Capt. B. H. Dodson came home from Stonewall County Wednesday and reported an exciting runaway in which he participated. He was driving along the road when his horse shook the bridle off, looked around and took to his heels at a Nancy Hanks gait. The Captain stayed with the outfit a while, trying with his usual persuasive eloquence to induce the brute to stop and rest a little, but seeing that his oratory produced no effect and that they were approaching a wire fence which the animal would probably go through in Rough Rider style he decided to watch the performance from a safe distance and dropped out over the back end of the buggy, sustaining a few bruises and cuts but no serious hurt. The horse and most of the buggy went over and the Captain says the horse continued his mad career for several miles, going over or through another fence or two and leaving fragments of the buggy here and there by the wayside, but coming out unscathed himself.

VA's Dallas Branch Office, which supervises the tri-state area veterans' programs, said it issued 6,582,371 checks during the fiscal year for benefits ranging from education to disabilities.

Largest amount reported was \$225,903,000 in subsistence to World War II veterans going to school or taking on-the-job training. Schools and educational institutions training the veterans received \$85,854,000 for tuition and other fees.

Death pension checks mailed to beneficiaries or dependents of deceased veterans amounted to \$28,994,000 while another \$20,370,000 was received during the year by GI insurance beneficiaries of veterans in the tri-state area.

An estimated 1,400,000 veterans of all wars are residents of Texas, Louisiana and Mississippi.

When an automobile manufacturer produces a car so obviously ahead of the times as the Futuramic Oldsmobile, it's only natural that demand for that product should reach record-breaking proportions. Add to this today's pent-up need for automotive transportation—plus continuing shortages of steel and other critical materials—and you'll see why we, as Oldsmobile dealers, have a real problem on our hands. We value the good will of all our customers. We would like to provide all our customers with new Oldsmobile cars. But unfortunately, this can't be done overnight. That is why we are taking this opportunity to reaffirm publicly our policies on new car deliveries, as listed in the box at right. We believe that under present circumstances these policies constitute a sound basis for "fair play" to everybody. And we hope that, on this basis, we may continue to serve you and merit your patronage for Oldsmobile and for ourselves.

Proper Conditioning Of Show Animals Is Big Advantage

Future Farmers, 4-H Club boys, and other livestock owners who plan to enter animals in the Central West Texas Fair this year, would do well to keep in mind the fact that champions are made at home, and not in the show ring. The amount of training and conditioning your animal gets between now and show time will determine what color and how many ribbons the animal will get in the ring, says J. W. Davis, assistant extension dairy husbandman of Texas A&M College.

Fitting an animal means a combination of good grooming and proper feeding. And there's a big difference between a "fitted" and a "fattened" animal. To show well, a dairy animal should carry enough flesh to fill out the frame smoothly and show a good condition of health. For the show ring, the skin should be thin and mellow, and the hair should be fine, smooth and glossy.

Let's get the animal ready for the fair now. Put it under a blanket six to eight weeks before the first show. Two or three brushings a day with a soft fiber and rubber brush will get the long hair out of the way, and will help train the new hair to lay down. Here's an important point: Use your hand as well as the brush. Finger movement will stimulate secretion and soften the hair and skin.

Training the dairy animal to lead, pose and obey commands is part of the daily routine. Study the animal closely and see what position she looks best in, then train her to pose in that position. Train the animal to stand with all four feet placed squarely under the body and slightly apart.

If the animal droops in the rump, pinch along the back between the hips with your fingers.

Poor Handling of Eggs Results In Heavy Loss

Five eggs out of every hundred are lost on Texas poultry farms because of poor handling. Hot weather has a lot to do with it, says F. Z. Beanblossom, extension poultry marketing specialist of Texas A&M College. And Texas still faces a long period of hot weather before things begin to cool off this coming fall.

Going back to last year's egg record, Texas poultry flocks laid over 75 million dozen eggs during the hot summer months

ers. If low in the back, touch it under the belly. If the back is humped, touch it lightly on the middle of the animal's back. Most important of all, never lose patience or get rough with an animal you are training. Kindness always gets the best response.

Often it is necessary to train the horns on young animals in order to give them a good shape. Many people use wire and mechanical devices. These are recommended by nearly everybody that uses them.

About a week before the show is the time to give the horns a final dressing. Smooth down the rough outside surface with a rasp or horn scraper. Finish off the job with emery cloth. Then apply pumice stone or sweet oil. Polish the horns with a woolen cloth just before showing the animal in the ring.

Trim the overgrown hooves to make them shapely and comfortable. Levelness on the bottom is essential, and most of the weight should be on the outside wall of the foot. You can do a fine job with a file from time to time, and keep the hooves in pretty good shape. Maybe you can pick up some extra points in the ring by cleaning the hooves and rubbing them with oil.

If you have done a good conditioning job on the hair, you won't have to clip the animal all over. Clipping tends to make the hair coarse. A few days before showing the animal, clip the long hair around the head, ears, above the switch, inside the legs and around the udder.

Just a day before the show, wash, braid and wrap the switch. Rinsing it in bluing water will brighten the color of the hair, too. Just before going into the show ring, unbraids the switch and comb it out. This will give the animal a clean, fluffy switch that adds points to its appearance.

Feeding roughage puts high medals on dairy animals, says Davis. Feed them good quality hay frequently. The barrel capacity of an animal will show up the best if the animal takes a good drink of water fifteen or twenty minutes before going into the ring.

After these many weeks of fitting the animal for the ring, you want to keep her looking her best when you get her there. Never allow her to droop or go to sleep at any time. When stopping the animal, always try to stop her with her forefeet on slightly higher ground than the hind feet, says Davis. And one of the most important things of all to remember when you're in the show ring is to keep one eye on the judge and the other on the animal being shown at all times.

of June, July, August and September. Now, five percent of this number is more than 3 1/2 million dozen eggs. That's how many eggs had to be thrown out because they were not handled properly. Looking at the money side of it, that many eggs are worth around a million and a half dollars.

Beanblossom has a few ideas for the flock owners that will cut down egg losses. To beat the heat, he suggests that farmers collect eggs from the flock at least three times a day. Don't leave the eggs in the nests too long. Get them into a cool, moist room and leave them there at least 24 hours before packing them.

A wire basket allows for lots of air circulation around the eggs. It's about the best thing there is to collect eggs in. Pails, boxes or woven baskets keep the gathered eggs warm and the air out, so use a wire basket. And do not fill it all the way to the top.

A few degrees of heat makes a big difference, says Beanblossom. Freshly laid eggs held at 90 degrees lose as much quality in 20 hours as eggs held for three days at 70 degrees, or for 24 days at 50 degrees.

The best humidity for eggs is around 85 to 90 percent and a temperature of 32 to 60 degrees. The lower the temperature within these limits, the better the eggs will keep.

Eggs take up odors easily and quickly, says Beanblossom, so keep them away from such things as lemons, onions, kerosene or mustiness.

Yes, Reddy, thanks to the West Texas Utilities Company's policy of anticipating future needs, most of the material you need to keep the construction program rolling is on hand or scheduled for delivery as needed. In fact, much of the material to be used in this construction program was ordered nearly two years ago! However, due to the continuing critical shortages of heavy electrical equipment and wire, deliveries are just now being made on materials ordered as early as September, 1946.

Eighteen million dollars! Each of those dollars Reddy, is a vote of confidence in the growth and development of West Texas.

Army Switches Back To Whites

Future procurements of Army underwear, towels, and handkerchiefs, will be of white materials instead of the war-time olive drab, the Department of the Army has announced.

Cotton undershirts, shorts, and towels, and handkerchiefs will be of bleached white under the new Quartermaster Corps in-

tations to bids, while wool underwear shirts and wool drawers will be of natural color.

The Quartermaster Corps announced that future procurements of cotton underwear shirts will be of the T-shirt design instead of the sleeveless type now being the war and subsequently, both flat-knit and ribbed-knit shirts were procured.

Decision to substitute the T-shirt, known technically as quarter-sleeve, for the sleeveless shirt was reached after comparative tests of both types in which 10,000 soldiers participated.

Personally I was greatly helped His vivid, descriptive language, his sense and practical interpretation of the Scriptures, and his keen interest in the deeper, spiritual truth of the New Testament—all these together appealed to one. It was a privilege to worship with people from many church groups under the leadership of one who stressed the vital meaning of "The Word!" Dr. G. Ray Jordan, Pastor of the First Methodist Church, Charlotte, North Carolina.

J. P. Payne Home Is Scene of Coffee For Bride-Elect

Carolyn Williams, bride-elect of Jack Pippin, Miles, Texas, was honored at a coffee given for her in the John P. Payne home, Tuesday, August 31. Mrs. John P. Payne, Mrs. Claiborne Payne and Mary Beth Payne were hostesses. The guests were served from the table which carried out the bridal theme in the napkins and the chosen colors of the bride. Signing the bride's book were: Anne Katherine Rike, Carolyn Turner, Betty Oates, Catherine Davis, Mildred Chapman, Mrs. Richard Sherrill, Pittsburg, Pa., Mrs. Tom Davis, Mrs. B. C. Chapman, Mrs. Carrie Williams, Mrs. R. E. Sherrill.

Getting Rid of Pesky Wasps By Burning Nests Sometimes Proves Costly Method

Burning a wasp nest could cost you from \$25 to \$2,300. At least that is the calculation made by Marvin Hall, State Fire Insurance Commissioner, based on experiences of Texans in June. A \$2,300 fire loss was suffered when a wasp nest in a cedar tree was set fire and in turn ignited the roof of a duplex. The \$25 damage occurred when a man tried to burn a wasp nest off his home with flaming paper. In a third instance, \$200 damage was done in a similar situation.

Pre-School Physical Check of Children Is Advised

Dr. Geo. W. Cox, State Health Officer, urges the parents of all children who will respond to the school bell for the first time in September to be sure the child is physically ready for school duties.

First and foremost is the need for vaccination against smallpox. Parents and physicians should see that children are vaccinated before they are one year of age; however if not done previously, at school age vaccination becomes absolutely necessary, Dr. Cox said. If your child has not been vaccinated, have it done immediately so that the scar will be completely healed before school opens.

Immunization against diphtheria is also highly desirable, Dr. Cox believes. This disease, which causes serious illness and deaths among young children can be prevented with toxoid. The child who has never been protected should be given this safeguard against a dreaded disease. Even though he may have been immunized as a baby, doctors and health officers usually recommend an additional dose of the toxoid to strengthen immunity before entrance into school. In addition, before you send your child to school you are urged to take him to your family physician and dentist for a thorough examination, Dr. Cox adds. You will want to know that he is in good physical condition and can compete with the other children on equal terms. If the check-up reveals any weakness or defect there will be time to build up his general health and correct dental defects before school opens. Don't let your child start his school life with any avoidable handicap.

Weinert Families Spend Vacation In Ozarks

Mr. and Mrs. Dick Therwhanger and sons, Mr. and Mrs. John Therwhanger and sons, all of Weinert, and Mr. and Mrs. Herbert Simmons and family of Lamesa, have returned from a week's vacation in the Ozark Mountains in Arkansas and Missouri. They visited the famous "roaring springs" in Missouri, and Eureka Springs in Arkansas. The Weinert and Lamesa people noted the peculiar fact that none of the 230 streets in Eureka cross any other street, and declared that residents of that city told them its streets form the letter O seven times, the letter S sixteen times, with fifty U turns and fifty V's to complete the confusion. The city has 63 springs within the city limits. The vacationing party traveled by way of Fayetteville, Ark., and came back through Little Rock.

Community Exhibits Will Be Featured In Abilene Fair

D. H. Jefferies, President of the West Texas Fair Association, Abilene, has announced plans for presenting one of the largest Community Exhibits in the history of the West Texas Fair when this show opens in Abilene the week of September 27. A cross section of the fine produce and handwork of the many West Texas communities will be displayed before an estimated crowd of 100,000 Fair visitors. Any West Texas community or community organization is eligible to enter any exhibit of the products which were produced or made in the community. Exhibits will be judged on quality, attractiveness, originality, and neatness. Several communities have already reserved display space for such entries as dairy products, preserves, jellies, quilts and many others in the hope of capturing part of the premiums which range from \$100 to \$10 and incidentally to gain some measure of fame in the homemaking arts.

PONTIAC

A FINE CAR MADE EVEN FINER!

A Product of General Motors

GM Hydra-Matic Drive optional on all models!

Pontiac announces a series of notable improvements in the car that has already won widespread endorsement of more than a million owners and friends.

Among these advancements is the General Motors Hydra-Matic Drive—standard as optional equipment on all cars. Pontiac is the lowest-priced car in the world to provide this great mechanical

masterpiece—which shifts gears automatically, and completely eliminates the clutch pedal.

Coupled with this great engineering triumph is a striking improvement in beauty and luxury. New exterior smartness extends from the new radiator grille to the streamlined rear bumper.

Interiors, too, are remarkably improved. Upholsteries are more beautiful and are expertly blended to achieve new attractiveness and charm. Instrument panels are finished in a smart design adapted from quarter-sawn mahogany—and an adroit use of chrome moulding adds a deft touch of modernity.

Engine and chassis have been refined wherever possible—but they remain, basically, the same engineering masterpieces which have become

synonymous in the automotive industry with goodness and dependability.

There are many more things we could tell you about the new Pontiac, for there are countless improvements which add to its traditional quality and value. But we feel that, for those who know Pontiac, we need only say—

—here is, by far, the most beautiful Pontiac ever built

—here is the most luxurious Pontiac ever built

—here is the most dependable Pontiac ever built

—and it is now available with GM Hydra-Matic Drive—optional at additional cost.

We wish only to add that it is here—on display in our showroom—and that you are most cordially invited to see and inspect it.
