

# STERLING CITY NEWS-RECORD

76 "Since 1890" PUBLISHED EVERY FRIDAY AT STERLING CITY, TEXAS MARCH 3, 1967 No. 3

The Board of Supervisors of the North Concho River Soil Conservation District has purchased water testing equipment to test water for the salt content for domestic and livestock use.

The equipment is located in the second floor of the Sterling County Courthouse. Samples may be brought to the Soil Conservation office, the county agent's office, or the Sterling County ASCS office. These offices are all located on the second floor of the courthouse also.

It is the aim of the Board to test all sources in Sterling County to determine the salt content or degree of pollution and record on permanent files information.

The foregoing was announced recently by the Board of Supervisors of the district. If you have wells that you would like to have tested, you are urged to do so by contacting one of the agencies listed. The board hopes to make this an annual test through the use of the permanent files.

Three Sterling County 4-H club members are taking part in the Houston Livestock show this week. They are exhibiting in the fat lamb show, the Junior Rambouillet show and the Junior Hampshire Sheep show.

Fat lamb exhibitors are Amy Hodges, Janis Igo and Lee Wayne Igo. The three has a total of six lambs entered. Amy is competing in the Junior lamb show while Janis and Lee Wayne are entered in the senior lamb show.

Amy has four rams and four ewes entered in the Junior Rambouillet show. She also has two rams and three ewes entered in the Junior Hampshire show. In the open show next week, Amy's Hamps won reserve championships in the ewe and ram class both. Her Rambouillets also were entered in the open show. Places on them are not available at this time.

Janis and Lee Wayne have three rams and four ewes entered in the Junior Rambouillet show.

Lamb judging took place Wednesday and the Hamps and Rambouillets are being judged on Friday.

Fifteen lambs, twelve Junior Rambouillets, five Hampshire lambs, and one group of range Angora goats have been entered by Sterling County 4-H Club members in the San Angelo show next week. The show opens on Wednesday with judging in the breeding classes. Lamb judging and Junior Rambouillet judging takes place on Thursday. Friday, the remainder of the Junior Rambouillets, the range ewe lambs and the range goats will be judged.

Exhibitors and their entries were: Kenny Blane, one lamb; seven Foster, four lambs; Amy Hodges, four lambs, six Junior Rambouillets, one group of goats, five Hampshires; and Lee Wayne Igo, one lamb, one group of range ewe lambs, six Junior Rambouillets; Pam McEntire, two ewes; Susan Mixon, one ewe; Payton Wilson, two ewes; Frank and Allen Price, one group of range ewe lambs.

Three district agents from the Extension Service in Irion spent last Thursday in Sterling County. They are working about sheep and wool production methods in the United States, disease control methods, and the general live-stock production practices. In Sterling County, the agents spent one day in Irion, Schleichner and Tom County. Visitors were all gradu-

## School Holiday on March 10

The Sterling school will get a holiday on March 10, it was announced this week by superintendent O. T. Jones.

That day is the day for the teachers' meeting in Brownwood. Also it is a day of the San Angelo Fat Stock Show, said Jones.

**Easter Holidays Later**

The Easter holidays also fall in March. The school will be out on Friday, March 24, and Monday, March 27, said the superintendent.

## School Board Election April 1

There will be a school trustee or board election here on Saturday, April 1. Three members have terms expiring. They are Stan Horwood, Bill C. Humble and Roy Morgan. Filing for the spots on the ballots are Horwood and Humble—and Clinton Hodges.

Roy Morgan did not want to be considered for reelection and did not file. Hodges is on the ticket in the third spot.

Other members of the local board are Chesley McDonald, Finis Westbrook, Reynolds W. Foster, and John Copeland.

Mrs. Lee Augustine will be judge of the election and the election will be held in the district courtroom of the local courthouse.

## PTA Next Monday

The Sterling City PTA will meet at 7:30 next Monday evening at the school auditorium for the March meeting.

The Rev. Andy Daniels of the Baptist Church will give the devotional. Amy Humble will play a piano solo.

Robert Bass, high school English teacher, will speak on "Education—What Kind For Whom? How Much?" A special feature will be presented by the 6th, 7th and 8th graders.

In the business session the nominating committee will make their report.

**Public School Week**

Next week is public school week and will be observed in the Sterling school. All parents and patrons are invited to be at the PTA meeting and visit the school next week.

## Heart Fund Drive

Mrs. Riley King, who heads the Heart Fund drive here this year, said \$334.00 had been turned in so far with only half of the individual workers kits turned in.

She expects the total to be in the neighborhood of \$500 when all workers have reported in with their money.

If you haven't been contacted by a worker for a donation—and you would like to give, leave your donation at the post office with Mrs. Virgie Garrett or at the bank.

## Cancer Mobile Unit Here Next Monday

Dan Glass, president of the Sterling County Chapter of the American Cancer Society, said that a mobile unit of the society would be parked on the street by the courthouse here next Monday all day.

The mobile unit has exhibits on cancer education, with literature, etc. available for people visiting it. This one is on "smoking" said the president.

All residents are urged to drop in and visit the mobile unit.

**APRIL IS CANCER MONTH**

The Cancer fund drive will be in April. The month is the usual one each year. In last week's paper it was reported that the drive would be in March, but the report was not right—it will be in April.

**CARD OF THANKS**

We wish to thank everyone for their kindness while Buster was in the hospital. May bless each one.

The George Tabor family

## AS IT LOOKS FROM HERE

By Omar Burleson, Member of Congress, 17th District

WASHINGTON, D.C.—The flack and flap over the public disclosure of the subsidization of a number of organizations by the Central Intelligence Agency has been thick and fast these past two weeks.

The director of the CIA was scheduled in advance of this recent publicity to make a periodic report to my committee. His appearance had nothing to do with the revelation that the CIA, acting through a number of foundations, was contributing funds to certain student, labor and church groups and other organizations with international activities. The Director was to brief the Committee on political conditions around the as related to our own self interest. Inevitably, however, Committee members first questions were about the immediate news of the Central Intelligence Agency's operations.

My concern as expressed to the director was not a criticism of the CIA's purposes and intent but rather whether we had received our money's worth.

In this situation, "Money's Worth" cannot be measured in yards, inches, pounds or gallons. It must be measured by the intangible accomplishments of the CIA in combating the ideological advances of communism.

The "Cold War" is as real today as it ever was. In fact, by reason of the great scientific advances; by reason of great strides in transportation and communication, our world gets smaller and smaller. As a result, people are closer and closer together. To relax our guard and not be knowledgeable of the communist conspiracy at home and abroad is to fail in our duty as a Nation to meet the threat.

We live in a world in which ugly mobism is only "democratic protest" in the opinion of some. We see today public officials barely saved from physical violence when facing the beatnik and peacenik; a world in which every agency of Government entrusted with this country's physical security is physically attacked and smeared; in which night is day and truth is falsehood and patriotism has become a sour note.

On March 12, 1964, this column referred to the great influence of students in foreign countries. The university student in Latin America for instance has always carried prestige different from that in our own country. Presently, however, "campus demonstrations" whose leaders openly wear the symbol of communism are coddled and publicized here at home. Now that there is publicity about the attempt of the CIA to have the true spirit of America reported by patriotic students meeting with other students in foreign countries, a few of our "great thinkers" worry about the "integrity of American education."

1700 students at Stanford University listened in civilized fashion to the Vice-President of the United States speak on the Viet Nam situation. A mob of 300 outside his car called him a war criminal and stout-

ed that well known slogan—"Burn Baby Burn." The decent conduct of the 1700 was not news.

There is comfort in steps taken, as small as they may be, to prevent a total capture of the international student movement by the communists.

## Oil Means a Lot To Sterling County

Oil and gas valued at more than \$2.7 million is produced each year in Sterling County, according to figures provided by Texas Mid-Continent Oil & Gas Association.

The oil and gas production, royalty payments and drilling expenditures in the county mean millions of dollars each year to the local economy.

The latest figures available, for 1964, show that 906,000 barrels of oil, valued at \$2,681,760; and 168 million cubic feet of natural gas, valued at \$20,832, were produced in Sterling County.

Royalty payments for the year totaled \$337,824 and the state collected \$124,819 in production taxes. The oil industry payroll in the county is almost \$200,000.

In 1965, there were 58 wells drilled in Sterling County at a cost of \$4,329,236. Of that amount \$1,103,552 was spent on the 15 dry holes. Seventeen of the wells drilled were wildcats.

To gauge the local contributions of oil and gas, it may be noted that the industry contributed approximately 35 per cent of the \$142,261 in local taxes required by the Sterling City School District in 1965-66.

## Wins at Houston

**CLINTON HODGES HAS CHAMP RAMBOUILLETS**

Clinton Hodges, local Rambouillet breeder and rancher, exhibited the grand champion Rambouillet ram and ewe—and the reserve champion Rambouillet ram at the 1967 Houston Livestock Show last weekend.

**Daughter Wins in Hampshires**

Clinton's daughter Amy, also "hit" at the Houston show. Amy had the reserve champion Hampshire ram and reserve champion ewe at the show, thus sharing honors—in a sense—with her father.

WANT good home for five months old puppy, male. (free) See Mrs. Sam Simmons in late afternoons.

**CARD OF THANKS**

I want to express my deep thanks and appreciation to all for the flowers, cards, visits and all acts of thoughtfulness shown me while I was hospitalized. A special thanks to Dr. Swann and the hospital staff for their thoughtfulness and considerations.

Mrs. Riley King

## SCHOOL LUNCH ROOM MENUS

## LIONS CLUB

The Sterling City Lions Club met Wednesday noon in the community center for the regular weekly luncheon. One visitor was present, being Fred McCabe of Robert Lee. The prize went to R. P. Brown.

It was announced that the yield signs would be put up over town Saturday if the weather permitted.

The club committee for the sewer investigation plans to meet with the city council at the next meeting. On the club committee are H. L. Hildebrand, Skipper Lively, Ross Foster, Jack Douthit, and H. L. Bailey.

## Spring Conference

**21ST ANNUAL PTA SPRING CONFERENCE MARCH 8**

The 16th district of Texas Congress of Parents and Teachers 21st annual Spring Conference will be held March 8 in Lamesa. Mrs. Alvie L. Cole of Sterling City, district PTA president will preside.

"Who is My Neighbor?" is the theme of the conference starting at 9 a.m. The afternoon session begins at 1:30 p.m. ending at 3:00 p.m.

Speakers will include Mrs. Jean Harris of Agua Dulce, state vice-president; Mr. S. L. Canterbury Jr. of Kilgore, state membership chairman; Mrs. Guy Kennison of Lamesa; Mrs. Karl Norman of Lamesa; Bruce Frazier, Big Spring, and Sarah Bennett of Big Spring.

Special features will include a banquet for the district board members March 7, 7:30 p.m. in the Lamesa High School Cafeteria. The A cappella Choir of Lamesa High School will perform during the conference Wednesday morning.

Registration will begin at 8:00 a.m. with the conference starting at 9:00 a.m. The afternoon session begins at 1:30 p.m. ending at 3:00 p.m.

## GRASS FIRES UP HWAY 87

Two nuts in a late model white Chevrolet were setting grass fires on ranches up 87 toward Big Spring Thursday morning. They were seen by a rancher and chased but not caught. He wanted to get the car license number.

Fires were on the Foster ranch, the McDonald ranch, the O'Barr and Powell ranches and were spreading due to the west winds.

Trucks from Sterling City, Glasscock and Howard counties were called to help combat the spread of fires.

## GRASS FIRES UP HWAY 87

Two nuts in a late model white Chevrolet were setting grass fires on ranches up 87 toward Big Spring Thursday morning. They were seen by a rancher and chased but not caught. He wanted to get the car license number.

Fires were on the Foster ranch, the McDonald ranch, the O'Barr and Powell ranches and were spreading due to the west winds.

Trucks from Sterling City, Glasscock and Howard counties were called to help combat the spread of fires.

RANGER, 1919 — The colorful Ranger boom, which began with a 1917 discovery, produced some of the wildest boom town stories of them all; but this scene of an auto mired in its main street gives authenticity to reports of visitors paying to be "ferried" across muddy streets.

### Mrs. L.A. Randolph Buried in California

Mrs. L. A. (Veva) Randolph died in Long Beach, California on February 18. Burial followed in Long Beach. Mrs. Randolph, a daughter of Mrs. J. R. Welch of Sterling City, was ill with lung cancer for two months preceding her passing. She was 67 years old. Survivors include the husband of Long Beach, one daughter, Mrs. Frank Subic of Santa Paula, California, and two grandsons; the mother of Sterling City; and five brothers, W.B. Welch of Green Forrest, Ark., Guinn Welch of Sterling City, Bill Sam Welch of Grandfalls, Floyd Welch of Long Beach, Calif., and Noble Welch of Big Spring. Mrs. Taylor Garrett of Sterling City attended the funeral services.

### Health Column

**THE "UNMENTIONABLE" DISEASES**

The diseases that nobody wants to talk about are among the very ones that can blind, cripple, or even kill. The American Medical Association says venereal diseases are this nation's most urgent communicable disease problem. There's little wonder: VD is infecting 1,100,000 Americans a year—about 3,000 a day, or almost two a minute. And yet, despite the penicillin cure that has been known for more than 20 years, VD continues as a problem, continues to bring tragedy to countless families. Venereal disease is passed by intimate personal contact. That, of course, is why it is so reluctantly mentioned. If VD is to be conquered, however, it must be by a straight-forward approach. The AMA and medical societies throughout the country are encouraging people to (1) avoid exposure to VD, (2) seek prompt examination and necessary treatment, and (3) report to their doctor, sincerely and completely, their possible contacts with the disease. Only by this lawful method can VD be eliminated. And only then can conscientious people stop talking about it.

# An Oilman's Glimpse at the Next 100 Years

By Stanley Learned, President Phillips Petroleum Company

"An Oilman's Glimpse at the Next 100 Years," developed from a suggestion that "since we are observing the 100th anniversary of the drilling of the first well in Texas, a paper devoted to the next 100 years would be timely and of immense interest."

Accurate forecasts are difficult because our world is a world of change. What appears to be a valid premise today has a way of being invalid a year or two from now. I have, therefore generally tried to dissociate myself from prophesying about even the immediate future, let alone the next hundred years.

However, I decided to take a glimpse at the next 100 years, not through glimpts but through mainly conjecture, because we can benefit by peering into the crystal ball. We can look at some of the ways our civilization is trending and at some of the ways our civilization is trending and at some of the exciting possibilities which may develop along these ways. Certainly such a look stimulates our imaginations about the enormous promise and potential of our industry.

It seemed the best way to start to get ideas about the next 100 years was to look at the history of the past 100 years. People living 100 years ago could never have even dreamed of the amazing developments the future had in store. Even the visions of Jules Verne in his "science fiction" of 100 years ago were less wondrous than what the realities turned out to be.

Let us look at just a random selection of developments which have come upon the scene since L. T. Barret completed that first Texas oil well near Nacogdoches in September 1866. These developments include the gasoline engine with all its ramifications including automobiles, trucks, buses, farm tractors, piston driven airplanes, motorcycles, motor boats, power mowers, stationary engines, and mobile construction and military equipment of all kinds; the diesel locomotive; turbine and jet powered aircraft; oil fueled ships; rockets and missiles; petroleum fueled boilers, pumps, and other industrial equipment and machinery of many sorts; oil and gas fueled space heating and cooking equipment; air conditioning; the washing machine; clothes dryer; water heater dishwasher; refrigerator; vacuum clean-

## State R.R. Commission History Spans Years

The Texas Railroad Commission is a regulatory body administering the law concerning rates on railroads, express companies, truck and buses within Texas, gas utilities appellate jurisdiction, butane and propane safety means, licensing of dealers and handlers, oil and gas pipelines in wholly intrastate operations, conservation of oil and gas in the production thereof, ascertaining the market demand and setting allowable production at rates to prevent waste.

The Texas Railroad Commission was created under the leadership of Governor James Stephen Hogg during his administration as Governor.

While he was Attorney General he devoted much of his career to battling the railroads over rates, and was one of the leaders in promoting the adoption of a constitutional amendment in 1890 authorizing such regulation.

The next year when he was serving his first term as Governor, the Legislature created the Railroad Commission. Governor Hogg got Senator John H. Reagan to resign his seat in the U. S. Senate to become the Railroad Commission's first Chairman.

**Three Members**  
The Railroad Commission was composed of three members, and at first they were appointed by the Governor, but this became a matter of political activity on the part of the railroads and they sought to have the office of Railroad

er; incandescent lamp; phonograph; telephone; movie machine; radio; television; radar; rotary drill; cream separator; milking machine; flame weeder; orchard heater; linotype; cash register; key punch machines; the atomic reactor; computers and automatic instruments; X-ray; heart-lung machine and iron lung. And there are, of course, thousands of other amazing developments which have emerged since 1866. May I interject here that the Petroleum Department of the Chase Manhattan Bank has called air conditioning, just one of the items I have mentioned, the most far-reaching development of a technological nature now on the scene affecting energy demand.

Commissioner made an elective office. This was done, and ever since that time the office of Railroad Commissioner has been an elective office.

Today railroad regulation, while perhaps less glamorous than it once was, is still one of the Commission's most important functions; however, the Commission is also charged with regulation of motor transportation (both trucks and buses); the regulation of gas utility companies; the regulation of butane and propane distribution to the public; and the major task of regulating drilling, production, and transportation of oil and gas as conservation measures.

The leadership exercised by the Commission has undoubtedly promoted the healthy growth of the oil and gas industry, both in Texas and throughout the nation, and has protected the role of the states as the primary authority in oil and gas regulation.

**Conservation**  
Long range conservation practices instituted on Commission orders have helped to maximize the economic benefits from Texas' rich heritage of natural resources. For many years the Commission has had an enviable record in regulatory policy making, matched by its performance in the areas of policy application and enforcement.

They knew when regulatory policy was being reasonably obeyed and adequately enforced. In recent years the problems of oil and gas conservation, development, and production have become much more complex. Numerous small companies have merged and grown into great corporations; old time "general managers" have been replaced by functional specialists. Economic pressures have forced the industry to automate and streamline its methods to stay competitive.

Texas state government has also grown rapidly larger and more complex, and soaring taxes have forced legislative and administrative officials to seek better and more economic methods of operation.

To function effectively within the framework of expanding state government and to cope with changing methods and practices in the industry, the Railroad Commission has in the past few years reorganized and modernized its own structure and procedures in order to maintain its standards of excellence.

**Oil and Gas Division**  
The organizational structure of the Oil and Gas Division of the Railroad Commission centers responsibility for the administration under the Chief Engineer.

Oil and gas hearings are held by the Railroad Commission to establish drilling and production rules of statewide application, or rules which apply only to a single reservoir, or to consider special cases or exception. Such hearings are held by a set of hearing examiners made up of engineers, geologists and lawyers. Administration processing is provided wherever possible.

Productions accounting in the Railroad Commission is designed to insure compliance with proration regulations. Reports on oil and gas produced each month are compared with the amount of allowable production allocated to each well or lease.

Production accounting of both oil and gas and the updating of proration schedules are handled by machine data processing equipment in the headquarters in Austin.

**Importance of Research**  
The Research and Planning Section of the Oil and Gas Division is headed by a Director with the primary duty being the improvement of conserva-

tion rules and practices.

This Section analyzes the results of field regulations, keeps up with trends and new developments, works on current problems, and makes long range conservation plans.

The Railroad Commission has ten district offices throughout the state with 91 engineers and field inspectors headed by a Director of Field Operations responsible to the Chief Engineer.

These personnel inspect approximately 10 per cent of the 225,000 operating wells, witness approximately 60 per cent of all wells plugged, inspect virtually all of the 14,000 annual well completions, and check an estimated 5,000 annual complaints on drilling and production practices and problems concerned with salt water disposal operations and pollution.

The Division of Administrative Services of the Railroad Commission in general carries out the auxiliary functions required to keep the Agency in operation. Fiscal personnel, and records management, along with other "housekeeping" duties, are combined under this Division.

Budgeting and expenditure control are among one of its most important assignments. One of the most important functions is the preparation and execution of the agency budget.

# Oil Production Has Skyrocketed Through the Years

Just the developments I have listed make the tales of Jules Verne pale by comparison. The developments mentioned all have in common one aspect which is especially significant to us—they all affect energy demand.

Of course, continued population increases accelerate energy demand. In the past 100 years world population has increased from 1.3 billion to 3.3 billion. U. S. population alone has zoomed from 36,000,000 to nearly 200,000,000 during this time.

Because of developments stimulating energy use, annual consumption of energy in the U. S., measured by barrels of oil equivalent, has skyrocketed from 500 million barrels of oil 100 years ago to 9.4 billion barrels in 1965. In just the past 25 years U. S. energy consumption has more than doubled. Who in 1866 could have ever speculated that we would require such prodigious amounts of energy? At that time, for instance, who would have ever dreamed that the internal combustion engine would come along to open the floodgates for petroleum which was being used than mainly for illumination?

The discoveries listed, revolutionary as they turned out to be, did not burst upon the scene all at once to alter the energy business. Most of them unfolded gradually. The gasoline powered automobile, for instance, was first introduced in the U. S. in 1892. The airplane was a 1903 invention. Television was a reality at the Chicago World's Fair in 1934. The important factor dictating the large-scale availability of these discoveries was economics. Their solid impact came when they could economically be made for and utilized by great masses of people.

Now with this background let us look to the future. There seems no end to the variety of discoveries and improvements flowing from the minds of men. This is indicated by patent applications filed. In 1965 alone more than 94,000 applications for U. S. patents were filed, an increase of 11,000 over the number filed five years ago. It certainly doesn't look as if discoveries based on science and engineering are dwindling. Predictions about future developments may actually turn out to be conservative and any estimates about energy demand may be too low. Here are some possible developments that may unfold in the next 100 years, all of which would affect the use of energy.

### More Airmail To Servicemen

Postmaster Virgie Garrett today announced that henceforth all first class mail, personal sound recordings (voice letters), and parcels weighing 3 pounds or less and measuring not more than 60 inches in length and girth combined will be airlifted on a space available basis between the United States and all military post offices overseas.

Also, all second class mail, such as newspapers and magazines published weekly or more often, would be airlifted from San Francisco to the armed forces serving in Viet Nam.

### Social Security

Some 3000 Texans who may be eligible for disability benefits under the new Social Security provisions, have not yet applied for them.

Under recent liberalizations of the law, persons with nonpermanent disability may now qualify for benefits. Ellington said that under the previous law a person was eligible only if he had a severe disability that was expected to last a long and indefinite time. Now benefits can be paid if the severe disability has lasted or is expected to last as long as 12 months by his doctors. There are also more liberal requirements for certain persons who are blind.

### SOCIAL SECURITY OFFICE HOURS CHANGED

Ted F. Moellering, manager of the Social Security District Office located at 3000 W. Harris in San Angelo, announced a change in office hours.

During the past few months the office has been open from 8:30 AM until 8:30 PM each Monday. According to Moellering, the reason for the extended hours was to take care of callers who could not come in during regular hours.

A need still exists for these extended hours, said Moellering. However, experience has shown that very few persons come in during the last hour. Therefore, the new Monday office hours will be from 8:30 AM until 7:30 PM.

Moellering said that there will be no change in the office hours from Tuesday through Friday. These will remain from 8:30 AM to 4:30 PM daily.

### Breakfast Browsing

By Betty Barclay

CEREAL packages have taken on a new look. The backs of many Post Cereal packages are a miniature recipe file containing wonderful new recipe ideas for ways to use and serve cereal.

Did you know that bran and prune flakes are delicious served with sour cream or yogurt? All you do is stir enough milk into sour cream or yogurt until it's the right consistency, pour the mixture over the cereal and sprinkle brown sugar on top.

Another flavorful way to use bran and prune flakes is with sweet potatoes. This casserole would be the perfect accompaniment to roast pork or ham.

Sweet Potato Casserole  
One 1-lb. 2-oz. can sweet potatoes; one 8½-oz. can crushed pineapple; 3 tablespoons butter, melted; 1 slightly beaten egg; 2 tablespoons brown sugar; ½ teaspoon salt; 1½ cups bran and prune flakes.

Drain and mash potatoes. Blend in pineapple, 2 tablespoons butter, egg, sugar, and salt. Gently stir in ½ cup cereal. Bake in a 1-quart casserole at 350° about 20 minutes. Mix remaining butter and cereal; sprinkle over top of casserole. Makes 4 servings.

**Huge Growth of World's Population Means Changes**

An increase in world population to more than ten billion by 2066. And this figure is based upon man's having the wisdom effectively to control the birth rate. The greatest population increase will occur in countries where per capita energy use is now low. This per capita energy use will climb steeply as technology and machine operation reach the underdeveloped areas of the globe.

In the U. S. population may zoom to 375 million and gross national product may reach \$16 trillion 100 years from now. Resources for the Future, a Ford Foundation research group, estimates that by the year 2000—less than 35 years away—U. S. population will be more than 330 million, the annual gross national product will jump from approximately \$700 billion now to \$2.2 trillion, and 244 million autos and trucks will be in use, compared with 90 million today.

Many forecasters predict that within 100 years we will have computerization of nearly every aspect of life. They predict that computer-robots will prepare and deliver food, and do the laundering, cleaning, dish-washing, and grass cutting around the home, and that offices and industries will be operated almost wholly by machines and computers.

Other energy affecting developments which the speculators say may unfold over the next 100 years include underground, automated highways but with wheels and road surfaces eventually giving way to hovercraft riding on air; enormous supersonic transport planes; individual propulsion; transportation by ballistic rockets to any place on earth within 40 minutes; permanent space stations; regular trips to the moon; all plastic houses entirely weather conditioned. The next 100 years may also see huge cities entirely enclosed and weather conditioned and served by trains reaching speeds of 1,000 miles an hour; synthetic clothes, and other goods and appliances made to be used and thrown away; teaching machines; automated libraries; facsimile newspapers and magazines; communication with anyone, anywhere at anytime by voice, sight, and written message via satellite telephone, radio, and television; motorized and computerized artificial arms and legs; far more use of elevators and escalators, outdoors and indoors; and chemical control of the aging process extending life by up to 50 years.

**LONGER BENEFITS UNDER SOCIAL SECURITY FOR STUDENTS (Up to 22 Years)**

The social security law now provides monthly benefits to unmarried students under age 22. These benefits are payable only on the record of an insured parent who is drawing disability or retirement payments, or who is deceased. The amount of the benefit depends on the earnings of the parent and the number of dependents entitled to payments on the parent's account. Student payments can be as high as \$102 per month and more in future years.

Students whose benefits were stopped under the old law when they reached age 18 may be eligible to receive payments now.

Ted F. Moeller, District Manager of the San Angelo Social Security Office, believes here are many students in this area who could qualify for monthly payments.

These payments are not automatic. Any student who has a parent who is retired, disabled, or deceased should contact the people at the social security office for additional information and application forms. If you wait too long, you risk losing benefits.

The district social security office is located at 3000 West Harris in San Angelo. The telephone number is 949-4608. The office remains open each Monday evening until 8:30 for the convenience of those who are unable to come in during regular office hours.

# Food of Future May Come From Petroleum

## Oil Field Service

GENERAL DIRT WORK  
HIGH PRESSURE PUMP SERVICE  
OIL & WATER HAULING  
ACIDIZING

### Jack Taylor

CONTRACTOR, Inc.  
Coahoma, Texas

510 S. 1st 394-2452

Part of the most important energy supply of all—food for the human body—may come during the next 100 years from huge fields of kelp and other kinds of seaweed, whale farms, and from cheap, edible protein derived from petroleum.

Needs for fresh water are going to grow enormously during the next 100 years. Thus, one of the most significant developments for futhering desalination of salt water by cheap nuclear power.

These predictions do not allow for any cataclysmic event such as a devastating war. Obviously, any such catastrophe would crush all the grand hopes and dreams of man before they had a chance to become realities. During the next 100 years, therefore, mankind will have the hard job of solving the problems of human and national relationships while there is still time. In any look at the next 100 years this challenge overrides all the others.

One expert has estimated that world energy demand will increase as much as 50 times over the next 100-year period. In terms of billions of barrels of oil equivalent this would be an increase world-wide from 26 billion barrels a year today to 1,350 billion barrels in 2066. This is only conjecture, however. No one can tell really how much energy the world will need.

We do know this though. The energy demand for the future is going to be colossal. There can be no doubt about this in view of the certain explosion in population, dazzling new energy gobbling developments, and increase in per capita energy use. The really big problem will be getting the energy to supply the massive needs. In fact, many of the prophets consulted in my research believe that the extent to which the dreams of the future are realized will be dependent upon the amount of energy available. Dr. Philip Abelson, Editor of "Science" magazine, this year said, "Fuel reserves are not sufficient to meet our long-term needs."

### REWARD NOTICE

A reward of \$500.00 will be paid by the Texas Sheep and Goat Raisers Association to any person (other than law enforcement officers) giving information causing the arrest and final conviction of any person or persons found butchering or stealing any sheep or lambs or goats belonging to any Association member in good standing. When two or more persons give information, the above sum will be divided at the discretion of the Board of the Association. When two or more defendants are involved in a single crime, the total reward is limited to \$500.00, but the conviction of one defendant, even though the other defendants are acquitted will entitle the claimant or claimants to said sum of \$500.00. All claims must be submitted within ninety (90) days following conviction. If, upon conviction, a defendant confesses other thefts, no additional reward will be paid. All devisions concerning the payment of such reward and the conditions of payment will be made by the Board of Directors of the Association. TEXAS SHEEP & GOAT RAISERS ASSOCIATION

# Huge Energy Need Looming in Future

The huge energy needs of the future, therefore, are going to require not only the utmost care in the use of petroleum, but large use of other energy sources as well. It is inevitable, for instance, that electrical energy supplied by nuclear power will become an important factor in the energy picture. Although it may be doubtful an atomic reactor will ever be feasible for operation of small mobile equipment such as the automobile, I believe advances in nuclear power technology will shortly enable this source of energy to supply increasingly larger amounts of electricity. The Atomic Energy Commission now estimates that by 1980 atomic power may provide 20% of total estimated consumption of electricity. Some of the long-range forecasts predict that 100 years from now over 50% of the world's energy supply will come from electricity generated

by nuclear power. Still other energy sources will have to enter the picture on a large scale to supply the astronomical demand. As these demands increase, man will develop energy from the vast reserves of low-grade oil shale and tar sands, thin and deep-lying coal seams, from the great locked-in energy of ocean tides. He may do the same with geothermal energy and energy differences within the earth. Eventually he may find a way to harness and transmit solar energy. These can all develop when the "price is right." Now what about petroleum? What does this glimpse into the future mean to the members of the Texas Mid-Continent Oil and Gas Association in this year of 1966? The energy needs of the future are going to be so enormous that the petroleum industry will have to exert a supreme effort to supply its

share of these needs. Some prophets predict that at the end of the 100-year period there will be no economically producible petroleum remaining at all because the petroleum will have been used up supplying its share of the huge energy demand.

## The Cup That Cheers

By Betty Barclay

UP-TO-DATE homemakers will agree that nothing perks up lagging spirits more than a cup of freshly brewed coffee. In some coffees, such as Sanka, the caffeine has been removed, but the full-bodied flavor and aroma are retained since caffeine has no taste in coffee.

For special occasions when friends and neighbors gather to share a cup of decaffeinated coffee, you might blend it with other ingredients to make a glamorous beverage. For instance, Steaming Mocha is a blend of chocolate syrup, coffee, and milk topped with a garnish of whipped cream and a sprinkling of cinnamon. Or you may add a touch of grated orange rind, chopped candied ginger, or crushed cinnamon candies.

### Steaming Mocha

Blend together 2 cups hot freshly brewed decaffeinated coffee, 2 cups hot milk, and 1/2 to 1/2 cup chocolate syrup. Serve hot in cups or mugs with a dollop of whipped cream and a sprinkling of cinnamon, grated orange rind, chopped candied ginger, or crushed cinnamon candies. Makes 1 quart or 6 servings.

## Governor's \$187 Million Tax Package Heavy on Oil Industry

Governor John Connally, in a message to the Legislature, proposed additional state tax levies totaling \$187 million, which would provide \$144 million in general revenue funds needed to finance his recommended budget for the next biennium.

The petroleum industry and users of its products would bear a major share of the tax increases (\$124 million.) Proposals affecting the oil and gas industry are:

—Increasing the natural gas production tax from 7 to 8 percent and (eliminating taxes on gas used on the lease where it is produced) —\$18 million.

—Increasing the franchise tax from \$2.25 to \$3 per \$1,000 of capital during 1968-69, but keeping the \$2.25 rate on corporate debt for 1968 and reducing it to \$2 in 1969—\$31 million (\$9 million of it from the petroleum industry).

—Increasing the state motor fuel tax from 5 to 6 cents per gallon—\$97 million. (Of this amount, \$24 million would automatically go to the public school fund. The remaining \$73 million would go to the State Highway Department. However, another of Connally's proposals, repealing the Colson-Briscoe Act, which provides \$30 million a biennium for farm-to-market roads, would mean a reduction of that amount for the highway budget. In effect, these two proposals would add \$54 million biennially to general revenue.)

You get a good idea of the challenge which you as petroleum industry members have by looking at what is on tap for just the time from now through 1980. In barrels of oil equivalent, by 1980 energy consumption in the United States will total some 15 billion used in 1965. Although there will be some changes in the proportion of U. S. energy supplied by the various energy sources in 1980, these will not be radical. Liquid hydrocarbons will still supply the lion's share with about 40%, only a slight decline from the 43% today. Let me say that energy consumption for the Free World as a whole will zoom 100% by 1980. The stark fact is it looks as if we will use more petroleum energy between now and the end of 1980 than we have used in all of our previous history.

To see what a tremendous job this forecast just to 1980 poses, let me quote from a recent address by Interior Secretary Stewart Udall. He said, "In case of oil, if domestic sources continue to supply approximately the same relative proportion of our total demand for liquid hydrocarbons as they now do, and if we elect to hold to the historic reserve-to-production ratio at 12:1, we will have to add 83 billion barrels to our proved reserves between now and 1980." The means a yearly average for the period of 5 1/2 billion barrels. When you consider that the average of yearly additions since 1955 has been 3.3 billion barrels you get an idea of the big job before you.

Natural gas consumption in the U. S. should also increase providing the natural gas supplies are ample. Natural gas demand will get a big boost in coming years by total energy systems. The development of an economic fuel cell could well skyrocket gas demand.

As to the outlook for gas supplies, Secretary Udall had this to say, "choosing to maintain a reserve-to-production ratio of 18:1, we shall need to add 450 trillion cubic feet to our proved reserves. This is an average of 30 trillion cubic feet a year. At no time in its history has the petroleum industry ever added as much as 25 trillion cubic feet to reserves in any one year. The average since 1955 has been 20 trillion."

# New Techniques Needed

## For Oil Business

To meet these challenges of coming years, some spectacular changes must be made. New and better techniques and devices for mapping underground structures and detecting possible presence of petroleum will be needed. Techniques for defining stratigraphic traps are needed. We are going to have to make breakthroughs in techniques of drilling and in reducing costs. Many wells will be in remote, difficult to drill areas such as the Arctic ice cap. Offshore techniques must be improved as we will have to drill further out in the ocean and position producing equipment on the ocean floor.

Artificial lift methods to supplement reservoir energy must be made economical. We are going to have to find and perfect methods of recovery of much more of the oil left in the reservoirs. Controlled nuclear explosions comprise one possible new recovery method which may emerge. Complete automatic transfer in the fields will be a requirement. Computerizing plants and transportation in an inevitable eventuality.

Huge amounts of capital will be needed. Quality people in increasing numbers will be required by the industry. May I say that to attract the individuals the industry must have we are going to have to convince outstanding young people that supplying petroleum energy for the future is just as exciting and significant a job as going to the moon, or eliminating poverty, or rebuilding cities, or beautifying the land, important as these are.

Now what is the fine ingredient necessary to accomplish these tasks and successfully meet the coming challenges? You know the answer. It is

BURKBURNETT, 1919 — North Texas ranchlands had been producing oil since 1905 and early Burkburnett production started around 1912 but by 1919, when this picture was made, it was one of the state's leading oil boom centers.

economic incentive. This economic incentive is not sufficient at the present. This is vividly illustrated by several facts about our industry which I should like to mention briefly.

During the nine years following the last general increase in 1957, crude oil prices deteriorated so that the average U. S. crude oil price, according to the U. S. Bureau of Mines, dropped from \$3.09 in 1957 to \$2.86 in 1965, a decrease of 23 cents per barrel or 7.4%.

### City Election April 4

There will be a city election here on Tuesday, April 4 for the purpose of electing three city councilmen. This will be the regular city election.

Councilman Fred Hodges is dead, Hugh Harzke is moving to Brady, and Harvey Glass' term of office is up, said city secretary Mrs. H.F. Donalson.

4-ROOM furnished house for sale. Mrs. Debolt. Call at the T.H. Murrell residence, 8-2081

MEN WANTED to meet the growing need for CLAIM ADJUSTORS. Earn \$450 to \$1,000 a month.

We train you at home in your spare time for a job that can pay you a big income, provide your car, pay your expenses and give you lifetime security. 5904 E. Colfax,  
Denver, Colorado, 80220

FOR SALE—Pressure pump and tank, good shape. See or call G. C. Cannon.

#### REWARD NOTICE

A reward of \$500.00 will be paid by the Texas Sheep and Goat Raisers Association to any person (other than law enforcement officers) giving information causing the arrest and final conviction of any person or persons found butchering or stealing any sheep or lambs or goats belonging to any Association member in good standing. When two or more persons give information, the above sum will be divided at the discretion of the Board of the Association. When two or more defendants are involved in a single crime, the total reward is limited to \$500.00, but the conviction of one defendant, even though the other defendants are acquitted will entitle the claimant or claimants to said sum of \$500.00. All claims must be submitted within ninety (90) days following conviction. If, upon conviction, a defendant confesses other thefts, no additional reward will be paid. All deviations concerning the payment of such reward and the conditions of payment will be made by the Board of Directors of the Association. **TEXAS SHEEP & GOAT RAISERS ASSOCIATION**

## SCIENCE SKETCHES

WALKING or hiking is an excellent exercise available nearly every day of the year, says the American Medical Association. If your doctor tells you to "take a walk," don't be offended. He's looking out for your health.

EASTERN railroads are replacing conventional 39-foot rail segments with quarter-mile continuous welded rails. The long rails are made by electrically heating and squeezing together the ends of conventional rail in a National Cylinder Gas rail welding unit. A 50-ton blow forces impurities and excess metal from the joint.

LIQUID traveling from a nozzle at supersonic speed can cut wood and inch-thick concrete, according to a research team at the University of Michigan. The team used a jet of water one-thousandths of an inch thick, shooting it at three times the speed of sound. It cut through the one-inch concrete at a rate of 15 inches per minute.

# Production and Drilling Costs Cause Exploration Decrease

Let's compare this decrease with the experience of other segments of our economy, including those which make up the producer's major costs. From 1957 through 1965 the wholesale price index for all commodities other than farm products and foods in the U. S. rose 3.3%. According to the U. S. Bureau of Labor Statistics, the cost of living in 1965 was 12% higher than in 1957. Data published by the U. S. Bureau of Labor Statistics show average hourly wages for production employees in crude petroleum and natural gas fields during 1965 were up about 23% from 1957. The cost of oil field machinery in 1965 was up 5.1% and the cost of oil well casing was 11.6% higher than in 1957. It is only natural that this disparity in experience of crude oil prices and that of items representing the major costs of crude oil producers would have a seriously depressing effect upon exploration and drilling activity. From 1956 through 1965, total well completions in the United States declined 29%. But exploratory wells, which are the ones that find new reserves, declined 42%. Geophysical activity, the forerunner of exploratory drilling, decreased 53% from 1956 through 1965. The situation is not improving. For the first six months of this year, total domestic well completions dropped 15% from 1965's first

six months. Total footage posted a greater percentage drop than completions, sagging 17% below the first six months of last year.

Meanwhile the reserves-to-production ratio for oil has been declining. Despite the great potentialities for greater recovery from old fields, the scarcity of new oil reserves is a cause of real concern. It is too early to tell whether the recent small, spotty crude price increases will provide sufficient incentive to reverse the downward trends. As for gas, the economic incentive since Federal regulation of producers was imposed in 1954 has, in my opinion, been insufficient to encourage exploring for the necessary new reserves. We are all familiar with the continued decline in the gas reserves-to-production ratio. Anyone familiar with this situation will agree that at some point this decline must be stopped and to do so will require a reversal of the continued downward trend in exploratory activity. In my opinion, the time to begin this reversal is now because of the time lag between exploration and final gas delivery to the pipeline.

It should seem obvious that the prices for both oil and gas are adequate to provide the incentive sufficient to find and supply the needed petroleum for the future. I don't know precisely what the prices should be to provide an adequate incentive. I know they must be higher than they are now for crude, at least as high and perhaps higher than in 1957 when prices began their downward slide. As for gas, there needs to be the added qualification of having the price assured by a contract which cannot be altered by subsequent regulatory actions.

The industry requires sufficient economic incentive to do its job of helping supply the world's massive future energy requirements. I have faith that competition will do the job of establishing prices that are both adequate and fair if the public and its elected representatives are fully informed of the critical need for such prices and thus permit free, competitive enterprise to do its job.

**EAST TEXAS, 1930** — This traffic jam on a country road led to the famous Daisy Bradford No. 3, the discovery well drilled by C. M. (Dad) Joiner which opened up this nation's largest oil field, the famous East Texas field, which has produced more than 3.7 billion barrels of oil.

**"Who is your brother's keeper?"**

**Should it be you?**  
 In a time when it's 'every man for himself,' to love your neighbor as yourself may seem to carry a hollow ring.

But to do so can be vital to each of us. To love even our enemies is to discover something of the richness of love itself. It can open the way to greater accomplishment in our lives, restoring health and blessing others. And the way is to begin to see our true nature — and that of our fellowman — as fashioned in the image and likeness of God.

You are invited to hear this subject explored in a challenging lecture by Neil H. Bowles, C.S.B., of Atlanta, Georgia. Mr. Bowles is a member of The Christian Science Board of Lectureship. Admission is free and all are welcome.

**CHRISTIAN SCIENCE LECTURE IN ANGELO MARCH 9**

"Who Is Your Brother's Keeper?" is the title of a Christian Science lecture by Neil H. Bowles, C.S.B., who will speak in San Angelo Thursday, March 9 under the sponsorship of First Church of Christ, Scientist, San Angelo.

The lecture will begin at 8:00 p.m. in Massie Club House, 815 South Abe Street.

Mr. Bowles is on tour as a member of the Board of Lectureship of The First Church of Christ, Scientist, in Boston Mass. A native of Chicago, Illinois, Mr. Bowles withdrew from business in 1942 to devote his full time to the public practice of Christian Science healing. Since becoming a member of The Christian Science Board of Lectureship in 1958, he has traveled widely in Europe and other areas as well as the United States and Canada. His present home is Atlanta, Georgia, where he is also a recognized teacher of Christian Science.
