KEEPING WELL DANGERS OF TALCUM POWDER DR. FREDERICK R. GREEN Editor of "HEALTH"

A LMOST every mother, during the first two years of her baby's life, uses some form of toilet powder to sockroach or croton bug, has been keep the skin dry, to prevent chafing determined by Dr. C. E. Rice of the He (ecstatically)-Am I walking | and to make the baby more comfortable, especially in hot weather. In the early days corn starch or fine rice powder was generally used. These, like all vegetable powders, were open to several objections, and they gradually gave way to talcum powders, made of very finely pulverized talc. These talcum powders have, during the past few years, been replaced serious and sometimes fatal results, | their eggs as well.

due to the child accidentally inhaling large amounts of the powder. So common have these cases become, that a New York physician recently reported

The accidents all occurred in one of the articles picked up by the in- two wuys. In using the dusting powing a large amount of the powder in the child's face, or the infant, itself, when it was learned that 18 per cent getting hold of the box, suddenly turned it upside down, over its face, for 46 per cent of the accidents. as it would a nursing bottle. The Their emotional and hysterical tenshower of powder through the openings in the lid covered the baby's face. In either case, some of the powder was ers are engaged. Of 10,000 applidrawn into the throat and lungs. In some cases, so much of the pow- ; result. der has been inhaled as to cause death

made a meal of it. Now Mr. Serlie in 24 hours. In others, the irritation of the powder caused a pneumonia. which sometimes proved fatal in two to three weeks. In other cases, in which the amount of powder inhaled was small, the child gradually recovered.

In view of the numerous accidents in the use of dusting powders, several Kaisarieh, Turkey. precautions should be taken by mothers and nurses.

Be sure the cover of the dusting box is on tight. If it has a sliding cover, don't open the holes to their fullest extent. When applying the powder near \$,000 years before Christ. the baby's mouth and nose, protect the baby's face with a bandkerchief or towel. Don't let the baby have the

box itself and don't leave the powder box where the child can get it. (C), 1924, Western Newspaper Union.)

Why sargent Left Paris The origin of John Sargent's settling in London was his portrait of Mms. Clautroau, according to a writer in the London Morning Post. Mme. Gautreau was a great friend of Gambetta's and was very much admired and very popular in Paris with the Republican party. When Sargent's picture of her appeared at. the Salon there was a tremendous outery against it. The French people, chiefly the artists, took it up most violently, and said Sargent had purposely caricatured her. The press also was very abusive.

Altogether the whole thing was so unpleasant for Sargent that he left Paris. He went over to London and eventually made his home there.

Gas Exterminates Pests That chemical warfare methods tre effective against the chief animal pest on shipboard, the German

United States public health service. In his experiments he used cyanogen chloride, one of the deadliest of poison gases, but not used during the war because it was too volatile for trench warfare. By sealing up all sources of ventilation and confining the gas for two hours he killed almost all the insects. A four-hour fumigation not only made a completely clean sweep but killed all

\$ 3.7.

men are concerned. Many years ago, when Texas stock-men were suffering great losses through their gattle dying of Texas fever, it was proposed to import from India the zebu or humped oxen of that country, which, for some reason, are immune to the fever, which prevalled in Texas. Many of these strange cattle were brought in, and in some ways the experiment has been a success, although newer and better by destroying the tick which carries it have reduced the disease in domestic cattle to a comparatively small problem.

But the Brahman cattle, while immune to the tick fever, are apparently very susceptible to a much more dangerous disease, the so-called foot-andouth disease.

This disease, also called aphthous : fever or aphthous epizootic, most commonly afflicts cows, but may attack horses, dogs, cats and fowls. Unfortunately, human beings are also susceptible.

Numerous epidemics 'among cows have occurred in this country since 1870, when it was first imported from England. Handling diseased cows or drinking milk from an infected cow will cause the disease in man. On the second day after the exposure fever, headache and itching occur. Five days later blisters form on the hands, the tongue, lips and cheeks. These blisters may later form ulcers. As a rule the disease is a mild one in man, but in children, in severe or neglected cases, the ulcers may become large and painful sores.

3-94

Regular Dinners.

Fresh Bread and

While there is no question that this, disense is caused by some germ, the exact cause is not known. Strange to say, the United States Department

of Agriculture will not even aflow its scientific men in the bureau-of animal industry to attempt to find the cause. It seems that in Europe some experiments were made, with the result that

the infection in some way escaped and started a new epidemic. Yet no intelligent steps can be taken to prevent or cure this disease, either in animals or men, until the exact cause

is known. Surely there should be some spot in this great country so remote that studies could be safely carried on, and the cause of this disease, dangerous to both man and best, discovered and a method of prevention devised. (©, 1924, Western Newspaper Union.)

When shipments of rubber begin this prodtion of Reak Estate Boards: The uct will become an important factor

to Dress on Broadway The creator of the "Follies," in addition to being considered the best judge of pretty women on Broadway, has quite a reputation as a constic wit, as many of the girls in his choruses will attest. Not so long ago, a girl who had been engaged and who took it for granted that she would receive a thousand a week, at least, burst into his office indignantly and registered a kick over the size of her pay, check. "If this is all the salary I get." oversoil, and creates malarial she exclaimed, 'liow can I dress on' swamps. Ordinary irrigation is Broadway?" "You can't," replied Flo without a moment's hesitation. "You'll have to use one of the dressing rooms, just the same as the other girls."-New York Times.

HE National Tuberculosis association, through its publications and its state and local branches, devotes the month of November to emphasizing the benefit of sleeping outdoors. I have already discussed this subject. in several articles, showing not only Just when the first lodge bearing the advantage of outdoor sleeping but also the ways in which it could be done with the greatest comfort. A recent article in the Journal of Outdoor life gives a number of suggestions in addition to those already given, which will be of interest and value to those who want to sleep outdoors

Adjustable glass windows for the sleeping porch are best. If canvas curtains are used be sure they don't shut out the air. If bamboo or wooden screens are used, adjust them no that they won't rattle. Don't put the hed in a strong draft. A screen for use in a high wind is an advantage. An iron bed can be kept cleaner than a wooden bed. It is not as liable to be damaged by the exposure as a wooden one.

Outing finnnel makes light sheets, easily washed. For sleeping gorments fiannel pajamas with a woolen blanket coat worn over them, and white woolen socks with bed slippers will keep the body warm. Sleeping bags

If you scorn the hot brick of earlier bags, "stone pigs," electric pads, chemical heaters and aluminum and

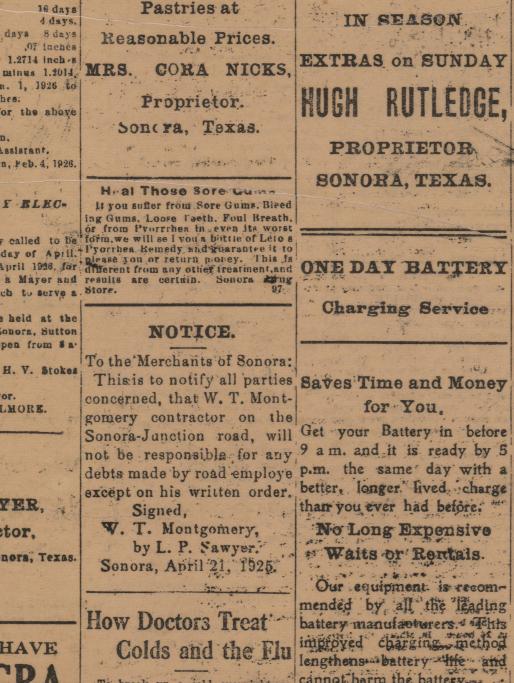

Price, of course, must be considered medal style, can be gotten at any army goods store for \$3 or \$3.50. The medical department special, extra wide and high and of heavier duck, will cost about \$4.50. A regulation bedding roll of dark brown duck costs from \$5 to \$7. Mattresses Scan be gotten atorany price, depending on quality and filling. Outing flannel sheets cost \$3.50 n pair, blankets from \$3.50 for army to \$15 or \$20 for allwool white. Sleeping bags can be had for from \$13 to \$25. Flannel pajamas, cotton or wool sleeping coats, wool socks and fleece-lined or fur-lined slippers can be gotten at any dry goods store or ordered from any mail order house

Expensive? Somewhat. But how about railroad fare to Florida or Callweeks or months? Sleep outdoors and give tuberculosis the merry ha-ha. (@. 1924, Western Newspaper Union.)

To Restore Fertility

to Region of Apulic To conquer water with water is the program undertaken by a reclamation consortium in Apulia. Apulia, which before 1000 A. D. was perhaps the richest section of Italy, has in later centuries become one of the poorest because of deforestation, soil exhaustion and general neglect. Its particular curse has been water, both too much and too little of it. The porous soil lets the rain pass through to a lower level, leaving the upper stratum parched during a large part of the year, while the subterranean reservoir reappears at the surface later. through periodic sinking of the thus a useless task. But the experts of the consortium have hit upon the idea of raising the needed irrigation water from the subsoil by means of many small electric pumps. And these pumps are to get their power from water imprisoned. in an artificial lake in the nearby hills. Little Wonder That

#### Small Silkworm Farm

Thousands of school children in the United States owe their firsthand knowledge of the industrious silkworm to T. A. Keleher, an amateur entomologist of Washington, who for 26 years has been experimenting with silkworm culture in his own back yard. On half a dozen mulberry trees he raises from 10,-000 to 20,000 of the creatures a year, says Popular Science Monthly, distributing them among schools as living exhibits. Every cocoon ONE DAY BATTERY contains from 750 to 1,000 yards of silk thread.

Student Parachute Jumper Of all the University of Minnesota students working their way through school, Victor I. Eagan, medical student, has adopted about the strangest way, He is a parachute jumper. Eagan formerly made Get your Battery in before a living by participating in motor-He did his first parachute jumping last summer. His only complaint is better, longer. lived, charge that his 175 pounds is too much of a load for the average size "chute." 'I never get a 'chute' big enough," her said, "and consequently I get quite a jolt when I land."

To Study Mexican Ruins Clarence L. Hay, research associate in Mexican and Central American archeology for the American Museum of Natural History, has saffed for Yucatan to view the ruins of antiquity there and in other cannot harm the battery as parts of Mexico. "The visit is intended to lieip the Mexican hall of A well charged battery archeology which it is proposed to gives your car more power, build on the Columbus avenue side brighter lights, Quick start, of the museum.

#### Canada Values Helium

The premier of Ontario, Canada, announced that a deposit of helmm has been discovered at Inglewood, about forty miles northwest of Toronto. "The province has taken over the helium rights at Inglewood," declared the premier, "and I am informed that they have the highest content of this gas of any in the British, empire. The wells have been turned over to the University of Toronto for research, work." Secrecy respecting the discovery, the premier said, had been maintained "because of the trecycle races at Minnesota state fairs. mendous importance of the find." -Pathfinder Magazine.

Spread American Methods Nine of thirteen students from foreign countries attending Loyola university, New Orleans, ate preparing to take American dental methods back to their homes. The university has thirteen students from ten countries other than the United States, and nine are enrolled in the school of dentistry. Three are studying pharmacy and one is applying himself to the

schools of arts and sciences. Guatemala leads, with four, followed by Mexico and Cuba, with two each.

#### **Constant Static**

The Blue book of the meteorological office of the British government states that there are at least 100 lightning flashes every second, year in and year out, winter and summer, somewhere in the world. The world experiences 16,000,000 thunderstorms a year, or an average of 44,000 a day, according to the book. It is calculated that in any given water-power stations produce in six wavs. menths.

## **Tires Are Punctured**

If it wasn't for tacks and nails in the road, tire expense wouldn't be near as high notwithstanding the English rubber monopoly. As an experiment an Idaho concern hung a big electric magnet from the rear of one of its trucks, supplied it with current from a storage battery, then ewept the roads near its plant, gathering up a surprising lot of loose junk. Afterward the state highway department repeated the experiment and from seven miles of slab road on the Yellowstone. trail the magnet gathered up 603 pounds of nails, bolts, tacks and similar scrap which punctures tires. Now if somebody will find a way to remove the constantly increasing amounts of broken glass from the road, this will be a great world to live in for those who ride in Mr. Ford's chaises .-- Capper's Weekly.

By 1950 London will be a city of 11,000,000, according to Lord Ashfield in his report to the directors of the Underground railway of the world's metropolis. The population today is 7,500,000. Twenty years ago the average person used the underground 158 times a year, but today each person uses it 460 times a year, according to Lord Ashfield's study. The transportation lines in London, including the busses and tramways, carry 3,500,-000,000 passengers annually. Lord Ashfield was at one time general manager of the Detroit electric rail-

Doctor Jackson of Philadelphia, who has had wide experience in this sort of cases, tells in a recent article of a child of fifteen months who got a thin piece of glass from a broken Christmas tree ornament lodged in its larynx, where it remained for four and one-half nonths without causing any apparent discomfort to the child.

On the other hand the child may be taken with a persistent cough almost as soon as the foreign body is drawn into the kings. The child, if old enough to describe its sensations, may complain of a sharp pain near its. Adam's apple or in one or both ears. Swallowing may be painful and breathing difficult.

The outcome depends on the object swallowed and the point where it lodges. The safest plan is to keep all loose and harmful objects out of the baby's reach. Don't give him hnything to play with that can hurt him. If the baby does swallow some harmful object, don't try to get it out yourself. You may push it farther down and do great harm. Get a doctor and have an X-ray picture taken. Present day methods and instruments

Where Comets Come From can remove most foreign bodies, even from the lungs themselves. Astronomers now think comets (G. 1924, Western Newspaper Union.) are made of stellar rubbish, the ma-
