## President Truman Will Greet 12 Outstanding Boy Scouts

President Truman will greet 12 outstanding Boy Scouts in the White House during Boy Scout Week, February 6 to 12, to mark the 40th birthday anniversary of the organization.

The Scouts, who will represent the nation's 2,300,000 Scouts and leaders in ceremonies at Washington, D. C., where the Scout Movement was incorporated, will go to Independence Hall in Philadelphia February 9 for ceremonies where the Liberty Bell is enshrined. The Scouts will wind up their trip in New York where they will enjoy sightseeing, meet notables and visit the National Council office.

Boy Scout Week marking the 40th birthday of Boy Scouting in the United States, will be observed from February 6 through February 12. On the actual birthdate (February 8) all the members will have an opportunity to recommit themselves to the Scout Oath or Promise at 8:15 p. m., in the four time zones.

The theme of the birthday celebration is "Strengthen Liberty." Since in every city and town and nearly all villages and hamlets throughout the nation and its territories more than 71,000 units take part, this is the largest birthday celebration observed by young America.

One of the secrets of successful livestock production comes from knowing your animals and then taking advantage of this knowledge to get from them their maximum production.

## Increase In Social Security Tax Effective January 1

The fact that the social security tax advanced from 1 percent to 1 1/2 percent from the employer and the employee, effective January 1, 1950, has caused some employers to inquire if the law has been changed to tax more than the first \$3,000.00 in wages paid to an employee in a year, according to J. R. Sanderson, manager of the Amarillo office of the Social Security Administration.

"Only the first \$3,000.00 in wages paid by an employer to each employee is taxable," Sanderson said, "and only an Act of Congress will change the law pertaining to the maximum wages to be taxed."

Sanderson pointed out that all inquiries regarding social security tax matters should be referred to the Collector of Internal Revenue, and that all questions about old-age and survivors insurance benefits should be directed to the social security office, Post Office Building, Amarillo.

### BIRTH

Mr. and Mrs. Royce Vaughan, of Plainview, are the parents of a baby boy, born January 26, weight 7 pounds and seven and one-half ounces. Named Randall Royce. His grandparents are Mr. and Mrs. B. T. Vaughan, of Plainview, and Mr. and Mrs. W. E. Autry, of Silverton. He is great-grandson of Mrs. Perkins of Lawton, Oklahoma, and Mr. and Mrs. T. L. Autry of Silverton.

L. D. Griffin, Carl D. Bomar and Wayne McMurtry, spent the week end in Fort Worth on business.

## 15-Point System Aids Insomniacs To Get to Sleep

NEW YORK. — For those who have trouble getting to sleep, there is a formula on the market which is designed primarily to remedy that trouble. Although most people bother about how to stay awake, or how to wake up, once asleep, there are many thousands of humans who are tortured night after night by inability to get to sleep.

Dr. James Bender never had any trouble like that, although he did lose some hours over a book he was writing. The title of it is "How to Sleep."

Although the book touches on all phases of sleeping—from the fine art of snoring to how to get the children to bed—it is chiefly aimed at bringing comfort to the insomniacs, the people who can't go to sleep.

For those who want to try it, Dr. Bender has a 15-point program for producing sleep. Here is what he recommends:

1. Sleep in a good bed. Make sure it's big enough for you.
  2. Sleep on a pillow that fits you.
  3. Dress your bed right. Dr. Bender even advocates a daily change of linen for severe cases of non-sleeping.
  4. Don't sleep in a room decorated in exciting colors. Pastel greens and blues are the most restful shades.
- Keep Room Dark**
5. Keep the room dark. If necessary, buy and wear a pair of eye-shades.
  6. The bedroom should be strictly for sleeping; make it a pleasant, restful room, with things near by that induce slumber.
  7. Take a bath before going to bed. A bath is more relaxing than a shower, especially if a few drops of pine needle extract are added to the tub. The temperature of the water should be between 98 and 102 degrees.
  8. Be the master of noise. A pair of ear stoppers help keep the room quiet.
  9. Ventilate your room to suit yourself.
  10. Try melotherapy. That means music. Among the selections Dr. Bender suggests are MacDowell's "To a Water Lily" and Debussy's "Afternoon of a Faun."
  11. Make friends of your senses. In other words, rest them. Some ways you can do that are to brush your hair before retiring and to burn a stick of incense in the bedroom.
  12. Eat a snack. But be careful. Dr. Bender advises the bedtime menu consist of a glass of skim milk and a plain cookie. If you're very tired, maybe two cookies.

### Kid Self Along

13. Kid yourself along. Dickens, says Dr. Bender, couldn't sleep unless his bed pointed north. If you need a secret trick—like crawling around the bed 10 times—go to it.
- 14. Read yourself to sleep.
- 15. Make a happy event of going to bed. Look on sleep as a delightful escape from problems.

Besides the 15 points, Dr. Bender has other suggestions.

"I have almost a religious fervor in the belief that relaxation exercises are a big help," he says.

Some ways, Dr. Bender advocates relaxing are by standing on your head, or yawning, or blinking. Yawning, incidentally, is good for you, and you shouldn't try to swallow your yawns.

## Farm Kids Rated as Having Better Chance Than Others

CHICAGO.—Farm kids have all the luck. They're healthier; their responsibilities build stronger character, and often by the time they're 20, they're capitalists.

That's the summation of a 4-H club official, G. L. Noble, director of the national committee on boys' and girls' club work.

"If cities had a youth program similar to 4-H clubs," he said, "juvenile delinquency would be greatly decreased."

Noble contends that city youngsters don't have the responsibilities of their rural cousins.

"We spend thousands of dollars on supervised recreation for kids in the cities," he said. "The kids are told what to do. They don't learn how to take responsibility—and if you don't learn that, oftentimes you turn out to be a weakling."

Noble says that it is different with rural youngsters as members of 4-H clubs.

"Each club is a little democracy. The kids map out their own program. They take responsibilities."

He said that the nation's cities need a 4-H club type of program even more than the rural areas.

"Farm kids would be kept busy with chores even if there weren't a 4-H club," Noble said. "But city kids don't have an opportunity to work with their hands and with different gadgets."

Noble says that the 4-H club program gives rural youngsters a chance to gain recognition—an important ingredient in a well rounded personality.

## Reds Claim Discovery Of Most Ancient Rugs In Frozen-up Tomb

MOSCOW, USSR.—According to newspaper reports here, Soviet archeologists have found the oldest rugs in the world.

The press reports said the rugs were discovered in the rich tomb of tribal chieftains in the distant Altai. The treasures, it was added, are 2,500 years old.

Further, it was said, one of the two carpets is as fine an example of rug making as the best Persian rugs up to now.

The reports said the rugs, the bodies of the princes and princesses buried in the tomb, and many other interesting objects were in an excellent state of preservation since the tomb was permanently frozen. One of the rugs, the articles said, was of felt and quite large, about 13 by 20 feet.

It depicts a divine being sitting on a throne with a tree in his hands. The second rug is velvet and of extraordinary high quality. Both have many colors. Soviet scientists said they were made in the fifth century before Christ.

Two bodies, one of a man, the other of a woman, found in the tomb are embalmed. On the head of the woman was a tiaralike head-gear.

The tomb itself was luxuriously appointed. The walls were covered with felt cloth on which were pictures of griffins (mythical monsters, half lion and half eagle). In another section was a chariot, a decorated saddle, bridles and saddle cloth. They were made of felt and covered with ornamented cloths with embroidered flowers and birds of paradise.

## Earth's Atmosphere Rocks With Wave-Like Disturbance

NEW YORK. — The British naval physical laboratory, Slough, England, has reported that the top of the earth's atmosphere rocks to and fro with a wave-like motion.

The motion is like that of water in the top of a bucket after it has been tilted. There are both waves and ripples. The discovery, it was said, shows that the wave motion can be predicted, and this forecasting promises a new step in radio.

It might be used to beam radio long distances, far around the curvature of the earth, and far beyond the limits of radar. Such a beam might aid in steering a guided missile to a trans-ocean target.

## Blind Man's Charity Saves Four Cabbies From Prison

PHILADELPHIA.—A blind man's charity has saved from prison four men convicted of an attack upon him which cost him his sight.

The blind pardoner was Clair Reed, Jr., 33-year old former taxi driver. The men he saved from prison were cabbies too. They were convicted of participating in an attack upon Reed in which Reed lost his vision when struck with a tire iron.

Reed felt his way to the witness chair when the men came up for sentencing. As the four convicted drivers watched their permanently sightless victim, Reed told the judge: "I don't feel these boys should go to jail because of this act . . . I don't hold any prejudice against anybody."

The judge then let the men off with \$100 fines and court costs, putting them on probation for two years. As he did so he remarked that the defendants "normally would be sent to prison."

Reed was injured during violence over a wildcat taxi strike. A fifth man accused of wielding the tire iron against Reed is a fugitive. The judge took into account a union collection for Reed, reportedly \$8,000, in his sentencing, but said the person who blinded Reed would "eventually be held to account for his act."

## Scientist Changes Mercury To Gold, But Cost too High

CHICAGO. — It remained for modern science to do something the ancient alchemists sought to do for centuries—turn base metal into gold.

But, there is a catch, as usual. The process costs so much more than the price of gold that "it would be folly to fool with it."

Dr. Arthur Dempster, of the Argonne national laboratory, reported it had been learned that a small portion of mercury would change into gold if bombarded by neutrons in an atomic pile. But this is no easy method of making gold, for it costs many times the \$35 an ounce being paid for gold.

Dr. Dempster said Argonne physicists found that a very weak mercury isotope—or particle of matter made radioactive—had a great capacity to absorb neutrons. This particular isotope has an atomic weight of 196.

A sample of mercury 196 was sent to the Hanford (Wash.) laboratory of the atomic energy commission and placed under neutron bombardment in the atomic pile. It was left there two weeks.

At the end of that time it was found that a small portion of the mercury had been transformed into gold.

## "Mighty Muddy Mo"

NORFOLK, VA. — Fifteen tugs fail to budge the battleship USS Missouri from a mudflat in Hampton Roads, near Norfolk. Efforts to free the big vessel were abandoned until February in order to take advantage of higher tides. A court of inquiry has been ordered to investigate the grounding of the battleship.

## YOU MUST FILE A CLAIM FOR YOUR FEDERAL OLD-AGE INSURANCE BENEFITS

You won't "use up" your Federal old-age and survivors insurance benefits by drawing them as soon as you are qualified. Benefits are payable for life, but remember, you must file a claim. Old-age and survivors insurance benefits are payable only if claimed! So get in touch—whether you are 65 and retired, or whether you are the next of kin of a deceased member of your family who has been paying social security premiums through payroll deductions—with the Social Security Administration, 324 New Post Office Building, Amarillo.

# Nobel Winner Will Use Money To Foster Peace

LONDON — The Nobel prize of 152,289 Norwegian crowns (\$21,889), given for efforts to promote peace, will not benefit its recipient one dime's worth financially because he's going to use it all exclusively in efforts to promote peace.

The winner of the prize, Lord Boyd Orr, is convinced that hunger is the root of just about everything and the 69-year old Scot wants to do everything possible to increase the world's food production. That's why he declines to profit from the prize—not even to the extent of a new hat.

A respected authority on nutrition, a former director-general of the United Nations food and agricultural organization, Lord Orr is a political philosopher who likes to pack wisdom into snappy epigrams. World peace is his passion.

"Not that I wouldn't fight if something vital or sacred was threatened," he says, "but I don't want to it's so unnecessary."

**Food Is Answer**

His formula to end wars can be squeezed into one word — food. "Feed the people and they won't fight," he says.

He insists that "hunger is the greatest politician of them all."

Lord Boyd Orr is an earnest man with a mission who looks like an elderly, weather-beaten physician, or a professor, or an up-country politician, or a farmer in town for the agricultural convention. In fact he has lived, or is living, in all these roles. Much contact with the world has not erased entirely his Ayrshire manner of speaking. There is Scotch in his r-r-r's.

He smokes matches.

There is tobacco in his pipe all right, but he lights up and forgets to puff because he is so intent on driving home a telling point. Match after match is expended as he makes his arguments factually, wittily and sometimes bitterly. The world moves much too slowly to suit him.

In young manhood he was physician. Then he became more interested, by turn, in physiology, animal nutrition, human nutrition and finally the vast problem of feeding the world to preserve peace.

**Glad to Be Farmer**

Now he thinks of himself as a farmer and is glad to be one. He is caustic about the artificial life of cities, believes that in every life there should be a garden, the outdoors and the feel of weather.

Since January, when King George elevated him to the peerage—he had been known before then as Sir John—Farmer Boyd Orr has come down from Scotland occasionally to take his place in the House of Lords, to vote, to put in some plugs for world government, to tell all who will listen about his conviction that food is the beginning and end of everything. He appreciates being in the House of Lords—it gives him a platform and a base of operations—but he doesn't think too much of it as an institution.

"Ought to have been reformed years ago," he said. But let the politicians worry about that, his mission is food.

**Footman, Clockwinder Dance With Royalty at Palace Fete**

LONDON.—It was a wild dream come true for the footman and the clock winder at Buckingham palace. At the annual household party the queen danced with the footman and the princess danced with the clock winder.

Queen Elizabeth, in diamond tiara and flowing green gown, waltzed with the liveried footman. Princess Margaret, sleek in rose and pink, swirled over the glassy floor with the man in charge of the palace's famous collection of French gilt clocks.

Until the wee hours of the morning they danced with other staff members in the traditional palace staff party.

King George, still recuperating from a leg ailment, sat on the sidelines until shortly after midnight. Then he retired.

**Pal Tries to Aid Escape; Saws Hid in Peanut Butter**

COVINGTON, KY.—Stanley Flannery wasn't satisfied with being released from the Covington jail. He returned five hours later to gain a friend's release—with a jar of peanut butter.

Flannery, 25, who has no known address, and was being held on a breach of peace warrant, was released from jail and instructed to leave the county, police said.

Instead, he returned later with a bag of goodies for James Sturgeon, Kenton county, held under \$10,000 bond on charges of breaking and entering, and possessing a stolen automobile.

James Fox, turnkey, became suspicious and, inspecting the parcel of food, found a number of hacksaw blades, which had been broken in two, inside a jar of peanut butter.

Flannery walked from the jail after delivering his package.

## Beet, High in Vitamin A, First Eaten for Its Greens

The beet is a root vegetable which came originally from the European continent, and was used by the ancient Greeks and Romans. However, the symmetrical root of the present-day type is comparatively recent—less than 500 years. In a way, carrots and beets have a parallel history.

The Europeans have perhaps preferred root crops, the Asiatics seed crops, and the original Americans fruiting vegetables. Therefore, most of the underground vegetables have been developed in Europe—even the potato, which probably was a comparatively unimportant crop in America and which now occupies first place among vegetables.

The beet shows a number of forms. At first it was eaten only by the poorer people of Europe for greens. Even today beet greens and Swiss chard, particularly, form an important item of food. There is also the table beet which is usually red in color, but may also be yellow; the sugar beet, which is hardly edible as a table vegetable but has a very high sugar content; and the mangel, which is grown entirely for stock food.

Beets are high in easily-digestible carbohydrates, and are therefore an excellent energy food. The mineral content is high, especially the phosphorus and iron, but the calcium content is rendered worthless by rather high oxalic acid. Beets are also high as a source of vitamin A, and contain amounts of vitamin B and C.

The best vitamin and mineral content, contrary to popular belief, is in the top of the beet. So, if you wish to get the best food value, eat the tops and throw the root away. One big advantage of beets as a vegetable food, is that they lose nothing during the canning process.

**Veterinarian Gives Tips Of Value to Dog Owners**

A number of suggestions for making life safer and more enjoyable for your dog are given by Dr. R. E. Witter, veterinarian at the University of Illinois.

If you value your dog and your children, Dr. Witter suggests having your dog vaccinated against rabies each year. "More than 6,600 dogs died of rabies in 1948," he reports, "and 17 persons died of the disease after being bitten by dogs or other rabid animals."

And don't guess at treatment if your dog is sick. Many patent remedies are available, but the safe thing to do is take the dog to a veterinarian for correct diagnosis and treatment when he first becomes sick.

"Keep friendly with your neighbors by keeping your dog at home," Dr. Witter advises. "A dog that is allowed to run loose may pick up and bring home disease, or he may be injured or killed by a car."

Dr. Witter says it's a good idea, too, to teach dogs to obey. For example, training your dog not to run after cars may save his life. You can find several good books or pamphlets on obedience training at your library, he says.

**Sorghum Grain Check**

Check your sorghum grain in the bin. If it was not thoroughly dry when stored, it may be molding or heating. Juicy sticks from the combine can sometimes add enough moisture to dry grain to cause spoilage. Cracked kernels in the grain seem to hasten spoilage. If you have not already done so, run the sorghum grain through a fanning mill to remove the debris and cracked kernels. If the grain continues to heat after this treatment, turn it with a shovel or load it out onto wagons and back into the bin to air it and cool it. Sorghum grain that is allowed to heat may lose its ability to germinate or even become unfit for feed.

**Artificial Breeding**

Artificial breeding of dairy cows can result in 60 per cent of the cows setting the first service if every phase of this work is properly controlled.

The breeding association will need to select only fertile sires and send only high quality, fresh, properly cooled, and diluted semen to the inseminator in the field. The herd owner has the responsibility of watching carefully for signs of heat, of keeping a record of every heat period, and of notifying the inseminator promptly when a cow is first observed in this condition. If cows persistently fail to settle, the cause needs to be determined and veterinary attention called if needed. Cows need to be bred from 60 to 75 days after freshening.

**Effects of Noise**

If noise can boil an egg, kill bacteria and coagulate proteins, it can certainly bring about changes in the human brain. Experiments show that the bursting of a blown-up bag raised the brain pressure four times above normal and higher than morphine or nitroglycerine. Continuous noise was found to produce thickening of the ear drums, with a subsequent loss of movement. Today New York cab drivers who ply in the most congested areas of the city where there is a constant blare of auto horns, are becoming hard of hearing.

## Diet for Grandmothers Outlined by Home Maker

Grandmothers have much to contribute to family and community life, especially if they are in good health and have a zest for living. One of the big reasons for feeling peppy when you grow older is good nutrition.

Gone are the days when grandmother ate a slice of toast and some preserves, and a cup of tea for her evening meal. Whether she is 40, 50, 70 or older, her three meals should include the following food, except when the doctor prescribes otherwise: one pint of milk, one egg, one or two servings of fruit or fish, four servings of fruit and vegetables including a potato, a leafy vegetable, a citrus fruit or tomato juice, and one or two other kinds of fruits or vegetables. Enriched or whole wheat bread with butter or enriched oleo, and sugar or other sweets to satisfy the needs should also be eaten. However, sometimes the desire for sweet and starchy foods exceeds the need, with overweight resulting.

As time goes on, and one begins to slow down, a person needs less and sometimes eats more. Therefore, the foods we do eat should be chosen with great care. Instead of large amounts of sweet and starchy foods, the daily meal should include plenty of milk, vegetables, and fruit, with protein foods like meat, fish, and eggs. The person who does not add excess weight, and enjoys a good diet, has greater chances of living a more abundant life.

On the other hand, many people over 70 become too thin and suffer from too little, or the wrong kind, of food. Many older folks are calcium poor, so their bones break easily or give away. More calcium-rich food, especially milk in any form and cheese, will help to enrich the body with calcium.

**Soybeans Make Profits, But Cut Down Corn Yields**

Soybeans are a profitable crop, but growing large acreages of them will cause the corn-yielding ability of the soil to drop off fast.

That's the finding reported by M. L. Mosher, farm management specialist in the Illinois college of agriculture, after studying the 10-year records from 200 farm bureau management service farms.

Mosher recommends no more than 55-65 per cent of corn and beans in your rotation, and at least 25-40 per cent in soil-building legumes.

Mosher found that from 1936 to 1945 the average net income of 50 soybean farms was about the same as for 50 farms without beans. This was true even though the soybean farms fed only about half as much livestock and averaged 6 less bushels of corn per acre.

This difference in corn crops would normally mean about \$700 lower net farm income per farm each year. But the income from beans made up this \$700 difference. However, the corn yields went up less on the soybean farms than on those without beans.

**Important Discovery**

A new layer in the upper atmosphere has been discovered by Dr. Joseph Kaplan, physicist on the Los Angeles campus of the University of California. It may be the link needed to fill out the puzzling chain of solar-terrestrial relationships, says the U. C. L. A. physicist. It also may pave the way for accurate long-range weather forecasting as more is found out about it, he adds. The layer is made up of a hitherto unknown form of oxygen molecules, which Dr. Kaplan calls "metastable" or "energetic" oxygen molecules. It lies in the lower part of the ionosphere, the region that reflects radio waves earthward, and is probably about 60 miles above the earth's surface just above the ozone layer.

**The Magnitude of a Star**

The magnitude of a star is a measure of a star's brightness. The method originated in 150 B.C. with the Greek astronomer Hipparchus who classified the visible stars under six different magnitudes. The 20 brightest were called first magnitude and the faintest were placed in the sixth group, with others in between. In more recent years astronomers have made the system more exact, so that the average ration of brightness between magnitudes is about 2.5, or 100 for a difference of five magnitudes. To take care of the other objects which get many times brighter than the first magnitude, astronomers go to magnitudes of minus one, minus two, etc., that of the sun, for example, being minus 26.7. At the other extreme are the faintest stars which can be observed with the largest telescopes, about magnitude 20.

**Soybeans for Seed**

Storing soybeans used for seed next spring requires extra care if you expect high germination. Soybean seed deteriorates rapidly under poor storage conditions. The beans to be used for seed should be cleaned and all cracked beans removed; then sacked and the sacks placed in cross rick. Soybeans are particularly easily injured in handling. Careless piling up on a tank or shed will result in a poor stand next spring.

Mrs. Carl D. Bomar and Mrs. L. D. Griffin were business visitors in Tulia Friday.

Mrs. J. Custer and Mrs. T. W. Davenport, of Wellington, visited relatives here Thursday.

Rev. G. A. Elrod made a business trip to Canyon Monday Morning.

Mr. and Mrs. Fred Garrison, of Plainview, have moved to Silverton to make their home, and have an apartment at the home of Mrs. Jim Bomar. Fred was among the mid-term graduates of Wayland College. He will be associated with his father in the Conoco Oil business here.

Mr. and Mrs. Geo. Birchfield and Mrs. R. A. Day and Mrs. E. A. Day, of Matador, visited in the home of Mr. and Mrs. Ware Fogerson Sunday. Dianne Fogerson accompanied them home. Mr. and Mrs. Ware Fogerson and sons went after their daughter Monday afternoon.

**Witch Doctors, Old Remedies Get Scientists' OK**

Tomorrow a scientist may announce that those ancient Chinese doctors had something when they prescribed the ashes of earthworms to grow reared on bald heads. If he does, you may be sure one group won't be at all surprised—that is, other scientists who are probing excitedly into the secrets of primitive medicine. No matter how bizarre, nothing would surprise them now after the discoveries they have already made.

In a hundred laboratories from the Royal College of Physicians in Edinburgh, to Western Reserve university at Cleveland, and the California Institute of Technology, scientists are brewing remedies from the recipes of Indian medicine men of the Southwest, Chinese herb doctors, wild tribesmen of Ecuador and Brazil, and the witch doctors of interior Africa. Too, they aren't forgetting the folk remedies long in use in the Cumberlands, the Ozarks, rural areas of Quebec, and other backwaters of our own civilization.

**Discoveries Important**

From these researchers, a number of important discoveries have already been made and science believes itself on the threshold of others just as important.

For instance, the Indians were right when they prescribed sumac for flu—it does attack that virus. Those Australian bushmen, American Indians, and court physicians of feudal France who put such strong reliance on mandrake root may merely have been a few centuries ahead of their time. At least, men at microscopes in the austere halls of the national cancer institute at Washington find the root effectively checks cancer in mice and look ahead hopefully to the unpredictable findings that may foreshadow. And balsam bark, that perennial cure-all among primitive people, is chalking up such baffling cures for a variety of diseases that it is fast becoming the darling of the test tube set.

Although current scientific excitement is new—spurred by the miracles wrought by penicillin, the mold used for centuries by European peasants to treat wounds—the history of civilized man's adoption of primitive remedies is not new.

Possibly, the greatest of all the discoveries of the Spanish colonists in South America 300 and more years ago was cinchona bark. It is from this bark that we get quinine, the specific which has aided us to control malaria, the greatest killer of all.

However, the Peruvian natives and even our grandparents didn't limit their use of quinine and the bark from which it is made to treatment of malaria. They used it for muscle cramps, as a tonic, to break up colds, to treat iritis, and for almost any ailment afflicting them for which they had no specific remedy. To all of this the doctors of a generation ago offered a not too polite "Pooh-pooh."

**Blooms With Tributes**

But in recent months and years, the dignified medical journals have bloomed with tributes to the drug and agree that those wild Peruvian tribesmen knew their medicine.

In the American Heart Journal, Drs. Moss and Herrman assure us that quinine stimulates the heart to carry away wastes and thus relieves muscle cramps. In Clinical Medicine, Dr. L. A. Curley reports on success in treating iritis with

**Town and Home Builders Inc., Is New Texas Corporation**

Dallas, Texas—For the purpose of building homes in small towns and communities all over Texas, Town and Country Builders, Inc., a new Texas corporation, has been organized at Dallas. The company is prepared to give complete service to those who desire new homes, including acquisition of lot, financing, architectural and engineering services, and actual construction. All the home purchaser need do is to select plans and specifications for his new home, sign a contract and make down payment. Town and Country Builders will do the rest and have the new home ready for occupancy within thirty days after financing has been approved.

Nathan L. Jones, a prominent builder, formerly of Kansas, is president of the new company. His son, Nathan E. Jones, is vice president and E. E. Lynch is secretary treasurer. The officers also serve as directors.

Jones has been active in construction of homes in Kansas for several years, and his company, Town & Country Homes, Inc., of Salina, built and sold more than 350 new homes in Kansas during 1949. His company has set a goal of 1,000 new homes in Kansas for 1950. The complete service which Jones has been able to give in Kansas, coupled with high grade materials and engineered construction, has proved popular with home purchasers.

The important feature of Town and Country Builders is that they plan to finance, sell and build entire communities so that there is one responsibility, a service very much needed in many communities.

Town and Country Builders, the Texas unit, although just organized, already has launched building operations in Garland, Dallas County, and in Rockwall, a nearby county seat town. The company has acquired 21 building lots in Garland and will erect this number of homes as its initial project. Citizens of Rockwall requested his organization to build about 25 new homes there, pledging to make building lots available.

Many other Texas towns have indicated that they want Town and Country Builders to undertake the job of providing homes to relieve existing housing shortages. Homes built by the Jones organization range in size from one bedroom up, and in price from about \$6,000. Homes can be finished in wood siding, asbestos or redwood shingles, brick or stone to suit purchaser. Attached or unattached garages and basements can be provided where desired.

Lem Weaver attended to business in Tulia Monday.

Supervisors for Cap Rock District—Earl I. Cantwell, Chairman; Chester Burnett, Bray H. Cook, L. A. McJimsey and R. L. Brunson.

Do you want your soil to be more productive with a higher organic content, have a greater capacity for taking up water, have an available supply of stored nitrogen, be more amply protected against wind and water erosion, and during the period you are getting this effect still produce a cash crop? This may sound like a pipe-dream, but it can be accomplished by the proper growth of hubam clover or other legumes.

Hubam clover is an annual, with blossom, deep-rooted legume that produces pasture, hay and an abundant seed crop. It can be used to over-seed small grains in the spring on irrigated land without danger of missing the following small grain crop. However, with all these attributes hubam clover cannot accomplish this job unless it is properly treated.

One important step in the handling of hubam clover is the proper inoculation of seed before planting. This inoculant contains small organisms known as bacteria that form nodules on the roots of the clover and have the ability to assemble nitrogen from the air. Unless these bacteria are present, the legumes do not have the nitrogen fixing ability and the plants are smaller and have a lower seed production. Inoculate the seed immediately prior to planting in order that the bacteria will not die before being planted in the soil. In order to obtain the best results, it is necessary to fertilize

the clover with 200 to 300 pounds of 20 percent super phosphate per acre.

Eight to ten pounds of hubam clover seed should be used when drilled with small grains. Ten to fifteen pounds should be planted broadcast and three to five pounds in regular width rows. The planting should be done between February 15 and April 15. A smooth, firm seed bed is necessary and the seed should be planted about 1-2 inch deep.

As the Hubam clover grows the root system is pushed deep into the soil loosening up the compact soil and allowing it to take water more freely. When these roots decay they further enrich the soil. The top growth will furnish hay, pasture and seed production or serve as a green manure crop. The production of hubam clover varies considerably but will probably produce from 1 to 3 tons of hay per acre and 150 to 600 pounds of seed. In addition, it serves as a protection against wind and

water erosion and when plowed under furnishes needed organic matter and nitrogen. Hubam clover cannot perform miracles but it is one important step in a more complete soil conservation and soil building program. Soil Conservation Service personnel will be glad to render whatever assistance it has available in establishing this legume or any legume.

**More Productivity  
 For More Pay Held  
 Answer to Strikes**

**NEW YORK** — Strikes can be stopped, according to Lewis S. Rosentiel, if labor and business make a basic bargain at once of more pay for more productivity.

Rosentiel, who is chairman of Schenley Industries, says: "In the more than four years since V-J day, strikes have cost us six billion dollars. What we need now—is a five-year moratorium on strikes."

This is the simple swap, between labor and business, that Rosentiel urges to end industrial disputes for the next five years:

1. For labor—a 5 per cent wage increase each year;
2. For business—a 4 per cent annual increase in labor's man-hour productivity.

The executive regards what he proposes as an old-fashioned horse trade, with firm mutual incentives for the both sides in the U. S. production picture. And he ought to know since his company employs approximately 12,000 persons and has one of the "cleanest" labor records in the country.

It has more than 100 contracts currently in effect covering plants in nearly two score communities throughout the country and has had "practically no lost time because of labor disputes."

Besides eliminating labor - business discord, his proposal will provide continued prosperity for the nation, Rosentiel says.

"The wage increases will put 47 million dollars more in employees' pay envelopes in 1954," he says, "and that will mean a one-third increase in the standard of living. Naturally, greater productivity and heightened consumer activity will provide the nation with a healthy, expanding economy, an economic climate that is always good for businessmen."

According to Rosentiel, the U. S. national income should reach 300 billion by 1954, a 33 per cent increase over the 1948 income of 228 billion dollars.

**Life Expectancy Greatest  
 In U.S., Survey Discloses**

**NEW YORK**—Is it true that life expectancy in the United States is greater for foreigners living here than it would be in their own homes?

There is strong evidence that this is the case, according to Dr. Frank G. Dickinson, economist and statistician of the American Medical Association.

He says Swedes live longer in Minnesota than in Sweden and that there is equally strong proof that Norwegians live longer in South Dakota than in Norway, and that there is considerable evidence that Mexicans live longer in New Mexico than in Mexico.

Dickinson made the comparisons by way of upholding the thesis that the United States is the healthiest nation in the world. He says statistics prove life longer here than anywhere else among the large nations, explaining this meant nations with more than 10 million population.

**Lad of Five Takes Cab Home  
 After Tiring of Long Wait**

**MARQUETTE, MICH.** — Donald Messier is becoming a little annoyed at his precocious son.

Late one afternoon as Messier drove into Marquette to pay a bill, he told his five-year old son, Tom, to wait in the car while he went into the building.

When Messier came out, he couldn't find Tommy. The frantic father drove to several places in Marquette where he thought his son possibly might be, and called police to join in the search.

About 8 p. m., after three hours of fruitless searching, he decided to return home and break the bad news to his wife, Amelia. When he opened the door he saw Tommy comfortably seated in the living room with the rest of the family.

It seemed Tommy had gotten tired of waiting for his dad, and had taken a cab home.

**British to Test Endurance  
 Of Sailors in Cold Weather**

**LONDON**—The British admiralty plans to set a group of sailors afloat for three to five days in small life rafts in Arctic gales to test ability of men to survive in wintry seas.

Six to 10 men were to set out in new type naval life floats during an Arctic gale with air temperatures of 14 to five degrees.

Wearing survivors' suits, the men will be exposed twice to the below-freezing weather for periods of from three to five days. They will be given two sets of rations—one a complete, 3,000 calory diet; the other a minimum of 1,500 calories, including toffee, dehydrated fruit block, biscuits and condensed sweet milk.

Each man will be given about one pint of water daily, but the admiralty hadn't decided whether the water would be carried in tin, or converted from sea water.

# Money-making Machine!

Yes, there is such a device! It hangs on your wall, around your wrist, sits on your mantel, and wakes you up in the morning!

It's a clock—just a clock. Every minute, every hour it ticks off can make money for you!

All you have to do is invest in the Savings Plan that puts Time to work—all you have to do is put your money where it grows—in United States Savings Bonds!

Hour by hour, month by month, year by year, every bond you buy increases in value, until it's worth four dollars for every three it cost!

Your Government has made it wonderfully simple for you to acquire a stockpile of bonds. It offers you two plans. One is at your place of business—the Payroll Savings Plan, that gets you a bond just as often as you like. Two is at your bank—the Bond-A-Month Plan, that gets you a bond monthly through your checking account.

Let those money-making machines make money for you! Sign up for the plan you want today!

## Automatic saving is sure saving U.S. Savings Bonds

### Gargantua, Famous Gorilla, To Be Displayed at Peabody

The remains of Gargantua have arrived at Yale's Peabody museum, but the mounted skeleton of the famous circus gorilla will not be ready for public display until spring.

Professor Carl O. Dunbar, director of the museum, disclosed that a special case is being prepared in the exhibition rooms for the newest arrival.

"We are planning an entire new exhibit on giant apes with Gargantua as the center of attraction," he said.

The skeletal remains of the gorilla were shipped to the Peabody museum from Johns Hopkins university in Baltimore, Md. The body had been sent there for autopsy following the animal's death in Miami, Fla.

Professor Dunbar explained that it would take a few weeks before the bones have been completely processed and ready for mounting. The individual bones must be cleaned and all the marrow and oils washed out before the skeleton can be wired and mounted, he said.

The new exhibit on giant apes to be built around Gargantua included photographs and other educational material to illustrate the habits and jungle environments of the apes. Pictures of Gargantua while alive will be used along with pictures of other apes.

Professor Dunbar expects the exhibit to be among the most popular in the museum because of the tremendous interest in Gargantua by the public.

"We've had more inquiries about him than any other specimen we've ever brought here," he said. "People everywhere keep asking when Gargantua will be ready for exhibition."

### More Street Cars Desired By Many of World's Cities

For 30 years, streetcars have been on the wane in the United States. Today, their number is less than one-third of the one-time peak.

But there will always be a streetcar, fans for this mode of transit say. Their view is well supported by a look at city transportation systems all over the world.

Here in the U. S., trolley cars developed to modern specifications since 1935 are fast, quiet, comfortable, and economical. Pittsburgh operates nearly 700, including 100 new this year. The 5,000 now in service in more than a score of cities will almost certainly continue on the scene for a long time to come.

Abroad, Australia's oil-short cities have reported a swingback from buses to electric streetcars. Russia and Spain have copied some recent American-type trolleys. Cities in Europe, South America, Asia, and Africa eagerly seek the best of the cars retired from service in the United States.

Surface trolleys rolled their last mile on Manhattan Island in mid-1947. Bronx and Brooklyn lines are making way for big Diesel buses. Hartford, Grand Rapids, Syracuse, Nashville, Miami, and Houston are a few of the many other cities where the streetcar belongs to the past.

### Effect of Soot

"A layer of soot on the heating surface of a boiler decreases efficiency because it increases resistance to the flow of heat, with the result that the heat transfer to the water is lower and the temperature of the flue gas higher than they would be if the surfaces remained clean. The percentage of reduction in heat transfer depends on the position and area of the sooted surfaces, the thickness of the soot, and the percentage of the total heat absorbed by those surfaces when clean; thus it will vary with the type of boiler and in particular with the ration of the area of the convection heating surface of the total area," says the U. S. bureau of mines.

### Turkeys Court Death

Turkey raisers report the birds would rather stand outside and drown during a rainstorm than take shelter in sheds provided for them. This foolhardiness, combined with insatiable curiosity, has prevented many a turkey from meeting a Thanksgiving date. One grower tells of finding six turkeys smothered to death in an empty barrel carelessly left in the turkey yard. All six had been on a tour of investigation and, once in the barrel, didn't have the sense to get out. Everything frightens a turkey, and when a flock is flying in panic it will crash into anything—barns, houses, fences—causing casualties by the hundreds.

### Women-Driven Autos

Strange as it seems, the engines of women's cars collect carbon at a faster rate than do those operated by men. Yet the reason is simplicity itself. Women usually use the cars for shorter runs, with more stopping and starting, and plenty of parking sandwiched in between. A good rule is to take the car on the open road as often as possible, driving briskly particularly uphill. This helps to keep the engine clean.

### New Coventry Monument Glorifies Lady Godiva

Lady Godiva is on her horse again. This time Coventry's medieval heroine is of bronze, and her mount is the bronze steed of the statue recently unveiled by the wife of the U. S. ambassador to Britain.

The new monument in Coventry is an indication that this ancient English city, now gradually rebuilding its war-shattered homes, churches, and factories, has not forgotten its past.

In practical terms, this past is the story of steadily developing industries which have made Coventry one of England's economic leaders. To the world at large, however, the name stands for three other things:

It is a symbol of sacrifice by a modest woman who rode naked through the streets to ransom the people from cruel taxation.

There are skeptics who say that Lady Godiva's ride is a myth, and that the myth was merely romanticized by Tennyson's famous poem.

Whatever the exact facts, in the history-plus-legend of the event, it is recorded that Lady Godiva was the wife of Leofric, powerful 11th-century Earl of Mercia.

The earliest narrative of the famous ride was written by a 13th century author, based on stories growing out of the incident. According to this account, Leofric, in jest or anger at his wife's continued protests against the heavy taxes levied on Coventry's near-starving people, agreed to lift the burden if she would ride unclothed through the marketplace. At the end of her ordeal, the story goes, Leofric kept his promise.

Later a postscript legend was added to the effect that only one of all the townspeople broke the pledge not to look during the ride. For his lapse, this "Peeping Tom" was stricken with blindness.

### Poultry Disease Viruses Survive Sub-Zero Cold

Poultry growers who rely on very dry or freezing weather to kill off disease germs in their flocks may be in for a long, long wait.

New evidence that the popular "dry and cold" theory of disease control does not apply to deadly virus infections of poultry has been furnished.

Viruses responsible for common poultry diseases—including fowl pox, bronchitis, and laryngotracheitis—were frozen, dried by laboratory methods, and then stored in the dry state at temperatures constantly below zero. The stored viruses were tested at intervals on poultry to see if they would produce infection.

It took almost two years for the weakest virus to lose its infection-producing power, veterinary scientists reported, while some of the other viruses remained infective for nearly ten years.

Similar research has shown that the virus which causes Newcastle disease is likewise highly resistant to freezing temperatures. Living viruses capable of causing Newcastle disease have been found in the bone marrow and muscle of poultry carcasses chilled or frozen for as long as six months.

### Early Days of Street Car

New York pioneered tracked vehicles with Broadway horsecars in 1827. London waited until 1891. The first electric traction line of any extent is credited to Richmond, Virginia, in 1838. Streetcars really pushed forward from 1902 to 1917, while the motor vehicle was still an infant. Trolley excursions were popular, and fancy cars that could be chartered, and built amusement parks as goals of excursion runs. Baltimore's black-adorned funeral car, Dolores, did a brisk business for years, since the city's cemeteries were mostly along the trolley lines.

### Center of Learning

An educational and literary center from early times, Edinburgh, Scotland, was already well launched on its golden age of learning when the New Town was built at the end of the 18th century. Associated with the city, among the gifted company that included Scott and Stevenson, are such notables as the fiery 16th-century reformer, John Knox; philosopher David Hume; economist Adam Smith; biographer Boswell; J. M. Barrie, novelist and playwright; and Alexander Graham Bell, inventor of the telephone. Present-day Edinburgh has a population approaching the half million mark.

### Cleaning Venetian Blinds

To clean those Venetian blinds, use a cloth wrung out of warm, sudsy water. Rinse in clear warm water and dry. Smudges may be removed before washing with art gum. A coat of wax will help the blinds resist dust and greasy film. The tapes can be dusted with a brush, or cleaned with a special attachment of the vacuum cleaner. A clever aid on the market for cleaning blinds is a pair of tongs. A pair of wool pads for dusting are interchangeable with a pair of sponges for washing. With this gadget, you can get at both sides of the slat at once.

### Texas Cotton Quotas In Effect For 1950 Says B. F. Vance

College Station — Texas cotton farmers will have to take cotton marketing quotas under consideration in planning their 1950 farming operations, B. F. Vance, State Production and Marketing Administration director, pointed out recently.

Approval of cotton marketing quotas by more than two-thirds of the nation's cotton farmers in the December 15 referendum means that the quotas will be in effect on the 1950 crop.

A cotton farmer who plants within his cotton acreage allotment can market all of his cotton without penalty. His marketing quota is the production from his acreage allotment. He also can obtain a government loan on his cotton at 90 percent of parity, and he will be eligible to receive conservation assistance payments from the PMA.

A cotton farmer who plants more land to cotton than his acreage allotment must pay a penalty amounting to one-half parity price on any excess cotton which he sells. Current parity price is about 30 cents which would mean a penalty of about 15 cents a pound on excess cotton if marketing quotas were in effect on this year's crop. Parity charges, and so the marketing penalty will change from month to month.

Under the law, excess cotton subject to a penalty is that cotton produced from the acres in excess of the allotment. The amount of cotton subject to penalty will be determined by multiplying the number of overplanted acres by the normal cotton yield of the farm.

In addition, cotton produced on a farm where the cotton allotment was overplanted will not be eligible for a government cotton loan. Nor can the farm receive PMA conservation assistance payments.

Good, properly working equipment, in the brooder house makes for a successful brooding operation.

Order your next year's supply of fertilizer now.

The hen that lays is the hen that pays. Close culling of the laying flock will save feed and labor.

New Texas Almanacs at News office, \$1.00 each.

**MARtha WASHINGTON PARTY GIVEN AT STODGHILL HOME**

Mrs. C. L. Wilson, Mrs. Carroll Garrison, Mrs. J. E. Wheelock and Mrs. O. C. Allard were hostesses at the Martha Washington Party held at the home of Mrs. R. H. Stodghill Monday, January 30.

The program was musical with reading. Each lady was asked to tell about her most embarrassing moment.

Refreshment of Jello Cherry Pie topped with whipped cream with coffee, was served to the following members: Mesdames C. L. Wilson, C. O. Allard, Roy S. Brown, J. E. Wheelock, Berton Hughes, W. E. Stodghill, Shelby Haynes, G. R. Dowdy, L. K. Gilkeyson, Ray Bomar, Bill Tension, G. A. Elrod, Marie Garrison, C. R. Badgett, Ola Mills, R. H. Stodghill, A. D. Arnold, S. P. Brown, Don Garrison and A. H. Jackson.

Mr. and Mrs. Drew Halcomb and daughter, Rebecca, of Turkey, visited Sunday with Mrs. Halcomb's parents, Mr. and Mrs. T. G. Olive.

**PERSONALS**

Mrs. Shelby Haynes was called to Plainview Saturday to be at the bedside of her father, J. R. Burson, who is very low. Shelby Haynes was called Tuesday morning.

Mr. and Mrs. John McCain and children spent Sunday in Tulia visiting his sister, Mr. and Mrs. Elvin Hutson and family and with his mother, Mrs. N. C. McCain.

Mr. and Mrs. A. M. Allard, of Excell Helium Plant, visited their daughter, Mr. and Mrs. Judd Donnell and family Sunday.

Bill Edwards made a business trip to Matador Friday.

**CARD OF THANKS**

We wish to take this means of expressing our sincere appreciation and gratitude for the many words of kindness and sympathy shown us in our bereavement, and for the beautiful floral offerings. May God bless each of you in our prayer.

Mrs. Simuel Vaughan and family.

**Do You Understand The Vain Minds of Your Farm Animals?**

College Station—Animals, just like human beings, have their own ways of making adjustments to the problems of life. How much the farmer knows about the physiology of his animals may be reflected in his income from livestock, says Dr. W. C. Banks, extension veterinarian of Texas A. and M. College. Correct handling usually adds more money to his income and incorrect handling cuts income.

Generally speaking, says Banks, we know that animals are influenced perhaps more than humans by emotional changes caused by fear, jealousy, pain, suspicion, frustration and the dominance of stronger members of their species.

Dozens of examples can be cited on livestock farms. A good example, points out Banks, is the dairy cow. When she is subjected to a sudden change or something happens to upset her, she gives less milk. A number of things can cause her milk production to drop. Usual noises, rough handling, change of caretakers or even a dislike for the milking time attendant may affect her production.

Believe it or not, says Banks, the relationship between cows is important. In every large herd, he says there are a few outstanding characters. One cow may try to dominate all the other cows; one may enjoy hurting others. Some cows require a great deal of affection from the owner before they produce at their best while some resent being petted.

It seems that some sheep don't like to take their pills any better than some humans. When they are given a large medicated pill and then turned loose, they may wait until the owner is out of sight and then get rid of it.

Banks says when dealing with pigs, it is well to remember that they are comfortable looking animals and only when they are comfortably housed and properly cared for, will they turn feed and water into the maximum amount of pork.

Dr. Banks believes that one of the secrets of successful livestock production comes from knowing your animals and then taking advantage of this knowledge to get from them their maximum production. He adds, good care, shelter, plenty of good feed of the right kinds and good clean water will all help to make the animals on your farm comfortable, satisfied and maximum income producers.

**T. L. D. Club Met With Mrs. J. W. Lyon, Jr.**

The T. L. D. Club met in the home of Mrs. J. W. Lyon, Jr. Tuesday, January 31. Guess what's were given to Mrs. Arnold Brown and Mrs. Dee McWilliams. Names were drawn for valentine party to be held February 15, with Mrs. Arnold Brown.

Refreshments were served to Mrs. Johnnie Lanham, Mrs. Dee McWilliams, Mrs. Arnold Brown, Mrs. Theron Crass, Mrs. Coleman Garrison, Mrs. L. D. Griffin, Mrs. Bob Hill, Mrs. Ware Fogerson, Mrs. Conrad Alexander and the hostess.

**Mrs. Bill Edwards Entertains Sunday School Class**

Mrs. Bill Edwards entertained her Sunday School Class of the Methodist Church with a dinner Sunday, February 5. After attending Sunday School and church the children were taken out to Mrs. Edwards home. After having been served with a delicious dinner the children spent the afternoon playing.

Members of the class who attended were: Pat Jackson, Janet Turner, Linda Adcock, Harold Edwards, Sid Marshall, Donald Cherry, Eddie B. Jasper and Doyle Tiffin.

Guests were: Joan Blackshear, Frances Ely and Tommie Strange.

**P. T. A. Meeting to be Held Thursday, February 9**

The P. T. A. meets at 7:30 p. m. Thursday, February 9, at the school auditorium. A guest speaker will acquaint us with facts concerning the founding of P. T. A. Come and be registered to count in the room contest.

Also of interest will be the nomination committee for next year's officers.

Mrs. M. J. Montague and Mrs. James Henderson left Monday for Denver, Colorado, where they will visit Mrs. Montague's parents.

Otis Tidwell spent the week end in Plainview.

Mr. and Mrs. Roscoe Forte, of Lubbock, visited Mrs. Jeff Simpson Sunday afternoon.

Mrs. P. E. Visage, of Lubbock, visited a few days last week with her parents, Mr. and Mrs. W. L. McMinn, and her brother, Bud McMinn and family.

Mr. and Mrs. Elmer Stinson, of Plainview, visited Eddie and Miss Eunice Cox Tuesday.

Eddie Cox and sister, Miss Eunice, visited the Alva Duncan family in Floydada Sunday.

**CARBON PAPER at the NEWS**

**THEIR ANNIVERSARY**

Written by Glerma Wilson and dedicated to Mr. and Mrs. W. L. McMinn.

Just fifty years ago today  
A lovely couple wed  
So young, so happy, and so gay  
The day their vows were said.  
Since gladly meeting them one day  
I've seen the two together  
And surely it has been that way  
Through pain and stormy weather.

For down through all their sunny days  
I'm sure a few clouds gathered  
But hand in hand they glimpsed the ways  
And cloudy days were weathered.

They seem to love their children so  
And have to have them near  
The children who they helped to grow  
Through sickness and through fear.

They now recall the little things  
Bringing laughter and some tears  
Declaring time went by on wings  
Through fifty happy years.

Their friends keep coming through the gate  
So many friends you see  
Have come to help them celebrate  
Their anniversary.

Yes, their golden anniversary  
They celebrate today  
May days forever happy be  
And God's blessing come their way.

**PERSONALS**

Mr. and Mrs. Bud McMinn and Fayree took Mr. McMinn's sister, Mrs. Clifton Hubbard to Childress Sunday night to catch the train to her home in Hillsboro, Texas.

Mr. and Mrs. W. C. White, of Springlake, visited in the home of Mr. and Mrs. Leo White Thursday night.

Mr. and Mrs. C. O. Allard visited Sunday afternoon in Tulia with Mr. and Mrs. Van Berbour.

Mr. and Mrs. R. E. Brookshire, Mr. and Mrs. Arnold Banks and children and Jerry Bingham, attended the First Sunday Singing at Kress Sunday afternoon.

Mr. and Mrs. Joe Banks and children, of Amarillo, visited Monday night with his brother and family, Mr. and Mrs. Arnold Banks.

**Boots, Chaps, Belts.**

All three made as per your specifications. We guarantee satisfaction. Cavalier Polishes, Suede Dressings, Neetsfoot Oil, Shoe grease, Viscol and Saddle Soap. Shoe Laces, any color or length.
