of chemistry of the United States Department of Agriculture show that paper for wrapping apples, oranges, lemons, pears and tomatoes should weigh 10 or 12 pounds per ream of 500 sheets 24 by 36 inches in size, and that it should have a bursting strength of not less than 6 points.

It should have sufficient flexibility and strength to withstand the vigorous rapid twist given the paper in wrapping and to give a smooth, attractive appearance to the wrapped fruit. Paper complying with these requirements generally has been found satisfactory by the packers, but paper not complying with the specifications has not proved serviceable.

Wrapping papers of the right kind will retard evaporation and thus tend to keep fruits and vegetables in a fresh condition. They will reduce damage in shipment from rubbing or jarring, retard final ripening until removed by the retailer, and they will give protection from dust, frost or the sun. While it cannot be expected that one kind of paper will prove suitable for all kinds of fruits and vegetables, the specifications will enable shippers to purchase satisfactory wrapping papers.

In order to secure additional information for fruit packers, the bureau of chemistry will examine samples of paper that have proved satisfactory in service. The sample sent in must consist of at least 20 wrappers, 10 new and 10 that show the paper torn or damaged in wrapping fruit. A full statement as to the points in which the paper is unsatisfactory, the name of the maker, brand name of paper, and approximate percentage of the paper falling during wrapping, should accompany the sample which should be mailed to the bureau at Washington.

Cultivation of Alfalfa

Helps to Control Weeds

Cultivation of alfalfa may be beneficial under two conditions—when barnyard manure has been applied to the soil as a top dressing, and when it is necessary to control weeds, according to Prof. S. C. Salmon of the department of agronomy at the Kansas State Agricultural college.

"Efficient cultivation works the manure into the soil where it more readily decays and hence becomes more useful to the plants," said Professor Salmon. "There is good reason to believe that cultivation after applying manure may be beneficial for that reason. There is no experimental evidence, however, to verify or disprove this opinion.

"Bluegrass, crabgrass and foxtail which greatly damage old alfalfa fields can be practically eradicated through cultivation. When alfalfa fields are to be left for seed it may be especially desirable to remove all weeds by cultivation.

"One of the best implements for cultivation is the spring-tooth harrow. If the ground is very hard a disk harrow may be used. A good time to cultivate is early in the spring before growth starts. Cultivation immediately after removing the first crop is perhaps more effective in killing bluegrass whereas cultivation after the second or third crop is cut may be most effective in killing crabgrass."

Cowpea Valuable as Hay

for Different Animals

The cowpea is valuable for hay, being nearly equal to wheat bran in nutrition, according to the Department of Agriculture. The seed is rich feed but is little used because of its scarcity and high price. It also makes an excellent dish for human consumption and is considerably used in the South. The seed is long lived and can be stored for long periods without loss of germinating quality but is attacked by weevils, so seed houses are forced to treat it with carbon bisulphid before storing, to kill off these pests and to give later treatment to keep them in check. While there are a number of varieties only a few are recognized as of first importance and the seed trade is accumulating a stock of the best sorts for distribution through careful tests and study.

FARM NOTES

If the apples kept in the cellar for home use are sorted occasionally rot will not spread.

Every pound of fruit, vegetables, milk or meat placed on the market has a part in affecting the price of all.

European clover seed is low in price and quality, though neither are as low as the man who would sell it for home-grown seed.

There are approximately 103,000 farms in New York state, which is about three times as many as there are in the state of Washington.

Experience goes to show that there is less waste of the fertilizing elements of manure when it is spread upon the fields as fast as it accumulates.

**Develop Better
Oat Varieties**

**Crop Has Been Materially
Increased in West in the
Last Decade.**

(Prepared by the United States Department of Agriculture.)

The oat crop of Iowa and Illinois and some other Corn Belt states has been increased materially in the last decade by the use of several new high-yielding varieties developed by the Iowa state experiment station in cooperation with the United States Department of Agriculture. Four of the new varieties are discussed in Department Bulletin 1343, just issued by the United States Department of Agriculture.

The four varieties are Albion (Iowa No. 103), Richland (Iowa No. 105), Iowar, and Iogren. Albion was developed from a single plant selected from Kherson in 1906. Owing to the demand for an early variety with white kernels, even though Albion did not show superiority in yield to Kherson, its distribution was begun in 1913. The variety immediately became popular, and it was estimated that nearly 1,500,000 acres were grown in the Corn Belt in 1919, while in 1924 almost this acreage was grown in Iowa alone.

Richland for Rich Soils.

Richland, an early yellow oat, is a companion strain of Albion and has about the same history. It was selected from Kherson in 1906, primarily because of its short, stiff straw. It was first distributed in 1914. In yielding power it is superior to both Kherson and Albion, and because of its short straw it is especially recommended for growing on rich soils where taller varieties frequently cause partial loss of the crop by lodging.

Iowar was selected in 1911 from Kherson and differs from Albion in having a taller culm and in being a little later in maturity. It is superior in yielding power to Kherson and Albion. It was first distributed in 1919. Iowar is the most promising of the three early varieties here discussed and already has attained a wide distribution in Iowa and adjoining states. The variety probably will replace Albion to a considerable extent because of its higher yielding ability and its taller straw.

Iogren is High Yielder.

Iogren, a selection from Green Russian, was increased from an original plant selection made in 1910. The variety was first distributed to farmers in 1922. Iogren has been markedly superior in yield to the parent, Green Russian, and it is believed will ultimately largely replace that variety in northern Iowa. Of all the varieties grown in the experiments at Ames, Iogren has been the highest yielder.

Albion, Richland and Iowar have been most promising in states other than Iowa in those sections where the parent sorts. Kherson and Sixty-Day have been the leading varieties. Since in such areas the selections usually slightly outyield the parent varieties, they may profitably be substituted where Kherson or Sixty-Day is grown. A copy of the bulletin may be obtained as long as the supply lasts by writing to the United States Department of Agriculture, Washington, D. C.

**"Warble Fly" Expensive
Bug to Cattle Breeder**

American farmers pay \$500,000,000 each year in beef, milk and hides because of the "warble fly," according to the United States Department of Agriculture educational film "The Ox Warble—a Fifty-Million-Dollar Tune."

The warble as an adult is an innocent-looking fly which alights on the legs of cattle and lays its eggs. The microscopic grubs that hatch from the eggs burrow through the hide and work their way to the animal's gutlet and thence to the back, where they become full sized. They perforate the hide and drop to the ground to go through certain changes of form, then emerge as adult flies and begin the cycle all over again.

Often as many as 200 grub holes will be found in a single hide, and the total damage to hides alone is tremendous. The presence of the grubs also causes the animals to lose weight and keep down milk production.

Actual photography and animated drawings trace the life history of the insect, and methods of controlling the pest are emphasized in the Department of Agriculture film.

Soy Beans Satisfactory

for Egg-Producing Hens

Soy beans proved a satisfactory substitute for meat scrap for laying hens at the Missouri experiment station. The basal mash consisted of equal parts of bran, shorts and corn meal. To this was added 30 per cent soy-bean meal and 5 per cent mineral, the remaining 65 per cent consisting of the original mash. The results of a two-year period have been very satisfactory.

When soy beans are used in the poultry mash, the mineral supplement is very essential. In pens where no mineral was used, the production was only 70 eggs per hen per year. The mineral is not expensive, being composed of one pound of salt and four pounds of ground bonemeal. All pens had access to oyster shell and grit.

Because the soy beans are lower in protein content than meat scrap, it is considered necessary to substitute one and a half pounds of soy-bean meal for each one pound of meat scrap.

**Control of Insects
Covers Large Field**

**War on Pests Continues
With Much Energy.**

(Prepared by the United States Department of Agriculture.)

The war on insect enemies of plants and animals continues with increasing energy and the number of sectors multiplies. The annual report of the bureau of entomology contains discussions of investigations and methods of control of an amazing number of pests, mostly those attacking field, orchard and garden crops but including also enemies of the forest, live stock, stored products, buildings, bees and man.

Among the most destructive insects given attention by the entomologists are the Japanese beetle, the cotton boll weevil, the European corn borer and the Mexican bean beetle.

Efforts to control the Japanese beetle are meeting with considerable success in certain directions. In addition to improved sprays and better methods of treating soil on roots of nursery plants progress has been made in the introduction of parasites and in developing chemicals attractive to the beetle.

Dusting with calcium arsenate for the boll weevil, according to the report, continues to become more firmly established as a standard farm operation in the cotton belt. Both the poison itself and the machinery for applying it are steadily undergoing improvements while at the same time the cost has been reduced. It is predicted that distributing poison dust will be successful not only in the control of cotton insects but also in the control of other pests. During the past season more than 50,000 acres of cotton were dusted commercially by airplane.

**Each Little Seed Is a
Tiny Factory in Itself**

Each tiny seed is a little factory in itself wherein various processes go on busily and when completed the seed is ready to function. Once completed, the seed must be sown or it loses its vitality. In each live seed these processes go on even when stored in bins and granaries.

One of the active agents in this work inside the seed is known as an enzyme, a sort of ferment which changes the starchy stored food into sugar. This activity tends toward lowering the vitality of the seed. Then, too, the vitality of seed is largely dependent upon the harvesting. If seed is harvested before it is completely ripened, its vitality is lower than if it is ripe. Seed harvested in wet weather is believed to be of lower vitality than that harvested in dry weather.

There is a large percentage of loss to the seedman in grain seeds whose period of vitality is short and which does not last over one season. If he cannot store his seed he must secure each year as old seed soon tells its tale in lack of germination when sown. Some seed has much longer life than others, some being better in germinating quality the second year than the first.

Grain seeds which lose their vitality comparatively quickly are corn, wheat, rye, oats and blue grass. They must be sold or the seedman must carry a loss. He must work on a close margin with these seeds.

Pastures May Be Helped

by Keeping Animals Off

Pastures may be improved by keeping stock off of them in the spring until the grass has made a good start and by fertilizing with acid phosphate and, where the soil is acid, applying ground limestone.

Because of the high price of feed some farmers may be tempted to turn their stock on pasture while the ground is still wet and before the grass has made any considerable growth. This is usually a mistake. As a rule, pastures furnish a cheap feed, especially if labor is considered, but they must be properly cared for.

In many places the yield and quality is poor. In pasture tests of the Ohio experiment station on the Washington county farm many different treatments for improving pastures are under observation. An application of 200 pounds of acid phosphate to the acre has increased the yield 39.7 per cent over that of unfertilized land. Chemical analyses of the grass cut from the fertilized and unfertilized plots showed that the total feed value of the grass from the phosphate plots was much the greater because of its higher nitrogen content.

Farm Hints

Hogs should be deprived of food during the 24 hours preceding slaughter, but should receive plenty of water.

Concrete can be laid in winter if care is taken to heat the "mix" and keep the job covered until it has "set."

Keep a watchful eye on stock that are given to burrowing into the straw-stacks—it may bury them once and for all. To provide some kind of a shelter for them on stormy days is a good insurance against a fatal straw-slide.

Artificial lights are now being used quite extensively to increase winter egg production. They give the hen a longer working day. This enables her to eat more feed, which leaves a larger surplus from which to make eggs.

Children Cry

**Fletcher's
CASTORIA**
MOTHER:—Fletcher's Castoria is especially prepared to relieve infants in arms and Children all ages of Constipation, Flatulency, Wind Colic and Diarrhea; allaying Feverishness arising therefrom, and, by regulating the Stomach and Bowels, aids the assimilation of Food; giving healthy and natural sleep.

To avoid imitations, always look for the signature of *Dr. J. C. Fletcher*. Absolutely Harmless—No Opiates. Physicians everywhere recommend it.

DR. W. B. CALDWELL
AT THE AGE OF 63

**A Child's Laxative
Which Mothers
Can Rely On**

To Dr. W. B. Caldwell, of Monticello, Ill., a practicing physician for 47 years, it seemed cruel that so many constipated infants and children had to be kept "stirred up" and half sick by taking cathartic pills, tablets, salts, calomel and nasty oils.

While he knew that constipation was the cause of nearly all children's little ills, he constantly advised mothers to give only a harmless laxative which would help to establish natural bowel "regularity."

In Dr. Caldwell's Syrup Pepsin mothers have a regulating laxative which they can depend upon whenever a child is constipated, bilious, feverish or sick from a cold, indigestion or sour stomach. All children love its pleasant taste.

Buy a large 60-cent bottle at any store that sells medicine and just see for yourself how perfectly it cleanses and regulates the bowels of infants and children.

TREES

So the people may know! On account of our customers in the Mulshoe territory losing some of their crops by the freeze, we are taking off 1-3 to 1-2 on all our nursery stock.

This applies to orders taken by our agents for fall and spring (if you write us at once) also to orders sent us from now on, or to those who call at our Nursery. The high electric line runs from coal chute crossing straight to our nursery, due north, also 1-2 mile east of Amarillo highway. We ship till May 1st. Most planting being done in January February and March. We have been established here 16 years, largest acreage of Nursery stock west of Sherman.

Be sure the address is correct.

Thefts Betray Man as Boss Planned Reward

New York.—On the eve of retiring, and giving his fur business into the hands of employees, Max Cohen, president of M. Cohen & Brothers, furriers, discovered that the man who was to take over control of the business, John Dingfelder, had been robbing him for five years. The theft had so weakened the company, Cohen said, that he had to postpone his retirement indefinitely.

Dingfelder had worked for him 20 years, he said, starting at \$4 a week and slowly increasing his salary until it attained \$9,000 annually plus bonuses. Cohen told his story in General Sessions court, where Dingfelder was arraigned for robbery and was sentenced to from six months to three years in the penitentiary. Max Ackerman, a fellow employee, arraigned as Dingfelder's accomplice, received a similar sentence.

VETERAN OPERATED ON FORTY TIMES

Surgeons Restore Sight and Are Rebuilding Body.

New York.—Frank Hasselberger was preparing the other day for his forty-first operation in the last seven years. Army surgeons, determined to put Hasselberger together again so that he looks and feels as he did before he was torn almost to pieces in France seven years ago, will operate on him again at the Walter Reed hospital in Washington.

Hasselberger enlisted in the regular army and was one of the first men sent to France. On September 23, 1918, the section of trench in which he was stationed was bombed by German airplanes and he was taken to a first aid station half blinded and apparently dead. There was a piece of steel in almost every square inch of his body.

The Walter Reed hospital surgeons decided to reconstruct what was left of Hasselberger's body. They restored his sight completely and then devoted themselves to skin grafting operations and plastic surgery on his body. Forty operations over a period of seven years were performed on all parts of his body.

Hasselberger, while unable to move about freely, sees perfectly and he has hope.

"After a couple of dozen more operations," he said, "they figure they'll be able to start work in earnest on me."

Mary Bought Everything, Then Fiance Left Town

Milwaukee.—A broken-hearted woman came to the police station. With difficulty she choked back the tears so that she might make a missing report. Mingled with the sadness at the loss of her fiancé was the chagrin of a woman scorned.

The broken-hearted woman is Mary Cetina, a widow. She is twenty-five and the mother of two boys, Frank, eight, and William, three.

The missing man is Anton Bostyanek. He is twenty-three.

Mary and Anton were to have been married this week. Mary got the marriage license two weeks ago. She had rented a flat at 715 Sixth avenue and furnished it with her own money. She had purchased an engagement and wedding ring.

Then he disappeared leaving a note telling her he'd rather cut off his right arm than marry her.

Man Who Stole Elephants Freed After Two Years

McAlester, Okla.—"Elephant Red" Kole, believed to be the only man in the United States who ever served time for stealing a herd of elephants, was released from the state penitentiary here Saturday when his two-year term expired.

The circus with which Kole traveled experienced financial difficulties. The partners agreed to separate and each took a share of the animals and equipment. Kole went with one of them and a short time later decided to steal back the elephants. They were driven to a point 18 miles away from where they were quartered when officers arrested Kole and returned the animals.

Dog to Die for Chewing U. S. Flags Over Graves

Stamford, Conn.—Arnold Kurth, dog warden, has in his kennels a mongrel found guilty of repeated attacks on the American flag. The dog was caught as a result of complaints that flags over the graves of soldiers and sailors in Woodland cemetery had been chewed to rags.

Kurth passed several days watching at the cemetery and caught the mongrel after it had chewed a flag. The animal will be killed.

Has Six Fingers
Richmond, Va.—William A. Toler, Bertillon expert of the local police department, was confronted recently with the problem of finger printing William Heath, a negro with six fingers on each hand, who was arrested on a charge of robbing a local jewelry store where he was porter. Mr. Toler said no method has been worked out for such cases.

Add disappointing types: The old-fashioned wallflower who looked like 15 cents worth of prunes.

Rubber is called England's new gold. It ought to be more elastic than present currency, at any rate.

It isn't that Americans are conservative, but that they can't stay mad while they're prosperous.

It's rather too bad nothing can be done with a second-hand mah-jongg set but play mah-jongg.

There are a lot of otherwise good people who think the laws were not intended to apply to them.

It is estimated by a philologist that radio has added 5,000 words to the language, exclusive of expletives.

An autoist's arm was broken in an accident caused by the bite of a mosquito. Add accessories: Screens.

What has become of the old-fashioned man who used to say that woman never could learn to drive a car?

There are breakfast nooks being put into homes nowadays that aren't any bigger than an old-fashioned platter of eggs.

Notwithstanding the life of a paper dollar is only seven or eight months, we have never had one die on our hands.

Y L Community News

The Parent Teachers Ass'n. met last Friday night and elected the following officers: Ed Buhrman President, Mrs. H. E. Wilterding first vice-president, Mrs. J. E. Adams second vice president and O. N. Robison secy. Treas.

The pupils of the Y L school will give a program at the next P. T. A. meeting on next Friday night.

Y L school now has hot lunch every day. Donations of milk and vegetables were made possible thru the P. T. A. Those who don't have either of these are making money donations. The lunch is prepared by the Home economics class. Teachers see that the children are all served alike and eat in an orderly manner.

A number of young people met at the home of H. B. Bearden last Saturday to bid Miss Jimmie Pickard. The Pickard family are moving to West Camp. We are sorry to see them leave.

Mr. and Mrs. Martin of Spring-lake were guests at the home of O. N. Robison.

Senior Newsnotes

Tuesday Jan. 5 'The Mulshoe' was selected as the name for the annual. It will be the first annual ever put over here.

The annual staff are working hard on the annual. Sixty of them have been sold already. The High school slogan is, "Have you bought an annual?"

The staff has co-operated in the 'put it over' stuff and expect to be winners. The advertising department is at work getting ads so dont be surprised when a representative calls on you. Help us put out an annual.

Miss Kistler—"Spell needle Rufus."

Rufus—"Needle."
Miss Kistler—"Wrong, no i in needle."

Rufus—"Well 'tain't no then."
Cloy Johnson was asked to write a short story on responsibility and this is what he handed in.

Boys have two buttons on their suspenders to hold up their pants and when one button comes off there's a lot of responsibility on the other button.

Mr. Smith—"Define trickle."
Jack—"To run slowly."
Mr. Smith—"Define anecdote."
Jack—"A short funny tale."

Mr. Smith—"Use both words in a sentence."
Jack—"The dog trickled down the street with a can tied to his anecdote."

Friday morning chapel period was given over to a discussion of the popular contest. Each class has its candidates and is standing behind them. Each vote costs a penny and it goes to the annual fund. The preliminary contest ends Friday and the two leading contestants will be in the run-off.

Junior Newsnotes

The Juniors have selected Lea Green, all around girl, Dolores Lawrance most popular girl, Jimmie Cox all around boy and Cloye Johnson most popular boy for the popular contest.

Mary Snyder has returned after a weeks absence.

Hershal Alsup has returned after visiting the mumps.

What a Junior Said
M. H. S. Its the best school in the world

Its the best place for each boy and girl

You learn Latin, Spanish and math

We have kind teachers who seldom turn to wrath

We have a Superintendent, a dear, dear man

He never makes a rule you cant understand

He wants all his pupils to do the right thing

No talking, no chewing is the message he brings

The rest of the faculty are hard to beat

They never feed you anything you're not able to eat

Now boys and girls dont grow up a fool

But rise to your standard at Mulshoe High School.

Lea Green spent Sunday with Dollie Lawrance.

Marie Gwyn spent Sunday with Mary Goodson.

Better watch your step, the faculty are sure enforcing the rules.

The boys and girls Basketball team won a victory over Y L the score being 16 to 8 for the boys

and 33 to 4 for the girls last Thursday night.

Last Friday night both teams played Littlefield. The girls won with a score of 25 to 11 and our boys losing by a score of 14 to 28.

Miss Kistler—"Jack, do you understand the difference between liking and loving?"

Jack—"Yes ma'am, I like my father and mother but I love pie."

Velma and Mildred McDorman spent Sunday with Lela Myer.

Every Home Should Have This Wonder Cook Stove

Every woman can now enjoy the convenience, cleanliness and comfort of cooking with gas. This new Albert Lea Kitchen-kook makes its own gas from common gasoline, burns a clear blue flame, free from smoke, soot and odor, with 50 to 100 per cent more heat than common oil or gasoline stoves.

It not only produces a hotter fire, but the flame comes in direct contact with cooking utensils. There are no bear-wasting "chimneys," no wicks; burners cannot clog and never require cleaning.

Let us demonstrate this better stove and explain the Safety Test for you

Why Men Fail
"One reason why many men fail," says Harvey Firestone, "is because they have no goal. They work hard, but aimlessly. In other words, they don't set up for themselves an objective and then bend all their efforts toward attaining it."

The minute a man finds himself running around in a circle and not getting anywhere he should set some definite point which he desires to reach, and then make everything he does assist him along to that end. When he has gained this point he should then set another one higher up and so on until his ultimate goal is reached. —Forbes' Magazine.

Evidently the man whose will leaves a sum of money for struggling musicians at some time or other had witnessed one of them struggle.

Don't Fuss With Mustard Plasters!
Masterole Works Without the Blister—Easier, Quicker

Don't mix a mess of mustard, flour and water when you can relieve pain, soreness or stiffness with a little clean, white Masterole.

Masterole is made of pure oil of mustard and other helpful ingredients, in the form of a white ointment. It takes the place of mustard plasters, and will not blister.

Masterole usually gives prompt relief from sore throat, bronchitis, tonsillitis, croup, stiff neck, asthma, neuralgia, headache, congestion, pleurisy, rheumatism, lumbago, pains and aches of the back or joints, sprains, sore muscles, bruises, chilblains, frosted feet, colds of the chest (it may prevent pneumonia).

The Static in Christianity

By REV. J. H. RALSTON, D. D. Dean of the Correspondence School, Moody Bible Institute, Chicago.

TEXT—But that which ye have already hold fast till I come.—Rev. 2:25.

J. H. Ralston, D. D.

The word "static" has been used by more than one prominent modernist in a derisive way as applying to what conservatives or evangelicals in the church hold—a static position, no movement forward. In considering Christianity several of its aspects are before us—its past, its present and its future. All that the church has today was given in the past. It now has a great deposit, and it has hopes for the future.

This derisive use of the word "static" is in connection with Christian truth. The charge is that the church will not look forward to new truth. Taking the derision out of the word, the statement is true. Christianity simply rests on what it has received and uses it not only for the present, but believes that its proper use will make the best provision for the future. Those who are now calling for new truth are not slow to say that they have an object, something they are driving at and it is nothing else than a revolution. They are determined to change the beliefs of men as to God, Jesus Christ, the Bible, sin, salvation and the things of the hereafter.

Now, what is the church to do with what has been given to it? While it may be admitted that it has had something given to its history and in its experience, what it has, has been given to it by revelation from God in the Bible. It is not difficult to get a comprehensive view of what it possesses.

Besides, the Bible has been the subject of interpretation for nearly two thousand years, and in the course of those centuries there has been a certain deposit of what may be called faith. Asking different bodies of Christians who hold that deposit for language in which to express it, it will be found that the language differs slightly, emphasis not being put at the same places. However, this difference is often sufficient to cause Christians to form different communions, thus accounting for the various historical denominations. But, take any one of a half-dozen of these formularies of belief, eliminate the few points of real difference between it and the others, and you will find that the residue of one will correspond quite accurately with that of every other and the essentials will include the supernatural being of God, the true deity of Jesus Christ, the supreme authority of the Bible, the new birth by regeneration of the Holy Spirit, the oneness of believers, the return of the Lord Jesus Christ, the resurrection of all men, the judgments, and eternal future rewards and punishments. The exhortation of our text is that we hold this great deposit fast.

The holding fast of that which has been received is not an easy task. In the first place those holding it should quite clearly know what they are holding. On the part of the evangelical portion of the truth a new study of the fundamentals of faith is demanded. Most of the confessions of the churches will splendidly repay new reading and study. Divinity schools should again return to the simple teaching of the Bible and confessional Christianity. Not only should evangelical Christians thus renew study, but preachers and teachers should put new emphasis on the great doctrines of faith.

Still further, holding these things means battle. Timothy and others of the first centuries were told that they should hold the faith, they must fight, and wage a good warfare. Shifting religious teachers engage the attention of but a small part of mankind, but when the Word of the Lord, which abideth forever, is given to the world the attention of men is arrested around the world and they are blessed.

In the material world men do not know what to do, change comes so frequently; the method today may be altogether out of date tomorrow. But as to the things of the religion of the Lord Jesus Christ everything remains as it was, and what succeeded two thousand years ago will succeed today. One thing is stable, and changes not—"the Word of the Lord."

God Has So Willed

But as to the good things of this life, and its ills, God has willed that these things should be common to both the righteous and unrighteous, that we might not too easily covet the things which wicked men are seen equally to enjoy, nor shrink with an unseemly fear from the ills which even good men often suffer.—Augustine.

Whenever We Meet Him

What men have known of God is not in the books, but in the soul. What Jesus knew of God is not in the Gospel statement, nor did He ever intend that it should be. It was in Him; and we see it, feel it, know it, wherever and whenever we meet Him.

Texas Cotton Mills

Unless all indications are wrong, Texas will build a number of cotton mills in 1926. Texas cotton mills have steadily been making money. There is more capital in the state with which to build than ever before. There is less farm indebtedness. Money is seeking profitable investment, and farm loans can not absorb all the idle capital. It will almost be forced to go into manufacturing. A good start for 1926 was made on January 7, when a number of capitalists met at Center Point to study the feasibility of erecting a cotton mill there. Center Point is a place in Kerr County of less than 1,000 population, but it is on the Guadalupe River and has plenty of water power to operate the \$1,000,000 mill that is contemplated. Texas should invest at least \$10,000,000 in cotton mills in 1926 and in all probability it will do so.

Texas Wool Enriches the East.

Texas produces more wool and mohair than any other state in the union, but all of it is sent east to be manufactured. The state once had two woolen mills—one at New Braunfels and one at Waco—but for some reason their operation was discontinued. That was many years ago, when Texans had an idea that factories could not be made profitable in Texas. The woolen mills in the state quit business more because there was no one interested enough and enthusiastic enough to keep them running than because they did not pay. The principal owner of the Waco mills often talked to this writer about the 20 and 25 per cent profits that were being made, but he was temperamental and nervous and when he became tired of the work there was no one interested enough to take his place. Men with money reasoned that banks could make as large dividends as mills and without so much effort, so why worry with factories? "Let the East have them and sell us our goods." But times are changing, and Texas should be manufacturing Texas wool.

Texas Grapefruit Best.

If you eat grapefruit and have tried that grown in the Rio Grande Valley of Texas in comparison with the California and Florida fruit, you know the Texas grapefruit is by far the best. Grocers all know this and they buy and sell about as much California and Florida grapefruit as they can get. Neither grocers nor housekeeper appear to give any special preference to the Texas product—they buy whatever is offered them and more regard to the looks than the quality. Every Texas grapefruit has "Texas" stamped on it, and consumers should insist on getting home products. If we are to build up Texas we should use Texas products, especially when they are as good as those grown elsewhere.

Oil Fields Spreading.

It has not been many years since Spindle Top, near Beaumont, was about the only oil field known to Texans that was considered worth while. There was some oil development around Corsicana, but not enough to interest many people. Where is "the" oil field of Texas now? It can't be definitely located in any part of the state, for it seems to be just anywhere in Texas that capital decides to go down in search of oil. The development of gas is going right along with oil. Gas is being produced faster than capital can be found to confine and pipe it for use of fuel. Geologists say that Texas has hardly started on the production of oil and gas and that there are riches beneath the surface of the soil hardly yet dreamed of.

Those New Year Resolutions.

Did you make any resolutions for the New Year? Have you broken any of them yet? Perhaps you are answering yes to both questions. Most people are weak and need a constant "renewing of the spirit." There is no need to be discouraged over failure, even over repeated failures. There are few of us who can keep our spiritual and moral batteries charged for an entire year without a renewal. Every day starts a new year for each of us. Why not make resolutions daily if that is necessary to their keeping. I take my physical "setting up" exercises regularly every morning, and then have to pound myself occasionally during the day if I sit too long at a typewriter. An exercise of that kind once a year would do very little good, but I keep fairly fit by the constant effort. That is not a bad way to go about insuring the keeping of your resolutions.

Election Year in Texas.

Texans are being reminded already that this will be an election year in Texas and that politics will "wax warm." Really there is too much politics and too little patriotism in Texas. Thinking voter is likely to become a thinking voter. He sees that position at the lowest level as what it is.

Lore for Dog-Owners

By Albert Payson Terhune

A QUEER DOG YARN

Lugging That Big Block Behind Him and Getting It Caught in Every Obstacle.

MRS. MERTON had been listening with keen interest to Old Man Negley, who had been telling her of the strange "homing" traits of dogs. She was especially interested because her beloved dog, Key-nard, had just found his way back to his mistress' Vine street house from the other end of the city.

Negley finished his account of this odd instinct by hinting at a story which, he told her, "sounds like a lie, but isn't." This piqued her curiosity, and she begged the garrulous old dog-man to tell her the story.

"It happened down South," he began. "I won't tell you the people's real names, for at least one of them hasn't overmuch reason to be proud of his share in the things that happened. So I'll use fake names; but the story itself is true. I know it's true, because I was working in the town where it happened, and I was a near neighbor of one of the men and I knew them both very well.

"A man whom we'll call Miller had a collie named Scamp; a big, wise dog, that looked like a throwback to some ancestral wolf and had all the brain and instinct of the best type of collie. Miller wasn't a dogman. He and Scamp didn't get on very well together. He wasn't the sort of man that dogs take to or that take to dogs. It wasn't his fault. Some folks are born that way.

"A friend of his, named Gregg, was calling at his house one day when an automobile ran over Scamp in front of the dooryard and broke his leg in two places. Miller took one look at his suffering collie. Then he started for another room.

"Gregg was leaning over Scamp, examining the fracture, and he asked Miller where he was going.

"I'm going to get my gun," said Miller, "and put the brute out of the way. He is spoiled for life by that busted leg."

"Scamp looked up into Gregg's face without a whimper, but in a queer, dumb appeal, as if he understood what his master was going to do and as if he was begging Gregg to save him. That look went right to Gregg's heart. He had spent a couple of years in a medical school and he was a natural-born surgeon, even though he was in another business then.

"Give me a chance to set the leg," he said; "I believe I can do it. I've set worse fractures than this. Send out and get some plaster of paris and some bandages, and I'll make a splint while you're waiting for them."

"He set Scamp's leg so that the dog was cured. As soon as Scamp was allowed out of the house—while he still had the plaster cast on his leg—he left home and went limping across town, for a mile or more. When Gregg got back from work that afternoon, there was Scamp curled up, plaster cast and all, on the Gregg doorstep.

"How did he find his way there? What's the mystery. But it seems Miller had stopped once for a chat with Gregg, two months earlier while he and Scamp were out for a walk one Sunday. But think of Scamp's brain, in remembering where Gregg lived! And think of his sense of gratitude in hustling on three legs to the man who had saved him! He accepted Gregg as a master and a sort of divinity, for doing that leg-setting stunt and keeping Miller from shooting him.

"Next morning Gregg took Scamp back to Miller. Miller whipped him for running away. But as soon as Scamp could get loose, back he limped to Gregg's. Gregg took him home again. Miller kept him indoors. He was all well. Then he put him with a heavy block at the chain to tether

Gregg brought him home next morning and tried to buy him. Miller wouldn't sell him, but packed Scamp off to his sister, who lived in another city.

"She kept him in a high wire enclosure, never letting him out, for a whole year. At the end of that time she shipped him back to Miller, who thought that Scamp must surely have forgotten Gregg during those twelve long months. (Twelve months is five times as long to a dog as it is to a human, of course, for it represents about a tenth of his life.)

"The minute he could get outdoors Scamp galloped away to Gregg. He hadn't forgotten. Collies don't forget. He was brought back and chained up. Soon afterward he was stolen. It was in 1917. A soldier had stolen him and taken him to France as a chum or as a mascot. A lad who knew Miller wrote of seeing Scamp in France. Miller wrote him to ship him home, but he got no answer.

"Now here comes the queerest part of the story and I can vouch for its truth, for I was in Miller's home town at the time. Perhaps it isn't so queer, after all; for perhaps the lad sent Scamp back by some friend, or perhaps Scamp stole a ride on some returning army transport. Anyhow, here is what happened:

"Late one night Gregg heard a feeble scratching at the door of his house. And there was Scamp, lame and starved to a skeleton and half dead. Gregg took him in and nursed him back to health. Then, being an honest man, he notified Miller.

"Again Miller refused to sell him to Gregg, but took the collie back home and put another block and chain on him, a heavier one this time. The same evening Scamp managed to avoid his owner's vigilance and started off for Gregg's, lugging the heavy block at the end of his chain.

"On the way he had to cross the railroad tracks. The block got wedged between two of the ties. The train came along. Scamp was run over and killed by it.

"That's all there is to the yarn, ma'am," finished Old Man Negley. "You see, poor Scamp was only just a dog. So he didn't know any better than to feel gratitude and love for the man who had saved his life and to want to be with him always." (Copyright by the McNaught Syndicate, Inc.)

Little Vegetation on North Coast of Norway

Few parts of the earth's surface are more dreary and desolate than the islands along the coast in the extreme north of Norway. They are entirely destitute of trees and shrubs, and so far beyond the limits of cultivation that only the most meager trace of polar vegetation faintly tinges with verdure the barren rocks during the summer months. The Arctic willow, whose root, stem and foliage could be gummed on a sheet of notepaper, creeps along the soil, and is the only representative of the woods and forests of more favored regions. The pulse of nature is there at the lowest—it beats and that is all; and the struggle for existence, elsewhere carried on with crowds of rival plants and animals, is there, as on the bare summits of lofty mountains, maintained solely against the fierce elements. And yet, by a wonderful compensation, the Gulf stream, which crosses the Atlantic from the tropical seas of America and skirts the northern shores of Europe, breathes its last warm breath upon these islands, thus somewhat modifying their natural temperature, and, what is far better, strews upon their shores the valuable timber carried down into the ocean by the great rivers of the West.

In Olden Days

Drowning used to be a capital punishment in Great Britain, as an alternative to execution. It was regarded as the milder punishment, and was usually administered to women prisoners. The last official execution by drowning occurred in 1083.

How Cathedrals Are Built Now

Three pairs of steel towers, 84 feet high, support derricks which lift the granite and limestone blocks for the walls and pillars at the Cathedral of St. John the Divine in New York. The framework is temporary. A platform will rest atop the towers and from this will run the wooden "centering" to support the arches until each keystone is in place.

Home Towns of Famous Cheese

Must Go to Baedeker for Guide to Places Made Famous by Product.

Washington.—The memorial tablet which has been erected to Mme. Marie Harel, creator of camembert cheese, on her Brittany cottage in Camembert, France, recalls that the United States Department of Agriculture was surprised to find a large increase in the imports of camembert cheese from France immediately after the World War. Investigation showed that the A. E. F., like the old Crusaders returning from Palestine with a new-found love for the spices and silks of the East, came back from France with a relish for camembert.

"Bully beef" was drab fare to the American doughboy. He craved a substitute for the pies and all the rest that mother made. So he sought out French farmhouses where he begged or bought food that knew no tins. Usually his search was rewarded with cheese. What could banish camp rations monotony easier than spicy-odored and spicy-flavored camembert? With a bit of camembert wrapped in tin-foil there must be purchased in many American delicatessens today memories of friendly folk in deep-roofed Norman cottages.

Made by a Mold.

"What Mme Harel discovered in Camembert, thirty miles south of the resort Deauville, was the way to control a certain mold," says a bulletin of the National Geographic society from its Washington (D. C.) headquarters, on the well-known foreign and domestic cheeses. "The camembert culture can now be secured from concerns who make it a business to grow it. Camembert and allied varieties like Brie are cured widely throughout northern France. American production now shares the United States market.

"So slender is the path the world makes to the historic homes of famous cheeses that one often must go to Baedeker for the sign posts. Camembert is on few maps; Cheddar, which supplies the technical title for American or 'rat trap' cheese, is 15 miles southeast of Bristol, England; Stilton is 65 miles directly north of London; Gorgonzola is in Italy, close to Milan; Parma, one of the largest of the cheese towns, is the city in south Lombardy that gives its name to Parmesan; Swiss cheese is more properly Emmental, for the valley of Emmenthal near Bern; Munster in Germany saw the birth of Munster cheese; red and yellow Edam cheese balls are still colorful ornaments to the Edam market near Amsterdam; Neuchâtel

CARILLON OF BELLS MAY BECOME POPULAR IN U. S.

Instrument Used in Low Countries of Europe for Centuries to Promote Love of Music.

New York.—The carillon with clavier as an instrument in civic musical education has been pealing from singing towers in continental low countries for hundreds of years, but it has only lately become better known outside the boundaries of its origin.

Belgium and Holland accepted the bells as a means of cultivating and teaching a love for folk-songs and the great melodies of their fatherland. The carillon has shared its companionship in all the stirring events in the history of these countries, usually at the public charge. In not a few of the towers the carillon has been played for one hundred years or more the same day and at the same hour. The United States has but few sets of the bells in operation,

on the Dieppe-Paris rail line, was the object of German drives for far other purposes than to get soft cream cheese; Limbourg, the town made famous by an odor, lies near Liege where Belgium halted the invaders; and finally there is Roquefort, in the Auvergne plateau of central France. "For more than two thousand years the caverns of Roquefort have cured cheeses. Roquefort has a natural monopoly because nowhere else do Nature and man combine the same elements. In the limestone rock are numerous linked caves in which there is much water. Nature maintains in these caverns a constant temperature which hovers above freezing and an atmosphere saturated with moisture; perfect conditions to favor the Roquefort mold and discourage growth of other molds.

"America's contributions to the cheese industry have been chiefly scientific production, large scale output and improved styles of marketing.

"Philadelphia cream cheese and some other cream cheeses are new in that fresh curd is used, but the texture links them to the Neuchâtel group.

"Wisconsin in one year produces more than twice as much cheese as Switzerland.

"Loaf cheese, wrapped in tin-foil, is strictly a Yankee invention and a

good one because a slice is the size of a piece of bread and because drying cannot exact great losses in money and quality.

"Not many months ago a man who is a big figure in American politics and industry arrived in Washington. Employees in this man's Washington office stood ready to do his bidding. His first question on this trip made their heads whirl.

"How can one put holes in Swiss cheese?" he asked.

"His employees soon found this was no joking matter. This famous man, it appears, when he can forget affairs of the United States, the world and its business, is absorbed in his big farm. A problem had arisen in the dairy. The Swiss cheese had no holes. Since the presence or absence of holes affect the flavor, this was important. He had come to Washington in search of holes. Next day a four-page report on holes for Swiss cheese was on his desk. It said in part that bacteria known as Swiss cultures were the excavators, or more properly, the bellows. Gas generated by the bacteria expands the rubbery, raw cheese as yeast does bread. Further, that the organisms can be had from the Department of Agriculture and certain state universities.

"The Department of Agriculture not only knows Swiss cheese, but also makes it in their experimental dairy."

9,495 Aliens Deported by Authorities in 1925

Washington.—Secretary of Labor James J. Davis, reports that the immigration service during the fiscal year 1925 arrested and deported a total of 9,495 aliens, the largest number in the history of the service. He makes the following comment on the situation:

"With the tide of immigration suddenly and materially stemmed by the adoption of restrictive immigration measures, leaving millions of aliens who were unable to gain admission through lawful channels, it is quite natural that their eyes should turn to other channels which afforded a means of gaining entry.

"Stimulated by conditions existing in their own countries and encouraged by unscrupulous persons, who sought to reap financial reward from their undertakings, they were easily influenced to adopt the 'back door,' which to them presented a ready, albeit an expensive, means of effecting entry to the land of their ambitions.

"Of a total of 9,495 deportations under warrant for the fiscal year, the largest number in the history of the immigration service, 1,169, were upon the ground of entry without inspection. Deportations to Canada numbered 1,921 and to Mexico, 1,826. The remainder, minus a small percentage of South Americans, Asiatics, and Africans, were deported to European countries."

Precious Lingerie

London.—Dainty washable lingerie made out of gold and silver thread is now on view in the stores.

The United States has more than 15,000 motion-picture theaters.

Jap Princesses as Clam Diggers

Princesses of the blood of Japan, Kanin, Asaka and Takeda, with fellow students of the Girls' Peers' school, digging clams at ebb tide along the shore of Chiba, Japan. The chubby young ladies seem to be enjoying themselves.

Heir Takes Up Music

New York.—Another New York banker's son has taken up music for a career. Unlike Roger Kahn, who is a jazz artist, Gerald M. Warburg is for the classics. He played the cello at a concert in his parents' home and he has written songs for a debutantes charity show.

Thirty-five cubic feet of average seawater weighs one long ton.
