Campaign donations favor Bush

If voting in the 19th Congressional District depended upon who brought in the most money, there would be no doubt as to who is ahead.

George W. Bush of Midland, the Republicans' choice, has collected \$207,558.73 in the period between July 1 and Sept. 30. His Democratic opponent, Kent

Hance of Lubbock, has pulled in only about a third of that, with \$74,822.08 in the same period. Reports on the contributions and

expenditures of both candidates were filed last week with the Federal Election Committee Bush outspent Hance during the

reporting period, \$179,766.34 to \$36, 095.27.Even comparing total contributions

and spending since each of their campaigns began. Bush has outdone Hance in both respects. The Midlander has collected \$347,269 42 Hance has brought in \$231,809.41.

Bush's total expenditures have mounted to \$309,892.58 while Hance's e2!y to \$168,709.41.

The differences between the two campaigns is evident not only in the amount of money received and spent, but also in the size of their reports. Bush's is almost an inch thick, has 181 pages and lists about 1,200 contribu-

The Lubbock attorney's report has only 35 pages and approximately 133

contributors Hance, though, started out in this reporting period with more cash on hand compared to Bush - \$24,372.82 to \$9.584.45

The 35-year-old Democrat still has \$63,099.63 in the bank, probably enough to finish out the campaign which ends Nov 7. He has no debts

Energy plan passes 60-17

By DONALD M. ROTHBERG

WASHINGTON (AP) — The 95th Congress regained its momentum toward adjournment early Sunday when opponents of President Carter's energy plan gave up their Senate filibuster and permitted the program to move toward final congressional

The Senate immediately approved the tax portions of the energy package by a margin of 60-17 and sent it to the House where approval seemed

Meanwhile, Senate and House conferees were trying to complete work on a massive tax cut bill and tailor it to fit the guidelines President Carter has set as conditions for his approv-

The impasse on energy ended shortly after midnight Saturday when Sen. James Abourezk took the floor and said his filibuster, which had delayed action on the bill for more

than 15 hours, was ending. "If it's not going to work, there's no reason to continue," said the South Dakota Democrat. Abourezk conceded that congressional leaders held the votes that would enable them to prevail eventually.

The senator went on to describe the energy package as "extremely bad, noxious legislation," and added that, 'I don't regret having made this effort ... I don't regret having tried to represent my constituency.

On taxes, the Senate-House conferees agreed on a reduction in capital gains levies and a once-in-a-lifetime break for persons over 55 who sell their homes. The provisions seemed to be within limits acceptable to

The conferees voted to reduce the maximum tax rate on capital gains from 49.1 percent to 28 percent. The homeowner provision would exempt from taxation up to \$100,000 in profit from the sale of a principal home by a person 55 or older.

The massive, election-year tax cut bill is likely to be the final order of business before the 95th Congress adjourns for good. The conference committee was working on the measure under threat of a presidential veto if they fail to come up with a bill that meets Carter's guidelines.

The Senate also passed and sent to the House an administration-backed bill to cut back on federal regulation of airline fares and routes.

The House voted 231-157 to exempt Tellico Dam in Tennessee from the provisions of the Endangered Species Act. Construction of the dam was halted because it threatened to wipe out the habitat of the snail darter, a three-inch fish on the endangered list. Whether the exemption would clear the Senate was uncertain.

Senate Majority Leader Robert C. Byrd, D-W.Va., told reporters Saturday morning that, "I expect to finish tonight depending on the tax bill."

Asked if he thought a veto could be avoided, Byrd replied: "I don't know. I have not discussed this with the

Midland Chamber to honor Mahon

Congressman and Mrs. George Mahon will be the honorees on Nov. 11 as Midland and Midlanders observe 'George and Helen Mahon Day' in the Tall City

The veteran congressman who has represented the 19th Congressional District since it was created 44 years ago, is retiring from office at the end of this year.

The Midland Chamber of Commerce is sponsoring the celebration in appreciation of the many and varied

services he has performed for Midland and Midlanders and for his cooperation and assistance in many projects and programs through the

Harrell Feldt, president of the Chamber of Commerce, has announced the appointment of W. H. "Bill" Collyns, Reporter-Telegram editor, as chairman of the event.

Highlight of the observance will be a barbecue luncheon and an informal program scheduled from 11:30 a.m. to 2 p.m. in the new Chaparral Center at Midland College. The function is open to the public.

Winston Barclay, chairman of the attendance committee, said that tickets, priced at \$1 each, will go on sale later this week.

W. J. Mewhorter is chairman of the finance committee, which includes Tony Martin, Wilbur Yeager, Robert Pendleton, Boley Embrey, Spencer Blocker, Ray Moudy and T. L. "Ike"

Others serving with Collyns on the general committee include Martin Allday, Ernest Angelo Jr., William Blakemore, Steve Davidson, Thornton Hardie Jr., Reagan Legg, Charles

Priddy and Charles Marsh. The chairman said that others will be named to special committees within the next several days.

"George Mahon has done so much for Midland in so many ways over a long period of years that we want to recognize him and Mrs. Mahon in a

special way," Feldt said. "And this is the kind of event that the congressman has said he likes best."
"We want to make this the best and most meaningful event of its kind ever held here." Feldt continued. "It is hoped that an exceptionally large crowd of Midlanders will attend the function to express the sincere appreciation we have for George and

Party label 'not important'

By LINDA HILL **R-T Staff Writer**

In spite of what the title "county judge" might indicate, the office

holder does much more than hear cases. Republican Bill Ahders and Democratic incumbent Blake Hansen will face each other on the Nov. 7 ballot for the right to be the chief

administrative officer of the county, as well as to serve as judge of the County commissioners, in a politically controversial move, appointed Hansen to the job in March. He replaced Barbara Culver when she re-

signed the post to accept judgeship of the 318th District Court. Local Republicans had urged the court to appoint a non-candidate to With the election little more than three weeks away, both candidates

are expressing optimism about their chances to be elected. Hansen, now 29 years old, came to the job after brief stints as assistant district attorney assistant county attorney and lawyer in a private

Ahders is municipal judge for the city of Midland, a job he took in 1968 after retiring from the FBI after 26 years. Educationally, their backgrounds are similar. Both have bachelors de-

grees in business and law degrees. The county judge's job is two-fold — administrative and judicial. He serves as presiding officer of the Commissioner's Court and generally is chief administrator of the county's business.

Also, under the Texas Constitution, he serves as judge of the county court, hearing misdemeanor criminal cases and civil cases involving \$1,000 or less, in addition to handling probate and mental competency

The latter portion of the job has become less critical in Midland Coun-

ty with creation of the county court at law, which has jurisdiction over all

those matters, plus civil cases involving up to \$5,000. 'Quite a bit more than 50 percent of my job is administrative," Hansen

Ahders declined to put a percentage on the amount of time he would expect to spend on the two areas of responsibility. "I would be very much interested in spending a great deal of my time in the judicial because I do enjoy administering justice," he said.

Both candidates downgrade the importance of party labels at the

county level, and both agree that any judicial position should be

Discussing qualifications, Ahders emphasizes his legal background. But, he said, the most important qualification is "the ability to get

along with people, to have harmony on the Commissioners Court." Hansen contends his legal and business education is "current and up-to-date." He also emphasizes his tenure in county positions. "I've worked here. I know the people in the county courthouse... We've solved

problems together," said Hansen. Traditionally, the Midland County judge votes only in case of a tie and

(Continued on Page 6A)

Midlanders to face nearly \$4 million more taxes

Midlanders will be paying almost \$22 million in property taxes this

This is almost \$4 million more than they paid last year, according to figures compiled in the city tax assessor-collector's office.

Expected in tax money this year is \$21,967,612. Last year taxes totaled \$17,979,563

The larger amount, though, is not entirely from increased tax rates. A large part of the increased amount of revenue comes with the addition of the hospital district to the taxing

Whereas last year there were three taxing bodies, there now are four city of Midland, Midland Junior College District, Midland Independent School District and the Midland County Hospital District.

Residents should be pulling their tax statements out of their mailbox any day now, as they were mailed at the end of last week, according to Virgil Jones Jr., city tax assessor-col-

This mailing is slightly later than in the past, he said, because new tax statements had to be printed to comply with a 1978 state law. The Public School Finance Bill provides that all school districts have to comply in listing necessary information on the tax statement.

Jones said the statements will list a resident's 100 percent valution of his property, the 75 percent assessed valuation to which the tax rate applies, last year's tax rates and tax payment and this year's tax rates and While this is required only for the

school district, Jones said Midland provides the information on all four taxing bodies — school, city, college "We feel it's good public relations to

let the people know everything about

their taxes in all the districts instead

of just one," Jones said. For those who do not want to pay it all at once, Jones said, the deadline for paying half is Nov. 30. They must pay the remaining half by June 30,

1979. Deadline for those who pay the full amount will be Jan. 31.

The tax rolls are scheduled to be approved at the four boards' next regular meetings, according to

Total tax rate for the four districts this year is \$2.20. Last year it was

The city dropped its tax rate by two cents, from 65 cents last year to 63 this year. Midland College kept its rate the same - 22 cents.

But Midland Independent School District raised its by three cents, from \$1.17 last year to \$1.20. The hospital district is 15 cents this year.

Taxable assessed valuation of property last year for the city was \$698,-561,910, which brought in \$4,540,751.68 in tax money. This year, the taxable assessed valuation is \$742,867,980 which will bring \$4,692,036.02 in tax

Although the tax rate is down this year and revenue up, Jones explained there has been an increase of taxable property in Midland because of its rapid growth. Both Midland College and the school district have a taxable as-

sessed valuation of \$1,092,487,390. Last year it was \$966,789,600. Tax money will be bringing in a little more to the college, with an

expected \$2,408,164.67. Last year the college received \$2,127,003.67. The school district should receive \$13,135,436.76 in tax money this year, compared to last year's \$11,311,-

The hospital district has an as sessed taxable valuation of \$1,152,412,-

070 to bring \$1,731,974.71 in taxes. Two exemptions have been taken into account on these tax rolls, Jones said, and those are homestead and disabled veterans

The homestead exemption is for all persons at least 65 years of age. It allows \$6,000 to be taken off the assessed value of the resident's homestead before taxes are figured, according to Jones

Considering the four taxing districts, there are 2,335 persons using this exemption.

A bill passed by the Texas Legislature allows for property tax exemptions for veterans with service-connected disabilities and their surviving spouses. The exemptions apply to taxes levied by the state, county, city, town, school district, special district or other political subdivison of the

It is a mandatory tax and applies to all taxing entities in Texas.

Amount of the exemption is based upon the amount of disability. There are 311 veterans in the county included in this exemption, Jones

If Joe Citizen does not qualify for any tax exemptions and owns a house rated as \$50,000 on market value. Jones figures the resident would pay \$825 in taxes this year.

The tax rate of \$2.20 would be applied to the 75 percent valuation of the home, which would be 437,500, he

But if Joe Citizen lives outside the city limits in his \$50,000 home, he

would have to pay only \$588.75. The city tax rate would not apply to him.

All city property will be revaluated for next year's tax rolls, Jones said. The city's Board of Equalization recommended last summer the revaluation be done every two years instead of five, as in the past.

By doing the revaluation, Jones said he feels city property will be brought up to a fair market value, something which he said has not been happening lately with the inflationary costs of housing.

BIG SPRING — Services for Ray B. Adams, 61, of Ackerly, were Saturday in Nalley-Pickle Funeral Home with the Rev. Jim Mosley, pastor of the First Baptist Church in Ackerly, offi-

Burial was in Trinity Memorial Park in Big Spring.

Adams died Friday in a Lubbock

hospital after an illness. He was born in Howard County and had lived in Ackerly all his life. He was married to Marie Clayton Johnson June 26, 1975, in Hico.

The farmer was a member of the First Baptist Church at Ackerly, the Elks and Eagles Lodges and Future Farmers of America. He helped organize the Nurthside Youth Center here and received the Outstanding Farmer Award from the Soil Conservation District about 20 years ago.

Survivurs include his wife; a son, Bryan Adams of Austin; a daughter, Sandra Talkington of Arlington; a brother, Harvey Adams of Knott; two stepdaughters, Amy Higgins and Janelle Land, both of Odessa, three grandchildren and eight great-grandchildren.

The family suggests memorials be made to the American Cancer Society or a favorite charity.

'Gene' McCollum

PORT NECHES - Eugene "Gene" McCullum, 65, of Port Neches, formerly of Midland, died in a Port Neches hospital after a long illness. Services will be at 10 a.m. Monday

in First Baptist Church of Port Neches with burial in Port Neches. McCullum was coach at Midland High School from 1942 through 1945. From Midland, he moved to Port Neches, where he coached three state championship teams before becoming superintendent of schools. He re-

Survivurs include a son, Gene Owen

McCollum of Houston; a daughter, Mrs. Terry N. (Tam) McGuire of Port Neches, several brothers and sisters and three grandchildren.

Sonia Ellison

Services for Sonia Ellison, 41, of Gilmer and formerly of Midland will be at 10 a.m. Monday in Bethel Baptist Church with Dr. Roy Day officiating. Burial will be in Resthaven Memorial Park directed by Newnie W. Ellis Funeral Home.

Mrs. Ellison died Friday in a Gilmer hospital after a month-long

She was born Oct. 6, 1937, in Rector. Ark. She lived in Detroit, Mich., eight years before moving to Grand Prai-rie. She moved to Midland in 1949 and moved from here to Gilmer five months ago.

She was married to John M. Ellison March 2, 1950, in Big Spring. She had worked as a nurse in Midland Memorial Hospital several years.

She was a member of Bethel Baptist Church and the VFW Auxiliary. Survivors include her husband; a son, the Rev. Robert John Ellison of Gilmer; three daughters, Shiriy Doty and Becky Seay, both of Midland, and Kathy Copeland of Gillmer; her mother, Pauline Branson of Midland; a brother, John Branson of Spain; a daughter-in-law, Carol Ellison, and six grandchildren.

Food prices to increase

Howard W. Hjort, the department's director of economics, said "price inflation in the general economy alone implies a 4 to 5-plus percent increase in food prices for 1979."

By SUSAN TOTH **R-T Staff Writer**

Some Midland private school operators in Midland are upset by what they see as an attempt by the federal government to take over their

A set of proposed Internal Revenue Service procedures would revoke the tax-exempt status of any private schools which does not meet strict standards on minority enrollment and

Some Midland operators see the matter as a question of the separation of church and state and the right of private individuals to have the kind of education they want for their chil-

They are also upset by what one operator termed "the asinine assumption that all Christian schools have been started for segregation purposes," which he believes is im-plied in the regulations.

The regulations state that any school which was founded or substantially expanded during the time of desegration in the community and which does not have a significant number of minority students enrolled is subject to the loss of status.

Oaklawn School, because it opened in 1976 and has little minority enroll-

ment, might be the most effected of Midland's five private schools

Private schools upset with new IRS rules

"The whole thing is a matter of control," said Oaklawn's director, the Rev. David Piearcy.

"I don't think the government has any business in private schools at all. We don't discriminate in our admissions, but out students are screened individually to make sure they will fit in with our environment," Piearcy said. "Our students are screened on the basis of their attitude and spirituality, not on what color they are.

"Our school is a direct outreach of our church (Oaklawn Baptist Church), and I think this is a matter of separation of church and state."

The proposals would have little effect on Trinity School initially, said the Rev. P.D. Peterson, headmaster of the school.

Trinity was established in 1957. before the first desegregation orders in Midland, and its growth has been "gradual" throughout the years, he

While Trinity would meet the criteria for minority enrollment, he said the "arbitrary specificity and vague language would leave one open to capricious interpretations" of the regulation's meaning

We agree with the general intent of the regulation, but disagree strongly with the language and approach," Peterson said.

According to the proposed regulations, the IRS will declare racially discriminatory any private schools that was "formed or significantly ex-

panded at or about the time of desegregation of the public schools" and that has an insignificant number of minority students.

The burden is on the school to show evidence of affirmitive action to secure minority enrollment Otherwise, the school would lose its

tax exempt status - and its contributors would lose the tax deductibility of their gifts to the school.

Showing affirmitive action, and retaining tax-exempt status, could be accomplished if the school's minority enrullment percentage is at least 20° percent of the total community minority enrollment, or if the school can meet at least four of the following standards

-Scholarships and financial aid "on a significant basis to minority students.

—"Active and vigorous minority recruitment programs."

-An increasing percentage of minority enrollment.

-Employment of minority teachers or professional staff. -Substantial evidence of good

Other schools, however, are concerned about the proposals.

The American Association of Christian Schools, the national group which accredits Oaklawn, has started a letter-writing campaign designed to get 100,000 letters to the commissioner of the IRS before Oct. 23, the cutoff date for public comment on the proposed regulations.

The National Association of Independent Schools has filed suit on behalf of its members asking the IRS to hold public hearings on the matter, Peterson said.

Anyone interested in commenting on the regulations may do so in a letter to the Commissioner of Internal Revenue, Attention EEO, Washington D.C. 20224. The letters must be mailed by Oct. 23 to be considered.

Cool air slows cotton harvest

By CHARLES W. GREEN
County Extension Agent—Agriculture

The late September rains and the resulting cooler soil and air temperatures have delayed the cotton harvest in West Texas. Cotton, responding to the moisture, has made some foliage growth and boll maturity has slowed, which has caused producers to go slow on the use of harvest-aid chemicals.

Some earlier cotton or stressed cotton that had opened more fully prior to the weather change has been treated with desiccating chemicals to dry and prepare it for harvest. Producers are repairing and servicing trailers and harvest equipment in the interim before harvest.

Agricultural production in Texas has come a long way since 1906, when the first county agent was hired in Smith County and headquartered at Tyler. He was W.C. Stallings, who was employed by far-sighted leaders enthused over the success of Walter C. Porter's farm demonstration near Terrell in cotton and other crops and new farm practices.

The work at the Porter Farm directed by Dr. Seaman A. Knapp, special agent of the U.S. Department of Agriculture, became the foundation of the nationwide system of Cooperative Extension in agriculture, home economics and related subjects as we know it today. Congress passed the Smith-Lever Act in 1914, paving the way for Cooperative Extension Services in each state of the nation.

The Extension Service was given the responsibility of disseminating the research findings from Land-Grant Colleges and State Experiment Stations to the people. Through the years, the Extension Service has earned a reputation of dealing with major issues and concerns of the people, and in being in the fore-front in times of emergencies.

A big challenge for the Extension Service in Texas came during World War I, when county agents were called upon to help with an all-out agricultural production effort to feed and clothe people throughout

During the "Great Depression" of the 1930's, agents worked with farm and rural people to help them produce and conserve most of their family food needs. Extension, through its county network of agents, has been deeply involved in assisting with many national emergency programs, such as those resulting from hurricanes, floods, droughts, and in animal health problems.

Today, interest in gardening and food preservation has brought many new urban and rural residents to the County Extension offices seeking information. Many new agricultural frontiers have emerged in recent years. Extension county marine agents now serve in a number of the Texas Coastal counties and assist commercial fishermen and shrimpers. Integrated pest management programs are moving

Livestock programs are designed to improve overall reproductive efficiency and increase the calf crop percentage. Improved crop varieties are among other new thrusts. Agriculture today represents a whole new-but sophisticated-ballgame!

The Agricultural Extension Service is observing the Diamond anniversary of Farm Demonstration Work this October. A special celebration was held in Terrell Friday at the Porter Farm to pay special tribute to Dr. Seamn Knapp and Walter Porter.

With cooler weather, insects begin seeking a warmer place, and homes are ideal locations. The most common household invaders are earwigs, crickets, pillbugs, spiders, millipedes and cockroaches. These pests will damage fabrics, feed on food products and may also transmit diseasecausing organisms within the home.

The first control step should start outside. Remove hiding places such as plant debris around the foundation and perform any needed maintenance on portals of entry to keep insects outside. If insects have been a problem in the past, treat the foundation 12 to 24 inches above the soil line with a recommended insecticide such as diazinon, malathion or carbaryl (Sevin). Also apply the insecticide to the soil surface next to the foundation and around sidewalks, patios, driveways and storage areas.

Be sure to read the label and follow directions closely when applying any type of insecticides. If insects are already inside the home, it is usually best to hire a certified pest control operator rather than to take care of the problem yourself.

Simulated rocks like real thing

WESTMINSTER, Md. (AP) — "Rocks" are spilling out of the old Sherwood distillery complex here as workmen ready them for shipment to the Caribbe-

Rock and Waterscape Systems, Inc., is building the simulated rocks for a miniature mountain, complete with three waterfalls, to be built across two swimming pools in the Bahamas.

The process begins at the city dump here. We lift rock impressions off the cliffs by pressing latex skins into the rock, then painting them with a special substance so they'll retain that shape," said Ross Dietzel, the company's local plant-foreman.

"It's better to use God's own designs than to hand-sculpt our own, which is what we used to do," he said. "Obviously, using natural formations will produce more natural (simulated) rocks."

The skins are reinforced with polyurethane foam

and sprayed with a combination of cement and fiberglass, using a process developed to produce a new type of building material in England.

The molds are then popped off the cement, leaving a tough rock-like formation about three-quarters of an inch thick.

The simulated rock is then sprayed with acid and waterproofed. "Its life is estimated at around 300 years, just like regular cement," Dietzel said. Sections of the simulated rocks are shipped to

where they'll be used, fitted together and hand-sculptured by masons. The miniature mountains can "support the weight of 10 elephants, if necessary," The firm, which was founded by former Los

Angeles fireman Julian George, has built miniature mountains and wildlife habitats at hotels and zoos in Denver, Washington, Omaha, San Diego, Acapulco

The local plant was opened last year by Dietzel and other R&W employees who had already worked for a year at the National Zoo in Washington.

"In the two years we've worked there, we've constructed 13 different full-scale exhibits, including several bear caves and dens, a beaver habitat, a seal

exhibit and more," the plant foreman said.
"We must learn something about each animal's lifestyle and ability to climb, jump or maneuver before we construct a zoo habitat," he said.

WEATHER SUMMARY

Fair weather is forecast for most of the nation today, with temperatures in the 50s and 60s expected in the North, getting warmer to the South and reaching the 90s in the Southwest. (AP Laserphoto Map)

A broad band of clouds extending from Maine into the mid-Atlantic states and a weaker band extending to the Gulf Coast are seen in this satellite cloud photo, recorded Saturday afternoon. Heavy cloudiness is visible over the Gulf of Mexico, while clear conditions exist from the Rockies to the West. (AP Laserphoto)

Midland statistics

MIDLAND, ODESSA, RANKIN, BIG LAKE, GAR-DEN CITY FORECAST: Fair through Monday. A little warmer this afternoon. High today upper 70s. Low tonight upper 40s. High Monday near 80. Southerly winds 5 to 10 mph today.

ANDREWS, LAMESA, BIG SPRING, STANTON FORECAST: Pair through Monday. A little warmer this afternoon. High today upper 70s. Low tonight upper 40s. High Monday near 80. Southerly winds 5 to 10 mph

listed. Bush, a 32-year-old independent oil

producer, has only \$37,376.84 cash on hand. He has a \$4,304.50 debt listed. Both men are spending more money on getting their image and message across to the public than on any other

single item. Hance spent \$12,932.17 with Otice Green and Associates in Lubbock for public relations and related advertising costs. Another \$1,434.94 went to Downtown Printing Inc., in Lubbock

But Bush, apparently not one to run second on any aspect of the campaign, also has outspent Hance in getting an image across to the

A total of \$82,190.19 has been paid Scratch Pad in Austin for media production work. Another \$11,672.86 went to Wheeler Film Service in Overland Park, Kan., for filming. He spent another \$1,500 with Harry Treleaven in New York for consulting work. Marvin Collins in Dallas received an-

other \$3,750 for consulting work. Most of Hance's contributions came from Lubbock with several from Odessa, Dimmitt and other small towns in the district. Nine contributors from Midland are listed.

According to Bush's report, he has received strong support from Midland. But a list of other contributors shows much of Bush's financial support comes from outside the state.

This list includes Mr. and Mrs. Scott Pierce, vice chairman of E.F. Hutton in Ndew York, \$250; James McDonnell, chairman of McDonnell Corp. in St. Louis, \$1,000; William C. Ford of Dearborn, Mich., vice chairman of Ford Motor Co., \$500; C. Harvey Bradley Jr., general counsel for Eli Lilly and Co. in Indianapolis, Ind., \$250; John Loeb, partner in Loeb, Rhoades Co. in New York, \$1,000; Mr. and Mrs. Ming Hsu, an executive with RCA Corp. in New York, \$200; Herman Lay with Frito-Lay in Dallas, \$250; John P. Macomber, president of Celanese Co., \$250; Mrs. Douglas MacArthur in New York, \$100.

Also listed are Peter O'Malley of Los Angeles, owner of the Los Angeles Dodgers, \$250; Jerry Weintraub, a film producer in Beverly Hills, Calif., \$1,000; Bowie Kuhn, commissioner of baseball, \$250; Mr. and Mrs. Alden Clausen, chairman of the Bank of America in San Francisco, \$200, and Donald M. Kendall, chairman of

Donald M. Kendall, chairman of PEPSICO in Purchase, N.Y., \$150.
Those contributing \$1,000 or more to Bush's campaign include: Jack B. Wilkerson of Midland, real estate; Barry Beal of Midland and Carlton Beal of Midland, both petroleum engineers; Spencer Beal of Midland, both petroleum engineers; Spencer Beal of Midland, both mrs. Bill Munn of Midland, independent oil man; Margaret Ann Leede of Midland, dindependent oil man; Margaret Ann Leede of Midland, housewife; Peter O'Donnell Jr. of Midland, investor; Edward Leede of Midland, independent oil man; Carly Beal of Midland, petroleum engineer; Edith Jones O'Donnell of Midland, housewife; W.S. Farrish III of Houston, investor; Mr. and Mrs. John Redfern III of Midland, independent oil man; Frances H. Chiles of Fort Worth, housewife; Robert Mosbacher of Houston, oil and gas producer; James E. McDonnell of St. Louis, Mo., chairman of McDonnell Corp.; J.R. Butler of Houston, oil and gas consultant; Mr. and Mrs. J.A. Elkins Jr. of Houston, banker; John Loeb of New York City, partner in Loeb, Rhoades Co., David K. Wilson of Nashville, Tenn., investment company; John Hendrix of Midland, independent oil producer; Nicholas Brady of Piscataway, N.J., director of Purolator Inc.; Richard L. Incident confirms old adage among the politically aware

By LINDA HILL R-T Staff Writer

It's said politics makes strange bedfellows, and an incident that's set tongues wagging in Midland among the politically aware seems to prove the old adage. The occasion was a fundraiser for

Jim Baker, Republican candidate for attorney general. The place was Midland's Petroleum Club. Jim Conine, who supports Baker,

but doesn't "vote straight Republican," was to conduct an auction. But first, he introduced a candidate for office that had been missed during the first go-round - County Judge Blake Hansen, Democratic candidate for that office, who was there at Conine's

Conine says he did not endorse Hansen at the event. "I didn't urge them to vote for him or anything. I just introduced the little fellow," said Conine

Hansen said he was there "at the invitation of and guest of Jim Conine." But he declined to comment further on the incident.

Bill Ahders, Republican candidate for county judge, also was in the audience, and, by all accounts, state Republican Committeeman Robert Monaghan tried to introduce him,

saying Monaghan "was trying to do a little pushing" to get attention for Ahders

"This thing is getting blown out of proportion," Conine said. For the record, Hansen said he isn't a Baker supporter.

"He ignored me," Monaghan said of Conine. Conine explains the incident by

Bush-backers barbecue looks like 'love fest'

By LANA CUNNINGHAM **R-T Staff Writer**

It was a love fest for George W.

The Bush Country Barbecue rally held by Bush's supporters Saturday in the American Legion involved a little politicking, a lot of eating and a lot of relaxation. It's possibly the last time Bush's workers will have a chance to put their feet up and let their hair down until after the Nov. 7 general

Bush, a Republican from Midland, is running against Democrat Kent Hance of Lubbock for the 19th Congressional District seat.

The excitement is building, Bush told the audience, still chewing on their barbecue and sipping their iced

"We're so excited it's hard to contain our enthusiasm," Bush said, recounting how his organizations are growing throughout the district "day

Bush said a Lubbock poll taken a month ago showed Hance leading, 53-47. Another one released this past week reflected a change. This time, Bush said, it showed a 45-to-41 Bush

Working his way into his familiar political speech, his tempo quickening, Bush said, "The people in West Texas are realizing government is becoming a stifle. In 1978, we are taxing productivity, taxing profits, taxing savings and subsidizing wel-

"The United States was built upon the ability to succeed and that's what this race is all about.

He paused a moment, as if to catch his breath, then continued, saying there needs to be a philosphical change in thinking.

Bush said he realizes some people are staunch Democrats, "and they're afraid their grandmother or grandfather are going to roll over (in their graves) if they change parties."

But, he added, the clear issue in this campaign is who can go to Washington and "go toe-to-toe with (President) Carter and (Speaker of the House Tip) O'Neill.'

"We are on the brink of victory, and it is a sweet smell," he said.

But the slight edge he may have over Hance now is not enough. "We're asking you to do that little extra that will accomplish the election of a friend of West Texans to the U.S. Congress.'

But it was evident that his workers are looking forward to Nov. 7 for more reasons than one. As supporter Don Evans put it, "God, I've heard one of his jokes at least 50 times.'

Both candidates optimistic about battle for judgeship

(Continued from Page 1A)

does not make or second motions. But state law does permit such participation, and county judges in some other area counties routinely do

But neither candidate seems inclined to break the local tradition.

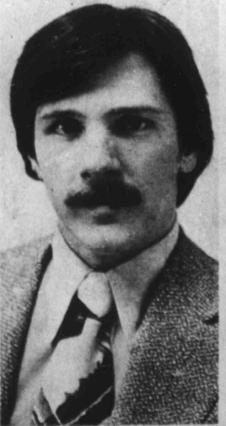

"Unless it is a tie vote, it doesn't change anything," Hansen said. He said he will express his opinion on issues, however, and "if it comes to a tie, I'm going to vote exactly the way I told them.' Anders said he would seem himself primarily as a "persuading force," adding, "I don't know how you could keep from participating (in the dis-

cussions). I have very decided ideas." During the next year or two, the candidates agree, one of the major issues will be realligning county commissioner precinct lines: The major problem with the present boundaries, according to both men, is that the precincts are not all contained within contiguous

"Where to start, I don't know," said Hansen. "It's always a very, very touchy situation.

Anders advocates forming an "unprejudiced committee" to make recommendations on how the lines should be drawn. The current boundaries split the bulk of the minority vote into two precincts. Hansen said he thinks the U.S. Justice Department, which under the Voting Rights Act must approve any redistricting plan, will

require minority vote to be concentrated in one precinct. Ahders said he doesn't think location of minority voters should be a factor in drawing boundary lines.

Playa lake pollution stirs 'oily duck' controversy

By MARK VOGLER R-T Staff Writer

ANDREWS — The discovery of dead ducks on the lonely shores of a playa lake 15 miles west of this oilfield city has sparked national concerns over wildlife and the future of West Texas's major natural re-The issues involved in the controversy are clearcut:

-Oil is the backbone of the thriving economy and growth of the

-Water is the life-blood support system.

-Environmental conditions of Whalen Lake and other similar bodies of water in West Texas potentially can affect hundreds of thousands of migratory birds that make winter rest stops here before flying to destinations all over North and South America.

A search for a whooping crane in the fall of 1976 took agent Dick Endress of the U.S. Department of Interior to the 630-acre playa lake in Andrews County where by accident he embarked on his "oily duck

At Whalen Lake, Endress failed to find the whooper. He did, however, discover a variety of waterfoul - dabblers, waders and divers. But all of them were dead. The agent contends the birds had succumbed to oil

Dipping into a "skimming pit" for a water sample at Whalen

Lake is Arnold Darrow, president of the Whalen Corp. U.S.

Interior Department agent Richard Endress looks on. (Staff

and brine water polluting Whalen Lake.
Endress said the disposal practices which occur at Whalen Lake and

other playa lakes in West Texas violate the Migratory Bird Treaty Act. In February of 1977, a federal grand jury in Midland investigated a complaint by Endress and the National Audubon Society that water pollution caused by oil companies discharing into Whalen Lake was taking a massive toll of migratory birds. Endress has since documented up to 500 dead birds at the lake.

Rather than prosecute, the U.S. Attorney's Office decided to turn the case over to the Texas Railroad Commission for investigation.

The Railroad Commission in September of last year authorized the Whalen Corp., a subsidiary of Triton Oil & Gas Co., to continue to dump

R-T Special Report

200,000 gallons of brine and bottom sediment into the lake. Renewal of the disposal permit will be the subject of a railroad com-

mission hearing Oct. 26 in Austin.

"There is no indication that the lake constitutes any threat of pollution to fresh water sources, but the surface condition of the lake is such that from time to time it is fatal to certain migratory birds," wrote the commission in an Aug. 9, 1977 memorandum.

"If use of the lake as a salt water disposal point were prohibited, approximately 20,000 barrels of oil per month would be lost," the commission stated in its final opinion last year, because this method is much cheaper than well injection.

Arnold Darrow, president of Whalen Corp., said that amount of lost oil would be enough to put a serious crimp into the economy of the Permian Basin and added well injection in West Texas is difficult and

Whalen Corp. contends it already has invested hundreds of thousands of dollars to make improvents in its current disposal system, which DarSECT

decision t

Hertel, a sc

row agrees is not functioning up to par. Most oilfield brine is re-injected into the ground in wells designed to increase pressure in underground resevoirs and thereby increase oil recovery, or in deep wells where industry experts say it will not contaminate

Darrow is confident his company can make enough improvements in the remaining time before the hearing, or at least come up with affirmative policies, to convince the Railroad Commission and environmenta-

Chemists from the Texas Department of Parks and Wildlife said recent tests taken at the lake indicate excessive amounts of petrolem materials are being discharged into the lake and may be contaminating the

The chemists, who said they have not seen any improvement in conditions of the lake over the past year, have launched an investigation into

The Railroad Commission, which regulates approximately 40 percent of the nation's oil production and also has sole jurisdiction over petroleum waste disposal into playa lakes, so far has taken the position that the issues raised over Whalen Lake and other alleged pollution at

Several state agencies have received many complaints alleging ground water contamination in West Texas because of brine disposal methods in recent years. But the Railroad Commission disputes the re-

ports and considers the situation to be minor. The Railroad Commission adopted a so-called "not pit" rule to ban

(Continued on Page 9B)

Dam completion approved

to permit completion of the Tellico Dam despite a Supreme Court ruling that halted work on the project because it endangers the tiny snail darter fish.

The decision, on a vote of 231-157, came as House members debated a bill to permit exemptions under the Endangered Species Act, the law the court used to make its ruling last summer.

The House was expected to complete action on the measure later in the day.

The Senate approved legislation earlier this year mental concerns aside, it might make more sense to setting up an exemption procedure under the law, but rejected a provision that would automatically have permitted completion of the Tellico Dam.

The conflict between the House and Senate bills was left to be resolved by a House-Senate conference The Tellico Dam is more than 90 percent complete,

but the Tennessee Valley Authority was denied permission to close its floodgates. The nation's highest court said that to do so would wipe out the habitat of the snail darter, a three-inch fish on the endangered species list.

The current law, approved five years ago, prohibits federal agencies from taking any action that threatens an endangered species.

But controversy in Congress over the Tellico Dam and the snail darter resulted in strong pressures to amend the law to provide more flexibility.

Both the Senate and House bills call for a highlevel federal review commission with authority to grant exemptions under tightly controlled circum-

Before granting an exemption, the commission would have to decide that the benefits of completing

WASHINGTON (AP) - The House voted Saturday the project outweigh the benefits of preserving the It also would have to rule that there are no feasible

or prudent alternatives to the project before an exemption could be granted. Ironically, the chairman of the TVA, S. David

Freeman, told Congress earlier this year he wasn't certain how the agency wanted to proceed on the \$119 million dam and reservoir project.

Freeman told a House committee that environredesign the project.

Baylor, 28-21

WACO, Texas (AP) — Southern Methodist quarterback Mike Ford erased a 21-point deficit with four second-half touchdown passes to slippery Emanuel Tolbert Saturday, propelling the Mustangs to a pulsating 28-21 Southwest Conference victory over the luckless Baylor Bears.

The Bears, who have lost all five of their games after leading in the fourth quarter, clawed to the end but David Hill intercepted a pass with 16 seconds to go to clench the incredible come-from-behind victory.

BAYLOR LED 21-0 at halftime thanks to five lost SMU fumbles. But three critical mistakes by Bear quarerback Steve Smith gave the Mus tangs heart.

Ford, the cool-headed, strongarmed sophomore connected on scoring passes of 4, 9, 9 and 6 yards to Tolbert, who caught three of the scoring tosses in a frantic 22-point SMU fourth-period

Ford completed 32-of-43 passes for 325 yards and a SWC record-tying

four touchdown passes. Tolbert caught 13 passes for 134 yards and a league record-tying four

touchdown passes. The victory gave SMU a 3-1-1 season record and a 2-0 mark in SWC play. Baylor is 0-5 overall and 0-2 in league play.

Hill also was responsible for a key play that turned the game around midway in the third quarter. Smith appeared to be on the verge of scoring Baylor's fourth touchdown when Hill stripped him of the ball and Tim Jones recovered at the Mustang one. SMU went 99 yards for its first touchdown and the Bears couldn't awaken from their trance before 36,500 fans in

Baylor Stadium. Baylor tailback Steve Howell ran 13 yards for a touchdown to cap an 80-yard drive in 18 plays and the

Lou listens to Jackson's advice

NEW YORK (AP) - Reggie Jackson told Lou Piniella to lay off Bob Welch's high fast ball. Piniella didn't, and, as a result, the World Series is tied at two games apiece after still another getting-to-be-a-habit comeback by the New York Yankees.

Piniella was the first batter faced by Welch, the Los Angeles Dodgers' smoke-throwing 21-year-old rookie sensation. Welch entered Saturday's game in the eighth inning with the score tied 3-3.

The count went to 3-1 and Piniella swung at the next four pitches, fouling off three before popping out.

"I thought I had some good swings against him," said Piniella, the Yankees' leading hitter during the regular season with a .314 average. "But after I popped out, Reggie told me not to swing at the high pitches.'

So what did Piniella do when he came up again in the bottom of the 10th after Welch walked Roy White with one out and Jackson drilled a two-out single through the right

THE FIRST pitch was a high fast ball out of the strike zone. Piniella swung and missed

"It was a bad pitch, up and in," he said. "Welch throws as hard as anybody in baseball and I was anxious, but I'm an anxious hitter. Pitchers don't have to throw me too many

Welch's next - and last - pitch was another high fast ball, also out of the strike zone. Piniella swung ... and didn't miss.

"It was out over the plate and I tomahawked it," he said. "I'm a contact hitter, and I don't necessarily have to swing at a strike.

The ball landed in center field, scoring White and scalping the Dodgers 4-3 to even what has suddenly become an exciting World Series. Piniella shrugged off his game-win-

"The key was not my base hit," he said, "but the way the pitchers kept the game within reach after we fell behind 3-0. It was Dick Tidrow holding them right there and Goose (Rich Gossage) shutting them out after

What helped get the Yankees into the 10th after Reggie Smith put the Dodgers on top with a three-run play in New York's two-run sixth.

WITH TWO runners aboard, Los Angeles shortstop Bill Russell dropped a line drive by Piniella. He stepped on second to force Jackson but his throw to first hit Jackson and rolled away, allowing Thurman Munson to score from second with a key run.

'When Lou hit the ball, it looked like a hit to me, so my instinct was to go to second," Jackson said. "Then, when it hit Russell's glove, my instinct was to go back to first. Then he dropped it and I didn't know where to

just froze. No, I didn't throw my hip

Oh? A television replay showed otherwise, according to NBC-TV announcer Joe Garagiola. "I won't comment any further,"

Jackson said. "I'm not stupid enough to talk about it. It hit me on the thigh. What else do you want to talk HOW ABOUT the Gossage-Welch

duel? "I was just thinking, 'You're not gonna beat me; you're too young, or something," said Gossage, who pitched two hitless innings and won the duel of hard-throwing right-handed relievers. "The kid's a hell of a competitor and he has a lot of composure but I'm a battler, too, and I knew somebody had to take me deep to beat

"Sure, it was a personal battle between me and him because we throw a lot alike, I guess. Being the Dodgers, it's a great satisfaction pitching against them. Maybe Dodger blue is helping us. Maybe somebody wants to make it exciting."

Dodgers fume over call in 6th inning Saturday

NEW YORK (AP) - The Los Angeles Dodgers remained incensed long after the game after umpire's call in the sixth inning permitted a New York Yankees run to score.

The Yankees went on to win 4-3 in the 10th inning Saturday to square the best-of-seven Series at two victories

Lou Piniella drove in the winning run with a single off a high fastball from 21-year-old Bob Welch, the hero of the second game. Piniella also was involved in the sixth-inning fracas but it was a hip movement by Reggie Jackson that brought the com-

JACKSON HAD driven in Roy White and was on first base with Thurman Munson at second when Piniella lined to shortstop Bill Russell near second base. Russell dropped the ball and then tagged second, automatically forcing Jackson.

His throw to first trying for the double play bounced off Jackson and by the time it was recovered, Munson had scored.

First baseman Steve Garvey said, "Jackson was squared up toward second base and when the ball came, he shifted his leg over and deflected it.

(Umpire Frank) Pulli said it was a judgement call and he felt, in his judgement, Reggie was going back to first. That's a tough way to lose."

Manager Tom Lasorda, still vehe-

ment, declared, "He can't go back to first. He's out. He stood there. He's got to get out of the way. He's got to move out and give the man the right to throw the ball. What he did was interference. It made the difference of us going into the eighth leading 3-1 instead of 3-2. That's how much it

"I never saw a play like that. Some-body told me that on TV it showed he moved his hip," said Lasorda. "All he's got to do is get out of the way of the ball. It should have been called a double play.'

Tommy John, who pitched seven innings for the Dodgers, said, "I thought Reggie moved into the ball. If so, it was a very smart play, since he got away with it.

World Series enters fifth game

(Continued from 1-B)

Thurman Munson. With the game tied at 3-3, Rich

Gossage reliever for New York and the game settled into a classic duel between two fastball

IN THE 10th, White battled back from an 0-2 count to work out a walk from Welch with one out. Munson then popped up, but Reggie Jackson - victimized by Welch on a game-ending strikeout in the second Series contest delivered a single to right, sending White to second.

That brought up Piniella and, on a one-strike pitch, the veteran Yankee hit a single to center that sent White scampering home with the winning run and

insured a return trip to California for Game 6 of this Series.

MUNSON DOUBLED home New York's tying run in the eighth inning before Welch came out of the Dodgers bullpen to preserve the deadlock.

Los Angeles starter Tommy John was nursing a 3-2 lead built on Reggie Smith's three-run homer when Paul Blair opened the Yankees eighth with a sin-

Terry Forster relieved John, and White sacrificed the runner to second. That brought up Munson, captain of the Yankees. Forster got ahead on the count at 0-2, one of the strikes a foul ball that smashed off Munson's leg so hard that it rolled all the way to shortstop. On the next

pitch, Munson doubled inside third base for the tying run.

After Jackson was hit by a pitch, the 21-year-old Welch who had saved the Dodgers' second-game victory - relieved again. He retired Piniella on a pop fly, then struck out Graig Nettles, ending the rally.

THEN THE game settled down to a duel of recievers with Welch of the Dodgers and Gossage of the Yankees matching fastballs as the contest spun into extra innings. The Yankees got back in the

game with two runs in the sixth against John, helped along by a bizarre play involving Dodgers shortstop Bill Russell. With one out, White singled to

center and Munson walked on a 3-2 pitch. Jackson followed with a single to right, scoring White with the first New York run. The hit extended Jackson's streak of driving in at least one run to eight consecutive World Series games, tying the all-time record held by Lou Gehrig.

Then, with the score 3-1 and runners at first and second, Piniella lined a shot near second base. Russell gloved the ball for a moment and it seemed like a sure double play with Munson trapped off second BUT RUSSELL dropped the

ball. He recovered in time to' tep on second, forcing Jackson, and it seemed he still might complete the double play with a

Tech overcomes Wright's aerial circus, 36-23

ALBUQUERQUE, N.M. (AP) — Rugged Fullback James Hadnot rushed for a Texas Tech record 268 yards Saturday night and scored his club's final touchdown to ice a 36-23 non-conference college football victory over New Mexico.

Hadnot, who was converted frmm tight end to fullback this year but still wears No. 86, bulled his way to the record on 26 carries. The old standard was 206 yards on 27 totes set in 1942 by Walter Schlinkmore against Creight-

Cardinals Cowboys tace

ST. LOUIS (AP) — If recent history is an indicator, the Dallas Cowboys-St. Louis Cardinals rematch in Busch Stadium Sunday may be worth the price of

admission after all. A sellout crowd, the Cards second of the year, will watch St. Louis challenge the defending Super Bowl champions in the role of a David vs. Goliath as one of two teams in the National

Football League still winless.

Serving as a magnet for the apparent mismatch is the Cards' ability to match Dallas victory for victory in the National Conference East rivalry

A year ago, the Cowboys prevailed here 30-24. But later in Dallas, after grabbing a 14-3 advantage at halftime, Coach Tom Landry's title-bound team

bowed 24-17.

Jim Hart's 3-yard touchdown flip to tight end Jackie Smith provided St. Louis' winning points in the fourth quarter. Since then, the Cards have won only one game. And Smith, a 16-year vet, has come out of retirement to don a Cowboys

Still, a contest three weeks ago in which St. Louis took a 10-0

today lead before submitting 21-12 has

> A St. Louis NFL low of 65 in six games notwithstanding, Landry has declared that St. Louis "is a team capable of putting points on the board."

El Paso wins cross-country title

By TERRY WILLIAMSON

Abilene Cooper's David Nelson and Midland Lee's Steve Hooper produced a 1-2 sweep in the annual Midland Invitational Cross Country Meet at Midland College Saturday morning, and it is getting to be a habit.

Nelson posted a new course record of nine minutes and 29 seconds to win his third straight cross country title this year. Hooper was second with a 9:33 and that marked the third time he has finished in that postition to

However, Hooper knocked off six seconds in the difference from the last time the two faced each other last week in San Angelo. Hooper is now in striking distance with the four second margin, and they will face each other

again next week in Lubbock. 'When I saw the huge field that was going to be here with the El Paso schools and all, I thought things might turn out different this week, but Steve and I turned out to be battling again. It's getting to be a weekly thing," Nelson said.

"David and I both want to go to state, and I know that if I can keep his pace, we will both be there. That's what we are working for right now," Hooper noted.

While the District 5-4A duo was putting on the show, powerful El Paso High was winning the team championship with 49 points. El Paso Coronado was a distant second with 94 while AAA Brownfield was third with 99 points. Defending champion Midland High dropped to fifth this year with 131 points and Lee was seventh with

El Paso was led by third place finisher Rickey Pena with a 9:40 while Odessa High's Johnny Herrera was fourth with a 9:45. Gene Tuttle led the MHS cause with a seventh place 9:49. The red head was third last week to Nelson and Hooper. Bob

Glenn managed a tenth place 9:54 for the Bulldogs.

In the girls' division, it was all El Paso High. Patsy Norman, who won the state cross country crown last year as a freshman, took top honors with an 11:36. Norman defeated teammate Margarita Solorzano for first place as Solorzano posted an 11:52. Solorzano had defeated Norman in two previous races this year,

El Paso posted 36 points to win the girls' title while EP Coronado was second with 55. Midland High was fifth with 148 points after placing second last week. Brownfield's Elizabeth Holquin was third with a 12:29

so this was Norman's first win of the

Rookie paces Nets win

PISCATAWAY, N.J. Norm Nixon hit a jumper but New Jersey guard AP) - Rookie guard Winford Boynes scored 20 points and the New Jersey Nets held off a furious Los Angeles comeback, defeating the Lakers 102-100 in National Basketball Associa-

The Nets held a 100-80 lead midway through the fourth quarter, when the Lakers, erratic offensively for most of the night, scored 16 straight points to cut the lead to four with less than two minutes to play. Ron Boone scored eight points in that stretch before George Johnson hit

the Nets a 102-96 lead. Adrian Dantley then hit two free throws and

to cut the lead to two with John Williamson then 15 seconds remaining, ran out the clock. Real Estate Today tion action Saturday. By DON HARVEY REALTOR

Owner, DON HARVEY REALTORS When many people look for a home, they search for things they think they need. These are usually features they have seen in homes of friends, relatives, neighbors, and business associates. Most two free throws to give of these items and innovations are of an

unusualy or dazzling nature. Some are decorative and some are practical, but they're all eye-catching enough to make people sit up and take notice.

For example, people will come in and excitedly describe all the things they absolutely MUST have. These may include huge planter-room dividers; a balcony; builtin aquarium; or a triplesided fireplace!

EXTRAS AND YOUR LIFESTYLE with these features. Taken singly, they can do a lot to enhance a home and make it distinctive. But if they were ALL put into one home, the end result might be somewhat

shocking! It's a good idea to look around and see what other people have in their homes, but when it comes to those extra, unusual features, a family should temper their desires and choose only what they really need to fit THEIR lifestyle!

****** If you have any questions on this subject or any other aspect of real estate, feel free-to phone or drop in at DON HARVEY Realtors. 702 Andrews Hwy. Phone 683-5333. We're here to help! Come in for your free copy of "Home for

A.J. "Jam" Jones finds the door open and picks up yardage after taking the handoff from Texas quarterback Randy McEachern (6) in second quarter action of their game with North Texas State at Austin Saturday night. North Texas linebacker Burks Washington (50) was in on the tackle. (AP

Texas struggles by

AUSTIN, Texas (AP) - Senior quarterback Randy McEachern calmed down Texas' look-of-the-future backfield Saturday night as the 12th-ranked Longhorns defeated North Texas State 26-16 in an inter-

sectional game. McEachern entered the game to the boos of the hometown crowd of 63,000 midway of the second quarter after freshman quarterback Donnie Little had fumbled three times. One of the fumbles by Little, starting his first game, stalled a Texas drive at the NTSU 4 in the first quarter.

North Texas quickly drove 96 yards for a touchdown on a 38-yard pass from Jordan Case to Charlie Murray and later took a 9-0 lead.

McEachern completed an 83-yard drive for Texas by handing to A.J. Jones, who scored from the 1. A bad snap out of the end zone and a 41-yard

Ketelsen gains quarterfinals

Top-seeded Kim Ketelsen advanced to today's quarterfinal round of the men's championship singles division of the Midland Coca-Cola Open tennis tournament with a bye and a pair of easy wins Saturday.

After a first round bye, Ketelsen, a teaching pro from San Angelo, eliminated Midland College's Kevin Jackson in the second round, 6-3, 6-2. In the third round he downed Mike Robertson of Midland, 6-1, 6-3. Joe Williams, the No. 2 men's

seed, also had a first round bye but was forced to default his second round match with Ed Innerarity of Midland. Bob Hilliard, the No. 5 seed from Austin, was also forced to default his first round match to Midland College's Scott Dunn.

Third seeded Joe Don McBeth of West Texas State and sixth seed Pressly Shafer of San Antonio both fell victim to second round upsets. After beating San Angelo's Rene Trevino in the first round, McBeth lost a split

set decision to Steve Buck of Abilene, 7-6, 3-6, 6-3. Shafer lost to Pierre DeChaud of Midland. 6-2, 7-5, after beating Brian Folkes 6-3, 6-2 in the first round.

Fourth seeded Paul Nunley of West Texas also stormed into the quarterfinals with three easy outings Saturday. Robert Wessell of Austin defaulted his first round match with Nunley and Nunley blasted Don Daniels of San Antonio, 6-2, 6-1, in the second round. Nunley beat Jay Box of Fort Stockton, 6-1, 6-1, in their third round match.

Midland College player Jose Rivera, the tourney's seventh seed, also came away victorious in his first three matches. Rivera beat West Texas' Stacy Foster, 6-4, 5-7, 6-2, in the first round and then eliminated Ralph Skinner of Hobbs, 6-4, 6-1. In the third round, Rivera defeated Richey Houdek of Midland, 6-0, 6-3.

All four of the top seeds in the women's championship singles survived Saturday's two rounds of action.

Top-seeded Karen Schuchard, a former Midland College player now at Texas Tech, defeated Marla Kennedy of Dallas in her first match, 6-1, 6-3, and then beat Linda Enemark, 6-1, 6-4.

Midland High senior Vicki Vasicek, the No. 2 seed, took a hard fought, 6-3, 4-6, 6-1, decision over Tech's Debbie Donnley in the second round after blasting Mary Jane Spencer of Midland College in the first round, 6-3,

Vicki Kerr, another former Midland College player and the tournament's third seeded women's player, beat Peggy O'Neil of Texas Tech, 6-1, 6-2, after Midland College's Karen Young was forced to default in their first round match.

Midland Collge's Geraldine Sayers, the No. 4 seed, eliminated Kendall Martin of Odessa in their first round match, 6-2, 6-4. She went on to down Joni Russell of Andrews, 6-2, 6-3 in the second

Jackson leads Tide to win

TUSCALOOSA, Ala. (AP) - Fullback Billy Jackson sped 87 yards in the second period to pace seventhranked Alabama to a 23-12 Southeastern Conference football victory over Florida Saturday.

Jackson burst through a drawn end Gator defense on a third down to put Alabama in command 14-3.

His run came after Curtis McGriff recovered a fumble at the Alabama 6. A jarring tackle by linebacker Barry Krauss knocked the ball loose from Florida runner Cris Collinsworth.

Despite getting no first downs in the

initial period, the Gators had taken a 3-0 lead on a 34-yard field goal by Berj Yepremian. It was set up by Rod Brooks' recovery of a Tony Nathan fumble at the Crimson Tide 24. After that field goal, Alabama moved from its 35, mainly on passes

by Jeff Rutledge, and the big senior quarterback ran it in from 13 yards out on the first play of the second Jackson's long run helped him pick up 147 yards on 13 carries as Alabama

Florida now is 1-3 and meets Army next Saturday while Alabama travels

Whitworth takes lead in Dallas Civitan Open

ROANOKE, Texas (AP) - Kathy Whitworth hit a 7-iron four feet from the pin and dropped the putt for an 18th-hole birdie Saturday that gave her a two-stroke lead going into Sunday's final round of the \$75,000 LPGA Dallas Civitan Open.

Whitworth, the host pro at the 6,315yard Trophy Club course, posted the tournament's best score, a 3-underpar 69, under ideal conditions. She is 1-under-par 143, through two rounds.

Deadlocked for second at 145 are Patty Hayes and Silvia Bertolaccini, two golfers looking for their first U.S. victories. Hayes shot a 71 to go with her first-round 74, while Bertolaccini, the first-round leader, backed an opening 70 with a 73 Saturday.

The original field of 158 was cut to 65 for the final round. Among those who fell were LPGA veterans Carol Mann, Mary Lou Crocker and Marilynn Smith It was the second straight day Whi-

tworth birdied the 386-yard, par-4 18th hole. Starting her round four strokes back, she sank a 15-footer for a birdie

on the par-5 first hole, dropped a 35-footer for another birdie on the par-3, 166-yard 12th hole and added another birdie by smoking a 3-iron just five feet from the pin on the 381-yard, par-4 14th hole.

"I played very consistent today," said Whitworth, the LPGA's all-time leading money winner with almost

Prairie View wins

PRAIRIE VIEW, Texas (AP) -Richard Warefield's two touchdown passes in the final four minutes gave Prairie View a 12-7 victory Saturday over Texas Lutheran.

Fullback Leonard Arnick scored from the 1 to give TLC a 7-0 in the first minute of the fourth quarter. But Warefield hit Bobby Barker with a 7-yard TD pass, then came back with a 48-yard pass to Tracy Jones with 2:02 left.

Both schools are now 1-4.

Wyoming in 31-22 win over Aztecs

LARAMIE, Wyo. (AP) - Myron Hardeman set a single-game rushing record, and the tenacious Wyoming Cowboy defense held off the vaunted San Diego State passing attack for a 31-22 Western Athletic Conference football victory here Saturday.

Hardeman rushed for 230 yards, breaking his record of 220 set last year at Utah State, but it took two goal line stands by the Cowboy defense to salvage the game.

Aztecs' conference leading offense to just 66 yards in the first half, but the Aztecs stormed back in the second period behind the passing of quarterback Mark Halda.

The No. 1 WAC defense held the

Aided by Cowboy fumbles and penalties, San Diego State narrowed the margin to 28-22 before Wyoming's Dan Christopulos put the game out of reach with a 37 yard field goal.

The Cowboys stopped the Aztecs on first-and-goal from the 1-yard line and 2-yard line.

The Cowboys were lead in scoring by Marc Cousins, who ran for two touchdowns and passed for a twopoint conversion. Runnng back Latraia Jones also ran for two touch-

Wyoming is now 1-1 in conference play and 2-3 overall. The loss drops San Diego State 0-2 in WAC play and 1-3 overall.

BYU edges Oregon, 17-16

Rams topple Falcons

AIR FORCE ACADEMY, Colo. (AP) — Junior quarterback Keith Lee passed for two touchdowns and ran for another and Colorado State's defense, keyed by All-America tackle Mike Bell and end Kent Campbell, smothered Air Force in the second half en route to a 31-13 college football victory over the Falcons Saturday.

Air Force trailed only 10-7 at halftime, but the entire third quarter was played on the Falcons' end of the

CSU finally capitalized late in the period after an Air Force fumble at the 7-yard line. Two plays later, Lee hit tight end Mark E. Bell on a 5-yard scoring pass.

The Rams put the game away in the final quarter with a pair of scores. Lee passed seven yards to the Rams' other tight end, Jack Upton, for the first TD and linebacker Scott Watson returned a blocked punt 22 yards for the other score.

Sam Houston upsets

Southwest Texas State HUNTSVILLE, Texas (AP) - Sam Houston State's Clay Louis delighted the homecoming crowd as he galloped 46 yards for a touchdown to cap a wild opening to the fourth quarter and seal a 21-16 upset Lone Star Conference

Texas State. Only seconds before, Southwest Texas, ranked No. 2 in the NAIA, took a 16-15 lead when Mike Miller dashed 41 yards for a touchdown.

victory here Saturday over Southwest

But the euphoria was short lived. It took just two plays for Sam Houston to retaliate when Lowry grabbed his third touchdown catch of the day against a team that only allowed one touchdown in its for previous out-

Rebel Brigade earns 14-14 tie

With the defense rising to the occassion to stop San Angelo's bid for a winning two-point conversion attempt the Midland Lee junior varsity preserved a 14-14 tie with the Central JV here Saturday.

San Angelo started things off with a bang, taking an 8-0 lead with a 60-yard touchdown pass on the game's first play and adding the two point conver-

Lee cut that margin to 8-6 on a 10-yard scoring pass from Alan Koonce to Bill Dern, but the important PAT attempt failed.

The Stonewall Brigade then opened a 14-8 lead when Eugene Merritt gathered in a screen pass from Koonce and rambled 60 yards for a score behind the blocking of Barry Crowder, Rob Watson and David Payne. Koonce then threw to Kevin Tarver for the two-point conversion. Aided by a pair of 15-yard penalites,

the San Angelo jayvee moved to the Lee 25 and tied the score on a touchdown pass from that point. But, the Lee JV defense rallied to stump the conversion attempt and preserve the

San Angelo had 102 passing yards and 93 rushing yards to the Stonewall Brigade's 125 passing and 175 rush-

Abilene Cooper ruins OHS homecoming, 24-0

By TERRY WILLIAMSON **R-T Sports Writer**

ODESSA - If Midland Lee football fans would like a sign, an omen if you please, concerning next week's outing with Abilene Cooper then consider this score over your Sunday morning coffee: Cooper 24, Odessa High 0.

Of course, if your memory is not too short, you must remember that Lee escaped the grasp of Odessa High by a 21-20 margin just a week ago, and now they face the task of facing Cooper on foreign soil Friday in what could be the most pivitol of all games during the District 5-4A season.

Make no mistake about it, Cooper deserved the 24-0 win over a stubborn Broncho crew that finally fell apart in the fourth period after two frustrating weeks of having their backs to the proverbial wall.

Cooper was lucky to have a 10-0 lead going into the half, but two fourth quarter touchdowns broke the Wild Bunch's back. Cooper used fullback Terry Orr and quarterback Tracey Thomas to pull off the big victory.

Orr, the 220-pound fullback, rushed for 111 yards in 17 carries while Thomas completed eight of 15 passes for 85 yards and a touchdown. It was all too much for the Bronchos even though fiesty Scott Caywood led all rushers with 113 yards on 19 carries.

The Bronchos held the Cougs at the one-yard line on Cooper's first possession as Pat Lewis put a crunching tackle on Weldon Jones' fourth down plunge. But Cooper came right back

Angelo State downs Wildcats

SAN ANGELO, Texas (AP) -Jerry Aldridge scored three touchdowns and gained 151 yards to lead Angelo State past Abilene Christian, 33-8, Saturday night in a battle of two of the nation's top NAIA teams.

Aldridge scored on runs of 41 and 2 yards for top-ranked Angelo State and took an 8-yard TD pass from quarterback Mark Embry. Embry hit Kelvin Ratliff on a 37-yard scoring pass also, and Vance Jenkins kicked field goals from 41 and 33 yards.

Abilene Christian, third-ranked NAIA team, was stifled by four lost fumbles and three interceptions. John Mayes threw 11 yards to Odis Dalton for ACU's only score.

Tarleton wins, 3-0

SHERMAN, Texas (AP) - Gale Grant booted a 31-yard field goal with five seconds left in the game to break a scoreless tie and give Tarleton State a 3-0 Texas Intercollegiate Athletic Association football victory over Austin College Saturday.

Halfback Chuck High led the Tarleton ground attack with 116 yards on 25 carries. Ricky Turner recorded 40 yards on 15 carries for Austin Col-

McMurry tops Trinity

ABILENE, Texas (AP) - Placekicker Bob Cervetto set school records for the longest field goal and the most scored by a single player in a season to lead McMurry College to a 13-7 Texas Intercollegiate Athletic Association victory over Trinity of Texas Saturday.

Cervetto kicked two field goals to give him eight for the season, with the final one traveling 51 yards to break

and moved back to the one before settling with a 22-yard filed goal off the toe of Kyle Stuard for a 3-0 first period lead.

Disaster struck Odessa with 1:21 left in the half when Cooper's Steve Malpass broke through to block a Brian Cantrell punt attempt and Alvin Jenkins grabbed the errant ball and scored from 22 yards out.

Still, the Bronchos were very much in the game, and early in the fourth period they marched to the Cooper six before they faced an important fourth down. Instead of going for the field goal, they tried to score, but reserve quarterback William Allred was stopped at the one after running when his intended receiver fell down in the end zone.

That was it because Cooper marched 99 yards to go out of harm's way. They did it in eight plays as Orr had runs of 23 and 37 yards, the latter for a touchdown and the game break-

Cooper added insult to injury after Ray Whitman intercepted his second

pass of the night to set the Cougs up at the Odessa 32. Five plays later Thomas hit Joel Harris for the final score of the night.

Odessa High completed only two of 17 pass attempts for a mere 23 yards. Cooper caught more passes with three interceptions and recovered three Broncho fumbles. That was a big

factor in the contest. Cooper is now 2-0 in district, the same as Lee, and 2-3 on the season. Odessa High is now 0-2 and 3-2.

Gregg wins International title

RIVERSIDE, Calif. (AP) - Pole position winner Peter Gregg, who figured correctly that a fast start would be to his advantage, built a comfortable lead and maintained the margin to the finish for victory Saturday in the International Race of Champions series qualifying race for international road racing stars.

Gregg, a five-time International Motor Sports Association national champion, sped across the finish line in his Chevrolet Camaro 2.5 seconds ahead of Emerson Fittipaldi of Bra-

Well back of them was newly crowned World Champion Mario Andretti, followed by a few hundred yards by Can-Am Challenge Cup leader Alan Jones of Australia, the last

David Hobbs was fifth after running off the course two laps from the finish while trying to pass Jones, followed by trouble-plagued Patrick Depailler of France and John Watson of Northern Ireland. Two-time world champion Niki Lauda was put out on the first lap by a broken clutch that started acting up on the parade lap.

The top four of the eight starters

moved into Sunday's full-fledged International Race of Champions event. the first of two "finals" in the \$250,000 series. The last race is scheduled for March 1979 in Atlanta.

Four drivers from NASCAR Grand National stock car racing and four USAC Indianapolis cars qualified in earlier races.

The outcome of Saturday's qualifier was largely determined by the start. Gregg and Fittipaldi, another twotime world champion, had a 1.5-second lead over the other six cars as they crossed the starting line. At the

end of the first lap, Gregg had added

1.5 seconds between himself and Fittipaldi. He stretched it to three seconds within a couple of laps and kept the margin there most of the race.

Andretti, who started sixth, got past Jones on the first lap, then on the next lap, Andretti and Jones both went past Depailler when Depailler went off in the dirt.

Despite his quick lead, Gregg said he thought it "was a fair, clean start. No funny business. I looked behind me and knew that Depailler and Lauda were getting ready to jump me. I wasn't born yesterday, so I prepared myself for a fast start.'

Indiana nabs win over Cats

BLOOMINGTON, Ind. (AP) - Quarterback Scott Arnett scored three touchdowns and Mike Harkrader rushed for 162 yards Saturday as Indiana capitalized on Northwestern turnovers to post a 38-10 Big Ten colege football victory.

Indiana 2-3 overall, and 1-1 in the conference. turned three consecutive Northwestern turnovers into touchdowns in the first 71/2 minutes of the game, taking a 21-0 advantage

Arnett scored from the 7 yard line on the first play after George Doehla recovered Northwestern's fumble of an Indi-

ana punt. Freshman Tim Wilbur then intercepted Northwestern's second play after the kickoff, returning it 16 yards to the Northwestern 24. Seven plays later, Arnett went over from the 1.

Southern wins

HOUSTON (AP) Horce Stroud rushed for 63 yards and one touchdown and John McZeal snatched three receptions for 105 yards and another TD Saturday to ease Texas Southern to a 37-17 non-conference football victory over Bishop College in the As-

9-3 victory NEW ORLEANS (AP) - Marvin Christian ran for 176 yards and Ed Murray booted three field goals to lead Tulane to a 9-3 victory over Boston College in a turnover-plagued college

> Murray's field goals were from 43 yards, 27 yards and 40 yards.

football game Saturday

Winless Boston College, which has given the ball away to opponents a half-dozen times a game, appeared to have conquered the turnover tendency through the early going. But when they did lose the handle on the ball, the turnovers came in a flurry.

Oklahoma State Cowboys to a surprise 24-20 upset of the No. 13 Colorado Buffalos here Satur-

Lundgaard prompted some almost audible sighs of relief from the Cowboy bench as he kept the previously undefeated Buffalos deep in their own territory most of the game. He was helped along by some occasional heroics by backs Vince Orange and Worley Taylor and quarterback Scott Burk.

with Colorado, but then early in the second quarter Lundgaard came out on a fourth-down situation and kicked the Cowboys out of trouble. His boot went out of bonds on the Colorado three.

The Buffs couldn't get their backs away from the goal and brought out their own punter, Lance Olander. Olander's pressure kick covered only six yards and the

Early in the game the Cowboys were set up and lie Beebe. game tide was flowing Orange took it in from 11

Oklahoma State start-

Taylor received the opening kickoff and re- ter with a 10-play, 66turned it 65 yards to the Colorado 15. Three downs later Colin Ankerson provided the Cowboys' first three points.

Colorado took the lead on a two-yard run by James Mayberry and an- Bill Solomon's one-yard other two-yarder by Wil- run.

Head Coach Jim Stanley's half-time apparently fired up Oklahoma ed the game strong when State as the Cowboys started the third quaryard drive capped by a three-yard touchdown pass from Burk to Steve Stephens. The final scoring came on a threeyard run by Taylor and Colorado quarterback

Transco is urgently seeking applicants to fill these new positions in the Houston headquarters of Transco **Exploration Company.**

Excellent salary and behefits are commensurate with experience, and competitive with those of major oil companies. **Exceptional vacation**, thrift and relocation plans make the move to Transco the profitable move, also.

Transco has spent the past two years exploring and locating new reserves of oil and natural gas. Now, we're ready to begin production, development and operation of recent discoveries. It's a groundfloor opportunity for

qualified applicants.

Transco is a fast-paced, growing oil-and-gas producer and transporter, especially active in offshore Gulf Coast areas. On any day, we're drilling as many wells as any other oil producer in the Gulf Coast Our parent company is

listed in the New York Stock Exchange and our financial standing is a matter of record with Dun & Bradstreet. Consult them. Then send your resume directly to Roger Aistrup, Transco **Exploration Company**, P.O. Box 1396, Houston, Texas 77001. All correspondence will be kept in strictest confidence.

 M. Tahnia (4-8-4) heat Labbuck Bannevelt, 28-21 downs and Marion Barber rushed for 123 yards as Minnesota nipped Iowa 22-20 Saturday for the Gophers' first Big Ten victory.

Carlson, starting his second game of the season, whipped two 17-yard scoring passes to split end Elmer Bailey in the second quarter as the Gophers built up a 19-0 halftime lead

Fullback Kent Kitzmann got Minnesota's first touchdown on a short run in the first quarter.

Paul Rogind booted a 27-yard field goal to put Minnesota ahead 22-0 in the third quarter before the Hawkeyes rallied.

Names in the news

SPOKANE (AP) - Today is the first anniversary of Bing Crosby's death, and Gonzaga University has announced it plans to honor its most famous alumnus with a memorial.

Crosby suffered a fatal heart attack Oct. 14, 1977, as he was finishing a round of golf in

The Rev. Arthur Dussalt, a Gonzaga vice president and close friend of the Crosby family, says plans call for a bronze statue of Crosby to be placed in front of the Crosby Library on

Deborah Copenhaver, a local sculptor, has been selected to do the work. She also will make a limited number of small replicas of "The Crosby Bronze," as the statue will be called, which will be sold to finance the estimated \$50,000 project.

Her model shows Crosby in a relaxed pose with his trademarks - a pipe, casual clothes, a hat with a feather and, of course, a set of golf clubs.

STATELINE, Nev. (AP) -What's Sammy Davis Jr. without his smile?

The entertainer cancelled one of his shows here Friday at Harrah's Hotel-Casino because of dental problems

"Sammy Davis' mouth is swollen and he's under medication," said Harrah's spokesman Carl Walquist. The singer is to fly to Los Angeles for dental care today, Walquist added. Singer Liza Minnelli, who just

completed her one-week engagement at Harrah's, was to take Davis' place for the single show.

But she would have to "wing it," Walquist said, because her musical arrangements, sets and costumes already had been

HERSHEY, Pa. (AP) - Captain Kangaroo has some advice

for parents and educators. Bob Keeshan, a pioneer in children's television programming and long-time star of Captain Kangaroo, said Friday that careful selection of TV programs can transform the medium from an enemy of educators to an ally

"Don't expect children to view the public television channels when their parents are watching 'Starsky & Hutch," Keeshan, 51, told the the annual meeting of the National Association of State Boards of Education.

"If you think children watch too much television, perhaps you ought to look at your own viewing habits."

UNITED NATIONS (AP) -U.S. Ambassador Andrew Young has complained to a United Nations committee that "male-led nations" were resisting equal rights for women.

"I therefore take this opportunity," he said, "to caution my reluctant brothers that the time for merely paying lip service as support for the struggle of our sisters has ended."

Young said U.N. Secretary-General Kurt Waldheim should name a special official "to be responsible for increasing the number of women employed"

Concert good but unfulfilling

I kept waiting for the main course to follow the canapes and the appetizers at Saturday night's benefit concert here by famous composer-singer Burt Bacharach and the Houston Symphony Orchestra.

A review

It turned out the canapes and the appetizers were the main (and only) course - there wasn't anything else forthcoming.

Don't get me wrong: I enjoyed the orchestra's and Bacharach's im-

mensely stylish and stylized musical offerings as much as anyone - such songs as"Close to You," "Promises, Promises," "Say A Little Prayer" and "Do you Know the Way to San

But, as much as I drew pleasure from these and lesser-known Bacharach compositions, I couldn't help but consider the whole musical lineup rather a waste of a professional orchestra's time and collective talents.

I wish this fine orchestra could have played one solid, substantial work during the course of the evening. Bacharach augmented the Houston

Federal agent contends oil, brine water polluting lakes

(Continued from Page 8A)

brine discharges into pits and playa lakes such as Whalen effective Jan. 1, 1969, because of widespread complaints about pollution of ground

The commission has granted 6,000 exceptions to the "no pit" rule, however, including 500 permits for oil producers to dump brine into coastal waters and some for discharge into unlined pits.

Farmers complain salt streams from drilling operations contaminate their water supplies and state pollution experts acknowledge there are some problems related to pit disposal. J.C. Franklin said he drew fresh, clear water from a well on his 1,300- acre ranch south of Midland for more than 30 years before "a salt stream got into it."

The state's water quality experts at one time investigated such pollution, but the state Legislature rewrote the lawbooks in 1967 to give the Railroad Commission exclusive jurisdiction over any pollution resulting from oil production.

An irate landowner's complaint four years ago brought a halt to brine dumping at Cordona Lake, 12 miles southwest of Crane after a valve malfunction dumped 950 barrels of straight crude into the water. Environmentalists have alleged that pollution due to brine water disposal has also occured at Mound Lake in Terry County, Soda Lake in Crane County, Hidden Lake in Andrews County and Cedar Lake in Gaines County. Whalen Corp. discontinued brine disposal at Soda Lake prior to last year's railroad commission hearing.

Meanwhile, officials from Department of Parks and Wildlife and other state agenices are concerned that unless the Railroad Commission facilitates more open discussion of the problem, federal officials might come

in and subject the Texas oil companies to stiffer federal controls. Defenders of Wildlife, a nationwide animal protectionist group headquartered in Washington, D.C., has put a national focus on the issue by threatening to file a major law suit in federal district court.

Symphony players with his own group of instrumentalists and vocalists from East and West coasts and they added to the stylishness of the concert, which was presented in Chaparral Center of Midland College under auspices of the Odessa Symphony Guild. The concert was a benefit for the Midland-Odessa Symphony and

who wrote the lyrics.

Many of the Bacharach songs which the composer and orchestra presented here have lyrics by Hal David, to whom the composer paid special tribute in the concert here.

Another musical work which Bacharach presented was "Dancing Fool," representing a collaboration between Bacharach and British actor

I couldn't help but consider the whole musical lineup rather a waste of a professional orchestra's time and collective talents.

The eloquent and elegant Bacharach introduced a number of new works on the program - they were, in effect, premiered in the concert

These works are for the most part untitled as yet - being identified by number only, such as No. 202, No. 203 and No. 211. They were nicely performed by the orchestra and special guest instrumentalists and vocal-

Another new work, titled "There Is Time," was given a splendid reading by Bacharach and the orchestra, joined by vocalist Sally Stevenson Tony Newley.

Bacharach paid tribute to the Houston Symphony, describing it as one of the "top ten" symphony orchestras in the U.S. He and the orchestra will repeat their Midland program in Houston on Nov. 1 as a benefit to the Houston Symphony Pension Fund.

Then, he and the orchestra will collaborate in making two LP records for A&M Records. The recording sessions on Nov. 2 and 3 in Jones Hall for the Performing Arts in downtown Houston will result in one LP of totally new material which Bacharach has written. -ROGER SOUTHALL

Ector County bond election date set

ODESSA - A \$21.6 million Ector County Independent School District bond issue will face voters in early December.

Voters will be asked to approve an 11 per cent hike in taxes to finance construction of three new schools, a football stadium and extensive renovations to various existing school fa-

School trustees set Dec. 5 as the election date. The board has been planning the election more than a

The trustees announced they officially will call the election at their Tuesday board meeting. If all three election propositions pass, taxpayers

will find 14 cents added to the school district tax rate - up to \$1.325 from the present rate of \$1.185.

For the owner of a \$20,000 home, passage of all three bond proposals would mean his taxes would go up from \$177.75 to \$198.75 yearly. Owner of a \$50,000 home would pay \$496.875 - which would be \$122.38 more than he presently pays.

All three proposals on the ballot will pass or fail independent of each other. A fourth proposal on the ballot will ask voters to indicate on which of the two sites available to the ECISD they would prefer the football stadium to

PBS unshaken by networks

NEW YORK (AP) -You can't always tell from the local listings, but there's a lot of sound planning behind what you get from public TV.

There is a philosophy to what we do," says Chloe Aaron, who's in charge of programming for the Public Broadcasting Service, "priorities we set for ourselves. And we have a certain latitude because we're blessed with not having to make money with everything we put on the

"Of course, there's a problem with that," she says. "It means we don't have the resources to be everything to everybody every year.

'The word 'alternative' is used a lot to describe public television, but it's not necessarily a good one by definition. I like to think of our schedule as a model for what good television could

Programming on public TV varies from station to station, so PBS' blueprint can be difficult to follow, the priorities often unclear.

Ms. Aaron says the non-commercial network's plan for this fall emphasizes public affairs and live programming, with Bill Moyers' return after two years at

CBS and the upcoming never be mentioned," afforded the network seven-part "Election Ms. Aaron says of the competition. highlights.

'And we have 100 per- tude. cent more live programming planned this fall," she says, already 95 and one-half hours scheduled and probably more. wasting people's do That's a commitment to money. live programming, not just a one-time thing."

ALPINE — The Big Bend Chamber Orchestra initiates its third season with a concert at 7 p.m. today in Graves-Pierce Gym at Sul Ross State University.

starts season today

The program, titled "Music for Children of All Ages," will be of interest to adults as well as young people, said Dr. Errol Gay, conductor and musical director of the orchestra.

Members of the ensemble include more than a dozen musicians from Midland, Odessa and El Paso, as well as players from Alpine and nearby areas of the Big Bend region.

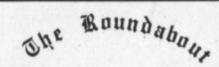

For this season-opening event, which has been scheduled for 7 p.m. to allow school children from area towns to attend, Gay has programmed three works. They include the "Peter and the Wolf" suite by Prokofiev and Saint-Saens' famous "Carnival of the Animals," as well as a sparkling set of dances by Shostakovich.

Gay will narrate the works as they are played so the young people in the audience will have something verbal to relate to, the music director explained.

This concert will be under the baton of guest conductor Yves L'Helgoul'ch, who is music director of the Irving Symphony Orchestra, as well as conductor of the Fort Worth Civic Orchestra. This will be the first concert of the local orchestra to have a guest conductor.

The concert is being held in the SRSU gymnasium because the university's main auditorium currently

is undergoing extensive renovation, Dr. Gay said. The gym will present some acoustical problems,' he said, "but we are hopeful that the music programmed for this concert will lend itself better than most to this setting."

Bass has the part of a senile boarder, Nanny.

Rounding out the cast is Laura Wolf as a high school

student who, along with Tillie, is a prize-winner in a

school science fair. (The play's title comes from

Tillie's science fair experiment involving gamma

The small, intimate Theatre II lends itself very

well to the staging of "Gamma Rays," and I perso-

nally am looking forward to seeing other serf-

ous and/or "experimental" stage works done there-

perhaps some Harold Pinter plays, or Albee stage

works, or new and unpublished works by local or

regional playwrights. The possibilities are virtually

I must confess I did not have an over abundance of

enthusiasm for "Stalag 17," but in its opening perfor-

mance Friday night, it turned out to be remarkably good entertainment. This is due in part to a good

script which seems to have worn its age gracefully,

The all-male cast, which includes a number of

performers new to the MCT stage, plus a few who are

new to any stage, handles its collective and respec-

and partly to a cast which in the main is excellent.

A review

The central role, the mother Beatrice, is splendidly

frequently disturbing one. It's first-rate theatre.

Midland Community Theatre's old Theatre Centre was a busy place in its time, but MCT's new home, Theatre Midland, is obviously even busier these days

awards to

rrent year,

pion el as arts

NG!

HG!

Not just one, but two major productions currently are playing at the splendid new structure on West Wadley avenue which MCT occupied several months ago and which it officially opened with a series of special "happenings" during September and on into the current month.

"The Effect of Gamma Rays on Man-in-the-Moon Marigolds," a searching and serious drama by Paul Zindel, had its first presentations in late September and then, after a break in the schedule, resumed performances this weekend in Theatre II. the arena-type performing area inside Theatre Midland. Then, Friday night, MCT opened its 200th major

production, a revival of the comedy "Stalag 17," in Theatre I, the main auditorium within the new Both "Gamma Rays" and "Stalag 17" will have

As the saying goes, you can pay your money and take your choice between high drama and moderately high comedy.

Or better still, plan your schedule and go see them both. "Gamma Rays" will play next Friday and Saturday nights, with concluding performances to be

offered Oct. 27 and 28. "Stalag 17" will have performances this coming Thursday, Friday and Saturday nights, and next Sunday afternoon, and additional presentations on the evenings of Oct. 26, 27 and 28. The Theatre Midland box office telephone number is 682-4111.

"Gamma Rays" is playwright Zindel's tautly-dramatic play about a widow, beset with problems (most of them of her own making) and her two daughters. MCT managing director Rick Schiller has assembled an excellent cast (an all-female cast) and I found the production highly engrossing. It's not

tive responsibilities very well.

Strong in their roles are John Meyer as Stosh,

Mark Tepperman as Harry, Al Beatty as Al, William

A. Salt as Sefton, Hampton Hodges as Price,

Rick Belding as Dunbar, Bill Coombes as Duke. Still

others who do good work in the play are Jack

Scannell as a German guard, Chris Johnson as Herb,

Joe Hill as McCarthy, Charles Luccous as Hor-

ney, Gary Anderson as Marko, Brian Sayre as

Schultz, Jim Hicks as Reed, David Willis as Peter-

son, Norm Larson as Red Dog, Lynn D. Durham Jr.,

as a German captain, Dean McLain as the Geneva

As you probably recall, "Stalag 17" revolves

around a group of American airmen in occupying a

barracks in a German prison camp during World

War II. It's not greatly unlike the long-running TV

series "Hogan's Heroes" (or perhaps the TV series is

not greatly unlike "Stalag 17") in its humor and

dramatic thrust. The humor of "Stalag" seems

relatively fresh and undiluted by time. What's more,

the suspense which builds up as the men try to

discover the identity of a enemy spy planted in the

barracks, and as the airmen try to save one of their

men by hiding him from the SS guards, provides

some highly entertaining dramatic tension.
"Stalag 17" was initially staged here 25 years ago

as MCT's 50th major production. Art Cole directed

that production and he also has directed the new one.

The current production seems nicely authentic

as to costumes and stage props, and the barracks set

Man and John McMahon as a guard.

In the strip, Buck was trapped deep in a cave space and his ship is near Pittsburgh and was preserved by a "peculiar Draconians." gas which had defied chemical analysis." It the comic strip by Dick more than any of his had a Rip Van Winkle air predecessors offered a to it.

modern," says Gil Gerard, who plays Buck in a two-hour movie being readied for NBC. He's frozen in 1987 while exploring deep finally discovered by the

Board driving interest rates to new highs in inflation fight

1975

1976

By R. GREGORY NOKES **Associated Press Writer**

WASHINGTON (AP)- The Federal Reserve Board is driving interest rates to all-time highs in a new bid to control inflation and prop up the sagging dollar.

In the process, it is gambling it can accomplish its objective without pushing the economy into a tailspin and a possible recession.

The board made its latest move Friday by increasing its bank discount rate to 8.5 percent, the highest it has ever been. The previous high of 8 percent was set by the board only three weeks ago.

The Friday increase, the sixth this year, signals a probable new round of rising interest rates throughout the economy, including business and consumer loans and possibly home mortages as well.

Interest rates already are at their highest levels since the 1974-1975 recession. Earlier this week, major prime lending rates — the minimum they charge on loans - to 10 per-

Controlling inflation was a chief motive in the board's hike in the discount rate, which is the interest it charges on loans to its approximately 5,000 member banks

BUSINESS NOTEBOOK

It said in a statement it took the action to bring the discount rate into closer alignment with other interest rates and also "in recognition of continued high inflation, the recent rapid rate of monetary expansion and current international financial condi-

An increase in the discount rate is one of the few tools the government has with which to act quickly against inflation and the sagging dollar. Higher interest rates theoretically slow economic growth and thereby take pressure off prices.

They also are supposed to make the dollar more attractive on world money markets by increasing its

But despite five previous increases in the discount rate this year, inflation has continued to worsen and the dollar has continued to fall.

Even before the latest increase, President Carter had said at a recent news conference he thought 8 percent

There is a fear within the Carter administration, as well as among some members of Congress and many economists, that the upward increase in interest rates will slow the economy so much it will trigger a possible new recession.

to permits

Home add

economic downturn.

Midlanders apparently are in the homebuilding mood as new building permits topped the \$1.5 million mark last week. Most of the permits were for new homes with few exceptions.

The latest action of the Federal

Reserve Board, however, makes

clear it has decided that the need to

put a brake on inflation and support

the dollar outweighs the risk of an

misgivings, however, since the vote

approving the increase was 5-2.

Chairman G. William Miller, who

previously this year voted against one

increase, was with the majority this

The action was not taken without

This brings the year's building perstill more than two months to go before the end of the year. The major new commercial permit

to be issued went to Southland Corp., \$62,000, to build a 7-Eleven store at 3208 N. Midkiff. The only other new commercial

permit went to Goodrich Hegl for a Quick Oil Change store at 611 S. Big Spring. The permit was for \$39,000.

E. Power received one for \$52,000 for an addition to a commercial building at 700 Andrews Highway. A sign will be erected by Graham Associates at 1006 S. Midkiff at a cost of \$3,500. The Central YMCA at 800 N. Big Spring is planning \$16,000 worth of repairs and interior alterations.

I.P.M.I. of Lubbock took out a permit for \$25,665 to add five apartment units to the existing building at 1801 N. Midland Drive.

Permits for new residences were

Casabella Homes, 3609 W. Wadley, \$65,000; Casabella Homes, 3611 W. \$65,000; Casabella Homes, 3613 W. Wadley, \$65,000; Casabella Homes, 3615 W. Don Cartwright, San Antonio,

who chairs the Subcommittee on Electronic Funds Transfer Systems of the House Financial Institutions Committee, says his panel will meet with a representative of the U.S. Senate Banking Committee to receive an update of Federal efforts in the EFTS area before putting any recommendations into final form.

Whatever is recommended, the lawmaker explains, the subcommittee wants to avoid potential conflicts between State and Federal requirements, as has occured with the disclosure requirements under "Truth in Lending" laws.

Cartwright says he has some concern over the lack of public perticipation in the subcommittee's hearings, commenting, "There's not an outcry from people pressing the subcommittee to do anything." -One reason, he feels, may be that

financial institutions using EFTS have done an acceptable job thus

However, Cartwright does anticipate some legislation will be pro-

"I think the basic mood of the committee is to recommend automatic teller machines off premises for banks," he say, noting that savings and loan associations and credit unions have such authority-and some are using it.

That legislation most likely would carry some type of geographical or territorial limits on how far from home banks could go-perhaps being restricted to operations within their counties-to prevent larger banks or holding companies from muscling in on smaller neighbors.

Also likely to be proposed, Cartwright reports, is some limit on the liability of an account holder in a EFTS operation—similar to the limits on liability for credit card holders.

While the subcommittee has been looking at "point of sale terminals," Cartwright expects no recommendavacy aspect of EFTS, but Cartwright feels there will need to be additional work done before any recommenda-

It appears there won't be any proposals in another area of financial activity or lawmakers-since it seems they handled the problem well

Archie Clayton, chief counsel for the Department of Baking, reports the statutes passed in the 65th Legislature requiring review and approval by the banking commissioner of changes in acquisition and control of State-chartered banks appear to have worked well for both the regulators and the regulated.

That, he notes, is no small achievement "in an area of such complex-

While no applications have been denied, and few (other than those which have involved overseas investors) have attracted much attention, Clayton feels the law is doing what it was intended to do.

His interpretation, Clayton says, is that the folks who would be turned down are simply not applying.

Testing by several state agriculture departments "have found the incidence of aflatoxin reduced from 1977 levels ... and less of a problem in the 1978 crop ... than it was a year ago,"

Hjort said. Food and Drug Administration guidelines prohibit corn from interstate commerce with aflatoxin of 20 parts per billion or more.

Farm income shows 25 percent increase

By BRIAN B. KING

WASHINGTON (AP) - When members of the 95th Congress returned to Washington last January, angry farmers greeted them at the Capitol and demanded more money

for what they produce. Congress had enacted an administration farm bill the previous year and the president and his supporters on Capitol Hill had said that measure would stabilize farm income.

But the protesting farmers, calling themselves the American Agriculture movement, said the 1977 bill wouldn't do the job. They said they would "strike," that they would reduce production at least one-half, unless Congress passed a bill that would guarantee them higher profits.

The farmers lobbied for the bill every day, unleashed sick goats, chickens and other animals at the Capitol, stormed the Agriculture Department twice to publicize their contention that production costs are rising faster than the wholesale prices paid to farmers.

Their demonstrations in Washington and elsewhere attracted national

But two weeks into the spring, the House decisively rejected the bill the farmers wanted. After one last march on the White House that night, all but a few of the farmers went home. Instead of a strike, U.S. farmers

by Bill Beattie

Is life a drab experience, or is a-thrill to be alive? Is our wellbeing a hit-or-miss proposition or a constant factor? Is each day dreary, depressing, frightening, or is it challenging and full of interest? Our response to these questions may very well lie in our answer to this question: "Is our gratitude insignificant or over-

A heart filled with gratitude does not find life a duli, dreary experience. Our lives are freed from binding restrictions as we express more thoughtfulness and One of the finest arts is grati-

tude and one that all of us can cultivate and make grow. One of the surest ways of developing it in ourselves is just to remember how pleased we are to hear a word of approval and praise and that it works both ways. How true it is!! Just the knowledge that someone. somewhere appreciated our efforts would lessen many of life's heavy loads. A philosopher once said, "It was a great surprise to me

when I discovered that most of the ugliness or beauty that I saw in others was but a reflection of my own nature.

What human does not long for an expression of gratitude, for an audible assurance of being wanted and deemed necessary to someone else's happiness and well-being? Gratitude is one of the real values of life . . . not the acute, cheap flattery or praise for selfish purposes, but the honest approval based on the acknowledgment of another's usefulness and goodness.

Gratitude is being thankful for our talents and abilities by accepting them as obligations to be invested for the common good. It appreciating our opportunities by accepting them as challen to achievement. Being grateful brings to us creative ideas that enrich life and help us make contributions to human progress.

Gratitude is a wonderful thing. There is as much greatness in acknowledging a good turn, as in

He enjoys much who is thankful for little; a grateful mind is both a great and a happy mind.

Wood opens Vallas office

IIDLAND-Robert L. Wood, veter-Midland independent oil operator d former president of the Indepennt Petroleum Association of Ameria, has announced the opening of a ballas office at 1210 Adolphus

The new office will be in charge of Lee F. Wood, a Dallas resident the last 15 years. He is a son of Mr. and Mrs. Robert L. Wood.

The firm engages in oil and gas leases, acquisitions and property de-

Robert L. Wood also is a member of the board of Commercial Bank and Trust Co. and First Savings and Loan Association, both in Midland. He is a past president of the Midland Chamber of Commerce and is a trustee of Austin College at Sherman.

Accountants plan meeting

When the Council of Petroleum Accountant's Societies of North America meets in Midland next week, there will be delegates form ten states (including Alaska) and Canada.

COPAS is recognized throughout the oil and gas industry for the establishment of uniform accounting pro-cedures, particularly for joint oilfield

The council will meet in business land Wednesday-Friday.

The schedule for Wednesday includes the executive council meeting, a golf tournament at Midland Country Club and a reception for all delegates in the evening at the Best Western

General business meetings will be conducted Thursday morning. The group will visit the Permian Basin Oil Show in the afternoon and the Dow Jones Average band featuring Janet Pollard as vocalist will entertain the group Thursday at a dinner dance in the Midland Petroleum Club.

Business meetings are scheduled Friday morning and the council is expected to adjourn mid-afternoon.

Special activities have been planned for the women during the council meeting. Eden's Restaurant will be the scene for brunch and a style show Thursday morning and the group will tour the Permain Basin Petroleum Museum on Friday morn-

Adobe Oil finals test

Adobe Oil & Gas Corp. of Midland has announced completion of a wildcat, its No. 1 Kavouras, in Indiana County, Pa.

Total depth of the well is 1,835 feet at which depth it potentialed for 9.836. 000 cubic feet of gas per day.

Delivery to pipeline is averaging in excess of 2 million cubic feet of gas

The company as approximately 300 acres of leases in the immediate area of the well. Adobe owns 50 percent interest in the new producer and its partnerships own the remaining 50

Adobe also reports the successful completion of a significant stepout to its wildcat gas discover, No. 1 R. L. Reagan, in Northwest Robertson County in East Texas,.

The stepout is No. 1 Zieglschmid which is producing from the Cotton Valley lime through perforations from 12,748 to 12,777 feet.

On calculated, absolute open flow potential it made 11,100,000 cubic feet of gas per day on chokes ranging from 6/64 to 10/64-inch. Flowing tubing pressure ranged from 6,175 to 5,950

Delivery to pipeline is averaging 2 million cubic feet of gas per day.

Additional pay zones in the Cotton Valley sands are indicated, however, these zones have not been production tested and will not until some time in the future. Adobe downs 67.5 per-cent dinterest in the well and the nding 3,274 acres. The remaing 32.5 percent interest is owned by e private partnerships and indi-

Spencer, Rietman take new Shamrock positions

AMARILLO-William L. Spencer has been promoted to vice president and general manager in Diamond Shamrock's Production Department, and Noel D. Rietmant has succeeded him as assistant general manager-**Drilling and Producing Operations.**

T. W. Clopton has been named senior vice president-Special Projects and Bill Killingsworth will assume the position of drilling and production

The changes were announced last week by Robey Clark, group vice president of Shamrock's oil and gas Spencer, who had been assistant general manager of drilling and pro-ducing operations since November

1975, will report to Robey Clark. Spencer joined the company in 1951 in the Natural Gas Department in In 1952, he transferred to Amarillo as a junior engineer in production engineering and in 1961 was appointed

assistant manager of production op-

erations. In 1971 he was promoted to manager of producing operations. Rietman transferred to his new post after two years as the company's manager of producing operations. He first joined the company in 1957 as a junior engineer in production at

Dumas and transferred to the production engineering staff in Amarillo two years later. He was promoted to assistant chief petroleum engineer in 1961 and to chief petroleum engineer

Clopton assumes his new position as senior vice president-Special projects after 39 years with the company. In addition to working on special projects, he will perform as a general assistant to Robey Clark.

Clopton joined Diamond Shamrock in June, 1939, as a blender at the company's McKee Plants near Dumas. He later was promoted to chart clerk.

In 1945, following military leave, he returned as a petroleum engineer and since that time has been active in Diamond Shamrock's production and drilling program. In 1966, he was named vice president in charge of production and in 1975 he was promoted to vice president and general manager of production, the position he held prior to his recent promo-

Embargo lines formed in U.S. five years ago

By MAX B. SKELTON AP Oil Writer

HOUSTON (AP) - The Arab oil embargo that caused gasoline lines to form at service stations across the nation was taking shape just five

War had broken out in the Middle East, and, on Oct. 16, 1973, Persian Gulf countries meeting in Kuwait announced a 70 percent increase in posted crude oil prices.

A day later, ministers of nine countries announced crude oil production cutbacks of 5 percent a month until Israel withdrew from Arab lands.

The next day, Oct. 18, Saudi Arabia and Qatar boosted the cutbacks to 10 percent and Abu Dhabi formally started the embargo of exports to the United States.

Libya followed Abu Dhabi a day later, one day ahead of Saudi Ara-

On Oct. 21, Iraq called for the breaking of Arab diplomatic relations with the United States, while Kuwait, Qatar, Bahrain, and Dubai joined the

A month later, Nov. 26, the Sixth Arab Summit Conference in Algiers

C. Wayne Greenlee

Dorchester adds to staff

C. Wayne Greenlee has joined Dorchester Exploration, Inc., in Midland as land manager, William H. Aikman, president announced.

Greenlee received his B.S. degree in Geology from the University of Oklahoma in 1957. He was previously employed by Flag-Redfern Oil Co. in Midland as land manager, and prior to that by Sandefer & Andress and Signal Oil & Gas.

He is a member of Permian Basin Landmen's Association and American Association of Petroleum Landtinuation of production cutbacks until Israel withdrew from Arab terri-As the full impact of the embargo

was beginning to be felt in the United States, the Organization of Petroleum Exporting Countries met Dec. 23 in Teheran and decided to raise crude oil posted prices 130 percent.

By early February, spot crude oil prices were reported to be nosediving because of large quantities of available supplies. Arab ministers scheduled a Feb. 14 meeting in Libya, but it was postponed because of a controversy over whether or not the embargo against the United States should be

The Arab embargo was lifted March 19, 1974, two days after an OPEC conference in Vienna decided to freeze crude prices.

The full effects of the embargo on U.S. consumers were delayed until early 1974 because the embargo began while U.S. stocks of crude oil and products were high and additional import shipments were in transit.

Before March 19, however, long lines of motorists seeking gasoline were common, gasoline rationing coupons had been printed, and Congress had reduced the highway speed limit to 55 miles an hour.

Since the Arab embargo, U.S. production of crude oil has declined but demand for petrolem products has increased.

As the embargo got under way, U.S. crude production was averaging about 9.2 million barrels a day. The current average, including production from Alaska's Prudhoe Bay, is about 8.7 million a day.

In the past five years, domestic demand for petroleum products has increased from 17.3 million barrels a day to more than 19 million barrels

Gasoline consumption, for example, has increased since 1973 from an average of 6.7 million barrels a day to a current level of about 7.4 million. And the American Petroleum Institute reports gasoline demand continues to climb.

In the four years from 1973 to 1977 gasoline demand, the API reports, rose only 4 percent while it increased 7.7 percent during the 12-month 1977-78 period ending in July. Frank N. Ikard, API president,

says consumers are buying smaller cars but are buying more of them and driving them more. "Add to that the rise in population, and the total use of energy keeps

rising," Ikard said. And the Arab share of U.S. imports is increasing.

In 1973, Arab nations supplied about 853,000 barrels of oil a day or 13.6 percent of U.S. imports. Arab imports today approximate 2.9 million barrels a day or approximately 50 percent of

foreign receipts. The API says Arab oil now accounts for about 15.5 percent of total U.S. supply, compared with 4.8 percent in

Energy bill's red tape to hit private citizens

By CLYDE LA MOTTE Reporter-Telegram Washington Oil Correspondent

WASHINGTON-Many domestic oil and gas producers have been complaining bitterly about the complexity of the natural gas bill and the red tape burdens it will impose on them. But that is only a part of the story. Private citizens, too, are going to discover that provisions for residential energy conservation are just about as com-

plicated. Private citizens will be involved because the energy legislation includes provisions for a tax break for homeowners and others who weatherize their buildings and thus reduce their energy consumption. Futhermore, there are provisions for some financial assistance for those who do not have the money available to pay for insulation of storm windows or

other energy-saving devices. That is, the federal government wants to help you and me save money

on utility bills. However, a reading of a congressional conference report shows that it will not be simple nor easy to obtain such help. There will be some strings attached

Naturally, if there is to be a government assistance plan, there must be rules and procedures established. The conference report spells out how this first step is to be undertak-

"The Secretary of Energy shall, not later that 45 days after enactment of this Act, publish an advanced notice of proposed rulemaking with respect to rules on the content and implementation of residential energy conservation plans which met the requirements of Sections 213 and 214.

"Not later than 60 days after the date of publication of the advanced notice or proposed rulemaking, and after consultation with the Secretary of Housing and Urban Development, the Secretary of Commerce (acting through the National bureau of Standards), the Federal Trade Commission, the Consumer Product Safety Commission and the heads of such other agencies as he deems appropriate, the Secretary shall publish a proposed rule on content and implementation of such plans.

After publication of such proposed rule, the Secretary shall afford interested persons (including federal and state agencies) an opportunity to present oral and written comments on matters relating to such proposed

"A rule prescribing the content and implementation of residential energy conservation plans shall be published not earlier than 45 days after publication of the proposed rule."

But the legislation not only outlines the maze through which the government should move in developing rules for residential energy conservation but it also spells out what the rules the secretary of Energy is to develop should contain.

For instance: "The rules promulgated under subsection (a) shall (1) identify the suggested measures for residential buildings, by climatic region and by categories determined by the Secretary on the basis of type of construction and any other factors which the Secretary determines necessary for general safety and effectiveness of any residential energy conservation measure, standards which the Secretary determines necessary for installation of any residential conservation measure, standards of procedures concerning fair and reasonable prices and rates of interest required under section 213 (a)(4), and standards developed in consultations with the Federal Trade Commission, concerning unfair, deceptive, or anti-competitive acts or practices, for the measures required

under Section 213(b)." There is more-much more-but that should be enough to make you realize that Uncle Sam is going to find out what is wrong, from an energy standpoint, with your house, what should be done about it and what the price should be

It will take a bit of time for all this to come about, of course, as was

Perry adds two staffmen

Perry Gas Transmission, Inc., a wholly-owned subsidiary of Odessabased Perry Gas Companies, Inc., announces the addition of John L. Wollaston and Walter Z. Baker to the

Wollaston, manager of Gas Supply for Perry Gas Transmission, Inc., is working in the company's Amarillo office. He previously was employed as senior gas sales representative with Phillips Petroleum Co. in Amarillo. Wollaston has a Bachelor of Science degree from Southeastern State in Durant, Okla.

Baker, previously employed as ex-ecutive vice president with Thomas Enterprises, Inc. Amarillo, is now area manager for Perry Gas Transmission, Inc., at the company's field office in Shamrock. He was graduated from Shamrock High School and has completed several courses pertaining to the natural gas business.

indicated in the various deadlines spelled out at the start for governmental determination of procedures and policies.

However, if you are patient, your government is going to look after the energy needs of your home and, as.

mentioned, see to it that you are not charged too much for any energy conservation action. And if you can't pay, don't worry about that, either. The government will take care of that, too. After all, it's all spelled out in the fine print of the legislation.

Texas group votes against compromise

WASHINGTON (AP) - The Texas delegation lined up a against a crucial House vote on a natural gas compromise rule, but the measure passed anyway - by one vote.

The final tally was 207-206. The rule allowed the compromise to be lumped with four other less controversial energy matters, and its approval Friday removed the final obstacle to House passage of the energy legislation President Carter has promised to sign.

Production shows drop

AUSTIN-Texas oil and gas wells produced 606,582,379 Mcf of gas in July 1978, down 6.50 percent from

field runs a year earlier. Marketed gas production totaled 514,202,589 Mcf and reflected a 4.23 percent decrease from the July 1977 volume. Marketed production is the total gas to transmission lines, carbon plant and plant fuel and lease use.

Gas exported from Texas in July totaled 267,405,914 Mcf and included 74,919,389 Mcf of imported gas. Exports of Texas-produced gas in

July totaled 192,486,525 Mcf and reflected a 2.05 percent decrease from the year earlier month. Natural Gas Pipeline Co. of America was the month's largest exporter, moving 97,-955,134 Mcf of gas of which 41,110,678 Mcf was Texas-produced gas. Texas gas production in July came

from 196,344 oil and gas wells. In June 1978, Texas wells produced 576,449,570 Mcf of gas. Marketed gas production in June totaled 485,052,585

Application approved

AUSTIN-The Railroad Commission has approved an application by George R. Brown, Houston, to unitize and initiate a secondary waterflood recovery program in the West City of Post San Andres A Unit of the Garza

Field, Garza County. The project could boost ultimate output of the field by some 6,000,000

barrels, the RRC reports. The unit is adjacent to the City of Post San Andres A Waterflood Unit, which has been operating for some six years, and which has increased producion from 7,000 barrels of oil monthly to 27,000 barrels monthly, the RRC reports:

The new unit covers some 1,566 productive acres, which have cumulative production to date of 6,400,000

The San Andres A reservoir was discovered in 1935 and produces from

an average depth of 2,800 feet.

The 24-member Texas delegation voted 12-10 against the rule Friday with two Texans - Democrats Henry B. Gonzales and Olin E. "Tiger" Teague — not voting. House Majority Leader Jim Wright of Fort Worth and Lufkin Democrat Charles Wilson pushed for passage of the rule as members of an energy task force appointed by House Speaker Thomas P. "Tip" O'Neill Jr.

Democrats Jack Brooks, Bob Eckhardt, Abraham "Chick" Kazen, Jim Mattox, Dale Milford, Jake Pickle, Bob Poage and John Young joined Wright and Wilson in voting for the

Republicans Bill Archer and Jim Collins voted against, as did Dennocrats Omar Burleson, Bob Gammage, Sam Hall, Jack Hightower, Barbara Jordan, Bob Krueger, George Malnon, Ray Roberts and Richard White. Krueger launched a last-minute let-

bers to vote against the rule, labeling the natural gas compromise a measure of "Byzantine complexity." Krueger's letter was also signed by Joe Waggonner Jr., D-La., and Jim

ter-writing campaign urging mem-

Jones, D-Okla. In a separate letter to the Texas delegation, Krueger said he opposed the natural gas measure "because I do not believe that it strikes a fair balance among consumers in different regions of the nation; it will impose a severe regulatory burden upon our intrastate gas market at in-

creased cost to Texas consumers." The compromise calls for deregulation of gas prices by 1985 with gradual price increases in the interim. It also introduces federal controls on the market until 1985 and c:reates a com-

plex set of price guidelines. Wilson said he thought the Krueger letter had "little effect" on the delegation but quickly added, "I'm not being critical of Bob Krueger at all; If I'd been in his situation, I'd have done the same thing. I still strongly support his candidacy for the Sen-

Krueger is trying to unseat Sen. John Tower, who, like Krueger, hastaken a firm stand against the natural

Heat energy project Wood before the rush. 5109 Andrews Highway. phone 694-8891. due to tap hot well MIDLAND, S.D. (AP) the department to demonstrate the use of geoth-

- A well that has served as a dependable water ermal energy. Tech resupply for 19 years on the Hilltop Ring Ranch has suddenly become more attractive as a source of heat energy.

Water from the 4,000foot, naturally flowing well, which intersects the Madison aquifer, is a fairly constant 153 degrees and can flow up to 174 gallons per minute.

The idea of tapping that heat came several years ago to George Armstrong, who owns the ranch 20 miles north of Midland.

He set up a successful system to heat a shop area with the water. But the materials he used eventually gave way to the extreme corrosiveness of the water.

Now, in cooperation with the U.S. Department of Energy and the South Dakota School of Mines and Technology, a widespread application of geothermal energy is planned for the ranch.

"We just think it's going to be great something we've wanted to do for years, but never knew how," Armstrong

The three year project, which is still in the design phase, was one of four grants from

Algae topic for meeting

The Permian Basin Section of the Society of Econiomic Paleontologists and Mineralogists will meet Tuesday in the Midland Hilton.

The meeting will get underway at 11:30 a.m.

The guest speaker will be Dr. John L. Wray, exploration research associate with Marathon Oil Co. in Littleton, Colo. His topic will be "Algae and Carbonate Facies."

Wray will discuss the role algae have played in carbonate sedimentation since Precambrian time, and the usefulness of fossil algae in making age determinations for environmental interpretations of carbonate facies, and as significant constituents in sedimentary facies associated with petroleum reservoirs.

The speaker is a graduate of West Virginia University, and the University of Wisconsin, and has been associated with Marathon Oil since 1956.

Dr. John L. Wray

Center plans land course

"Land Support Personnel — Phase One" will be offered by the Permian **Basin Graduate Center in cooperation** with The Institue For Energy Development, October 23-24, at the PBGC Building, 105 W. Illinois. Sessions will be held from 9:00 a.m. to 4:30 p.m. The instructor will be Lewis G. Mos-

This course is designed for land clerks, rental clerks, division order and title clerks, land secretaries, contract personnel, paralegals and others dealing with the administration of Land Department activities.

This two-day institute will cover those aspects of oil and gas, contract, and real property law of significance to Land Support Personnel-including real property and oil & gas title law, problems arising under the oil & gas lease, and the analysis and interpretation of farmout and support agreements, operating agreements, gas contracts and division orders.

Featured will be discussion of the new IRS Farmout Ruling and detailed analysis of the new AAPL Model Form Operating Agreement.

Lewis G. Mosburg Jr. is the senior partner of an Oklahoma City law firm. He teaches annual institues on "Petroleum Land Titles," "Advanced Problems Arising Under the Oil & Gas Lease," and "Contracts Used in Connection with Oil & Gas Operations," as well as "Land Support Personnel-Phases One and Two."

He is the author of Landman's Handbook on Petroleum Land Titles and editor of Landman's Handbook on Basic Land Management.

The \$200 fee includes materials and text: Land Support Personnel - Phase

Schneider promoted

The program chairman is Darrell R. Roberts, Cities Service Co., Tulsa, J. B. Pearce, The Parade Co., Shreveport, La., as morning session chairman, and Gordon Cornell, Cornell Engineering, Inc., Dallas, as afternoon session chairman.

There will be a seminar Oct. 25 covering loss control by the International Safety Academy, Houston. It will be an afternoon session.

Dr. Kaiser appointed

AUSTIN-U.S. Secretary of Energ James Schlesinger has appointed Dr. William R. Kaiser, research scientist with The University of Texas Bu of Economic Geology, to the De ment of Energy lignite subo tee of the fossil energy advi

Subcommittee members advis Schlesinger on research pertai ing technolo other low-rand coal.

Dr. Kaiser is a leading aut Texas and Gulf Coast lignite, partic larly in lignite resource assessment, exploration techniques and lignite att

His report "Texas Lignite: Near Surface and Deep-Basin Resources," published by the BEIG in 1974, has become a basic reference which cungeologic setting of lignite deposits and the first mapping for deep-basin lig-nite below 200 feet.

Dr. Kaiser has worked jointly with Dr. Tom Edgar of the UT Austin Chemical Engineering Department on instituting lignite gasification and with Dr. Hal Cooper of the UT Civil Engineering Department on air quali-ty resulting from lignite use.

He currently is working on an ex-tensive update of his 1974 lignite reserve and resources estimates for the Texas Energy Advisory Council.

C. F. Scott gets award

Charles F. Scott, administrative su pervisor in Midland for Atlantic Eich-field Co., has completed 30 years service with the company.

by C. E. Cardwell, district ma in Midland for the Permian Di Scott started with The Atlantic Refining Co. in Dallas Sept. 7, 1968, as an accounting trainee.

He was transferred to Longstew in 1948 as a production clert, then becampe payrull clerk followed by an nent as records and reports

He moved to Midland in August 1961 and joined the statistical data and analysis section. In November 1964 be was named office assistant in the Regional Drilling Section, and was appointed administrative supervisor

Axe Handle, why are your running from that ape? Are you scared of apes or something? thought you said you are rougher than sandpaper and didn't scare. It looks to me like you are scared of that ape. Brutus, I'm not running from that ape. I'm leading that ape. I'm lea that ape out of the pit. Sweet Molly told me to get that ape out of the pit before his sharp toe nails cut holes in the plastic. So I hollered at Tex three times for him to get out of the pill and stay out of the pit. The fourth time I hollered Tex get out of that pit before I come out there and slap you out of the pit and then slap you some more for getting out. When he heard that he just sat down and yawned. So I went out there and slapped him up to the side of the head with a Dixieland Daydreamer. Then I caught him open handed on the other cheek with a Choctaw Romancer that should have gyroomed him back to apeland, but it didn't like jumped up grabbing at me with his teeth sticking out, growling, grunting and growning and generally acting unmannerly. So I interpolated the consequences and came up with the answer immediately that apes can best be led out of a pit much better than apes can be driven from a pit. So you might tell your friends who see this picture that I am leading the ape and not run-

ICO, INC. DISCUSSES STOCK SALE

Bobby L. Payne, President of ICO, Inc., announced today that the shareholders of ICO have tentatively agreed to sell the outstanding stock of the company to a new corporation formed by a group of Texas investors. The investors, represented by Wilford B. Fultz, of Fort Worth, Texas, and the shareholders of 1CO, Inc. have signed letters of intent for an undisclosed price. The letters of intent are subject to certain conditions and asset evaluations which are to be completed on or before October 31, 1978.

In making the announcement, Payne went on to state that he would remain with the company in his present capacity and will be a shareholder in the new-corporation. No changes in the current operations are planned, however, the company plans to open a new tubular inspection and coating facility in Houston, Texas, in early 1979.

ICO, Inc. is the parent company of Rodco, Inc., Spinning Pipe Service, Universal Tubular Service and Spincote which have operations in Odessa, Texas, Denver City, Texas, and Oklahoma City, Oklahoma.

Four wildcats among new work

Four wildcat operations are among the oil and gas exploration activity reported in the Permian Basin of West Texas and Southeast New Mexico.

Two of the explorers have been scheduled in Crockett County.

One of the Crockett wildcats is Dan J. Harrison Jr. of Houston No. 1-29-30 University Lands. a 9,000-foot Ellenburger wildcat one mile southwest of the discovery well of the Pikes Peak Draw (Canyon gas)

The project is 17 miles west of Ozona and 860 feet from south and 660 feet from west lines of section 29, block 30, University Lands survey.

The Pikes Peak Draw field gained its second ucer with the com-

eition of Harrison No. 1-A Joe Bean. The well finaled for a calculated, absolute open flow potential of 1,-270,000 cubic feet of gas per day, through perforations from 67,466 to 6,-

589 feet after 500 gallons Total depths 8,132 feet and 4/5-inch casing is set

at 6,405 feet. The plugged back depth is 7,772 feet. Wellsite is one location north of the discovery and 705 feet from south and 660 feet from east es of section 28, block UV, GC&SF survey.

ANDERSON TEST

The second Crockett wildcat is Anderson Petroleum, Inc., of Ozona No. 4-11-O Moody Min-

The 7,500-foot test is 661 feet from south and wet lines of section 11, block MM, T&StL sur-

The drillsite is in the Ozona multipay field and surrounded by Canyon production. It will test the zone at 2,100-4,700 feet as a wildcat and then test for Canyon production at a lower level.

Mark IV Energy of San Antonio will drill No. 1 Stanley Adams in an at- Aldwell will be dug in the Blackwell (Wolfcamp) field of Coke County. three miles southwest of

foot contract, the wildcat is 990 feet from north and east lines of section 276, block 1-A, H&TC survey. Elevation at drilisite is 2,184 feet.

The site is a southwest offset to one of the field's two depleted wells and 3/8 mile south of a 3,795-foot dry hole.

RUNNELS TRY

Cherokee Oil & Gas Corp. of Fort Worth No. 1 Watkins is to be dug as a 4,700-foot wildcat in Runnels County, one mile northeast of Wilmeth.

The project is 467 feet from southeast and 1,330 feet from southwest lines of section 14, Henry L.

Bays survey no. 444. It is 1,500 feet west of Fry production and 1,500 feet northwest of Goen production in the Deike field.

PECOS TEST

Forest Oil Corp. of Midland No. 1-R-7 J. H. tion 34, block A. Dunlap is to be dug as a 22,500-foot project in the Gomez (Ellenburger) field of Pecos County, 13 miles northwest of Fort Stockton.

The deep test is 1,700 feet from south and 1,160 feet from west lines of section 7, block OW, of the Pennsylvanian. TCRR survey. It is a repiacement for well No. 7 Midland No. 4-39 Moody

which was junked and has been completed 5/8

Wagner & Brown of Midland No. 33-7 Hildebrand will be drilled in the Conger (Pennsylvanian) pool of Sterling County, eight miles southwest of Sterling

Scheduled for an 8,400foot bottom, it is 660 feet from south and west lines of section 7, S. B. Hiler survey.

MOBIL PROJECTS

Mobil Oil Clorp. has announced plans to plug back in two old producers in the Pegasus multipay field of Midland and Upton counties and test for production in the Spraberry.

No. 101 Pegasus Spraberry Unit in Midland County is 18 miles southeast of Odessa and 660 feet from north and west lines of section 19, block 40.T-4-S. T&P survey. It will be tested above 8,100 feet. The old total depth is 10,535 feet.

Mobil No. 4003 Pegasus Spraberry Unit in Upton County will be plugged back from 10,575 feet to 8,100 feet.

It is 1,980 feet from northand west lines of section 43, block 40, T-4-S, T&P survey.

REAGAN SITES

Saxon Oil Co. of Midland spotted locations for a trio of 8,200-foot projects in the Spraberry Trend area field of Reagan County, 22 miles northwest of Big Lake.

No. 1-15-58 University is 1,320 feet from north and east lines of section 15, block 58, University Lands survey

No. 1-16-58 University is 1,170 feet from north and 1,320 feet from east lines of section 16, block 58, University Lands sur-

No. 2-16-58 University is 1,320 feet from north and west lines of section 16, block 58, Univeristy Lands survey.

um Co. of Midland no. 3 County. Spraberry Trend Area of Reagan County, six on the pump for 150 barmiles northwest of

It is 1,320 feet from north and west lines of section 2, block D, L&SV survey. It is scheduled on an 8,200-foot contract.

OFFSET STAKED

Elliott Oil Co. of Abilene spotted its No. 5 Pruitt-Henson as a south offset to the discovery well and lone producer in the Johnson's Chapel (Tannehill) field of Stonewall County, eight miles southwest of Aspermont.

The 3,400-foot test is 1,-014 feet from north and 1,009 feet from west lines of section 199, block D, H&TC survey.

Shell Oil Co. No. 161 Sealy-Smith Founation is to be drilled as a 9,500foot test in the Monahans multipay area of Winkler County, five miles north

The project is 660 feet from north and 1,320 feet from east lines of sec-G&MMB&A survey. It is three miles northwest of the field's depleted Pennsylvanian oil discovery and one location south and slightly west of a lower Pennsylvanian oil well. The contract depth will allow for tests

Mesa Petroleum Co. of

mile west of Canyon sand gas production in the STERLING AREA

Ozona multipay field of Crockett County, 27 miles southwest of Completed from the

Canyon sand, it finaled for a calculated, absolute open flow potential of 1,-200,000 cubic feet of gas per day, through perforations from 6,555 to 6,-869 feet. The zone had been acidized with 6,000 gallons and fractured with 150,000 gallons.

It is 1,364 feet from south and 1,142 feet from west lines of section 39, block MM, T&StL sur-

Total depth is 7,400 feet and 4.5-inch casing is set on bottom. Plugged back depth is 7,332 feet.

The follwing tops were called on ground elevation of 2,4145 feet: Leonard 1,626 feet, Clear Fork 2,682 feet, Dean 4,198 feet, Wolfcamp shale, 4,-718 feet, upper Ozona sand 6,050 feet, middle Ozona sand 6,538 feet and lower Ozona sand 7,112

SCURRY OILER

Empire Drilling Co. of Dallas No. 1-346 Shannon Estate is the second well in the Shannon Ranch (Ellenburger) field of Scurry County, 12 miles northwest of Snyder.

Operator reported a daily flowing potential of 128 barrels of 37gravity oil, through a 15/64-inch choke and open hole from 8,124 feet, where 5.5-inch casing is set, and total depth of 8,128 feet. That zone had been acidize with 250 gallons.

The gas-oil ratio is 675-Wellsite is 660 feet from south and 1,980 feet from east lines of section 346, block 97, H&TC survey and one location north of the other well.

KING PRODUCER Taubert, Steed, Gunn & Medders of Wichita Falls announced potential test for its No. 6-GG S. B. Burnett Estate, 5/8 mile west of the Big S Tamarack Petrole- (Strawn) field of King

The well, the fourth in the field, was completed rels of 38-gravity oil, through perforations from 5,274 to 5,278 feet. Gas-oil ratio is 200-1.

Location is 660 feet from north and 1,166 feet from east lines of C. Sams survey, abstract 1189 and 14 miles south-

east of Guthrie. Total depth is 6,010 feet and 4.5-inch pipe was landed at 6,010 feet. The Strawn sand was topped at 5,272 feet.

Eagle Oil&Gas Co. of Wichita Falls No. 1 U. D. Lewis is a new well in the Wellman, Southwest field of Terry County,

915-366-3693 Pox 2008

TEXAS REAMER CO.

three miles south of Wellman.

One location east of other production, it finaled for a daily flow of 80 barrels of 36-gravity oil and 20 barrels of water, through perforations from 5,475 to 5,495 feet opposite the San Andres. The pay was acidized with 6,000 gallons.

Total depth is 5,505 feet and 4.5-inch casing is set on bottom.

Location is 3,170 feet from north and 1,787 feet from west lines of section 62, block DD, J. H. Gibson survey.

GARZA AREA

Kerr-McGee Corp. operating from Midland, has announced potential test on its No. 7-B Swenson in the Swenson-Barron field of Garza County, 15 miles east of Post. The well finaled for a

daily pumping potential of 269 barrels of 39-gravity oil, through perforations and open hole from 7,646 to 7,697 feet. The perforations are from 7,-646 to 7,687 feet. Total depth is 7,697 feet

and seven-inch casing is set at 7,687 feet.

Location is 1,980 feet from north and 990 feet from west lines of section 24, block 7, H&GN sur-

SUNDAY, OCT. 15, 1978

By HILMI TOROS

VATICAN CITY (AP) - Once again there is no odds-on favorite to be elected as the new pope of the Roman Catholic Church.

As the church's cardinals Saturday

in 54 days, the list of "papabili," or possible popes, included at least 10 percent of the 111 electors. But as usual, the papal guessing game is risky business.

Many included in list of papabili

"He who enters the conclave as pope, leaves as a cardinal," a time-honored Vatican saying admonishes.

To outsiders, Cardinal Albino Lu-

ciani, patriarch of Venice, entered the Aug. 25 conclave as a virtual unknown. His name hardly figured on the longest lists of papabili. Yet his election came on the first day of voting, surprising even Luciani him-

Abundance of parking tickets reflects city's parking problem

By LANA CUNNINGHAM

Insufficient downtown parking is a problem - one that won't be solved anytime soon.

Looking at the situation from a different point of view than most people who work downtown is Lt. H.M. Wicker, head of the traffic division at Midland Police Department.

His department, he said, is issuing between 400 and 500 tickets a day to people who are overparked or parked illegally in the downtown area.

Wicker keeps a daily account of the number of tickets issued each day. For example, there were 436 on Oct. 2; 413 on Oct. 3; 418 on Oct. 4; 420 on Oct. 5 and 398 on Oct. 6, for a total of 2,085 tickets in a single week.

This number is about the same, and sometimes more than, the number of tickets issued in Odessa, a city with more population than Midland.

Lt. Jim Hallman, head of the Odessa Police Department traffic division, said his department issues about 400, and sometimes fewer, tickets each The reason is the same as in Mid-

land: "Downtown employees are using the metered parking all day," he said. Wicker has five people working in

his department, with some checking illegal parking and others overparking at the meters. It takes them about 11/2 hours to

make their rounds, giving people using metered parking time to take care of their business and leave. But downtown employees parking their cars at the meters instead of in

off-street parking areas can be

caught this way, he said. The downtown area covered by the officers runs from Front Street to Ohio Avenue, and from A Street to Fort Worth Street. "We may go as far north as Louisiana Avenue for illegal parking," Wicker said.

If the meter has expired, a ticket is placed on the car. If the car is still there when the officer comes around again, another ticket is placed on the

By the end of the day, if the car is not moved, the owner can face paying several tickets, Wicker

Each ticket for overparking or illegal parking is \$2. The violator has five days to appear in Municipal Court to pay the ticket or contest it, according to Municipal Judge William Ahders.

If the five-day period comes and goes without the person appearing in court, he is sent a notice, and the \$2 ticket costs \$3. If he still has not appeared by the end of that time, a second notice is

sent, the ticket is upped to \$4 and he is given five more days. If he has not appeared by the end of that time, an arrest warrant is issued on the person and the cost of the ticket is raised to

Ahders said about 125 to 130 warrants are issued each month on Midlanders who fail to appear on tick-

It is not unusual for one person to let tickets stack up before paying them, he said. "We've had as much as 300 to 400 parking tickets on one person," he added.

When the cost tickets was raised from \$1 to \$2, Wicker said, employees stopped parking at the meters "for a while," but they are back there

The two-hour parking areas may not have meters, but Wicker said his officers have a way of checking to see if a car has been there longer than the

Officers mark a tire of each car with chalk. If the car is still there two

Debate challenge accepted

AUSTIN, Texas (AP) - Republican Bill Clements said his opponent in the governor's race. Democrat John Hill, has accepted debate challenges because Hill knows he is losing

"John Hill would never accept a debate if he believed he was ahead. He only accepts a debate when he knows he is in trouble," said Clem-

Hill and Clements will debate later this month on television stations in Dallas and Amarillo. The Amarillo encounter will be broadcast simultaneously in Lubbock.

"John Hill handles debate challenges the way he handles investigations by the attorney general's office," Clements continued. "He only agrees to move in when he feels it will benefit him politically.

POSITIVE THINKING

Get lost! It's the best way of finding yourself

By NORMAN VINCENT PEALE

A sales manager told me a curious idea he used when one of his salesmen seemed to go stale on the job.

"Go out on the road for a week," he told the man, "but leave your order book at home. Don't talk business and don't take an order, even if one is offered you. Just visit around with your customers, get to know them as persons, and find out how you can help them. Be friendly with thinking of any advantage in return. Really try to help each one all you can.

"And I don't mean only in connection with business. Try to find out if they're having trouble of any kind at home or personally. Don't be nosey but show your interest and when you do that people will often open up. Genuinely give yourself to them. And don't stop with your customers; de-vote the week to doing some unselfish service for everyone you may

I knew the results before he told me. "This guy came back almost like a new man," he said. "He was filled with new vitality. And when he picked up his order books again and went on the road his selling hit new highs."

This seemed a good sound psychology and practical as well. In losing yourself, you do indeed find yourself. I met a man a couple of years ago

who asked me to have a cup of coffee with him in the airport coffee shop. I went with him and actually watched him drink five cups! I noticed his hands shook and he chain-smoked as "What's wrong with me anyway?" he asked. "I ought to be happy, for

I've just been made president of my company, but I'm worried. I know that I haven't got what it takes and I'm sure they'll find me out. I'm miserabel just worrying about my-

"Tell me," I asked, "have you a secretary?"

"Of course," he answered, surprised at my seemingly irrelevant

I asked her name and he told me.

"What kind of home life does she have?" I wanted to know. "Have you met her family? Is she a happy per-

"How do I know?" was his reply. 'She's hired to do a job and she does it. That's all I care about.'

"You live in a big apartment house, don't you?" I continued. "What's the

doorman's name?" "I call him Bill," And then he anticipated my next question. "I don't know his family. I don't know any-thing about him. Why should I?"

"Why?" I answered. "Look at yourself. Your hand shakes so you can hardly hold a cup of coffee. A new attitude can cure you, and it is to become interested in that doorman and your secretary and everyone else you meet in the course of your day. You've got to start forgetting yourself. You are so inwardly tied up

that your abilities are frozen. "If you start by being honestly concerned about the people who work with you, you will get released from fear and self-pity. Then your job will take care of itself because you will have an efficient team of happy, loyal people, and besides, you will be your

Today that man is one of the best loved executives I know. He is a strong, happy, healthy and successful man. He learned to forget himself in becoming interested in other people and, furthermore, he forgot himself in a healthy out-goingness.

"For he that will love life, and see good days, let him...do good," so says the Bible, wisest of all books. Learn to love life and to live it with enthusiasm. And, of course, the way you think determines whether you hate

life or love it. If you keep telling yourself that things are bad or difficult, things will tend to be that way. Not that everything should be expected to become easy. Life is not intended to be easy, but it need not be defeating. If you confront your obstacles with enthusiasm and believe that you can handle them, then for sure you can. Lose ourself in life and you will find life hours later the officer issues a ticket, Wicker said.

"They (downtown employees) play games with us all the time," he noted. "They come out and wipe off the chalk with a rag, or drive their car around the block to remove the

But the officers have caught on to the tricks and recognize cars that are being done this way, according to

The parking expert said he does not expect the parking situation to be eased in the future

"Gibralter (Savings) won't have enough spaces in it for their employees," he said. "Marathon Oil is putting up a building right behind the (Midland) Hilton, and the Hilton is adding to its building. The Hilton didn't have enough spaces and the new addition is taking up part of

"Then there is the Sam Cox building and the Blanks building. They won't have additional parking.'

Until some solution is found, Wicker said, his officers will continue to chalk tires and write tickets until some people learn to find a better place to park.

Sears

The 34-day papacy of John Paul, who died Sept. 28, was so widely acclaimed that the overwhelming feeling among the cardinals in recent days seemed to be that a similar pontiff should follow him - namely an Italian of a "pastoral" back-

That immediately made most Italian cardinal-archbishops contenders. Those mentioned most often were Corradi Ursi, 70, of Naples; Salvatore Pappalardo, 60, of Palermo, Sicily; Ugo Poletti, 64, of Rome; Giuseppe Siri, 72, of Genoa; Giovanni Colombo, 75, of Milan; Giovanni Benelli, 57, of Florence, and Antonio Poma, 68, of

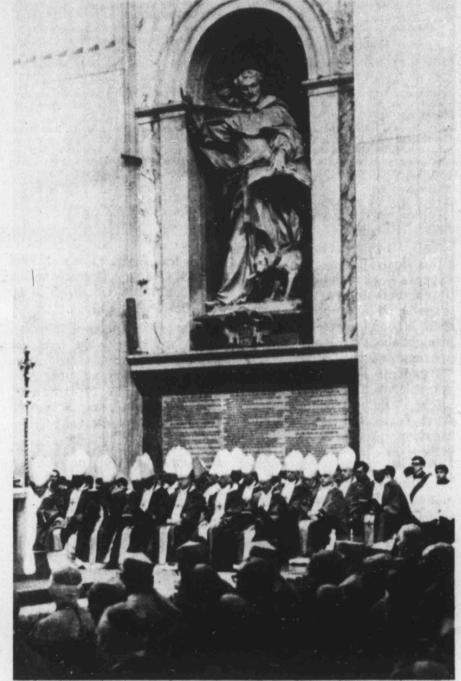

But other factors have entered into consideration in pre-conclave consultations, enlarging the list and dimming the chances of some of the

The main factor is that a cardinal with experience in the Vatican Curia, the central church administration, should not be excluded from consideration. There is widespread belief at the Vatican that lack of such training weighed heavily on John Paul, the 'people's pope" noted only for his diocesan work.

"All cardinals are pastors, even if in the Curia," remarked Bernardin Gantin, black Africa's highest representative in the Curia as head of the Justice and Peace Commission.

Vatican-based prelates who had been passed over in the last conclave's search for a pastor include Sergio Pignedoli, 68, head of office that deals with non-Christians, and Sebstiano Baggio, 65, prefect for the Congregation of Bishops. In addition, both Pignedoli and Baggio held pastoral posts before being called to the Vatican, a combination of skills some consider vital.

Non-Italian front-runners included Argentinian Eduardo Pironio, 57, and Dutchman Johannes Willebrands, 68.

Under a huge statue of St. Dominic in the apse of St. Peter's Basilica, cardinals sit in rows during a special mass held Saturday, opening the papal conclave. (AP Laserphoto)

It's 'Oil Show' time

This is the time of the year when cities, counties and organizations express appreciation to the petroleum industry for the leadership it has provided and the tremendous progress it has brought about in this and other oilproducing regions.

Residents know full-well that petroleum is THE major industry in the Permian Basin Empire of West Texas and Southeast New Mexico.

They also are aware that the petroleum industry has been operating full blast - and then some - in the last several years, doing its best to discover and develop new oil and gas fields to help ease the nation's energy shortage.

While serving in the nation's best interest, the increased activity also has accounted for a most favorable economy throughout the region, for which business interests and others are most grateful.

Unfortunately, however, the industry does not find itself in the same good graces everywhere.

Meanwhile, the major oil companies and the independent operators go right ahead, even under adverse circumstances in many instances, in their determined efforts to find and produce more and more oil and gas. This is an effort for which the nation as a whole should be thankful.

It also is to the credit of the oil industry that in addition to the finding of new oil reserves, operators have turned to secondary recovery as a means of bringing to the surface every drop of oil possible to help meet the energy requirements.

In order to achieve the overall goal, it has been necessary to perfect new methods of production, new and more efficient equipment, and improved discovery, production and recovery techniques.

Many of the achievements wrought in this field have resulted from continuing research and experimentation on the part of the oil companies themselves and the equipment and service firms serving the industry.

And this brings us right down to the major point - the center, if you please - of the subject of

It is the unveiling and staging of the 1978 version of the fabulous Permian Basin Oil Show to be held this week at Odessa.

This year's spectacular event, space for which was sold out months ago, undoubtedly will be the largest, best and most complete ever. And this is saying a lot, since there have been any number of good ones in the past.

The very latest and most modern equipment and facilities developed for use in exploring and drilling for oil and gas and for producing petroleum will be on exhibit during the show. It is reported there are more exhibitors and more exciting displays of all kinds this year than at any previous show.

It is something to visit and inspect and to enjoy and this is just exactly what thousands upon thousands of petroleum industry personnel and others will be doing during the Wednesday through Saturday exposition.

Many persons, even in the oil patch, have no idea of all that it takes to explore for, find, produce and develop oil reserves and conduct secondary recovery ef-

Others, both in and outside the industry, are not completely aware of all the magnificent advancements made in oilfield equipment in recent years.

This, then, is their opportunity, to discover a new world, so to speak, in this regard.

So, on this particular occasion, a snappy salute is directed to the petroleum industry and its personnel for the remarkable job they have done and are doing

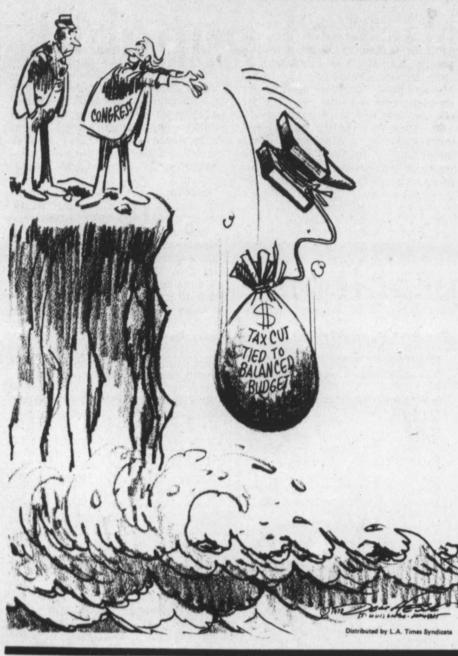

At the same time, a warm and most cordial welcome is beamed to all Permian Basin Oil Show visitors and exhibitors who are and will be in Midland and Odessa

Enjoy the show and come on back to see us at every opportunity.

FAA's rehabilitation program

By JACK ANDERSON

WASHINGTON - With one exception, every airline in the nation is taking part in an innovative program which encourages alcoholic pilots to come in out of the cold for help and rehabilitation. The lone holdout to this enlightened policy is Northwest Airlines, which punishes any pilot with a drinking problem by simply

The stubborn refusal of Northwest to try the new program has alarmed Federal Aviation Administration officials who devised it in 1972. Their statistics indicate that there are a number of Northwest pilots who are alcoholics, but who, because of the threat of losing their jobs, remain in the closet - and in the cockpit.

Jetliners carrying hundreds of passengers may thus have a chronic drinker at the controls. Pilots are forbidden to drink for 24 hours before a flight, and almost never does one turn up for duty in an intoxicated state. Even the alcoholics, it seems, confine their drinking to periods between flights.

But for a chronic drinker, a 24-hour drying-out period may not be enough. Even if the shakes of a hangover aren't evident, the pilot might well be impaired with poor coordination, memory lapses and delayed reac-

Until six years ago, FAA rules required airlines to fire any pilot found to be a problem drinker. But this draconian penalty created more problems than it solved. Knowing that a confession was an instant ticket to the unemployment line, an alcoholic pilot would conceal his illness. Other crew members would cover up for him. As a result, only a handful of the nation's 40,000 commercial airline pilots ever came to be identified as alcoholics.

"We knew there were others out there," an FAA official told our associate Peter Grant, "we just didn't know who they were.

Under the new policy, a pilot who admits to a drinking problem is immediately grounded, but given a chance to get his wings back. Upon completion of a medical rehabilitation program, he can seek an individual FAA exemption and resume flying. But he must be strictly monitored by supervisors and doctors to make sure he lays off the sauce.

In 1976, the rules were further relaxed to allow a detoxified pilot to get back in the air only three months after completion of his treatment. "It was then the alcoholic pilots started coming out of the woodwork," an FAA official told us.

workers, who knew they would not be condeming a colleague to financial But this year, 200 alcoholic pilots have been rehabilitated and are flying again. In statistical contrast, only three of Northwest's 1,550 pilots have been labeled alcoholics and grounded

Every airline but Northwest

initiated rehabilitation and

monitoring programs, and problem

drinkers began volunteering them-

selves, Some were identified by fellow

in the past two years. Of the company's hard-nosed, Victorian attitude toward alcoholism, an FAA official observed; "It encourages the alcoholic pilot to go underground and undetected."

The airline's adamant stand became an issue in the contract dispute with the Airline Pilots Association that led to a recent strike. Yet Northwest President Donald W. Nyrop refused to budge on the matter.

The only Northwest official who replied to our request for an explanation was chief counsel James Abbott, and his response was no explanation at all. "It is not appropriate to make this a public issue," he said. "You do not understand our policy, and I am not going to discuss it with

Industry sources, including some within the Northwest organization, lay responsibility for the airline's rejection of the rehabilitation program on Nyrop alone. The able, 66year-old corporate president is described as an individualist whose rigid attitudes toward drinking stem from his childhood in a small Nebraska town.

One source commented: "He doesn't accept alcoholism as a disease. He thinks everyone should have enough discipline to put down the bottle.'

The FAA is reluctant to publicize Northwest's foot-dragging, because the treatment program is not mandatory. The only official contact on the subject was a letter from the FAA's Air Surgeon Dr. Homer Reighard to Nyrop.

But off-the-record, FAA officials are dismayed at the company's recalcitrance. The pilots' union citing a ruling by Atty. Gen. Griffin Bell that alcoholism is a work disability falling within the 1973 antidiscrimination law requiring employers to help disabled workers has asked the Labor Department to investigate the situation at North-

Officially, the Labor Department has refused comment on the progress of the inquiry. But one source close to the investigation expressed astonishment at Northwest's stand. "Who would you rather have flying your airplane," he asked, "a dried-out alcoholic or one that hasn't been rehabilitated?"

CHARLEY REESE

Wrong-thinking infects some union leadership

By CHARLEY REESE Sun Belt Syndicate

ORLANDO, Fla. - I have just read a copy of the United Auto Workers publication, "Solidarity." The people who write for it must have taken LSD instead of economics when they were in college.

At the outset, let me clear the air This is no broadside attack against unionism. It is an attack against wrong-thinking which infects some union leadership just as it infects some of the leadership of most organizations. A union is essentially no different

than a Rotary Club. The rank and file tend to mind their own business and leave the organizational affairs to the few who have the time and inclination to fool with it and that is how both Rotarians and union members occasionally get into trouble. Let me give you an example of the

nonsense that is being pawned off on the UAW members. It's claimed that one way to create new jobs is for everyone who has a job to work fewer hours. Technically, that's true. If it takes 100 man-hours to make a widget and you subtract 40 man-hours of labor from the present work force, then obviously you've got to make up that 40 man-hours if you want to keep producing widgets. But there are a couple of catches.

One is that you are tempting the boss to find a machine that will make up

Charley Reese

that 40 man-hours. The other is you are increasing the cost of producing the widget. When you get the same pay for less work you are getting a pay hike and when pay hikes are not accomplished by an increase in productivity, they are inflationary. The trouble with UAW economic

logic is that it overlooks the fact that all of us are not only widget-makers but widget-buyers. There is no way a working man, union or non-union, is going to win when the game being dealt is inflation. Inflation is a game for big shots and they buy the pot every time. Furthermore, this tactic could in-

crease the price of widgets so that people will start buying Japanese widgets. Then, you've not only created no new jobs, you've destroyed the ones you had in the first place. I'm suspicious anyway of union

leaders who live in penthouses and are pally-wally enough with the Rockefellers to sit on the Trilateral Commission next to German and Jap To save space, I can sum up the

economic thinking found in "Solidarity" as socialism and any working man who buys that drivel needs to make sure his medical insurance policy will pay for shrinks. Everything the UAW leaders claim

they want for the U.S. already exists in England. They have over there "free national health care," closed shop, certain industries nationalized. and a government that asks, "How high?" whenever the trade unions say, "Jump."

Isn't it funny then that there are no great lines of people trying to get into England. No, it's not funny, especially to the British who are stifled by confiscatory taxes, eaten alive by inflation, destroyed in the world markets by the more productive Japs and Germans, and standing in the unemployment lines by the millions.

Socialism changed Great Britain from a world power to a fifth rate country that would be hard-pressed to win a war with Romania.

Every working man ought to get as much for his labor as he possibly can, but you can't change economic reality with ideology. If you kill the cow, you may eat steak for a few days, but your kids will have no milk.

The trouble with socialist thinking is that it concentrates on redistributing the wealth instead of creating wealth. You can't redistribute what doesn't exist and there's only one system that's ever produced enough surplus wealth to redistribute and that's capitalism.

Socialism is a con game, a scheme by which a few can make slaves out of the many. It's no accident that some of the biggest closet socialists both in England and America are the very, very rich. They know the score, and you can bet your last can of beer they aren't pushing a system that's going to cost them any money.

The working people in America had better wise up fast and start doing some independent thinking. When you start getting the same line from the president of the UAW and the chairman of the board of the Chase Manhattan Bank, you know they got something going.

It's beginning to look as if the only people in this country who really believe in free enterprise are the working people and the small independent businessmen. Well, if that's so, we'd better start speaking up - even if we have to challenge our "brothers" in

NICK THIMMESCH

Women in politics are being taken more seriously

WASHINGTON - The impulse of women to run for office tapered off some this year. But the women who are running are taken more seriously because they go about their political work in a more professional fashion. Gradualism is probably the best

through performance that they know what they are about, women candidates will gain respect, and thus the chores of public office as well. This year, there are 43 women running for Congress, two for the U.S. Senate and, according to the National Women's Educational Fund, the num-

course here because by showing

least equal the 12,060 who gave it a go Despite the flapdoodle about the Equal Rights Amendment, its extension and other so-called victories for the feminist cause, the woman who lets it out that she wants to run for public office doesn't have the easiest

ber trying for state legislature will at

Political action committees, those bottom-line outfits in politics, put their money on likely winners, and women candidates aren't regarded as likely winners as often as men candidates are. In politics, a woman is stuck with proving herself beyond the call of duty.

Indeed, when I visited the Republican congressional campaign committee last week, where staffers were confused about just how many women candidates they had, nine of their 17 aspirants were described as "throwaways." In the old politics, these women would have been called sacrificial lambs.

Even so, four incumbent Republican congressmen figure to be re-elected, and four non-incumbent women are rated as having a good chance to win.

Nick Thimmesch

Additionally, there is Nancy Landon Kassenbaum, celebrated daughter of Alf Landon, the GOP presidential candidate in dust bowl days. Mrs. Kassenbaum is running for the U.S. Senate in Kansas. (The Democrats have a Senate candidate, too, Jane Eskind, who is challenging Howard Baker in Tennessee.)

Of those GOP women newcomers, the youngest candidate is Olympia Snowe, not the name of a beer, but of a 30-year-old widow trying to win the seat vacated by William S. Cohen when he opted for a Senate race.

Mrs. Snowe was elected to her husband's chair in the Maine House after he was killed in an automobile accident in 1973. She was re-elected, and later made it to the State Senate.

Sandy Smoley, of Sacramento, Calif., is another Republican woman with a good shot at a congressional seat. Like Olympia, Sandy has the blessing and some of the bucks bestowed by the Women's Campaign Fund, an organization which claims it is out to elect women, but, in actuality, runs a feminist litmus test on

"We give no money to candidates who are not pro-choice on the abortion question," says Carol Randles, WCF's rather fetching director, "even if they are right on all the other

women's issues." Tsk, tsk. But WCF is also confused

about labels. It has described New Jersey Republican congresswoman Millicent Fenwick as both "progressive" and "conservative," and also applies the "conservative" sticker to Democratic aspirant Virginia Shapard of Georgia.

Throughout its literature, however, the opponents of WCF-endorsed candidates are scornfully described as "conservative Republican" or "a conservative prosecutor" or "an ultraconservative GOP businessman" and so on. Such nonsense. Even liberal - whoops, "progressive" - Democrats know better.

It seems that if women politicians rise above feminism, they won't lose the way Bella Abzug did three times in a row. A woman must run as

The Country Parson by Frank Clark

by folks working too hard at things they shouldn't be doing

constituency is conservative, she had better talk rationally about conservative issues. If the majority of her constituents are skeptical about federal funding of abortion, she must heed that or she will lose votes. There is a tendency here in Washington, both at the Democratic and Republican campaign headquarters,

a candidate, not as a feminist. If her

to be more chic than the rest of the Republic. The hired hands at the Republican congressional campaign committees, for example, tend to put down women candidates of the conservative persuasion. Republican women, however, of

varying ideological persuasion, are getting more involved in elective politics. In 1974, 30 of the women running for Congress were Democrats and 14 were Republicans. In 1976, it was 34 Democrats and 18 Republicans. This year, it is 26 Democrats and 17 Republicans.

Unlike the rest of the Republican Party, the Republican women aspirants'are making a credible showing in catch-up politics.

The energy bill: Regulation but better than no bill at all

THE MIDLAND REPORTER-TELEGRAM, SUN., OCT. 15, 1978

EDITOR'S NOTE: Writing an editorial column for The Reporter-Telegram was among items auctioned off during Auction '77 staged as a benefit for the Museum of the Southwest. Midland independent oil producer Ralph E. Williamson was the winning

By RALPH E. WILLIAMSON

Many people have written about the energy bill since its introduction seventeen months ago. Now that the bill is finally emerging from Congress, it is my turn.

The bill's passage or non-passage has been wearing on my nerves ever since President Carter announced it in March of 1977. Most of us in the oil and gas industry want to know the rules under which we are to operate. This continual changing of the rules, or worse no rules, or even worse retroactive rule change, is extremely aggrevating. Every oil man I ever met, including myself, would like a free market unhindered by federal government regulation. To my knowledge no federal regulation has ever helped find a barrel of oil, only increase the expense and time of doing the same job. But, today, with every business decision greatly influenced by the federal government, it is sad how much you don't get to keep in a deal (tax policy), which makes or breaks the deal. But given the continued liberal (socialist) drift of Congress, federal regulation of every phase of American life shows no signs of decreasing. Regulation of the domestic energy business has increased greatly since the Arab oil embargo. This energy bill is but the latest ex-

I have, however, supported the energy bill, gas compromise and all, as being the best compromise available from the present Congress, and

be done by more judges, or it will

Judicial reform, unlike tax reform,

panding the courts of civil appeals.

Judicial reform should be an issue

have to be better distributed.

"them" rather than "us."

"law's delay" reduced.

as being better than no bill at all, since Congress has shown a desire to continue to meddle in the domestic energy business, and an energy bill from the next Congress would probably be worse. Today we need \$2 per thousand cubic feet net to search for the mediocre unfound reserves available. Prices under the energy bill don't come up to this price, since under the bill, for the first time, the producer will have to pay for the cost of service, 10 cents to 30 cents per thousand cubic feet. There will be a lot of gas immediately available for public use when the interstate companies are allowed to compete pricewise — I believe ten billion cubic feet per day in Texas. The forced sharing arrangements between intrastate and interstate companies contained in the bill will make even more gas available during peak demand periods,

such as the prolonged cold spells in

the winter of two years ago and will

mean a better market for the independent gas producer.

I have never subscribed to the "Let them freeze in the dark!" theory. People in New York, New Jersey or Connecticut, or any other non-producing areas of this country are still Americans, no matter how uninformed they are and no matter how narrow-minded and regionally partisan their elected representatives. Now, for the first time, they will be paying the same prices for new supplies as we in Texas have been paying for some time, and with the continuing increase in the use of lignite coal, combined with new supplies of gas, which will be brought into the market place if the energy bill is allowed to function as legislated, people in Texas will not run short of energy. No significant intrastate market exists today for newly discovered gas. Gas transportation facilities are clogged full of gas, and existing producing wells are being cut back to 20 percent of capacity in many cases. The entry of interstate carriers, fierce competitors, into the intrastate market will be a very healthy addition to the market place. I am for sending gas to where the market will take it, out of state or not. Any increase in domestic oil or gas production has got to reduce imports. We have got to conserve energy by one means or another and we have got to produce more domestic energy by whatever means available.

I applaud the regulation which mandates greater gas efficiency for cars. This brings me to my main problem with the energy bill - not the bill, but what happens after its passage. If the government would allow the price escalators to work, and not keep changing the rules, prices will rise and more reserves will be brought into active exploitation. There is a tremendous amount of oil and gas out there to be found and

produced, gas especially, but in small quantities per well. A poor well always costs more than a good well to drill, complete, and produce since it is more trouble and trouble in the oil patch equals expense. I have very little faith in Washington's sincerity as concerns the oil industry. We have been and are being treated over and over again like the American Indian, treaty made treaty broken.

A case in point is the pricing of oil. After a long series of price freezes and rule revisions, the Federal Energy Administration established a national average price for crude oil, in May of 1976. The national average oil price rose as scheduled for only two months (another broken treaty). The government had misfigured the percentage of new oil. This led to a price freeze, and eventually to a rollback of oil prices of 60 cents per barrel in March of 1977 to make up for so-called cummulative "deficiencies." The FEA accused the oil producers of over-charging and profiteering when the FEA's own faulty accounting procedures created the problem. During this freeze and rollback period, the theoretical national price of crude continued to increase. President Carter has continued this trend of under-paying the legally allowed prices, only recently allowing the price of oil to rise. Meanwhile the commulative "deficiency" has become a two and one-half billion dollar surplus of under-payments to producers.

This is money which producers are legally entitled to and money which could have gone for exploration. Secretary Schlesinger, well aware of this fact, has generously offered to pay this money to the producer in the form of higher oil prices in return for producer support of the energy bill (paying us off with our own money). The price of oil is now \$1.25 a barrel less than we are legally entitled to have. The price of oil in West Texas is only just now approaching the price it was in March of 1977, meanwhile prices in the oil patch have gone up 20 percent. Imports have soared to onehalf of domestic usage and the dollar has lost 40 to 90 percent of its buying power overseas due principally to the balance of payments deficit caused by massive oil imports. Domestic energy costs cannot be blamed for continuing inflation since oil prices are less today than they were two years ago and inflation has kept right on going. Independent producers have no access to public markets and we must have oil and gas prices which reflect our true economic situation. We cannot stand a gas pricing fiasco, such as we have had in the past with oil prices. The producer needs firm gas and oil prices on which to base his decision to drill or not to drill.

It has been stated that one of the major failings on the gas bill is the many price categories for natural gas of identical composition (17 different prices by one count). This should not be a great problem because most interstate gas companies have a staff of lawyers to figure out which gas price applies where, and in the past the interstate gas companies have been perfectly willing to pay the allowable pass-through gas price for any gas they purchase. There will be no price competition for gas under the energy bill, only service competition. But, prices in all categories are higher than those interstate prices now in effect, and about the same as present intrastate prices. There is today no intrastate market for new discovered gas. The depth and distance criteria for new gas contained in the energy bill are arbitrary and bear no relation to subsurface reservoir conditions and developmental risks, but at least distances and depths can be measured and economic decisions made accordingly.

In conclusion, I support the basic aims of the energy bill — to promote conservation and stimulate domestic production. Contrary to most government studies, there is a lot of oil and gas out there to be found and produced but at great risk and great expense. Imports must be cut by whatever means available. Gasoline rationing would be better than economic torture at the hands of the OPEC. The energy bill provides the barest minimum of incentive for increased domestic production, but only if these incentives are allowed to stand as legislated. Sen. Jackson has recently said that "if prices get out of hand Congress will move in," so the energy price regulation war will continue, the producers versus the consumers. I do not expect gas to be deregulated by 1985 or by any other time but even the most liberal in Congress have acknowledged that higher prices are needed to stimulate production.

The debate in Congress is how high prices will be allowed to rise, how fast and at what total cost to the consumer. The real debate should be over the relative cost to the economuy in terms of unemployment and inflation of continued massive oil imports versus the cost of higher priced domestic energy. The domestic producer needs prices which will give him a reasonable rate of return, given the economic, physical and emotional risks involved in drillng an oil or gas well. There are very few investments that can result in a total loss - a dry hole is one of them. Sen. Jackson's advice to "not drill any dry holes" offers little solace to the hapless oil operator who has just drilled one. We in the domestic oil business do not need another broken treaty. With this energy bill, given a chance to work, the domestic producer, and the rest of the people in the country, by practicing conservation, can make a start at reducing imports and stopping infla-

If we can stop inflation we all might

AUSTIN - "The law is the true embodiment of everything that's excellent," sings the Lord Chancellor in the Gilbert and Sullivan operetta "Iolanthe.

"It has," he continues, "no kind of fault or flaw, and I, my Lords, embody the Law.'

All that's simply hyperbole — since laws have as many faults as the people who make, administer and live (or fail to live) under them.

Texas is no exception to that, and the Texas court system, like all human institutions, has its problems. One of those problems has been the

overcrowding of those courts - and that's what one of the constitutional amendments to be voted on Nov. 7 is aimed at alleviating. That proposal, which was passed as

SJR 45 by Sen. A.R. (Babe) Schwartz of Galveston, would allow expansion of the 14 existing courts of civil appeals and would allow the judges to sit in panels. Legislation will be needed, if the

amendment is approved, to determine the number of judges to be added to the courts and procedures for handling cases by panels. Voters recently approved expan-

sion of the Court of Criminal Appeals to nine judges, who sit in panels of three, and that change appears to have helped eliminate the backlog of cases in that court - which is the appeals court for all the criminal cases from lower courts.

State Supreme Court Justice Joe Greenhill, speaking to the Judicial Section of the State Bar recently, agreed that one thing does indeed need to be done.

But Greenhill indicated he also agrees with critics of the proposed amendment, who have called it another "bandaid approach" to a serious problem requiring the legislative equivalent of major surgery.

Greenhill notes that last year, 140 counties in the state had less than five jury trials, which he feels indicates some courts are under-worked while many of those in metropolitan areas are over-worked.

For the appeals courts the situation has been similar.

In 1977, there were 41 cases filed with the Tyler Court of Civil Appeals, 48 in the Eastland court, and 62 in the Texarkana court — while the Dallas court had 346. The average for the 14 courts was 141.

The Supreme Court has authority to transfer cases from crowded courts to less crowded ones - and does so but the practice has been criticized as, among other things, defeating the idea behind having elected judges.

As a report by the House Study Group on the proposal notes, "People in Houston might be unhappy about the decisions of the Eastland judges but there's nothing they can do about

Opponents also contend the change could result in some additional confusion by having different panels of the same court reach different decisions

on the same legal principle. Of course, the same sort of problem can result at present - which is why

there's a Supreme Court to eventually sort everything out. Opponents also say Texans just

don't want any more judges - and that may be true. However, as Justice Greenhill notes, there are more Texans - who are getting more divorces, commit-

lawsuits on one another. And obviously, if there's more work for judges to do, that work will have to

Only the rich?

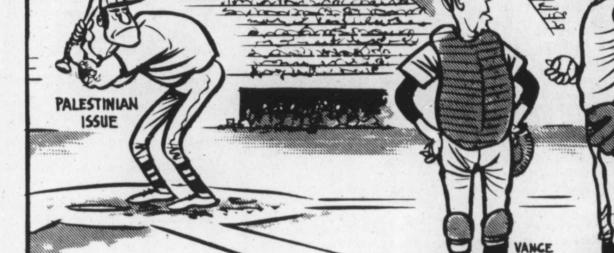

To The Editor:

This isn't really a complaint, just a question. On Tuesday Ronald Reagan will be in town supporting the Republican Party. Tickets are available for \$100 per person. Now, I realize political parties need money to operate so does my family! But why are these rallies always so expensive.

I don't consider us "poor," although a lot of people do I guess, but we in no way can afford affairs such as the above. Do politicians think that only the rich people vote? Or maybe they only care about the ones that can hand over some of that green stuff.

In no way am I putting Mr. Reagan down - this happens in both political parties. I'm just using this as an example. Just because some people can pay \$100 a ticket doesn't mean they are the only ones that can understand the issues of a campaign. I would appreciate seeing some other peoples' feelings voiced on this.

Today, Congress chooses its leaders

in a different way than in years past.

It is the collective will of the Party

Caucus, rather than the seniority sys-

tem, which is the determining factor

in the committee chairmanship as-

Also, today we see an unfortunate

change in the abiding principles of the

Democratic leadership in Congress.

Exemplified by Tip O'Neill, presiding

over the House, and Walter Mondale

presiding over the Senate, the will of

the Democratic leadership is woefully

out of tune with the conservative,

fiscally responsible beliefs of West

This change in the leadership of the

Democratic Party over the past years

is added cause for West Texans to

lament the retirement of the Honor-

able George Mahon, who for 44 years

has served us truly and served us

This change should also make us

acutely aware of the importance of

replacing Mr. Mahon with a man who

has the same strong beliefs in limited

government and who, hopefully, will

have the same force of character and

attain the same stature of leader-

have such a man: George Bush.

George believes in responsible, con-

servative government; he has shown

the force of character to quickly be-

come a leader in Congress; and he

has the energy and tenacity to fight

toe-to-toe against the liberal Demo-

Let us take note of the change that

has occurred in the Democratic Party

leadership. Let us be proud and ever

grateful to the Honorable George

Mahon. And let us be thankful to have

a candidate of such promise as

George Bush to continue responsible,

conservative representation of West

cratic leadership.

Texas.

We West Texans are fortunate to

Same punches

To The Editor:

It is the time of year that political candidates begin taking off their gloves and swinging away freely. And it is at this time that we find out not only who speaks effectively, but also who speaks to the important issues.

In the crucial race for the U.S. Congressional seat in this district, George Bush has been swinging away since the beginning of the general election. He has been hitting on the issue that his opponent, Kent Hance, cannot effectively represent conservative West Texans because he will be pressured by the liberal Democratic leaders like Tip O'Neill, Speaker of the

Now Mr. Hance has taken a swing. He stated last Tuesday in Dimmit that in his last four elections he has been outspent by his opponents, and he suggested that George Bush was trying to buy the election.

In response, first of all, nobody's vote is for sale.

And secondly, let's look at the facts. As reported by the Federal Election Commission at the end of the primary, the following are total contributions to the candidates: Kent Hance, \$139,000; his opponent, Morris Sheets, \$95,000, and George Bush, \$134,000.

That is a lot of money. It shows the importance which everyone attaches to this race; and it is indeed fortunate that all the candidates have money enough to wage an effective campaign in such a large district.

But it smacks of demagoguery for Mr. Hance to make misleading statements in his hometown which tend to give him a "poor boy," underdog appearance. And it is disappointing to see Mr. Hance taking his gloves off to take the same tired, old political punches at something that is not really an issue at all.

Congressmen jailed, reprimanded in Korean influence-buying scandal

WASHINGTON (AP) - Investigations of the South Korean influencebuying scandal are ending with one former congressman in prison, another facing trial and three present House members reprimanded.

The congressional and Justice Department probes concluded that South Korea carried out elaborate plans to bribe or influence U.S. congressmen, but enlisted only one: former Rep. Richard T. Hanna, D-

Hanna went to jail in Montgomery, Ala., last May after pleading guilty to conspiring to defraud the government. Hanna, who will be paroled next September, admitted working with South Korean rice dealer and Washington party-giver Tongsun Park to influence congressmen to support Seoul.

Former Rep. Otto Passman, D-La., faces trial on charges of taking bribes from Tongsun Park to help Park get rich selling U.S. rice to South Korea.

The House on Friday reprimanded former Democratic Whip Rep. John J. McFall and fellow California Democratic Reps. Edward R. Roybal and Charles H. Wilson for not reporting contributions from Park.

None of the three was accused of being influenced by the South Korean

Three prominent area doctors to speak at forum on arthritis

Three physicians will be guest speakers at a public forum on arthritis scheduled for 7:30 p.m. Thursday in the Central YMCA Health Club, 800

N. Big Spring St. The forum is being sponsored by the West Texas Chapter of the Arthri-

tis Foundation. Speakers will be Dr. William A. Riley of Big Spring, Dr. Kenneth C. Scholz of Lubbock and Dr. B.K. Khandelwal of Midland.

The forum discussion will center on the various types of arthritis, methods of treatment and tips for arthritis victims to help their condition.

Dr. Riley is with Malone-Hogan Clinic in Big Spring and limits his practice to internal medicine and rheumatology. He is a native of Nogales, Ariz., and was educated at Texas Western College and Baylor University College of Medicine.

He did postgraduate medical train-ing at City Memorial Hospital in Winston-Salem, N.C. His residency in internal medicine was at Baylor University College of Medicine. He spent two years in the Fellowship Section of Rheumatology at the Houston medical school.

Dr. Riley currently is vice president of the West Texas Chapter of the Arthritis Foundation.

Dr. Scholz is a resident of Lubbock where he is associate clinical professor in orthopedic surgery at Texas Tech University School of Medicine.

He is a native of Kingsville and attended Baylor University at Waco. He earned his bachelor of arts degree from Texas A&I College. Dr. Scholz received a DDS degree from Baylor University College of Dentistry.

He served residency and fellowships at Parkland Memorial Hospital, Baylor Medical center, Southwestern Medical School and Texas Scottish Rite Hospital for Crippled Children in the fields of general surgery, orthope-dic surgery and rheumatology.

He is on the active staff of Methodist Hospital, St. Mary's Hospital and University Hospital in Lubbock. He is

certified by the American Board of Orthopedic Surgery.

Dr. Khandelwal, a native of India, received his doctorate in medicine from Jiwhai University. He served his internship at Toronto General Hospital, followed by residencies at the University of Western Ontario.

He is certified by the American Board of Rheumatologists and in internal medicine.

Any person with family members who are victims of arthritis, are victims themselves or who are interested in knowing more about the disease is invited to attend.

apparently dies 'natural' death fect that announcement had on sales has meant that the government feels NEW YORK (AP) - Liquid prolittle urgency to ban liquid protein in the near future. Nonetheless, the

By LEE MITGANG

tein, the "natural food" diet fad used by thousands only a year ago, has died a natural death.

Two summers ago, bottles of the hot-selling syrupy liquid were piled high in drug stores across the country. Merchants barely had time to unpack it because, even at the high price of \$12 a bottle, many stores sold out of hundreds of bottles of the stuff every week

But a year ago, the government revealed that the potion was the suspected cause of as many as 16

Now it's hard to find liquid protein in many drug stores, once the main outlet for the diet substance. It has been consigned to the back shelves of health food stores, collecting dust, often unsold past the expiration dates named on the bottles.

'We were selling hundreds of bottles last year. Now we're lucky to sell 10 bottles in a week," says Tony Nigro, manager of the General Nutrition Center in New York. The price of a bottle is down to \$7.77 in that health

food store. The sensational success of the diet ended abruptly after the Food and Drug Administration last November announced it was investigating reported deaths among dieters using liquid protein. The FDA said it would recommend a warning label on bot-

The immediate and devastating ef-

Prices good thru Oct. 17, 1978. Quantity rights reserved.

deaths and possible future health risks remain medical mysteries, and the Center for Disease Control in Atlanta is still searching for answers.

Liquid protein diet food craze

According to Dr. Harold Sours, who is conducting the CDC investigation of the diet, the suspicious deaths occurred between July and November 1977, all were women, and all of them died of myocarditis, an inflammation of heart tissue that is considered very rare in women under 60 years old.

"It was such a strange finding. All the women had been on the diet for an average of five months, and were religious adherents of liquid protein, hardly eating any other food," he said in a recent interview.

Last March and April, Dr. Sours says the center conducted a telephone survey to estimate how many women between the ages 25 and 44 were on liquid protein for more than a month in 1977. Based on the findings, Sours says that about 98,000 women - men were assumed to be infrequent users of the diet - had taken liquid protein for at least a month. And about 37,000 of them used it for two months or

Sours further estimates that female users of the diet increase their risk of death from myocarditis 30-fold over the normal death rate of one or two

But Sours and other investigators remain mystified over just what it is about liquid protein that endangers users' lives. Some earlier theories about bacterial or chemical contamination have been judged unlikely, "but we can't rule anything out yet,"

says Sours. More likely, in his opinion, is that the protein used in the product is of low quality, lacking in some key components known as amino acids essential to keep muscle tissue in the heart

"So, in effect, the heart was aging and dying prematurely," he says, adding that tests done on liquid protein patients often revealed heart irregularities found in starvation.

But it is also possible that, apart from a protein deficiency, the 300 calories a day the liquid diet provides are just not enough to sustain normal

Most of the other health dangers reported by users of the diet - hair loss, loss of libido and abdominal pains — are by and large reversible, according to Sours. But the center is concerned over the possibility that users of the diet may have laid the seeds for future heart trouble, although "we have nothing to back that

Government officials say it is likely that liquid protein will be as difficult to legally ban as tobacco, for many of the same reasons. While statistics show the diet can lead to specific health risks, it may be difficult to show just what it is about the diet that causes the problems.

Next Davis court battle at least one week away

By ROB WOOD

HOUSTON (AP)- There will be at least one more week before another legal chapter begins in the trials of Cullen Davis, a 45-year-old Fort Worth millionaire who has spent most of the last two years either in jail or sitting in a courtroom.

First it was in the West Texas city of Amarillo out in the plains where it can go from hot to cold in one hour, and then to the bustling city of Houston, where already a new one-year record for murders has been established with three months to go and it can turn from hot to hotter in one

Davis is accused of soliciting the murder of Fort Worth Judge Joe Eid-son, the jurist who presided during most of the bitter four-year divorce hearings of Davis and his estranged wife, Priscilla. It was late last year that Davis was

found innocent of capital murder charges in the slaying of his 12-yearold stepdaughter.

That trial, the longest and costliest in the history of Texas criminal prosecution, was held in Amarillo on a change of venue.

Then Davis was arrested for his part in an alleged kill-for-hire plot involving the Fort Worth judge.

Spokesman convinced

TURIN, Italy (AP) - An American computer expert says he personally is convinced that the linen cloth revered by many as the Holy Shroud is indeed the 2,000-year-old burial cioth of Jesus.

Kenneth Stevenson, spokesman for a U.S.-Italian team that conducted five days of scientific tests on the cloth, said Friday it will be six to eight months before the results are

But he added: "I was sure before coming to Turin that the Holy Shroud was the burial garment of Christ. After tests here I have no reason for changing my mind."

The cloth bears the image of a bearded man with the wounds said to have been suffered by Christ in the crucifixion. Previous studies have ruled out the possibility that the image was painted.

The image shows the marks of scourging, thorn-like wounds on the head and a large wound in the chest— the same kind of torture the Gospel says Christ suffered. It also she signs of nails in the wrists and feet.

"Many laboratory checks and a global consideration of tests must be done before issuing any final judgment," Stevenson said. The 50-member team spent five

days conducting photographic, elec-tromagnetic, X-ray and other tests. On Friday, the shroud was returned to the crypt where it has been kept for 400 years since being transferred here from Chambery, France, by its owners, the Savoys, the former Ital-

ian royal family. The scientific team is attempting to determine how the image became imprinted on the linen and to estimate the age of the shroud.

That case was moved from Fort Worth to Houston and into the court of State District Judge Wallace Moore, a relaxed, chain-smoking jurist who many attorneys contacted by The Associated Press consider one of the best on the bench in this, the state's largest city.

The chief defense attorney is Richard "Racehorse" Haynes, who can in a flash change character from a country bumbkin to a polished big city lawyer. Haynes and Moore have been friends for a long time. It was not evident in the pretrial hearings that went through five long, often boring, days.

Moore did grant the defense a oneweek delay in the start of the trial, setting it back from a tentative start Monday to Oct. 23.

The judge said, "The defense's expert witness is out of the state for another trial and we will grant a motion for continuance until Oct. 23. We will make every effort to get the trial started that day."

During the pretrial hearings, the defense presented some 90 motions, some granted, some denied.

The major issue was the use of tape recordings of conversations between Davis and David McCrory, the chief witness for the prosecution.

The judge said the tapes could be admitted as evidence.

There was a parade of stars in the Davis case during the pretrial hearings, including Priscilla Davis and McCrory once worked for Davis and

now says he was asked by his former boss to help kill Judge Eidson and at least 14 other persons. The conversations between McCrory and Davis were taped with

Mrs. Davis was on the witness stand for two days and once asked if she had ever attempted to contact anyone in an effort to have her hus-

band killed, answered: "No, sir." And, McCrory, in a loud and angry voice, denied he had ever told anyone he had been offered a sum of money to turn against his former boss.

McCrory said, "I didn't tell anyone such a thing and if you got someone to say I did, that is a lie."

Haynes and McCrory clashed frequently during the hearing, prompting a warning from Judge Moore, "I will have no more of this. Put it in the record that Mr. Haynes and this witness don't like each other." Before the trial begins there are at

least three sealed motions still to be considered by the judge.

He denied one sealed motion that sources said called for the jury to be sequestered during the trial.

He granted another that would prohibit the prosecution from mentioning

to the jury a bond hearing held for Davis in Fort Worth in August. Davis was denied bond and now is being

held in the Harris County jail.

During the pretrial hearings the defense hit hard at the credibility of tape recordings allegedly linking Davis to the kill-for-hire plot, and this is expected to be one of the main

defense themes during the trial.

Haynes also has insisted "there has been an ongoing effort to make some sort of a case against Cullen Davis since he returned from Amarillo."

Judge Moore said he expected to rule in the next week on the pending sealed motions.

Downtown revitalized in Amish country city

AP Special Correspondent

LANCASTER, Pa. (AP) - The heart of Amish country, where the horse-and-buggy days are with us yet, is not exactly the place you expect innovation to rear its novel head. Yet this city of 55,000 has, with

ingenuity that seems obvious in its simplicity, succeeded spectacularly in a task that has frustrated city after city across the land.

It has revitalized its downtown. Five years ago, in Lancaster, as in

other cities, the center of town was a dreary scene of boarded-up buildings, empty relics of the days before suburban shopping centers.

ment stores closed its doors, more than half the downtown retailers fled in a stampede. Office workers followed. Then came the deserted streets and deteriorating sidewalks and broken street lights, the sad, familiar pattern of America in the '60s and '70s.

It seemed particularly sad in Lancaster, a lovely old city, once the

Nurses set workshop

The Permian Basin Chapter of the **American Association of Critical Care** Nurses is planning a workshop on patient assessment for Tuesday, Patsy Hockman, chairman, announced.

The one-day course will begin at 7:30 a.m. in the Midland Room of the Midland National Bank.

Speakers and their topics include Dr. Brian D. Mohr, cardiovascular; Dr. Seamus E. Carmody, gastro-in-testinal; Dr. Gregory W. Bartha, pul-monary; Celia Harris, RN, neurological; Teresa Guyton, RN, psychological aspects; Dr. Merrill C. Horne, pediatrics, and Dr. Thomas G. McIntosh, patient history.

Advance registrations may be mailed to Mrs. Hockman at P.O. Box 4263, Midland 79701, or persons may register at the workshop. Fees are \$15 for non-AACN members and \$10 for

Assisting Mrs. Hockman with the workshop are Joann Fee, Jan Pickett and Lucille Witt, all registered capital of Pennsylvania — once, in fact, considered as a site for the national capital.

As a trading and manufacturing center it produced for a westering nation the storied Conestoga wagon. Today, its quaint brick streets echo to the horse-drawn wagons of the Amish, the "plain people," who long have questioned the benefits of progress.

Lancaster tried what other cities have tried, a big urban renewal project based on the accepted theory that if you build attractive shopping malls downtown, people will follow. It didn't work.

So Lancaster reversed the conventional wisdom. It adopted the premise that if you bring people downtown, stores will follow

It wasn't all that simple, of course. First, about a dozen of the city's business and professional leaders met, hired a consultant, and settled on a three-way course: develop tourism, renovate housing attractive to young couples and retired people, and, finally, restore confidence among businessmen — not retailers — that downtown is the best area for office buildings.

The city, meanwhile, set about restoring those brick streets, planting trees, spurcing up public facilities. Equally important, City Hall streamlined the tedious procedures contrac-tors face with building inspectors and

Because no flashy new buildings went up all of a sudden, in the fashion of more typical renewal plans, many in Lancaster became dispirited if not skeptical.

Once the corner was turned, though - a new office building here, another there, a new law office, a bank confidence snowballed.

Officers need green thumbs

LINCOLN, Neb. (AP)-Police here need an officer with a green thumb. Among 160 recently recovered stolen items was a large lot of plants. Officers are having trouble finding the rightful owners.

Citizens were urged to reclaim their plants as soon as possible. Police say they can't keep the plants healthy very long because of inadequate faci-

UT to display Gutenberg Bible

AUSTIN, Texas (AP) - After spending centuries Pforzheimer Foundation Inc. in New York. The in a monastery and private libraries, the Gutenberg Bible owned by the University of Texas goes on public display today inside a terrorist-proof case.

University regents approved purchase of the \$2.4 million twin-volume copy in June, with \$1.4 million coming from a fund-raising organization, the Chancellor's Council.

"It's in superlative condition, relatively speaking," Dr. William Todd, English professor, told a press preview Friday. Todd examined the copy and recommended its purchase over two others. Viewers will find one volume opened to reveal

lavish illumination and the other closed to display intricate Old Testament figures stamped into the

16th Century brown calf binding.

Johann Gutenberg changed civilization when he invented movable type and printed an estimated 200 Bibles from 1450-1453 in Mainz, Germany. Only 20 of the 48 copies remaining are complete. In

the United States, other complete copies are at the Library of Congress, Harvard, Yale and the Pierpoint Morgan Library in New York. The volumes rest in a steel, oak and travertine marble case in the Mitchener Galleries of the Harry

Ransom Center. A San Antonio firm specializing in bullet-proof cars, International Security Group Inc., designed the \$8,100 cover. Multiple-alarms, 24-hour guards and closed circuit cameras protect the irreplaceable book, which Todd said cannot be insured. Costs of the case and alarm system were paid by

UT purchased the copy from the Carl and Lily

East Wadley section to be closed Monday

Fart of Wadley Avenue will be closed starting Monday, according to George Medley, a traffic engineer with the city of Midland.

The section to be closed is between Barber Drive to east of the Midland Women's Club in Hogan Park, he The city is paving this street and the road will be

closed at least four days, according to Medley, to

complete the work. He suggested residents trying to get to Midland Women's Club go north on Big Spring Street to FM 868 and turn onto the road that goes by Cubs

Residents going to Ranchland Hill Country Club should go out Golf Course Road until it intersects with Fairgrounds Road and continue north until they reach the country club.

earliest known owner was James Perry (1756-1821) who Todd said acquired it on the Continent.

"I'm not prepared to say," Todd said when asked if the volumes were stolen from a monastery.
"Those were troubled times. I can't imagine a

monastery giving up a Bible. First was the French Revolution. And then Napoleon's army was rampaging through Europe," he said, leaving open the possibility of plundering troops taking the book.

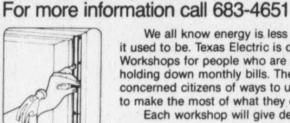

The Latin text in Gothic print leaves no indication of which monastery used it. However, Todd is certain it was used in the monks' dining room, because of handwritten instructions on how to pronounce certain words

"It was used somewhere where the readers were not sufficiently literate in Latin and had to be instructed in where the stress would fall," he said. 'We can assume it was not in one of the large, established monasteries or churches."

Learn how to make your energy dollars go further come to a one-hour

A Self-Help Course to help you balance your energy budget.

Tuesdays - 7:00 p.m. Thursdays — 1:30 p.m. Reddy Room, Midland TESCO Office, 123 N. Colorado

We all know energy is less plentiful and more expensive than it used to be. Texas Electric is offering Operation Tighten-Up Workshops for people who are serious about saving energy and holding down monthly bills. These workshops are designed to inform concerned citizens of ways to use less energy and to make the most of what they do use.

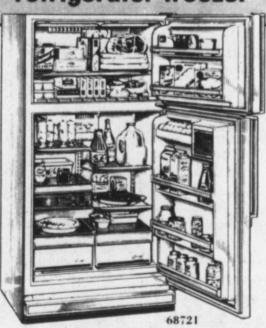

Each workshop will give details on how to manage your energy use more efficiently, as well as information on sealing your home's energy

leaks with insulation, weatherstripping, storm windows and caulking. Please try to attend.

Seven American presidents and 30 years after the 1948 Communist takeover in Czechoslovakia, Prague and Washington are still at odds over confiscated U.S. property and 18.4 tons of Czechoslovak gold.

"It is a waste of time, a waste of effort, a waste of money, a waste of everything," Foreign Minister Jaroslav Zantovsky, a former ambassador to Washington, says of past efforts to settle the disputes and get the gold back home.

The gold, worth about \$118 million at current market prices, was Czechoslovakian government property taken from the country by the Germans during World War II.

It was found at Aachen after the war, in what is now West Germany, and placed under American, British and French control.

Only the Americans object to re-turning it, saying Prague first has to come up with a better settlement of postwar claims, including \$72 million worth of nationalized property once owned by U.S. citizens.

There are other complications, including an \$18 million steel mill ordered and paid for by the non-Communist government in Prague in 1947. After 1948, the Americans kept the money and sold the mill to Argen-

RINGING THE BELL

and initialed them. Neither agreement got through the U.S. Congress. Senate Finance Committee Chairman Russell B. Long, D-La., is credited with almost single-handedly torpedoing the last one, in 1977, telling the State Department to "leave your Santa Claus suits at home" before coming back with another.

Eleven months of negotiations went into the last agreement, and Prague's offer to pay off old claims at 42 cents to the dollar was higher than other agreements approved with Bulgaria, Poland and Hungary.

Since then, nothing has happened. The 1977 setback stunted development of cultural and scientific programs between the two countries and left Czechoslovakia's ailing economy without both the gold and a favored trading status with the United

Although the last agreement foundered largely on cash issues, the issue has since become snarled in East-West disagreements over human

Thousands of Czechoslovaks are still suffering from or recovering from political and career upsets that came with the 1968 Warsaw Pact invasion to put an end to the liberal "Prague Spring" government of Alexander Dubcek. Government crackdowns on critics have made Czech dissidents a prime issue among Western politicians.

"The human rights debate, where the United States and Czechoslovakia are of clearly divergent viewpoints. has caused the area of bilateral rela-

Cars first; now verse

HAMILTON, Ohio (AP) — The poet laureate of the Fisher Body plant is retiring at the end of the year and the question among the fender stampers and tool and die makers is who will write the commemorative poem.

"It's nothing. It's only a hobby, said 61-year-old Tommie Hyde of his hundreds of stanzas, written to fit any and all occasions over the years.

While his subjects range from farm life, coal mines and baseball to installment buying, his co-workers have been memorialized over his 30 years of service in the tool and die

His home as a youth in Laurel County, Ky., has also been immortalized in his verse.

"My grandfather, Dot Hyde, came from North Carolina and swapped a rifle for 500 acres of land," he said. "He died there and my father has lived all his life there. To me, that'll always be home. I take pride in can't get it out of my head."

Hyde reluctantly gave up working in coal mines during the Depression and came to Butler County, Ohio, from Kentucky. "I loaded and shot, dynamited and

did all the different jobs around the mine, but I liked the coal mines. I liked the work," Hyde said.

One of his later poems took a sports writer to task for criticizing the University of Kentucky. He never sent it. He put it in a drawer.

'Why send it? I don't think it would make any difference," he laughed. Hyde said retirement would likely mean a proliferation of poetry.

Black leader must lead many to polls

With BOB TIEUEL

So You Want to Be a Black Leader? "Dear Bob-Since the survival of black folks in America is determined by those who sit on the Supreme Court and school boards, members of city council and the state legislature, the governors of the states and the president, only black people who should allow themselves to be called 'black leaders' are the ones who can get large numbers of registered voters to go to the polls and elect people who will get jobs for our unemployed and contracts for minority businesses, and fight hard for better schools, decent housing and good health care

"Although an individual may be recognized as a good businessman, a good writer, and be an excellent student who makes all A's; until that individual can get large numbers of blacks to register and go to the polls and vote, he is not a leader. In other words, the real leaders of the black community are the people who can get black folks to participate in the political processes that will set them free and make them equal under the

"If we elect our own people, and vote for those who are sympathetic to our interests, we don't have to be filing law suits, in the streets demonstrating, nor jumping up and down on Mr. Charley's desk demanding jobs, tax dollars and government programs which are rightfully ours.

'Census data indicate there are about 15.4 million blacks of voting age but only some 48.7 said they voted in 1976. Surveys show that 60.0 percent of whites of voting age said they voted in that election. Want to be a black leader. Get em to the polls, we say.

Mississippi bellringer sources indicate that the success of Charles Evers, mayor of Fayette, Mis., and brother of Medgar Evers, slain civil rights leader, to mobilize black voters behind his banner could hold the key to the outcome of what may be the most unusual Senate campaigning in

Mississippi in 100 years. Sen. James O. Eastland who had stayed on 13 years past the time when the Voting Rights Act of 1965 began lowering the curtain in Mississippi on a political epoch dominated by open, often virulent racism. As blacks started voting, white politicians stopped "nig-

gering" their way into office. Evers is running for the Senate as an independent in a three-way race that pits him against Democrat Maurice Dantin, the former mayor of Columbia, Miss., and Republican Thad Cochran, a three-term veteran in the U.S. House. A fourth candidate, independent Henry Kirksey, is a black social activist who has mounted

only a nominal campaign. Most observers give Evers only a remote chance of winning the election. Some believe he could siphon off enough traditonally Democratic black votes to tip the election to Cochran. An estimated one-third Mississippi's registered voters are

Some of my oldtime bellringers in Oklahoma remember the 30's. It was the time of 'Pretty Boy Floyd' and his gang that roamed the hills of Oklahoma. Bank robberies were popular, and Floyd told his gang not to attempt to rob the bank at Boley but they wouldn't listen. As a result, his integrated gang was left lying 'stone dead' on the streets. Chief of police at that time was the late Langston McCormick, who died

So on Oct 8, Gov. David L. Boren of Oklahoma declared it Joseph Langston McCormick Day, citing his 46 years as a "policeman and state investigator" and helping to keep peace and promoting law and in order in Oklahoma." McCormick will be placed in the Southwest Black Hall of Fame in Pecos, friends of this column reported. A grand addition, we think.

tions to be largely shelved," says one U.S. diplomat who asked to remain anonymous.

But the same American says there is a chance that progress in Soviet-American arms limitations might help get things moving again.

The Czechoslovaks, meanwhile, say they've grown wary of even opening talks without some assurances that there wouldn't be another last-minute collapse.

"What we are asking for are guarantees and no one is giving us guarantees," says Foreign Minister Zantovsky

"Nobody can guarantee Congress will do anything," says an U.S. em-bassy official, who also demanded anonymity. U.S. law requires one branch of government to negotiate such agreements and another to review the results.

Zantovsky says that in spite of the

latest property agreement collapse, he wrote the Americans a note suggesting an approach to going ahead and working out an implementation agreement on the stalled issue of cultural and scientific exchanges.

"I do not have a reply," he said in an interview with The Associated Press. "The note is now three-fourths of a year old."

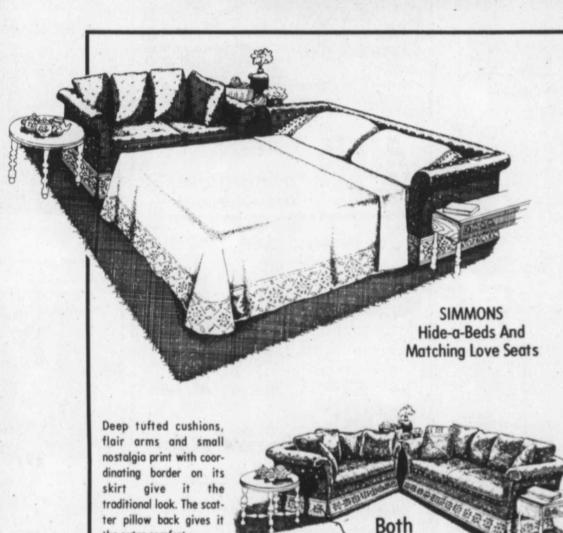

One effect is that instead of presenting its own cultural offerings in Czechoslovakia, the U.S. Embassy in Prague can do little more than offer help to commercially sponsored touring groups and entertainers.

Some exchanges take place, some don't, and the Embassy cultural officer, Bruce R. Koch, says there are no signs of new cooperation from up above the castle.

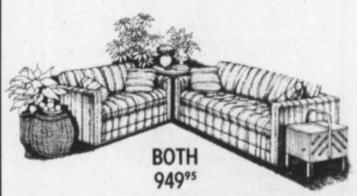

"They tell us they don't see how things can go any further without that implementation letter."

Free-lance artist, Ray wed in prison

By MATT YANCEY

PETROS, Tenn. (AP)-The 31year-old bride kissed her new husband, James Earl Ray, watched guards escort him back to his jail cell and vowed they will be together out-side prison within a year.

"I know we have a lot of adversity ahead of us, but now I'm ready to face it." Anna Sandhu Ray said after she and the convicted assassin of Dr. Martin Luther King Jr. were married Friday by a former associate of the slain civil rights leader.

my life and I'm sure there will be happier days in the future," she told reporters outside the walls of Brushy Mountain Penitentiary, where Ray is serving 99 years for King's slaying in Memphis 10 years ago. "I love him

very much." The Rev. James Lawson, one of the founders of King's Southern Christian Leadership Conference, was the man who invited the civil rights leader to Memphis in 1968. He conducted the wedding in a small visitors room deep

inside the isolated prison. "Certainly Anna and James are oing to overcome their adversity,' Lawson said. "I'm more committed than ever to helping get James Earl Ray a new trial and convinced that one day he will walk out of this prison

Only four guests - Ray's attorney and his associate and the bride's brother and her best friend - were present at the 30-minute ceremony and brief reception featuring a wedding cake baked by Ray's cellmate.

It was the first marriage for Ray, 50, who has spent most of his life behind bars. His bride, a free-lance artist in Knoxville, was divorced five years ago after a three-year mar-

Hours before the ceremony, Correction Commissioner C. Murray Henderson ordered Warden Stonney

Sanders, 88, enjoying life as chicken colonel

By GEORGE W. HACKETT

LOUISVILLE, Ky. (AP) - "Work keeps you young," says 88-year-old Col. Harland Sanders, the man whose fried chicken changed the eating habits of many. "I'm up about 5 a.m. each day and ready to go anywhere they want to send me.

He travels about 250,000 miles a year but still hasn't been able to visit all 48 countries where his product is

"I'm 88 now and still going strong. My ambition is to stay on for another 12 years and then think about retiring," he said. "A man who sits around and does nothing will soon

He says he collects about \$200,000 a year from the Kentucky Fried Chicken Corp. for advertising and promotional considerations, plus residuals

from commercials. "I'm not in it for the money. I've got all I need," he said, adding that his net worth is about \$3.5 million. "The Lord has been good to me so I try to repay him by helping others."

A sixth-grade dropout, he doesn't remember how many scholarships he's created at various universities. "I've got six honorary doctor's degrees. Not bad for a boy who was educated in a one-room country

of murder."

Born on a farm near Henryville, Ind., he learned to cook when he was 5 years old. His father had died and the youngster prepared meals for himself and a younger brother and sister while their mother worked.

"I cooked just like Mom did, and later, when I went into the restaurant business, I just kept on doing it the same way.

After working as a railroad fireman, salesman and a service station attendant, Sanders built a motel and restaurant at Corbin, Ky. It was here that he developed a process for quickcooked fried chicken.

In the mid-1950s, after learning that a new interstate highway would miss his place by seven miles, Sanders sold out and went on the road with his pressure cooker to recruit franchi-

"My wife Claudia and I slept in the car many nights while we waited for a restaurant to open so we could go

into our sales pitch," he recalled. By 1960, when Sanders moved his base of operations to Shelbyville, Ky., there were 400 franchisees. Today, there are more than 7,000.

Sanders sold the business in 1964 and the company, now a subsidiary of Heublein Inc., of Farmington, Conn., retained him to promote the

Alleged sub theft plot motive still vague

ST. LOUIS (AP) — An alleged plot to steal a U.S. Navy submarine may have been a front for a scheme to extort money from the underworld. says an attorney for one of three

men arrested in the case. Donald L. Wolff, attorney for Edward J. Mendenhall, 24, of Rochester, N.Y., made the suggestion in a preliminary hearing Friday before U.S. Magistrate David D. Noce.

Mendenhall and Kurtis J. Schmidt, 22, of Kansas City, who were arrested

DR. NEIL SOLOMON

Asbestos closely linked to cancer

DEAR DR. SOLOMON: Just what exactly is the story about ashestos? I heard something the other day about how men who worked in shipyards during World War II might now be getting lung cancer. My older bruther spent 14 or 15 months in a shipyard then. Just what should he do?-Will

DEAR WILL: What he should do, if he hasn't already, is to tell a doctor of his work experience and get a thorough physical examination. It will probably include a chest X-ray and tests to see how his lungs are functioning. The doctor may advise additional tests depending on your brother's condition.

As you may know, ashestos is widely used in industrial products, and one of the main uses has been insulation in ships. The government estimates that something like 4.5 million workers were exposed to asbestos dust in American shipyards during the peak building programs of World War II.

At that time, the dangers of asbestos were not as well known as now. And several recent studies point up the risk of asbestos-related disease developing 30 or more years later. Hence the present concern.

One disease is ashestosis, a chrunic lung ailment that produces shortness of breath and lessens the lungs' resistance to infection. Another is an unusual cancer called mesothelioma. which strikes at the thin membrane lining the chest and abdomen.

There is also a somewhat increased risk of lung cancer. But here the really great danger is the combination of asbestos exposure and smoking. Past or present asbestos workers who smoke may have up to 90 times the risk of lung cancer compared to nonsmokers who have not been exposed to asbestos. So anyone who has been exposed to asbestos dust should make it an absolute rule not to smoke.

Finally, some studies indicate a link between asbestos and some other cancers-of the esophagus (the tube leading to the stomach), the stomach, the colon and the rectum.

Symptoms that exposed persons should especially watch out for are shortness of breath, a cough or a change in cough habits, pain in the swallowing, prolonged hourseness, blood in the sputum and rapid weight

government has imposed regulations on asbestos exposure in the workplace. So workers today should not run the same risks that their predecessors did. But they should of course take all the precautions detailed by the government, the com-

Jobs where there is a significant ex-

sure to asbestos include-besides shipyard work-construction and building (including renovation), automative brake and clutch installation and repair, the manufacture of a wide range of asbestos products and, of course, asbestos mining and pro-

You can get further information about the asbestos problem from the local chapter of the American Cancer Society or the American Lung Assn. You can write to Asbestos, National Cancer Institute, Bethesada, Md. 20014. But in any case, be sure your brother gets a thorough physical ex-

Y offers new course

Registration is under way at the Midland Central YMCA for a course entitled "The Y's Way to a Healthy Back," sponsored by the Mens and Women's Health Fitness Centers.

Y's Way to a Healthy Back is a course designed to show participants how to relieve their back problems through proper exercise and condi-

The six-week program was developed with assistance from Dr. Hans Kraus, an internatonally known back specialist. Kraus treated the late President John F. Kennedy for his back problem. The class progresses from mild

stretch and relaxation exercises to more dificult muscle toning and flexibility exercises. Participants are trained throughout the course in muscle relaxation and tension control. A ductor's permission is required in

order for a person to participate in the class. This medical check prevents persons whose back problems would not be helped by exercise from parti-

The class will meet Tuesday and Thursday from 5:30 to 6:30 p.m. Tuesday through Nov. 28 in the Dora Roberts Room at the Midland Central YMCA. Cost is \$30 for non-members, enrollment information. Barbar Reynolds will be the instructor.

IN SECTION ONE HEREOF, WHICH

ROCHESTER, N.Y. (AP) - Four local teen-agers, short of cash for their rock band, wrote the Shah of Iran asking for help. So he bailed them out to the tune of \$1,000, the kids say - and the Iranian Embassy in Washington says it's true.

Shah's gift bails

out U.S. teen-agers

The youngsters call their band the Penn Central and say they received a a check from Shah Mohammed Reza Pahlavi last week.

In Washington, a spokeswoman in the Iranian Embassy said Friday night the Shah's government had indeed extended a \$1,000 grant to the youngsters, but she did not know whether the Shah had himself signed

Fourteen-year-old Michael Malone says it began this way:

'My teacher just said that the man was loaded with money. And so I said to my friends, 'Why don't we write to him, since he's got the money and we don't?"

Malone is the keyboard player in the band, whose other members are rhythm guitarist Tom Petronio, lead guitarist Mark Mazzo and drummer Frank LaPlacca. Malone had studied about the Shah's oil-rich Middle Eastern nation at the Bishop Kearney

Dr. Ferguson, 53, attended high school in Brigham City, Utah, and has received degrees from the University of Utah and the University of Utah School of Medicine. She attended the University of Texas Health Science Center at Houston, receiving her masters degree in public health in September 1976.

High School here last spring, and says he put the idea before the others, who approved

In May, he says, he dispatched a letter to the Shah which read:

"I found out that you have a large sum of money. You see we are desperate. Flat broke. What I'm trying to ask you is, could you possibly loan, donate, give, or whatever you call it, some money. I don't know how or if we could ever repay you, but we will try if you like."

"We were skeptical at first," Malone says, but in June the band received a reply.

"Your letter arrived while the three younger children of the imperial majesty were on vacation," Malone says the Shah wrote. "They too are very interested in modern music. If you will provide me with a detailed list of what you will require, I will see that it can be arranged.'

Malone said a list of electronic equipment including a desired selection of mixers, speakers, micro-phones, and amplifiers was forwarded - and on Wednesday, the \$1,000 check arrived in the mail.

"He opened it up and he went pretty wild," recalled Michael's brother, Joe, 16. "He was jumping around." Malone said the band sent the Shah a receipt — and a thank-you note.

"We haven't bought anything yet," Malone said. "We just deposited it. We can probably get everything we want for \$1,000. It should be enough." He said the Shah has asked to be kept posted on the progress of the group, whose next scheduled appearance is

DRILLING EQUIPMENT & MATERIALS EXPERT

THE NATIONAL IRANIAN OIL COMPANY has an important opportunity for an expert in drilling equipment and materials to oversee the extensive operations of our drilling sites throughout Iran.

Operating from our Teheran headquarters, the qualified candidate will identify program and prepare our long-term equipment requirements and recommend the selection, use and maintenance of equipment, tools, supplies and materials. Additional duties will include a current inventory program, expert opinion on all matters related to equipment and materials, initiation of policies, preparation of instruction manuals and training of Iranian personnel, as well as special studies related to use of existing or proprised equipment.

The qualified candidate will have a minimum of a bachelor's degree in petroleum or mechanical engineering, as well as 12 or more years' experience with all drilling equipment, tools, parts and materials. This will include detailed knowledge of relevant standards, specifications, MESC and indenting ordering procedures. Progressive experience in drilling engineering and operations is an advantage. Comprehensive command of both oral and written English is essential.

We offer a minimum 2 year contract, an attractive salary plus overseas benefits based upon family status. For prompt, confidential consideration, please send your detailed resume, including salary history, to:

Edna Cox, of Andrews, finds a unique way of avoiding surf at the black sand beach of Kaimu.

Claude Fergusson, right, were behind bars soon after arriving in Hawaii. Ima Fergus-

Charlie Burns, of Crane, and Midland's son visits the pair, who, despite appearances, are in a Honolulu restaurant.

James Smyers of Andrews clicks his camera at Waioli Garden's multi-colored foliage.

Honolulu's throbbing hotel district lights up at twilight.

Story and Photos by BRUCE PARTAIN

Sitting in a tour bus headed for an extinct volcano, Tommy Ward of Balmorhea fingered the Hawaiian necklace that hung loosely around his

The tiny seeds strung together looked like they might have come from inside an apple.

Tommy was exuberant. "This is the best time I've ever had

in my whole life," he proclaimed to his fellow passengers. On board were 64 Permian Basin

residents, enjoying their "dream

vacation" on Oahu, the most populous

of the eight Hawaiian islands. For many, the recent trip was one of high expectations— tales of exotic foods, sights, and night life had intoxicated the entourage with a feeling that their eight days would truly be an

escape to Paradise. As the bus wound its way up the ancient volcanic flow, passing through spectacular subtropical garden displays, a light mist began falling, giving credence to the driver's remark that it took 180 inches of rainfall a year to keep the philodendrons shooting out their 3 foot

Stopping at the Salvation Army's Waioli botanical garden, where Robert Louis Stevenson's "little grass shack" has been placed, the group of Midlanders and area people resembled a pack of school children, jumping off the bus to dart about the greenery, snapping photos of one

Kermit residents Jean Wildman and Marie Butts let curiosity get the better of them, as they sneaked closer to the Waioli chapel, where a video tape crew was recording a Hawaiian wedding. The two ended up being an unplanned addition to the cast of characters, as the cameraman zoomed in on them.

Moving into the Punchbowl Crater itself, the Texas visitors grew more reverent as thousands of plain bronze grave markers came into sight.

According to Midlander Leon Lloyd, the cemetery — filled with Americans killed in South Pacific ac-

tion - was relatively new. When Lloyd served on the islands as a Navy yeoman in 1944 and 1945, a cemetery known as "Red Hill" was

the Hawaiian burial grounds. "There was row upon row of white crosses then," the Midland chemical

supplier recalled. "They had so many people who had relative's bodies sent back to the states that it became a hodge-podge.

and they moved the cemetery up to the Punchbowl." Lloyd and his wife Nita spent one day of their vacation driving with Gordon

and Edna Cox of Andrews, testing Lloyd's memory of Oahu backroads Mixing days of exploration with nights of "clubbing" at Waikiki en-

tertainment spots became the routine

of the tourists.

Ima Fergusson of Midland brought excited nows after one evening of mai tais and steel guitars.

"I got to kiss Don Ho!" she exclaimed, retelling her on-stage escapades.

According to witnesses, Imafollowed the famous Hawaiian singer about the stage, her hands hooked in his pockets.

"He sure can kiss!" she said, glancing towards her husband, Claude, for a reaction. "Doesn't bother me a bit," said Mr. Fergusson. The Fergussons were celebrating

their 56th wedding anniversary and presumably were secure in their relationship. Big Lake residents James and

Hazel Proffitt were surprised to even be in Hawaii, since they hadn't made any plans or bought any tickets for the excursion.

'Our daughter, Marsha Ellison and her husband Jamie bought us this trip as our 38th anniversary present, explained Proffitt, who is better known as the sheriff of Reagan

"She even went down to the hospital, and arranged my vacation without me knowing about it," said Mrs. Proffitt, a registered nurse. The West Texas group visited the

Polynesian Cultural Center, Waimea Falls Park and "fried on the beach" at Waikiki. One day was spent on a quick flight and exploration of the more active volcanos on "The Big Island" of Hawaii.

Reactions to the different islands varied, but many felt, as Midland's Betty Moreland said, that "the final luau was the most entertaining part of

the trip." After washing down kelp and poiwith the ever-present mai tai concoction, the Permian Basin bunch settled back to watch a South Seas variety show, which included dances from the Phillipines, a fire-walker from Fiji and a Hawaiian male singer who apparently had aspirations to being a Hawaiian Englebert Humper-dinck. Some of the ladies attending

were duly impressed, especially when he introduced his mother. The festivities really got underway, however, when one Tommy Ward of Balmorhea took the stage, answering the call of a heavyweight comedy hula girl for volunteers.

"I finally got one my size!" announced the hula queen, who proceeded to instruct Ward and three others in the grass skirt technique.

Ward, a custodian for the Balmorhea School District, apparently was the star pupil, as he was asked to solo dance down the elevated runway coming off the stage.

"Hooo-wee! I'm havin' fun!" shouted the tall Texan.

Ward, who also made a point of being photographed with any available airline stewardesses, said later he was convinced the Hawaiian adventure changed his life.

'This will sure rile those cafeteria ladies back in Balmorhea, that's for sure," he laughed.

By PATSY GORDON R-T Lifestyle Editor

The Permian Basin Outing Club, a relatively new organization in the area, promotes outdoor activities, such as backpacking, mountain climbing, caving, camping and river

Families especially are invited to become affiliated with the group.

Sex trends studied by university

MADISON, Wis. (AP) - A University of Wisconsin-Madison study of three generations of middle-class women's sex education shows that today's families are more open on sex, a taboo subject when grandma

Iris Ruther Winogrond, working for her doctorate in educational psychology at the university, interviewed more than 240 women in three age divisions: 18 to 29, 32 to 59 and 60 to

"Overall, the study supports the contention that increasing permissiveness across all age groups in the United States is more a sexual evolu-

tion than a revolution," she reports. While most of the study's oldest women reported they learned "the facts of life" from their husbands, the middle-aged and youngest women said they learned from their families, with today's young college women giving credit especially to their mothers as their main source of sex educa-

Nursing profession recognized

Texas Nurse Week, Oct. 15-21, has been declared to give special recognition to those in the nursing profess-

The Permian Basin chapter of the American Association of Critical Care Nurses will be sponsoring a symposium on Oct. 17 to be held at the Midland National Bank.

The annual banquet for all registered nurses in the Midland area will be held at Ranchland Hills Country Club at 7:30 p.m. Oct. 18. The program for the banquet will consist of a presentation titled "Bookeria" to be given by Louise Weegee Hunter of

The Nurse of the Year from each of the Midland hospitals and a community service nurse will be announced and given special recognition during

The nurses participating in the week's activities serve in many areas: the community nurse, hospital nurse, office nurse, industrial nurse, school nurse and nurses in administrative and teaching capacities.

Altrusa observes birthday

The Altrusa Club of Midland, Inc., observed its 30th birthday at a luncheon in the Midland Hilton.

The Midland club was organized in August 1948 and was chartered Oct. 13 of that year. Katherine Shriver was the first president. Of the 25 charter members, five still are active. They are Bertie Boonie, Annie Ford, Caroline Simmons. These members were recognized by the program chairman, Elizabeth Grimm, who is chairman of Altrusa Information Committee, which presented the program. Mrs. Phillips and Mrs. Simmons cut and served the birthday cake, made and presented by Ann Hicks, club member.

by Ann Hicks, club member. 'Altrusa Bingo" was played by the members, with winners determined by the members able to answer the most questions about the Midland

Mary Alice Tidwell, president, spoke on District Nine's conference to be held in Sherman Thursday through Saturday. Assisted by the Midland Chamber of Commerce and the Midland Hilton, the Midland club will bid for the 1982 conference. Miss Tidwell and Myrtlene Bearden are the club's delegates to the conference, and Mrs. Grimm and Mrs. Keisling are alter-

Debbie Gleason, chairman of Community Service Committee, reported club gifts for the Big Spring State Hospital should be taken to Loletta Guffey no later than the next club meeting, and that plans were continuing for block parties for the crime check project. Margie McCain, chairman of International Relations Committee, reported on the club's participation in the Midland schools' Partners in Reading program, noting the need for volunteers for this project. She said the committee also will be sponsoring a linen basket to be displayed in the Dellwood Plaza Mall Nov. 4 as its fund-raising project.

Susan Edwards, who is chairman of the Vocational Services Committee, announced the advocacy booklet being prepared by the committee as a club project is almost ready to go to press, and it is hoped the booklet would be ready for public presentation the first of the year.

Miss Tidwell announced the club will have a booth in Dellwood Plaza Mall Nov. 4 to sell hammers, cutlery, cards and other Christmas items as its fund-raising project.

Dona Stacy was recognized as the club's newest member. Guests were Lois Hearn and Desiree Johnson of Gulfport, Miss., houseguests of Thelma and Roy Gardner.

The International Relations Committee will present the program at the meeting at noon Oct. 26 in the Midland

Service group hosting district meeting today

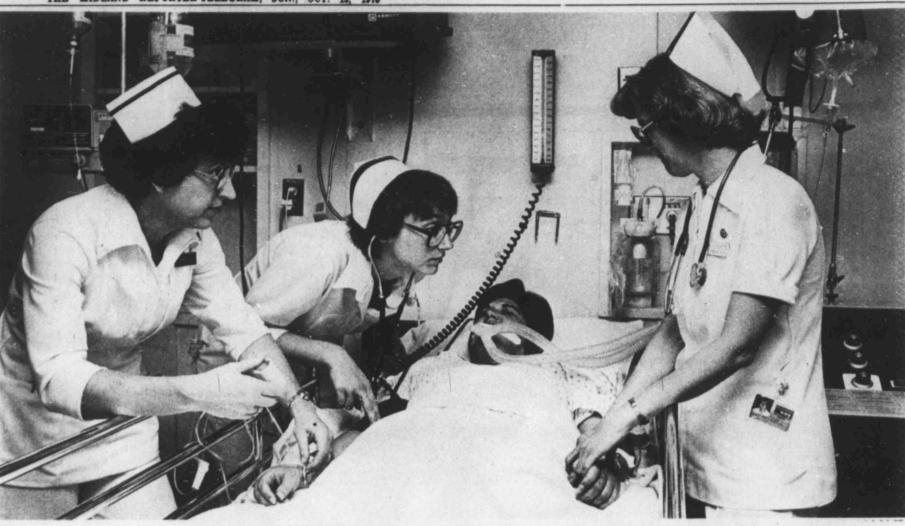

Beta Omega Chapter of Epsilon Sigma Alpha International, service organization, is hosting a district meeting today in the Granada Club, 3312 W. Wall St.

Registration begins at 10 a.m. Lunch will be served at noon, with the business session starting at 1 p.m.

ESA members from Andrews, Big Spring, Fort Stockton, Kermit, Midland and Odessa make up District

The Cystic Fibrosis Foundation. District VIII's service project, will give a presentation about its work and

possible projects. Persons interested in ESA may contact Marilyn Yeager, 684-7023, or Patty Cooper, 697-1852.

workshops, symposiums, scheduled weekly classes and teleconferences.

LEE MAJORS REGISTERED JEWELER AMERICAN GEM SOCIETY

THE SPECIAL EFFECTS DEPARTMENT

Light unlocks the beauty in gemstones. Not only is it responsible for the rainbow of colors, sparkle and dispersion which catches the gem lover's fancy, but it is also the cause of the mysterious special effects we call gemstone

The reflection of light is responsible for several interesting effects. Light reflecting off the fibrous structure in tiger's eye produces a silky sheen. Chatoyancy (the cat's eye effect), a welldefined band on the stone's surfact that opens and closes with the right movement, is caused by the reflection off tiny crystals, tubes or cavities within the stone. Several stones exhibit chatoyancy, but chrysoberly cat's eye is the most highly prized. Asterism (star effect) is caused by conditions similar to those which prompt chatoyancy, but in this case the needles intersect at 60° angles. Star ruby and star sapphire are the best examples of this phenomena. Aventurescence is a metallic spangled effect caused by the reflection off tiny platelets or flakes of an included mineral in the host material. Aventurine quartz, sunstone feldspar and golden coral exhibit this ef-

The special effects story will be continued in our next article. Space limits the depth to which we can carry the subject in this column. However, if you would like to learn more, please feel free to stop by the store.

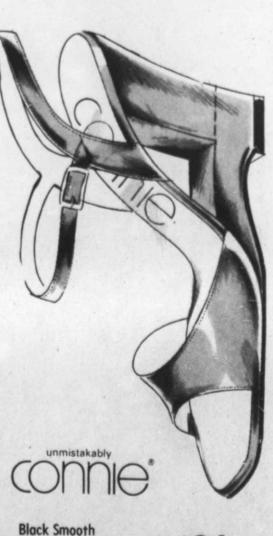

skirt and shawl with beautifully tailored satin blouse. Ivory. Sizes 4-16. Skirt \$58. Blouse \$38. Shawl \$30.

how's your fashion geometry?

Here's a shoe that equals an even greater fashion look than the sum of its arcs and angles--and you don't have to be a math major to see what we mean. Look at the contours. The lines. And that crazy right angle scooped right out of the wedge.

-6961

By TOM GABLE Copley News Service

If you are looking for a sound red wine with both aging potential and pocketbook appeal, then Zinfandel from California might be right up your palate.

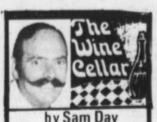

First, supply is not limited. The grape is widely planted the flourishes in many part of the state. More than 40 wineries now produce sound wines from Zinfandel.

Second, there is a style for almost every preference, from light and quaffable (Almaden, Foppiano, Concannon, Krug) to the thick, Portlike, late-harvest wines with 16 percent alcohol (Monterey Peninsula, David Bruce and some Ridge wines). You can even find with Zinfandels and roses.

Third, good Zinfandel, in the hands of a skilled wine maker, can have qualities very similar to Cabernet Sauvignon, the great red wine grape of Bordeaux which is now being made into fine wines in California (with accompanying high prices).

Finally, good Zinfandel has aging potential. During its youth, it is often called "berry-like," with a straighforward fruitiness and hints of wood in the background. With a little aging, a good Zinfandel gains some sophistication and complexity, not unlike the bottle bouquet taken on by Cabernet Sauvignon.

To determine the aging qualities of Zinfandel, we set aise wines from several vintages—1967, 1970 and 1973—and tasted them at regular intervals.

wine cookery, why not substitute Sake for any recipe that calls for a dry white wine or sherry. Try this recipe for an appetizer, blend 6 ounces of cream cheese, two thirds of a cup of cottage cheese, 2 thsp. soy sauce, 2 thsp. sake, and ½ thsp. ground ginger, together. Fold in ½ to ½ oz. can of tiny shrimp, drained, 8 canned water chestnuts, chopped, and ½ cup chopped green onions. Chill thoroughly and serve in large shells with potatoe chips.

When you're looking for a change of pace come to IM-PERIAL LIQUORS, 3209 W. Wadley. From coid domestic and imported beers to wines of all kinds to a full line of distilled spirits, we have the beverage selection that allows you to change your pace whenever you desire. Come by today and select the beverage that will satisfy your toste this evening. Open 10a.m.-9p.m. Monday -Saturday. Tel. 694-4256.

Who gives you important work, good pay, a variety of shifts, and half of each year to pursue your own interests?

Texas Instruments is looking for people to work as electronic assemblers from now until mid-December. The job is temporary. The rewards can be lasting.

For instance, you'll learn about how a growing new company in your community builds great products such as electronic calculators and digital watches. And you can come back again next year.

TI lets you know your work is important. The pay is good, and there

is a choice of shifts available. You'll discover that the products you are making are helping make life easier for people all over the world.

If you're a housewife, student, or anyone who wants to earn extra cash for the holidays, apply now. Come to the TI Employment Center at the Midland-Odessa Air Terminal.

8 a.m. 'til 8 p.m. Monday through Friday and 8 'til noon on Saturday.

An equal opportunity employer M/F

TEXAS INSTRUMENTS

The best of two worlds

It's all arms and trombones as these Midland horn players work on their music during one of the early morning rehearsals that will put them through their paces and try both their talents and endurance.

This musician pays close attention to Midland High School band director Clyde Wilson as he gives instructions from his 20-foot high scaffolding.

While football teams all across America are in locker marching bands are on the field providing the fans with music and entertainment.

Being a musician is tough enough, but to have to remem-ber detailed choreographies at the same time you are playing, doesn't make it any easier.

It takes practice and more practice before the members of the band march and play as one

A marching band is a team as much as anything else.

Be it trumpet player or quarterback, each person must learn their assignments and patterns for that night's performance on

The band director is to the band like the football coach is to the players.

Each instructor is prodding their charges to perform just a little better, with that extra edge that will make them winners.

And a band director can be just as tough as any sports coach.

Though perched on a scaffold or roof to get an overall view of the scene, directors seem to have keen eyes that quickly spot an out of synch performer.

One step may be practiced

many times before the director is satisfied with each person's

This can at times take on the atmosphere of a slapstick come-dy: An entire band takes one arched-back step foward and freezes in its tracks.

The ninth or tenth "again!" will bark out from the director's bullhorn and in unison the band will groan or berate the member who did not perform to the director's approval.

They will fall back into place and do it again.

And woe be it to the person who repeats his mistake.

Marching band directors, as a lot, seem to have very little patience with mistakes.

There are always details to be worked out and new march routines to try.

But there never seems to be enough time for the director to make sure everything is just

But when the band marches on to the field to do their show all he can do is watch from the sidelines.

Even if the steps are crisp and the lines are straight and the music is played well, chances are good he will want to work on many things at the next practice

Lee High School's band director the last-minute details with his Van Ragsdale goes over a few of group before a game.

Story and photos by Mike Kardos

Rearing back to better project his music, Lee High School sophomore Steve Spencer will play a few more warm-up songs before the football game.

Musicians play a few lazy notes and the flag corps works on their twirl as they wait for the final pregame practice that is about to commence.

odist Church here.

Miss Griffith, James Leiser repeat vows

Margaret Anne Griffith and James Stephen Leiser were married in a double ring ceremony at 7:30 p.m. Saturday in the Episcopal Church of

the Holy Trinity.

Mr. and Mrs. Robert Edwin Griffith of Midland are the parents of the bride. Dr. and Mrs. Alfred Emil Leiser of Houston are the bridegroom's parents.

The Rev. Samuel Hulsey officiated. John Bryant was the organist, and A. A. "Buzzy" Bucks of Austin was so-

Victoria Griffith of Austin, sister of the bride, was maid of honor. Bridesmaids were Katherine Riggs of Houston and Ann Tillett of Austin. Mrs. Robert Crow of Corpus Christi, Mrs. Edward Tinsley III of Austin and Mrs. Robert Wheless of Houston were

The father of the bridegroom was best man. The groomsmen were Thomas Leiser of San Francisco, Calif., and Gregory Leiser of Houston, brothers of the bridegroom; Charles MacGregor, Houston; Gary Gray of Denver, Colo., and Edmond Richards of Austin.

The ushers were David M. Griffith of Sierra Blanca, brother of the bride; Andrew McGrath, Seattle, Wash.; Stewart Morris Jr. and Marcus F. Schwartz, Houston; William R. Paschal, Austin, and Michael Hedrick,

Presented in marriage by her father, the bride wore a classic gown of ivory satin faced crepe combined with re-embroidered Alencon lace and bridal pearls. The gown featured a lace bertha encircling the shoulders, forming a cape-like sleeve, and accenting the Empire line of the bod-

Mrs. James Stephen Leiser

ice. The jeweled lace bertha dipped to a natural waistline in back. The fluid skirt of ivory crepe fell to slipper length and swept into a court-length train. A border of jeweled lace encircled the entire hem of the skirt. She also wore a long tier of silk illusion in her hair. Fresh stephanotis encircled her chignon. Attached to the bride's bouquet of white Cymbidium orchids was the lace handkerchief carried by her great-grandmother in her wedding in 1900.

The reception was held in the Petroleum Club of Midland.

The couple will reside in Denver, after a trip to the Virgin Islands.

Debra Ann Sewalt, Hayes marry

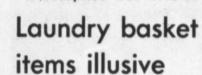

ABILENE-Debra Ann Sewalt of Abilene became the bride of James Lee Hayes of Midland in a ceremony at 6:30 p.m. Saturday in the First Christian Church. Dr. Ray Bristol of Midland officiated the double ring

Parents of the couple are Mr. and Mrs. Jesse Herschel Sewalt of Abilene and Mrs. James C. Hayes, 907 Harvard Drive, Midland, and the late Mr. Hayes.

When presented in marriage by her father, the bride wore a princess style floor-length gown of white satin overlaid with white tulle. The bodice was of Alencon lace and featured a yoke of shirred tulle. The sheer bishop sleeves were gathered into wide cuffs of shirred tulle. The mantilla veil was of French illusion outlined with Alencon lace. She carried a cascade of stephanotis and gardenias.

The maid of honor was Allene Hunt of Dickinson. The bridesmatrons were Mrs. Tom Sharrick of Midland, sister of the bridegroom; Mrs. Larry Sprayberry of Anson and Mrs. Dan Anderson of Beeville. The bridegroom's grandfather, I. L. Edwards of Midland, was best man. Groomsmen were Tom Sharrick and Terry Little of Midland and Robert Wayne Hayes of Bryan, uncle of the bride-

The organist was Janice Miller. A reception was held in the

TOLEDO, Ohio (AP)-Barbara Gearhart tossed her baby's towels and wash cloths in a laundry basket, awoke the following morning and found them gone.

Assuming that her husband, Tom, had handled the chore, she called to thank him, and learned that he had not washed them at all. He thought they were clean, folded them and put them away.

Mrs. Gearhart put the laundry back into the basket and left. She returned to find the laundry gone again. This time she assumed that her sister, Anne Hebert, who had stopped in earlier, had done the laundry.

She called Mrs. Hebert to thank her, and learned that Mrs. Hebert, too, had thought they were clean, folded them and put them away.

The Opportunity Center Auxiliary met in the home of Mrs. J. M. Patter-

Following the regular business session, Mildred Farris of Mildred's Flowers gave a demonstration on making cloth flowers and accents.

The bride attended McMurry College and is a cum laude graduate of the University of Houston Pharmacy School. Hayes attended Texas A&M University and The University of Texas. He also is a graduate of the University of Houston Pharmacy

School and is employed by Service Drug, Inc., in Midland.

Following a trip to Montego Bay, Jamaica, the couple will be at home in

The bridegroom's mother entertained with the rehearsal dinner in The Westwood Club.

Giant onion must rank as one of the most spectacular

By EARL ARONSON

AP Newsfeatures One of the most spectacular flowers in our garden is the giant onion. which grows three feet tall, topped with five-to six-inch purple balls of hundreds of florets. This allium (Giganteum) and other members of the allium family are planted in the fall and bloom in

Alliums, with their showy flowers in rounded clusters on long, leafless stems, provide color from early spring to mid-June. Treat them much as you do tulips, hyacinth and daffodils. We put our allium bulbs six inches deep into the ground in the fall and dig them up for rest in late spring or early summer after the big, low-growing leaves have ripened to give strength to the bulb for another season

of flowering. The bulbs should be planted base down in loosened soil, covered about four times their height, ones a loot apart. Some varieties may grow five feet tall. Smaller varieties are decorative in wild or they dry out), sprayrock gardens. Just give them a well-drained place in the sun. You don't have to dig them up each year - only when

Wrap with insulation

By ANDY LANG AP Newsfeatures

Q. - The cold-water pipe under our kitchen sink sweats very badly and drips water onto the floor. This does not happen to the pipe that carries the hot water. Why does this happen and how can we correct the condition?

A. - The sweating is caused by condensation, the same thing that occurs to windows under certain conditions. Condensation is the result of warm, moist air settling on a cold surface. It usually happens in rooms where there is excessive humidity. You can prevent it by wrapping the exposed part of the pipe with insulation sold specifically for that purpose. It can be purchased at hardware stores, lumber yards and buildingsupply dealers. While wrapping the pipe will halt the condensation forming on the pipe, it will not correct the basic problem of too much humidity, which may cause sweating on some other cold surface. If you cannot provide some means of permitting the moist air to escape, you may have to get a dehumidifier, which captures

and many others that, in having work done on the roof, a reliable roofer should be chosen. Fine, but how does one find out whether a roofer is reliable? We need our roof re-shingled.

A. - The first and best way to obtain a reliable roofer - or other contractor - is to get one who has been recommended by a friend or relative. If you can't do that, ask the roofer for the names of some people who have used his services. Also, ask him for references. He should willingly give both. He can also be checked out with a local bank where he does business or even with your own bank, which handles home improvement loans and has a good idea of who the good contractors are. You might also try the Better Business Bureau, which does not make specific recommendations but will advise you if there have been excessive complaints about a particular roofer. Once you decide to do business with one man or company, be sure he or it is insured for on-the-job accidents. And get everything in writing - the details of the project; the types of materials that will be used; the com-

DEAR ABBY

Sex not only for the young

By ABIGAIL VAN BUREN

DEAR ABBY: Jim and I have been married for over 40 years. We are both in our late 60s and still love each other deeply. However, due to Jim's impotence, we have not been sexually active for at least three years. This has not altered our relationship one iota. We still have a wonderful marriage and don't feel necessarily deprived.

Abby, I resent the constant bombardment from TV, radio and newspaper and magazine articles insisting that anyone who is under 90 and isn't sexually active should rush out and get some kind of therapy in order to live a "full life" again.
Jim and I DO live a full life. Sign

me. ..-CONTENTED

DEAR CONTENTED: If you're contented, fine, but the bombardment you resent is intended for the older person who buys the myth (and it IS a myth) that sex is for the young only.

Not true. Of course, with increasing age comes the natural slowing down of the entire body, sexual activities included, but they need not stop. After all, just because you can no

longer Charleston all night doesn't mean you can't waltz for an hour. DEAR ABBY: I have been going with a woman for nearly two years and I have never seen her in a dress!

She absolutely refuses to wear one. I have quit taking her out in public because she insists on wearing pants everywhere. Once, I even gave her money to buy a dress, but that didn't do any good.

Tell me, Abby, is there something wrong with her? Or do you think maybe I'm expecting too much?-GLEN

DEAR GLEN: There is a remote possibility that her legs are disfigured, or she considers them unpresentable.

In any case, it's her right to wear whatever she chooses, and it's your

right to refuse to escort her for reasons of your own.

DEAR ABBY: Will you please put something in your column that would be a tremendous help to a lot of

I refer to those individuals who are constantly complaining about their aches and pains.

A lot of these folks read your column. Please give them some kind of message. A gentle hint does no good. They go on and on.—TIRED OF HEARING IT

DEAR TIRED: We are all familiar with the type of "organ recital" you describe. In this connection, no one has topped the advice of the late Ella Wheeler Wilcox;

"Talk health. The dreary, never ending tale of mortal maladies are worn and stale. You cannot charm or interest or please by harping on that minor cord—disease. So, say that you are well, and all is well with you."

Men seek cosmetic surgery

By ELAINE Q. BARROW

NEW YORK (AP) -Looking into the mirror, it's not only women who want to erase the ravages of time. Men represent a substantial 35 percent of the persons seeking cosmetic surgery, a New York City specialist

Dr. Gerald Imber views the increase in male patients as "absolutely unbelievable."

Some years ago," he says, "men represented 10 to 20 percent of our are having face lifts and the bags under their eyes removed. Younger men are having nose jobs and hair transplants.

"But men are babies when it comes to surgery. Women are wonderful," adds Imber, who with K. J. Wagner has written a book, "Beauty by Design: A Complete Look at Plastic

Surgery."
When is the time to consider cosmetic sur-

mirror one day and you When you don't feel as ng on the outside as ou do on the inside."

Women evidently reach that stage between the ages of 45 and 55 and they seek face lifts. The average is older for

Fantasy often plays an once told prospective fainsidious role, and Imber is frank to say that plastic surgery is not for ev-

eryone.
"It's not magic," he says, "and any patient who believes that plastic surgery will change his disapointed with the re-

While it can improve a person's looks and confidence, he says, "personal problems will not vanish and depression can-

not be turned around." Imber points out that he screens prospective patients and, because of unrealistic expectations, turns down as many as 20

Nasal surgery, he says, poses the biggest area of dissatisfaction. He sits down with the patient over photographs and they sketch possibili-

"The patient draws, and I draw," he says. "I see what he or she wants and what I can deliver. I can deliver 90 percent of what I've shown in the drawing. If a patient doesn't like what's in the picture. I bow out He said that he gave

prospective patients 'the downside - the worst they can expect," adding, however, "essentially there's no pain. It's about two aspirins

worth of pain." While a colleague of his

celift patients to expect to emerge from surgery looking as if they had been hit by a small European truck, Imber is less

negative. "There still is black and blue in some affector her life is going to be ed parts immediately after surgery," he says, "but with advances, it is minimal these days." He credits the improvement to a new technique in in-

> serting sedatives. Another advance in surgery achieving major strides, he says, applies to reconstructing breasts following a mastectomy, a development in which he says he is proud to have played a part.

A change of attitudes by surgeons performing mastectomies is hearten ing, too, he says, ad-"Twenty years ago,

they used to tell the patient, 'We saved your life, what else do you want?' Now they're doing horizontal incisions and leaving muscles in the chest wall, which makes for easier reconstruction."

Costs are high. Dr Imber estimates that in major cities prices might be \$1,500 to \$3,000 for rhinoplasty (nasal reshaping); \$3,000 to \$5,000 for a full face-lift and eyelids; \$1,500 to \$2,500 for eyelids alone; \$1,500 to \$3,000 for breast en-

It's anchors aweigh for women

By DIANE CLARK Copley News Service

Deborah Cummings may have stepped into a traditional man's job when she became the first enlisted woman assigned to sea duty aboard a Coast Guard cutter last September but she taught the men to knit and crochet.

"They made their own sweaters and made mittens for Christmas presents," Cummings said in a telephone interview from San Francisco.

She is a hospital corpsman 2nd Class who served aboard the San Francisco-based cutter Morgenthau for about nine months.

The Morgenthau and her sister ship, the Gallatin, based in New York, became the first cutters to have women crew members and officers. Each has 12 women.

It was an experiment that must

have worked because the new Coast Guard commandant, John B. Hayes, announced recently that all restrictions based on sex in training, assignment and career opportunities would be dropped.

From now on, mixed-sex crews will be assigned to any Coast Guard unit, either afloat or ashore, which can provide separate sleeping and bathroom facilities.

Cummings, who had to leave the Morgenthau prematurely because of a head injury and is based at Yerba Buena Island, was elated at the new policy.

"When I joined this service (in 1975)
I was told I'd never see sea duty and two and one-half years later I was at sea ... I love sea duty. Getting under way is almost indescribable, it's so

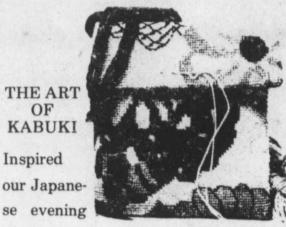

Home title important

An important step before completing the purchase of a home is determining whether the seller has good title to the property.

This normally involves an expert search of the public records for information about the real estate, which culminates in assembling a history of its ownership.

Esstential as this search is to you and your mortgage lender, it does not offer the maximum protection available. Sometimes the public records will contain an incomplete or an inaccurate history

Free information on home ownership safeguards may be obtained by writing American Land Title Association, Box 566, Washington, D.C. 20044.

Family budget must combine incomes

By ELAINE Q. BAR-ROW **AP** Newsfeatures

A budget you can enjoy? One that fits your style of living? YES. Author Alice Priest has come up with some fresh ideas that advocate happy saving and

happy spending.' Too often the word "budget" carries the connotation of a stringent, rigid, rule-ridden way of dealing with money

Mrs. Priest points out, however, that there are no right or wrong attitudes toward money. Each person has a choice in the way to spend or save money — which she explains in a book she has written.

"The book emphasizes strategies that you ought to - rather, might adopt," she says. "It has no 'ought'to's'.

Mrs. Priest urges the reader to "find out about yourself; are you a hoarder or a spender?"

A test of 30 questions is included in her book. Once answered, you'll find out if you are a careful spender (sometimes balance between saving, point of her book: spending and credit, or a high scorer who tends to 'hold money very light-

Each is given specific advice on how to save, buy insurance and housing, pay college and transportation costs, and use of credit. There are also tips for combatting inflation

Mrs. Priest, an editor of Business Week magazine who often writes the cover story, says tools for building a budget include four elements - insight, input, involvement and income.

The insight can be gained from the quiz and the input by a family brainstorming session to set goals. As for involvement, Mrs. Priest suggests that both husband and wife take turns at handling the family expenses, and that even a teenager might take a stint at keeping the

The family budget, she says, should include the combined income of husband and wife for the combined expenses of the family. If only one spouse works, she says, equal credit should be given for the other's labor in keeping the

Handling money is emotional, she observes. Once you understand your emotional approach to money — and that of other family members you can plan strategies. Money is said to be the

No. 2 problem (after sex) in marital strife. If both partners understand how they respond psychologically to money, they can adjust to each other's

goals - or shared goals. Although Mrs. Priest professes no bias toward hoarders or spenders, she indicates in conversation that compulsive savers miss out on a lot of living.

"There is a risk for those who save (compul-sively),'' she says, "There's the risk that they won't enjoy the fruits of their labor.

"They may get to the point where they will be too old to spend their money and be able to enjoy it, or will have to spend it for things they didn't expect to."

She adds, "We've all seen parents who left their kids well fixed and then the kids went out on a spending spree, which is the last thing their parents would have want-

But Mrs. Priest does not knock impulse spending, either.

"If that's your want, over-cautious); a mid- you should have disposdle-grounder who able income to spend," achieves a reasonable she said, bringing out a

> "A personal disposable income is the essential ingredient in every budget. It is the sum of money assigned each month to both partners to spend or save exactly as each sees fit ...'

She calls it "nag-free, happy" money and contends it is "the most important safety valve any marriage can have.'

With the approaching holiday season, she has some advice for those who stick to their budgets throughout the year only to go on a Christmas shopping spree.

"Whatever you plan to spend, you should add a

I have to show I can afcushion to it," she says. As for equating extravford it?"" Mrs. Priest and her agant, monogrammed,

husband, Richard, a fidesigner purchases with status, Mrs. Priest says, nancial executive, have "I don't believe buyers a son and a daughter. Asked if she handles are saying, 'This is for

ern (e//

By JEANNETTE BRANIN Copley News Service Recently a story appeared in the

newspaper about a woman who had found weevils in her flour. She asked what to do about it. She was told to inspect all meals and flour products, to throw out anything that showed signs of webbing and to scrub, scrub,

'Your article was very interesting but you didn't go far enough," wrote Irene C. Cowell.

You didn't go far enough and tell all the ladies how to keep the weevils out of their flour, meal, etc."

Irene was the first of many to write about the favored preventive: bay

"About 10 years ago I read an article saying bay leaves work, so I tried it and haven't seen a weevil since. I put 3 or 4 bay leaves in each of my containers and change them about every 6 months. It really works,"

"As you know, there's no odor given off, so it's a perfect solution as far as I'm concerned.

In the same mail came a letter from

Love Magness, who said she places bay leaves on the shelves as well as in containers of flour, cornmeal, dry cereals, etc.

'They will go away and stay," she said. "It does work and the bay leaves do not impart any flavor to the product it is stored with or near.

"It is a very inexpensive solution that will keep you from losing expensive grocery items.'

The use of bay leaves is a honey of a solution, wrote Mrs. E. Putzier. But she goes even farther to protect against weevils.

"I do, cautiously, put things in jars prefer the spearmint for its pungent leaves) and I'm so grateful, so I

thought I'd pass it on.' Albert Hoge stapled six bay leaves to his letter in which he said that he, too, had found that bay leaves in grain products will keep the weevils out and will not affect the flavor or odor.

A different procedure was Yet another method is recom-recommended by Mrs. Kaj Louring. mended by Elizabeth N. Shor: Chewing gum, unchewed.

"Take an unwrapped piece of chewing gum, any flavor, although I found in such things as spices and fish

or large cans or a plastic bag, in case. aroma and flavor, and place the piece Someone told me (about the bay of gum on the package of cereal, flour or spice," wrote Louring.

"Use cellophane tape to tape it on, and then about every six months check each package and renew the gum with a fresh piece. I assure you, from personal experience, this really works.

Freezing. She fights both the flour weevil and the tiny black beetle pest food, with that method.

"To combat both kinds of pests, I use my freezer and my refrigerator,' she wrote. "I freeze every newly purchased container of highly seasoned spices as I buy them, just overnight, before putting them into the cupboard (in case they are already infested).

"I store my cornmeal in the freezer and I find that it pours and mixes just as readily while frozen. I keep variety flours in the freezer." Shor said she buys seed mix in bulk for her parrot, and stores it in the freezer.

Biennial Basin oil show giant among exhibitions

The Permian Basin Oil Show! It is a giant among oil and gas exhibitions. For persons directly associated with the oil industry or one of its allied industries, a visit to the hundreds of exhibitions is a must-if for no other reason than to be brought up to date on the very latest in equipment used in the exploration for oil and gas.

And, for non-oil members of the West Texas-Southeast New Mexico community the show grounds will be a good place to get educated to the ways of the Permian Basin's most important industry. There will be plenty of sights for everyone.

The huge four-day show gets under-

way Wednesday at the Ector County Coliseum complex and will run through Saturday.

Larry H. Byrd of Midland, president of this year's show, and Jay Alvey of Odessa, executive director of the big four-day exhibition, expect the turnout this week to be the largest in the show's history.

Held biennially, the show's exhibits feature everything to do with the exploration for and production of oil and gas from the smallest ball bearing to some of the giant drilling rigs of the industry.

The show's 445 exhibitors will put on

view for the oilman and the general public every device imaginable that is associated with the petroleum industry-there will be exploration equipment, testing equipment, completion equipment, refinery equipment. You name it, it can be found somewhere on the show grounds.

And, it probably will take a grocery sack for the visitor to carry off all the free gifts that will be offered in many of the exhibit booths.

The 1978 version of the Permian Basin Oil Show will be represented by 22 states, including Texas, Arkansas, Arizona, California, Colorado, Geor-

gia, Illinois, Iowa, Kansas, Louisiana, Michigan, Minnesota, Missouri, New Jersey, New Mexico, New York, Ohio, Oklahoma, Pennsylvania, South Dakota, Wisconsin and Wyoming.

And, there will be 53 cities from outside Texas with exhibits at the mammoth show. California leads in this category

with nine of its municipalities in attendance: Bakersfield, Huntington Park, Laguna Beach, Long Beach, Los Angeles, Newport Beach, San Diego, San Fernando and Santa Ana. Oklahoma follows with eight: Bro-

ken Arrow, Duncan, Eufaula, Mus-keegee, Norman, Oklahoma City, Shawnee and Tulsa. Louisiana is represented by six

cities, Abbeville, Gretna, Lafayette, Houma, Mansfield and New Orleans. The champion out-of-state city from the standpoint of number of exhibitors is Tulsa. That city, the No. 1 oil city in Oklahoma, will have 16 exhibi-

tors at Odessa. Oklahoma City follows with 12 exhi-

Other out-of-state cities sending more than one exhibitor to the show grounds are: Denver, Colo., and Hobbs, N. M., six each; Newport Beach, Calif., five; Chicago, Ill., and Wichita, Kan., four each; Los Angeles, three and Farmington, N. M., and Cleveland, Ohio, two each.

Host city Odessa is the grand champion among all the cities with 140 exhibitors. Houston, the oil capital of the world, will be represented at the show by 74 exhibitors. And, Midland, the headquarters

city of the vast Permian Basin Oil Empire, the largest oil producing province in the United States, will have 45 companies showing their wares and technology during the four-day show.

The fifth top exhibiting city (following fourth place Tulsa with its 16 exhibitors) will be Dalias with 14 companies on hand.

In all, 40 cities within the Lone Star State's boundaries will have one or more booths or other exhibit areas at the Ector County Coliseum complex.

They are: Abilene, Andrews, Arlington, Austin, Barker, Big Spring, Borger, Brady, Carrolton, Conroe, Crane, Dallas, Del Rio, Electra, El Paso, Fort Worth (8), Gainesville,

Frank N. Ikard to be honored Friday

During each biennial Permian Basin Oil Show the exposition is dedicated to some phase of the energy industry and an honoree is selected who is representative to that phase.

Frank N. Ikard, president of the American Patraleum Institute since 1963, has been named as honoree of the 1978 Permian Basin Oil Show. As honoree of the current oil show Ikard will symbolize the oil industry's constant battle against government regulations and interference while trying to meet the nation's demands for energy.

As API president, Ikard heads one of the world's largest trade organizations. He first became associated with API in 1961 when he was named executive vice president, a position he held for two years until he was named president in 1963.

Ikard is well suited for the top API position because he was a gracticing: attorney and a former member of Congress.

Although Ikard's office is in Washington, D.C., he maintains his official residence in Wichita Falls.

A native of Henrietta, near Wichita Falls, Ikard began the gractice of law in Wichita Falls following his graduation from the University of Texas Law School in 1936. His law practice was interrupted in 1942 when he entered the Army

during World War II. He was a combat infantry man in Europe, where he was wounded twice, captured by the Gernams and spent the remainder of the time as a prisoner of war. The honoree returned to his law profession in Wichita Falls in 1940

where he was in private practice until 1951 when he was elected to the U.S. House of Representatives in 1951 from the 13th Congressional District which includes Wichita Falls and the Panhandle of Texas. During his 10 years in Congress, Ikard was a member of the House

Ways and Means Committee. He resigned his Congressional seat in 1961 to become executive vice president for API. In addition to serving in Congress, Ikard also served four years as a district judge in Wichita Falls. He has been admitted to the practice of

law in Texas, the District of Columbia, and the Supreme Court of the United States.

After being named to his position with the American Petruleum Institute in Washington, Ikard continued to render service to his native

He was appointed to the Board of Regents of the University of Texas-System in 1965 to fill a two-year unexpired term. He was re-aggninued to a full six year term as a regent in 1967. Both appointments were made by the then Governor John B. Connally. Ikard was elected vice chairman of the board of regents in March 1971 and also served as chairman of the regents' executive committee.

Ikard holds a life membership in the UT Ex-Students' Association and was a member of the board of the Houston Medical Foundation, a nonprofit corporation formed to assist in the development of the ET Medical School at Houston.

He has served on the advisory board of Georgetown University's Center for Strategic Studies in Washington and also on the hourd of several industrial and financial institutions.

He is a member of the National Petroleum Council and a U.S. Committee member for the World Petroleum Congresses. Bland is also secretary and trustee of the John F. Kennedy Center for the Performing

Ikard attended the UN Conference on the Human Environment att Stockholm as a member of the U.S. delegation. As honoree of the 1978 Permian Basin Oil Show, Ikard will be presented during ceremonies at noon Friday in front of the main gates of the oil

schedule from Fort Stockton, San Angelo, Crane, Big Lake and Rankin. The Midland members are Midland, vice president; Ediffe Dur-rett, Odessa, vice president; Hall, immediate past president; Alvey; G. W. Barth, Mobil Oil; R. K. Beggs, Tuesday: Exhibitor's and press cocktail party 7 p.m. to 9 p.m., Pan American Ballroom Hamid L. Bethancourt, Sun Oil; Ted Lewis Gray, Odessa, treasurer; in Odessa. Alvey no oilman, but he knows about shows

man and hasn't given even wants to be an oil-

So, what is he doing serving as general man-ager of the Permian Basin Oil Show for the 22nd year? There are a Alvey has been managpair of reasons. First, he works cheap, and sec-ond, he is highly success-

ful at it. If a person had to describe Alvey's philosophy concerning the Per-mian Basin Oil Show it would have to be, "It's hard to improve on success."

14 presidents Professionally, Alvey is vice president of Odessa's First National Bank where he is in charge oxf the Marketing Department. Ernie Schur, The modern version of the Permian chairman of the bank's Basin Oil Show (two were held before board of directors, said Alvey was "loaned" to the outbreak of World War II) has the oil show 22 years ago seen 14 show presidents take their when the show was in turn at successfully ramrodding the trouble and needed some help, and he has been Lloyd R. French of Midland, president of French Tool & Supply, was the first president when the show was doing the job of manag-

ing it ever since.
With the staging of the resumed in 1950 and he is the only man to be president of back to back 1978 Permian Basin Oil shows, having served a second time in Show this week in the Ector County Coliseum W. D. Lane, Midland, superintencomplex, Alvey will be in his 22nd year as oil show dent of the West Texas Production manager. He has served Department for Plymouth Oil Co., under all but two of the was the second man to take over. He show's president, and probably knows more Other past presidents are Roy about the Permian Basin Carter, Kermit, Carter Foundation; Arno Anders, Continental Oil Co., event than any other Odessa; J. C. Hostetler, Hostetler Enman alive.

Because of his long experience in putting the show together most of the ones in the past have been pretty much routine Odessa, McVean & Barlow; P. E. Fletcher, Midland, Atlantic Richfield with only those problems that come up in the last-minute scheduling Co.; Vernon Blain, Odessa, Johnn causing him any worry

And, Frank Lovering, Odessa, Phillips Petroleum Co.; J. W. Hall, Odes-sa, Loffland Brothers Co. Alvey is a man who favors change in the oil show, but only if it will be of benefit to the Larry Byrd, division production su-cerintendent for Exxon Co., U.S.A. in entire show and he is sure it will work. He Midland is president of the current admits that he has made some changes in

ODESSA-Jay Alvey past shows that didn't ies clammoring for isn't an oilman. In fact, work out as well as ex- space. But there just he has never been an oil- pected, but he wasn't wasn't any more to be afraid to go back to the any indication that he proven way of doing things until something better could be found.

The 1976 Bicentennial Oil Show probably reflected more changes than any show since er. That was the year the Ector County Cioliseum was opened to exhibitors for the first time. And even then, Alvey was a little hesitant to tell the

Jay Alvey has directed Permian Basin Oil Show 22 years, serving under 11 show presidents.

board of directors of the show that the entire 125 new spaces would be sold by showtime.

In fact, Alvey was quick to tell the board that some of the coliseum might have to be blocked off with a large curtain to hide the unsold

It just proves that even Jay Alvey can be wrong about the possibilities of the Permian Basin Oil show. The coliseum was sold out a month prior to the 1976 event and most new exhibitors said they wanted the same space for the 1978 show. After the coliseum was

sold out that year, only one building remained where additional space could be had for exhibitors. That was E Building on the coliseum grounds which traditionally had been used for storage of exhibitors'

display crates.
Once again Alvey told directors the additional space might not all be sold, and once again he was wrong. After the first week of taking orders for space, the building was filled and still there were compan-

This year, only one change of note has been made in the staging of the oil show. F Building, which always has been reserved for booths of chambers of commerce and other civic and business organizations, has been turned over to exhibitors with oil-related companies.

"We hated to do away with the spaces for the chambers and other organizations," Alvey said but our exhibitors and visitors spend a ton of money to come to Odessa for the Permian Basin Oil Show and the directors just felt the show should feature as many oil-related exhibits as possible because that is what they come here for," Alvey said the oil show this year has 130 outside spaces for exhi-bits and 527 inside spaces for a total fo 657 exhibit

"That may sound like lots of space," he said, "but it really isn't. It was all sold out three months before the opening date and we still had a waiting list."

"In the future, I think we will have to be more selective about new exhibitors for the show," Alvey said. "From now on, if we take on a new exhibitor, that company will definitely have to be in an oil-related business

of some type."
Few of Alvey's suggestions for changes to the board of directors have even caused a ripple among the directors over the years. Mainly be-cause they know he has thought it out and he is

pretty sure it will work. There was one suggestion for the 1976 Oil Show that caused more than a little discussion at one

(Continued on Page 2AA)

Nuclear energy gaining worldwide adherents

WASHINFGTON. D.C.-Nuclear energy, as a source of electricity, continues to gain adherents throughout the ordered in 1977, to 29 tries outside the U.S.

In a little more than a year, the number of countries outside the United States with announced nuclear energy programs rose from 46 to 52; electrical megawatt capacity of total plant commitments rose 20 percent, to 436,012 me-

up substantially, from 12 survey units (12,171 megawatts) units (27,711 megawatts) scheduled to be place on the books in 1978.

tries-where energy options are especially limited-account for much of the nuclear commitment increase," Atomic dent Carl Walske said in gawatts (151 reactors)-releasing that trade as-

MIDLAND. TEXAS

ATTEND THE **OIL SHOW OCTOBER 18~21 ECTOR COUNTY COLISEUM** The Permian Basin Oil Show is the largest of its kind in the world. Hundreds of exhibitors display their products or services during the four day affair With the focus of the nation on the oil industry, the Permian Basin will play a large part in meeting these needs. To supply this soaring oil consumption, petroleum companies will spend millions to expand research and development: Attend the 1978 Permian Basin Oil Show and get a glimpse of one the largest, most exciting industries in the world today.

exploration program.

HOUSTON-General Crude Oil Co., a whollowned subsidiary of International Paper Co., and Houston Oil & Minerals Corp. announced results recently upon completion of their joint venture's 1978 drilling program in the western Brooks Range of Alas-

During the 1978 field season, 79 core holes, totaling approximately 35,-000 feet of core drilling were completed in an area of about 200 acres.

Sixty-five of these core holes encountered mineralization in various zones at depths ranging from 30 to 850 feet. Preliminary alalysis of the cores indicate approximately 19 million tons of mineralized rock containing an average of 3.3 percent lead, 9.3 percent of zinc and 1.4 ounces of silver per ton.. Substantial additional drilling will be required to confirm these estimates and to define the full area extent of the deposite.

The exploration was conducted on federal mining claims approximately 80 miles north of Kotzebue, Alaska, and 50 miles from the Chukchi Sea. The possibility of a major mineral discovery at the site was first announced by the two comanies in September ator and has an equal 1977 after the completion of seven core holes. API fears effect of another Mideast embargo

WASHINGTON, D.C.-How would the nation fare should there be another Arab oil embargo?

The American Petroleum Institute tries to answer that question in the following statement released last

"Answer: Not well. Although there has been a considerable increase in private storage of oil and some efforts at conservation, the U.S. is consuming more, and more importantly, importing increasing amounts of oil from the Middle East.

"In October 1973 when the embargo began, oil imports accounted for 36 percent of U.S. demand. Today, despite the recent temporary decline, imports account for 42 percent of U.S. demand. Long-range predictions foresee a gradual increasse until 1990. when imports will amount to 50 percent of U.S. consumption.

What is even more disturbing is the fact that only 14 percent of U.S. impots used to come from the Arab nations. Today, five years later, those nations now supply nearly 50 percent of all U.S. oil imports. If a 14 percent cutoff in oil shipments could wreak havoc as it did in 1973, a 50 percent stoppage now could be much worse. The last embargo, according to some calculations, caused a \$10 to \$20 billion loss in the Gross National Product, and the temporary loss of 500,000

"A good case could be made for the premise that the root cause of the nation's current energy problems was the war that broke out five years ago, on Oct. 6, 1973, between Israel and the

"On Oct. 17 that year, Libya, Saudi Arabia, Iraq, Kuwait, Algeria, Egypt, Abu Dhabi, Bahrain, and Qatar met in conference and voted a five percent cutback in oil production from their countries, with a similar reduction planned each month until Israel withdrew from Arab territory occupied during the 1967 Arab-Israeli war.

"But in little more than a month, on Nov. 26, the Arab states announced a total embargo of oil shipments to the U.S. They said the cut-off would remain in effect until the U.S. withdrew

support from Israel.
"It was not the embargo alone, however, that caused the oil shortage that was to follow in the U.S. In an effort to 'share the shortage,' the U.S. government promulgated regulations at the onset of the embargo that effectively prohibited refiners from processing more than a certain amount of crude oil, even if such oil were available.

"Because stocks of crude oil and products were high, and some shipments were still in transit, the full effects of the embargo were not felt until the early weeks of 1974. By then,

the country had begun to react. Some companies started reducing lighting, shutting down machinery, and setting

up new energy saving policies.
"The chemical industry was affected more than most, because of its heavy reliance on petroleum to make fertilizers, plastics, rubber and other materials. Major industries dependent on these dproducts, such as automobiles, pharmaceuticals and textiles, had to curtail operations.

"Approximately 20,000 gasoline stations-about 10 percent of the nation's total-closed down. Other stations closed on weekends. Some states instituted certain days for motorists to buy gasoline-drivers of cars with odd license plate numbers were eligible to purchase on odd number calendar days. Motorists with even plates cars and higher costs for gasoline and heat. People will have to learn some harsh lessons.' "Although the Arab-Israeli war had ended comparatively quickly with a UN-sponsored ceasefire on Oct. 24, the Arabs did not call off their boycott of the U.S. until March 19, five months after it began. Meanwhile, they had raised their crude oil prices four-fold, thus igniting a recession-inflation-trade deficit crunch.

"After the embargo ended, people began looking for scapegoats, and the most visible were those whose names appeared on the gasoline pumps that had suddenly gone dry-the oil companies. Consumer advocates, including Ralph Nader led the outcry: 'Unarmed robbery by oil companies and the government.' Some CongressIn all, 3,000 firms in 48 industries are participating in the Department of Energy's voluntary energy conservation program.

"Reflecting the impact of cost, Americans have responded to their higher home-heating bills by installing more insulation, storm windows, weatherstripping and other heat-saving devices.

But state and local governments. despite fresh grants from the federal government for the purpose, have found the going difficult for their conservation programs.

"For example, in Delaware, Robert Bartly, the state director of Energy Conservation, says that "the level of awareness isn't as high as we would like it to be-there are a great number of people who haven't even done

Originally, the 500 million barrels was thought to be enough for a 90-day supply, but increases in demand have raised the requirement to 750 million barrels. To be on the safe side, some

now recommend one billion barrels. "There is also continuing controversy over location of the storage areas. Suggestions range from the Northeast U.S. to Hawaii. At Louisiana and Texas sites, the storage program is running behind schedule. Less than five percent of the 500 million barrels, an amount that would jast only about a week at current rates of consumption, assuming a 3.5million-barrel-a-day cur ailment, is

"Some legislators now are beginning to bridle at the cost of the program. Originally, it was estimated at

crude oil, if such oil were available. The fertilizer and petrochemical industries were hardest hit by those refinery cut-back regulations."

bought on even days. Everywhere, long lines of motorists formed to buy

"It was not the embargo alone that

caused the oil shortage that was to

follow in the United States. In an effort

to 'share the shortage,' the U.S. gov-

"In some cities, hundreds of cars stretched as far as the eve could see. some lines winding around corners creating traffic jams. As the lines lengthened, tempers shortened. Fistfights were reported, and some motorists even pulled guns on atten-

"Demand for siphoning equipment and gasoline tank locks rose. Many motorists bought additives in efforts to stretch what gasoline they could

"Gasoline rationing was seriously considered by the President, and coupons were presented.

"Congress reduced the highway speed limit to 55 miles an hour-a limit that is still in effect. Commuters formed carpools, or bicycled, or walked to work. Overall driving decreased by five percent as Americans joined in a wide-spread conservation

"Because of fuel shortages, airlines shortened, or cancelled schedules, and some of these forced changes are still in effect today.

"Congressional and administration leaders agreed to collaborate on a bipartisan fuels emergency act. The legislation gave the President wide powers to cope with the shortage, among them the authority to limit business hours.

"Interior Secretary Rogers C. B. Morton said at the time: 'We may even have to start closing our schools. On a long-range basis, there's going to have to be a change in the American ethic. We'll have to go to smaller men joined in: 'One major oil company is delaying truckloads of fuel.' Even service station employees were quoted: 'The big oil companies are running up the price.'

"Yet the oil companies for years had been warning, and still are, that over-dependence on foreign oil would one day cost the country dearly.

"The fact is that the U.S. government was totally unprepared for the embargo of 1973, despite these warnings, and a further fact is that the country now possibly is even more vulnerable to a Mideast oil cut-off.

'For one thing, the government has continued to maintain controls on petroleum, thus failing to dampen demand by allowing market forces to reduce consumption. Prices have remained artificially low, and there has been less incentive to explore, develop and produce more oil domestical-

"Except for Alaskan oil, no new major domestic source of oil production is in sight, and reserves continue to fall. Atlantic offshore exploration continues, but any new major oil discoveries will take six to ten years to bring production.

"To be sure, there have been some efforts at conservation of energy, but a large segment of the American population seems unaware that there is any urgency about the nation's energy situation. Conservation efforts have been accomplished by industry for the most part.

"Some industries have made major gains in energy efficiency. The petroleum refining industry, for example, has cut the energy used to refine a barrel of oil by 16.9 percent since 1972.

ernment promulgated regulations at

the onset of the embargo that effec-

tively prohibited refiners from pro-

cessing more than a certain amount of

"Even in Massachusetts, which ranks with California and Minnesota as among the more aggressive states in conservaiton, and whose energy plan has been chosen as a national model by the Council of State Governments, a study by the Massachusetts Public Interest Group concluded that energy waste in retail business "has gone from excessive to more excessive in the last two years

"Though late model automobiles are more energy efficient than the older models, demand for gasolinethe principal petroleum product-is on the upswing, reaching an all-time high of 8,014,000 barrels a day in July, a 7.7 increase over July of 1977. Since the embargo, U.S consumption of motor fuels had been rising at an average yearly rate of about two per-

"The reason is that there are more automobiles on the road today and mileage driven per car is almost back to pre-embargo levels. Moreover, the 55 mph speed limit is often ignored.

"Efforts to achieve significant savings through conservation has been hindered by a generally prevalent belief that the current glut of oil in the world and the nation's strategic storage program will provide protection against any stoppage of oil imports.

"In 1975, the federal government established a program under which 500 million barrels of crude oil would be stored in underground salt domes, or similar caverns, by the end of

"But problems have arisen with that plan. Proposals have been made to increase the amount of storage. \$8.8 billion. Now the program has doubled and cost estimates have risen

"Current oil supplies are more than adequate, but some experts feel this is a temporary circumstance. The present supply situation is largely the result of the entry into the oil market of three new major oil suppliers-the United Kingdom, Norway and Alaska. The combined production from these new sources is estimated at three million barrels a day, which has

oversupply situation. "However, the growth of production from these areas is expected to taper off by 1979-80. Says one authority, C. C. Garvin, chairman of the board of Exxon Corp.

tended to create a temporary world

"The current surplus of oil should not be regarded as a basic change in the energy supply-demand situation. It reflects a modest surplus of crude oil and product inventories, created chiefly by lower demand last summer (1977) than a number of suppliers anticipated.

"There will be periods when availability exceeds current needs, but world demand is continuing to grow at a rate that will require the development of about one Alaskan North Stope every year. We must hold down growth in consumption and raise energy supply capacity if we are to avoid shortfalls," Garvin said.

One Alaskan North Slope every year is a large order, and many geologists and other experts believe it is unlikely that sufficient new domestic reserves will be found to keep pace with rising consumption of oil over the long term. The U.S. and most

industrial nations thus will be increasingly dependent on oil supplies

"Probably the most powerful man in Middle East oil circles is Sheik Ahmed Zaki Yamani, the oil minister for Saudi Arabia, who contends that the U.S. fear of an Arab embargo is groundless, and that the real danger of any oil stoppage could come from Russia.

"In a recent Canadian television interview, Yamani said: 'I do expect the Russians, who will one day in the future be a net buyer of crude, to come and try to surround that area. dictate their terms and get their share of that oil, and this is exactly what is happening now,' he said.

"He cited that Soviet presence in Ethiopia and SouthOYemen, on oppo site sides of the Red Sea shipping lanes, to support his statement.

"He also said there is a possibility of an inadvertent shutoff. A fire could break out in the oil fields. Should that happen, he said, questions of a 'glut' or of short supply or of balanced supply, would be irrelevent.

When you have fire beside the oil, there'll be disaster and you (the West) will pay the price, because it won't be just a cutdown in the supply, it will be a serious interruption,' he

"Gen. Maxwell D. Taylor, former chairman of the Joint Chiefs of Staff. agrees with Sheik Yamani's assessment of the Russian presence. One of the Soviets' principal areas of pressure are against the United States, General Taylor points out, has been an economic one, such as 'interrupting the flow of Middle East oil to the U.S. and other Western markets.'

"The U.S. is to energy consumption as Saudi Arabia is to production. America consumes about a third of all the oil used in the world every day, and a seventh of all the oil used in the world every day is burned on American roads and highways.

"And what is the U.S. government doing to extricate U.S. citizens from this heavy reliance on imports? A little, but not nearly enough. There is the storage program, which as noted is moving too slowly; the National Energy Program, whose impact on oil supplies, if passed, is questionable. and a contingency gasoline rationing

Some experts have expressed doubts about NEP. An impartial observer, Michael Spicer, a member of the British Parliament and prominent economist, has predicted that soon the U.S. will be importing more than half of its oil, whether Congress passes the energy program or not. He warned that with the next decade, oil

How much of what you own is really yours?

You're familiar with the tax the government levies on your right to make money. It's called income tax, and it to Uncle Sam and your family. you pay it every year. But even though you've paid income tax all your life, part of what you have left still isn't yours.

You see, the government also levies a tax on your right to keep what you've earned. It's called estate tax. You may not be familiar with it, because you've never died.

You spend a lifetime building your estate. Suppose that much of your estate is tied up in your business. You have plowed your profits back into the business to keep it growing, locking your assets up in cattle, oil and cotton. You owe little or no money at all.

Yet the day you die, you may owe hundreds of thousands even millions — of dollars in estate taxes. Those dollars you've locked up will have to be unlocked. Liquidation may be the only way. You've spent a lifetime building your estate. Uncle Sam will take it apart in one day!

You cannot deed your entire estate to your family. You will deed Uncle Sam will come first, and your family will come second.

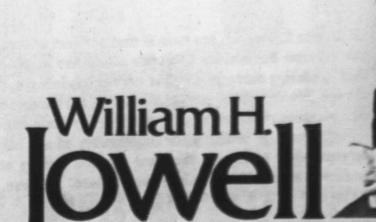

A person must either create enough cash to absorb the tax impact, or the tax impact will absorb the estate. I can create that cash for you. The tool I use is life insurance. I represent New York Life in the Permian Basin.

You can accomplish more with life insurance, with more certainty, than you can with a lifetime of work. For pennies on the dollar, I can help you create instantly the cash you need to keep what you've built. Let me show you how I can pay the taxes for your estate, instead of from your estate.

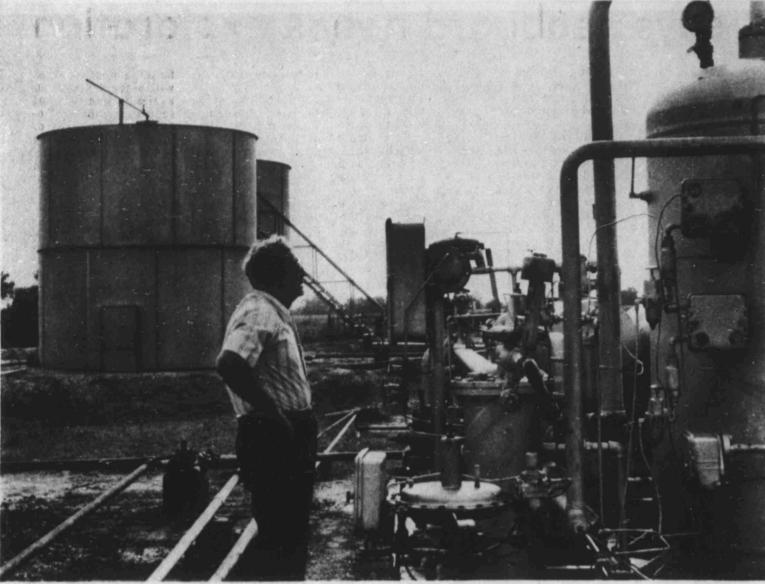

If you're interested in learning more about estate planning and conservation, Call or write: William H. Jowell

Committed to the Future of the Oil Industry

North American Royalties, Inc., a company committed to meeting present and future needs, including the need for domestic energy sources. A company committed to the future of the oil industry.

NAR carries on oil and gas exploration on the North American continent through four district offices, the largest of which is located at 200 Wilco Building in Midland. Headquartered in Chattanooga, Tenn., NAR's Oil and Gas Division is expanding its role in the industry.

NAR's modern foundries in Chattanooga meet other transportation and industrial needs.

NAR: A story of commitment to the

NORTH AMERICAN ROYALTIES, INC.

Listed on the American and Pacific Coast Stock Exchanges (Symbol: NAR)

Much of nation's crude comes from one-man producing areas

LAKE CHARLES, La.-To many people, the oil industry in this country means bigness. It means huge refineries, mammoth tank farms, and oil fields where pumping units are scattered out to the horizon.

In reality much of the oil production in the United States is on a much smaller scale. A good example is the oneman oil field operated here by Aminoil USA, a subsidiary of R. J. Reynolds Industries, Inc.

The "field" in this case is made up of the three remaining wells of what once was a flourishing oil and gas field. And the "one-man," the only fulltime employee at the field, is Walter Duncan, a production foreman who has been with Aminoil for almost 25 years.

"I can remember in the late '50s and early '60s," he says, "when this field was realy booming. We had some real good wells; the best one produced 10 million cubic feet of natural gas and 500 barrels of oil every 24 hours."

Today, in a typical 24hour period, the three South Lake Charles wells produce about 120 barrels of oi! and 100,000 cubic feet of natural gas. Maintaining even that reduced rate of production while keeping a tight rein on costs is a job that keeps the 62-year-old Duncan on his toes.

Since suffering a heart attack earlier this year, more on the occasional says this one could even other man and I used the

The semi-submersible drilling rig Ocean Victory, operated by Texaco, found the first shows of oil and gas production in the Baltimore Canyon off the coast of New Jersey. Texaco first reported shows of natural gas Aug. 14.

Unit increases yield

CHICAGO, ILL.-Amoco Chemicals Corp. announced a new high-density polyethylene production unit utilizing gas phase technology which has increased total capacity to 350 million pounds per year, using only half the energy required by particle form or other gas phase plants.

The new production facility, installed at Amoco Chemicals' Chocolate Bayou complex in Alvin, Tex., is the product of more than six years of research and development of new process and catalyst technology by Amoco Chemicals' scientists at the Amoco Research Center, Naperville,

and precessing characteristics equivalent to those made by the conventional particle form process.

Amoco also produces polyethlene and polypropylene, based on proprietary technology. The company's total thermoplastic polymer capacity is 1.5 billion pounds per year.

Amoco Chemicals is a subsidiary of Standard Oil Co. (Indiana),

"TALL COUNTRY FOR THE TALL CITY"

Midlanders share in economy boost

The multi-billion dollar boost that oil and gas industry opertions gave to the Texas economy in 1977 was shared by the citizens of Midland County.

The marketed value of petroleum production in the county has been calculated at \$139.7 million in an economic activity profile of the state's top producing counties prepared by the Dallas-Lased Texas Mid-Continent Oil & Gas Association.

"Texas's oil and gas industry remains the cornerstone of the economy of the state and many of its counties," said the association's president, H. B. "Hank" Harkins of Alice, independent producer and drilling company executive. "It is imperative that the state maintain taxing and regulatory policies which will encourage the growth of this industry."

Midland was one of 201 counties last year which produced petroleum with a market value of \$100,000 or more. The county ranked 33rd in the

estimated total value of petroleum produced.

The Texas Mid-Continent Oil & Gas Association has computed that approximately \$77.2 million came from the production of 8.5 million barrels of crude oil, with approximagtely \$62.5 million attributed to an outpout of 69.1 million MCF of natural gas. Payments last year to owners of royalty in Midland County were calculated at \$17.5 million,.

While paying local, county and state property taxes, producers in the county also helped support state government through production tax payments estimated at \$8.2 million. This included \$3.5 million from crude oil output, \$4.7 million from natural gas.

According to the Texas Employment Commission, during 1977 8,663 employees worked for the industry in the county. The reported payroll amounted to an estimated \$146 million.

The search for additional petroleum continued in Midland County last year. Oil and gas developers spent an estimated \$6.1 million in the drlling of 28 wells. Approximately \$609,500 of that amount was lost in two dry holes. The 26 wells included 24 oil producers and two gas pro-

Processing also contributed to the county's petroleum-related economy through the operation of five natural gasoline processing plants with a combined daily capacity of 228.1 million cubic feet.

Oil stored for embargo

HACKBERRY, La. (AP) - There are 43 million barrels of imported crude oil now stored in huge caverns hollowed out deep inside some Gulf Coast salt domes — and that's just a drop in the bucket.

The spectacular fire at one storage cavern here was an expensive complication - but not regarded as a serious setback in an unusual project born of world politics.

Before it is over, the Strategic Petroleum Reserve of the federal Department of Energy hopes to have up to one billion barrels of Arabian crude stashed away for emergency use.

It is an oil bank set up to weaken the power of far away sheiks and kings, a savings account to fall back on in the event of another Arab oil embargo like the one that jolted the United States in 1973.

The bank, fed by a parade of tankers from the Persian Gulf, would hold enough crude to offset the loss of imported oil for months.

It's an upside down business pumping oil out of the ground in one part of the world and pumping it back

Congress authorized half a billion barrels as a starter, at a cost of \$8 billion, and President Carter wants it in the vault by 1980.

ed by the Department of Energy: Hackberry, or West Hackberry as the facility is known locally, Bayou Choctaw, La., Weeks Island, La., and Bryan Mound, Texas.

The great salt domes that are being used as storage vaults are embedded all along the Louisiana. There are about 130 of them, forced up from the depths eons ago by enormous pressures but still entirely under-

They are roughly circular, ranging in size from a few yards to over a mile

Holes can be leached out inside the salt domes with water pressure. But oil does not dissolve salt, so when the hole is filled with oil the cavern is rather like a giant glass bottle.

Crude oil is lighter than brine and sits on top of it. When a barrel of brine is pumped into a cavern it displaces a barrel of oil - or vice versa.

The caverns here were the first to feel the gush of oil, and Hackberry has become the show piece of the project. Originally expected to have a capacity of 74 million barrels, plans now call for 234 million barrels.

A pumping complex at the surface handled input and output, and underground pipelines will connect the banks to major oil terminals.

Wood waste from logging no longer wasted EUGENE, Ore. (AP) - Wood from Douglas fir bark that can be

waste from logging operations that once went up in smoke or kept down weeds in someone's garden is now being developed into products that could heat a building or be used for many other purposes.

Researchers around Oregon are tinkering with experimental factories to see if the tons of bark and scrap wood produced every year can be used profitably.

In Albany, Ore., a company working for the federal Department of Energy is using a \$3.8-million testing laboratory to squeeze heavy fuel oil out of powdered wood chips.
A 50-year-old Brownsville, Ore., en-

trepreneur turns out about 125 tons of wood pellets per day, described as more efficient than coal. The pellets, dubbed "Woodex," have heated a hospital for two years.

An old sawmill about 10 miles north of Eugene produces a form of wax

process, Mudge said.

he said.

used in furniture polish, carbon paper and plastic moldings

Rudy Gunnerman's Brownsville factory sells Woodex - which looks like rabbit food - to about a dozen institutional customers in the Pacific Northwest. He said pellets costing \$1.20 to make provide the heat output of coal costing \$2.40 or oil at \$3.

His process starts with bark delivered to the plant from local lumber mills. It is ground to the consistency of face powder and then compressed at pressures of more than 30,000 pounds per square inch.

Western State Hospital has used the pellets for heating since 1976. Jim Spangler, hospital plant manager, said the fuel saves about \$500 per day in heating costs, reduces mainte nance and has eliminated spending \$200,000 for anti-pollution equipment. In Albany, a private company, Bechtel National, Inc., has been turn-

DOE hurrying nature RICHLAND, Wash.— thesis gas. They hope to and 650 degrees C (1020 Coal and petroleum are increase gas yields and 1300 degrees F.)

> Potential for biomass energy is enormous. Studies indicate that the logging industry alone produces an estimated 120 million dry tons of wood residues annually. At an average of 17 million British thermal units per dry ton converted at 45 percent efficiency, those logging wastes could produce 400,000 barrels of oil daily.

The gases produced in biomass conversion can be used directly or converted into other products. Hydrocarbon synthesis gas could be converted into liquid fuels and substituted for gasoline. Methane can be used as natural gas is used now-either as a direct fuel or as a feedstock to produce other chemicals. Ammonia synthesis gas could be used as a feedstock to produced between 550 produce fertilizer.

We salute the oil industry! Welcome, oil visitors!

What can Oxxford Clothes add to a Gentleman's appearance? The look of success.

An Oxxford suit has fashionable symmetry to its lines and balance. These impeccably hand tailored clothes tend to slim one's appearance and emphasize an impressive carriage. How? 1) The coat pockets in Oxxford jackets have a "bellows" construction that prevents external bulge from even bulky contents. 2) The patch pocket garment is sewn on the outside of the coat by hand. 3) Waistband and trouser pockets are made from a single piece for a thinning effect. 4) There are ten hand-turned belt loops, two more than normal, for sizes over 36. 5) The pleated fly-lining lies flat. 6) Outlets on all seams allow trousers and coats to be let out equally while retaining their original balance. Costly details, yes. But more reasons why Oxxford Clothes give you that extra appearance of excellence.

Design details of new service stations are checked on models before construction begins. John Heuring, right, Kerr-McGee Refining Co. architect, Oklahoma City, uses a toy car to demonstrate driveway design to A. R. Gockel, vice president of marketing and refining. Modern service

stations are designed to be aesthetic assets to the neighborhood in which they are located. Through architectural innovation, oil companies are working to eliminate the "gasoline alley" image of such stations.

Depletion of fossil fuel could destroy American civilization

LUBBOCK—The depletion of the nation's resources of fossil fuels in general and petroleum and natural gas in particular is entirely capable of distroying American civilization as we know it, a Texas Tech University economist warns.

"If we are to save our civilization from self-destruction, then we must plan, finance and implement the largest, the most intensive and the longest duration technological research and development program of all history," says Dr. Lewis E. Hill, economics professor.

"We at Texas Tech have good reason to believe that solar energy is among the good candidates first to supplement the fossil fuels in the near future and then to replace them gradually in the distant future."

Hill presented testimony before the Solar Energy Policy Forum in Dallas recently.

Hill and co-researchers believe that increasing energy costs will make household uses of solar energy economically feasible in the not-too-distant future. They are now technically feasible.

A primary concern is to identify and recommend policy actions to alleviate institutional barriers that threaten to delay the emergence of household use of solar energy beyond the date when it becomes economically feasible.

"We fear that social or cultural inertia will inhibit the acceptance and adoption of solar technology, as it has inhibited the acceptance and adoption of so many new technologies in the past," he said. "We are also concerned that lending institutions may be reluctant to provide loan capital to finance new solar facilities and those

to be installed in existing structures.

"Moreover, we fear that labor union work rules and jurisdictional disputes may seriously impede instal-

"We fear that social or cultural inertia will inhibit the acceptance of solar technolo-

lation of solar equipment in new construction and existing structures."

Hill also testified that public utility rate discrimination against householders who use solar energy as a source of supplementary power might discourage installation of solar facili-

He also said local building codes and zoning regulations could prove to be significant institutional barriers to the future installation of solar facilities in residential buildings.

Hill and co-researchers recommended at the federal level that income tax credits be used to subsidize installation and use of solar facilities, that loans to finance solar installations be guaranteed and that labor union work rules and jusisdictional disputes not be permitted to inhibit such installations.

At the state level they recommend

ed prohibition of public utility rate discrimination against households using solar energy, that such installations be exempt from the general property tax base and that building codess and zoning regulations be amended where necessary to encourage installation of solar equipment and facilities.

Two other general recommendations were made by Hill. He favors pricing fossil fuels at realistic world market levels and technological research and development program funding at the highest possible level.

Such a pricing policy, he said, would not only encourage conservation and discourage waste of fossil fuels, but it would also provide maximum incentive for conversion from petroleum and natural gas to solar power and other alternative sources.

"We are completely conviced that energy research and development programs must be pursued more diligently and financed more abundantly than the space exploration program of the 1960's. The very survival of contemporary industrial civilization will depend upon research and development of new energy technologies and resources."

SELL 'EM WITH A WANT AD! DIAL 682-6222

Training program started

AUSTIN—The Association of Oilwell Servicing Contractors (AOSC) has joined with the Petroleum Extension Service of the University of Texas to develop a training program for oilwell servicing crews and supervisory personnel.

In an effort to lower accident rates, offset manpower shortages and reduce costs, the Training Task Group of AOSC Manpower and Management Development Committee met in Austin in September to discuss solutions to the lack of trained personnel in the oilwell servicing industry.

According to Manpower and Management Development Committee chairman Fred D. George of Charles J. George, Inc., of Odessa, the lack of trained personnel is the most serious problem facing the oilwell servicing industry.

"An untrained employee is more prone to injure himself and his fellow employees. Increasing costs make it very important that our crews be trained to perform their jobs efficiently and safely," George said.

The Training Task Group has chosen the Petroleum Extension Service of the University of Texas (Petex) to develop the training program with the advice and cooperation of a special steering committee of oilwell servicing contractors.

According to Petex director Curtis Kruse, the training program will be started at the Petex facility in Odessa, and will later be expanded to other oil producing areas in the U.S.

"We still have a lot of work ahead of us," Sam Pease, Welsh Drilling and Service, Inc., of Houston said, "but we believe we will soon have a comprehensive training program which will benefit well servicing crews in all geographical areas." Pease is chairman of the AOSC Training Subcommittee.

"I am extremely pleased that AOSC has joined with Petex to develop a program to solve our serious training problems," Frank Sandel, with Globe Well Service in Big Lake, president of AOSC, said. "We have taken a giant step for our industry,"

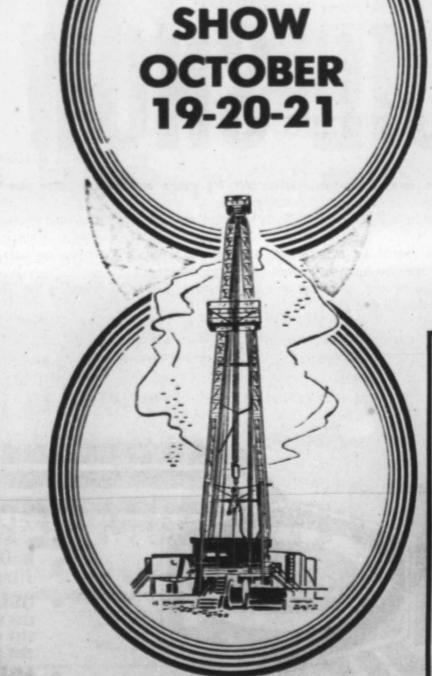

AOSC is a national organization of independent businessmen who operate more than 2,500 workover and well servicing rigs and employ in excess of 20,000 people. Members also include manufacturers of well servicing rigs and equipment and insurance companies, financial institutions and other companies offering special services to the oilwell servicing industry.

OIL SHOW

Albertsons recognizes the highly important role the oil industry of the great Permian Basin has played in the economy and social development of the area and takes this opportunity to help draw the spotlight on the men and women involved. As the oil industry has improved in techniques and products the basin has developed accordingly. You will find that we at

Albertsons have done our utmost to keep pace with that development ... improving our products and service. We invite you to drop by either of our stores in Midland and Odessa while you are here for the oil show and discover for yourself what many others already know.

(Continued from Page 4AA)

Three fuels-oil, natural gas, and coal-supply more than 93 percent of our energy. In fact, oil use is actually increasing because other sources

cannot keep up with rising demand. We are making significant progress in energy conservation and this trend will continue. But we are not making enough progress in energy production. Government studies indicate that we can find enough oil and gas to continue current production rates for 50 years or more. However, forecasters project that oil import will reach 12.5 million barrels per day by 1990 some 50 percent higher than last

The oil companies are exploring

farther, drilling deeper, and doing everything possible-withing the constraints set by the government-to increase domestic supplies.

But what about the energy sources that eventually will have to replace oil and gas? Advocates of the new energy sources, including many petroleum companies, are doing a lot of work to help bring alternate forces onstream as soon as possible. At least 65 petroleum companies are exploring for, researching, or developing new energy sources, even though they are sometimes criticized for these

Fuels from Coal

Synthetic oil and gas will come mainly from three sources: One is oil shale-an oil bearing rock. Another is tar sands which are natural sand deposits, saturated with tar or oil. The third is coal.

Coal, of course, is not a new fuel. In fact, turning it into gas or liquid is not new, either. But we need better processes for successful commercial operation. These processes will remove the sulfur and produce cleanburning synthetic oil and gas. And they can do it for a long time, because coal reserves in our country are measured in hundreds of years, no decades. In fact, the U.S. has almost one-third of the world's recoverable coal reserves.

At least 16 petroleum companies are involved in research and development of new or better ways to use coal, including liquifaction and gasification. The work has been going on for more than 10 years, often as joint efforts of government and private companies. Substantial progress has been made on all fronts, from the laboratory to operating pilot plants.

Oil Chale and Tar Sands

The oil locked in U.S. shale deposits is more than Saudi Arabia's total oil reserves and 20 times more than our U.S. oil reserves. Most of the shale lies in the Green River area of Colorado, Utah, and Wyoming.

Recovering oil from a rock represents large-size technical and environmental problems. However, many companies are committed to their solution. At least 30 petroleum companies have invested in studies, pilot tests, explorattion, or shale leases from the government.

Synthetics from U.S. tar sands have a smaller potential. The largest deposits are found in Utah. Only a small portion can be surface mined, and the rest will require new, more difficult methods. However, tar sand depostis in Canada equal the oil reserves of the entire free world, so development there will be much greater than in this country.

Geothernal Energy

At least 30 petroleum companies are exploring lands with geothermal potential or are developing the methodsTto harness the energy.

Natural steam fields, such as The Geysers in Northern California, are rare. More often a field contains steam and hot water, water alone, or even hot, dry rocks.

Union Oil, with Public Service Comapany of New Mexico, will build the nation's first steam and hot water geothernal plant in north central New Mexico. The plant sould produce electricity by 1982.

General Crude Oil Company is drilling the world's first hot water and natural gas well near Houston,

Standard of California is exploring geothermal prospects in eight wes-stern states and is planning a southern California project that will ultimately serve 400,000 people.

Alcohol Fuels

Petroleum companies have a lot of experience in making acohols from oil for chemical plant feedstocks, and some of them are Rapplying this know how to potential fuel uses.

Gulf has worked on an improved method of making alcohol from waste cellulose, such as sawdust, bark, corn

Several companies are working on coal gasification and liquefaction pro-

cesses that could yield alcohols. Other companies have studied the use of alcohols as octane-boosters in gasoline. Atlantic Richfield recently announced some promising results.

At last twelve petroleum companies are involved in solar energy. Some are working on thermal conversion capturing the sun's heat. Some are working to bring down the costs of solar cells, which convert sunlight to electricity. Others have already entered the several solar markets that exist today.

Solar heating with thermal collectors ca exonomically replace electricity in many parts of the country. Most of the systems in use provide a por-tion of a home's hot water. A more complete system to provide air conditioning and half of the heat and hot water for a three-bedroom home costs

about \$20,000. You also could buy a solar cell electric system for the same home, but it would cost about \$190,000. No one has yet made that invessment. However, there are markets for solar cells today. Ironically, petroleum companies provide one of those mar-kets. In remote locations along pipeliness, at gas wells, or on unman offshore platforms, solar cells ca be cheaper than running long power lines or supplying fuel by helicopter.

Petroleum companies are working to bring down the costs in all of these solar applications.

It is obvious that this country must develop new energy sources if we are to control our own energy future. The best researcch and technical expertise are needed to help solve the economic, scientific, environmental and legal problems which each of the new energy sources faces.

To take us smoothly through the end of this century and beyond, three things are necessary:

-The government must develop a sound energy policy that encourages today's fuels, as well as tomorrow's; Private companies must continue

their commitment to the development of new sources efficiently and humanely; -The political process should not be used to prevent any competitor and contributor from helping to solve

our energy problem.

Petroleum accounts for 69 percent of total value

New Mexico plays vital role in energy effort

SANTA FE, N. M.-New Mexico is an important producer of oil and gas in the United States. Although not a super-petroleum state like Texas. Louisiana, or Alaska, it fills a vital place in the U.S. energy effort.

In 1977 New Mexico was fourth in the country in gas production and seventh in oil.

The top two natural gas producers-Louisiana and Texas-provide 71 percent of the gas pumped out of the ground last year in the U.S. Oklahoma, New Mexico and Kansas supplied 28 percent. Other states made up the remaining 11 percent.

Texas, Louisiana, and California supplied almost 68 percent of the oil produced in the country that year. Another 20 percent came from five states - Alaska, Oklamona, Wyoming, New Mexico and Kansas. The remaining 12 percent came from other states.

The pertroleum industry is important to New Mexico in many ways. It is a mineral rich state and petroleum

accounts from 69 percent of the total value of its mineral production.

The fifth largest state in area, New Mexico contains more than 77.7 million acres. About 38 percent of this land has been proved productive of oil and/or gas, or is leased for possible future exploration.

As one of New Mexico's largest non-governmental employers, the petroleum industry provided jobs for more than 20,236 men and women in 1977. That number included 9,185 people employed in the production of crude oil and natural gas.

Although New Mexico has shared in the recent national decline in oil-gas production, it has retained its place among the country's top producers for many years. The 87,222,646 barrels of oil pro-

duced in 1977 came from the following counties: Lea-55,105,577; Eddy-23,498,167; San Juan-3,107,352; Chaves-1,428,794; Rio Arriba-1,350,726; Roosevelt-1,263,-

473; McKinley-942,494; Sanddoval-

Gas produced for the state totaled 1,184,318,260 MCF (thousand cubic

feet). By county: Lea-401,601,304; San Juan-363,605,-242; Eddy-234,761,040; Rio Arriba-166,-526,112; Chaves-10,525,556; Roosevelt-5,381,937; Sandoval-1,753,859; Mora-28,385.

TWO MAJOR BASINS

The state's petroleum comes primarily from the Permian basin in the

this province in 1977.

One hope for slowing the decline in production rate in the state and improving the situation with recoverable reserves is through improving enhanced-recovery techniques. That is finding ways to force the oil out of the older pools.

It is estimated that primary recovery (by natural flow) from a large number of pools in Southeast New Mexico has not exceeded 15 percent

southeast (Lea, Eddy, Chaves, and Roosevelt counties) and the San Juan basin in the northwest (San Juan, Rio Arriba, McKinley, and Sandoval counties).

The Permian basing of Southeast New Mexico and West Texas has long been one of the nation's major oil-producing areas. Ninety-three percent of the state's oil production came from

of New Mexico mineral production. (leaving 85 percent of the oil still in the ground). In areas where natural

water drive is present, recoveries

have run as high as 40 percent. Waterflood operations have been in effect in many of the older pools for a number of years and some have responded very well. In this procedure, water is injected into an oil reservior to wash the oil out of the reservior rock and into the bore of a producing

It is believed that an additional 200 million barrels of oil mau be added to recoverable reserves in the area from enhanced-recovery methods during the next few years.

Four of the 100 largest oil fields in the U.S. are in southeast New Mexico, according to the American Petroleum Institute. The Vacuum field, discovered in 1929, has produced 300.6 mil-lion barrels and is believed to have 65.4 million barrels left. The Empire pool, discovered in 1924, has produced 159.2 million barrels and is believed to have reserves totaling 61.9 million.

The Eunice pool, discovered in 1929, has produced 327.6 million barrels with 52 million remaining. The famous Hobbs field, discovered 50 years ago in 1928, has produced 239.8 million barrels and has reserves of 43.3 mil-

About 96 percent of New Mexico's known oil reserves are in the Permian

basn. This area produced 53 percent of the state's natural gas last year.

MOSTLY GAS

The northwest corner of New Mexico is primarily a gas-producing province, accounting for about 47 percent of the gas and 7 percent of the oil recovered in the state in 1977. However, the state's first commercially successful oil well was drilled at the Hogback Dakota pool in San Juan County in 1922.

Gas development did not begin here on a large scale unitl 1951, when the first major market was developed in

Of the 1,255 oil and gas pools in New Mexico, 1,084 are in the southeast and 171 are in the northwest. The 32,231 active wells include 20,515 in the southeast and 11,716 in the north-

Since 1935 New Mexico pools have produced 3.3 billion barrels of oil and 25 trillion cubic feet of gas.

Impacts studied

ALBUQUERQUE, N. M.-The ecological impacts of the current trend toward greater use of coal as an energy source for power production are discussed in a new 216-page report by the Interior Department's U.S. Fish and Wildlife Service.

The technical report, "Impacts of Coal-Fired Power Plants on Fish, Wildlife, and their Habitats," covers the environmental impacts associated with the operation of a power fa-cility from the time at which coal is delivered to the site through the final disposal of waste products.

The rapid rise in oil prices coupled with the national emphasis on future energy planning and development has made coal one of the cheapest and most abundant sources of energy for electric power produc-

The Fish and Wildlife Service's National Power Plant Tean contracted for the report because this increase in the use of coal can harm fish and wildlife through the discharge of waste materials from coal-fired power plants.

The report contains current information on the potential impacts on plant and animal communities and their habitats from the operation of coal-fired electric generating facilities and steps that can be taken to minimize these impacts. Also discussed are the impacts associated with oil and gas-fired stations that have been converted to coal.

Included in the report is an outline and discussion of research needed to more effectively predict and minimize impacts along with extensive reference listings at the end of each major section of the report.

"Impacts of Coal-Fired Power Plants on Fish, Wildlife, and their Habitats" is the first of two major publications prepared by the Department of Energy's Ar-gonne National Laboratory under an interagency agreement between the Fish and Wildlife Service and the Department of Energy. The other publication is a field manual entitled "A Biologists' Manual for the Evaluation of Impacts of Coal-Fired Power Plants on Fish, Wildlife and their Habi-

The National Power Plant Team, headquartered in Ann Arbor, Mich., is part of the Fish and Wildlife Service's Biological Services Program. It provides the programs's scientific and technical expertise regarding the impacts of power plants and energy development on fish and wildlife resources and arranges for contract studies with states, universities and consulting

"Impacts of Coal-Fired Power Plants on Fish, Wildlife, and their Habitats" can be pur-chased for \$4.50 from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., 20402, stock umber 024-010-00458-4.

Midkiff at Cuthbert

Texas tops states in minerals yield

AUSTIN-For the 43rd consecutive year, Texas has maintained its position as the nation's largest producer of minerals and energy

The value of raw minerals produced in the state in 1977 reached \$20 billion, according to a recently released report, "Minerals in the Econ-

The report, a joint publication of the University of Texas Bureau of Economic Geology and the U.S. Bureau of Mines, discusses the two major components of Texas' mineral industry-mining and mineral manufacturing-and their impact on the state's economy. The two agencles for many years have maintained a cooperative program in collecting and analyzing mineral production data in Texas.

The authors, Murphy E. Hawkins of the Bureau of Mines and Thomas J. Evans of the Bureau of Economic Geology, have included statistical data; tables, figures and a small map of the state indicating counties in which mineral raw materials are produced.

Fuels dominated Texas' mineral output in 1977, accounting for about 95 percent of the total value of all raw minerals produced in the state during the year.

Texas wells yielded 1,138 million barrels of crude oil, but that was about 51.4 million barrels less than in 1976. Natural gas production amounted to 7,109,188 million cubic feet-down 82,671 million cubic feet

Nevertheless, Texas continues as the nation's leading producer of crude oil, natural gas and natural gas liquids (natural gasoline, cycle products and liquid petroleum gases), producing 38 percent of the country's crude oil and 36 percent of its natural gas. Texas lignite production amounted to more than 15 million short tons

in 1977. The output is expected to increase substantially in the near future, as several new mines and plants are scheduled. Texas' mining industry also produced metallic minerals-iron, mag-

nesium and uranium-and industrial (or non-metallic) minerals such as stone, sulfur, cement, graphite, sand and gravel, salt, clays and Total value of the metallic and industrial minerals output was \$1,127

million during 1977. Texas was the leading state in sulfur, magnesium and graphite production. According to the report, by midyear 1977 the Texas mining industry

employed an average of 150,000 workers who earned a total annual wage of about \$2.3 billion.

During the fiscal year ending Aug. 31, 1977, taxes from crude oil, gas, sulfur, motor fuel and distribution of cement amounted to \$1,353 million and provided about one-fifth of the total state income that was derived from taxes.

The report also discusses the manufacturing segment of Texas' mineral industry which involves the processing of crude mineral commodities-some of which are imported from other states and foreign countries-into finished or semifinished products. This segment includes refineries (petroleum and alumina), smelters (zinc, tin, aluminum and copper), plants (brick, cement, petrochemical and magnesium) and

Expert says oil spills' harm to coasts minimal

ATLANTIC CITY, N.J.—An oil spill expert said today that offshore oil operations have had very little effect on U.S. ocean shorelines.

This assessment cam from Dr. Albert H. Lasday of Texaco Inc., who is chairman of the American Petroleum Institute's Committee on Fate and Effects of Oil in the Environment. He testified at a U.S. Bureau of Land Management hearing on the impact the sale of additional oil leases would have in the Baltimore Canyon area off the East Coast.

Lasday pointed out that although some 22,000 oil and gas wells have alreeady been drilling in U.S. waters, only one of these -- at Santa Barbara -resulted in an oil spill which required extensive beach cleanup operations. But its effects on marine life, he emphasized, were "slight and temporary."

He said that since 1970, his API committee has been engaged in a comprehensive research program to determine what happens when oil is spilled into the ocean.

This program, he said, has already resulted in publication of approximately 100 scientific papers and technical reports by many scientists whose work was supported by API. One of the most significant conclusions of the studies is that "low-level chronic exposure to drude oil has a negligible effect on marine life."

Infact, Lasday said, where concentrations of oil are less than one part per million partss of water, the oil actually stimulated the growth of phytoplankton, the minute organisms found in sea water, which are the first link in the marine food chain. This ovservation was made by Battelle pacific Northwest Laboratories. "Other investigators," he added,

"have reported similar observations in Alaska, France, Canada, and elsewhere. Evidently at these low concentration, oil serves as a nurient."

At higher concentrations, Lasday acknowledged, oil does reduce the "primary productivity" of phyto-plankton. However, he said, researchers have noted that once the exposure to oil wa ended, the phytoplankton "resumed a normal growth rate within a few days.

Lasday said the researchers also concluded that when "a spill episode has passed, only a few cels (of phytoplankton) need survive to repopulate a given area rapidly. Recruitment from nearby unaffected areas also would act to restore a normal phytoplankton population quickly. For these reasons, they repot that phytoplankton have a great 'rebound' po-

He also pointed out that the legs of drilling and producion platforms become encrusted with various organisms such as mussels and barnacles, and that these in turn attract other marine life. According to a survey in Santa Barbara Channel, there was very little marine life in an area where two such structures were built in in 1959 and 1960. "Soon after construction," Lasday said, "the fish populations had grown to about 6,000 under each platform." Some years later the "fish populations were estimated at more than 20,000 under each

GO EAST ON CUTHBERT, TURN LEFT ON LAMESA.

What appears to be the nation's latest, and strangest, space effort is really only the juxtaposition of the Washington Monument with an oil drilling derrick set up as part of Washington's Smithsonian Institution Festival of American Folklife. The festival, which ran from Oct. 4 through Oct. 9, was designed to explore how common cultural concerns tie people together in communities through demonstrations of traditional crafts, music, dance and cooking. (AP Laserphoto)

Alaska crude to flow by 1981 says Kryzer

BILLINGS, Mont.-Crude oil from Alaska's North Slope will be flowing into the oil-short Midwest by the fall of 1981, the head of a new pipeline project predicts.

Thomas C. Kryzer, president of Northern Tier Pipeline Co., said that if all permits are granted, construction of the 1,500-mile pipeline can begin in the latter part of 1979 and be completed by June 1981.

The Northern Tier line will run from Port Angeles, Wash., to Clearbrook, Minn., connecting with a number of existing pipelines which have been carrying Canadian crude oil to northern and Great Lakes states. Canada is curtailing exports to the United States and will stop them completely by 1982, thus creating a shortage in this area.

Kryzer pointed out that while a shortage of oil is developing in the inland states, a surplus building up on the Pacific Coast, largely because of Alaskan oil, some of which is being shipped to Gulf Coast ports via the Panama Canal.

The Northern Tier line, he said, will take the surplus directly to the area where it is most needed and will provide the cheapest method of bringing oil to the north-central states because Port Angeles is the closest port to Alaska and also to the Middle East, and is the only port in the United States capable of handling supertankers.

The national need to distribute Alaskan oil to the northern tier and inland states has been recognized by Congress, and President Carter has said that construction of a west-toeast pipeline is a matter of high national priority, he daid.

The West Coast surplus was 200,000 barrels per day a year ago and Kryzer estimated it may be three times that today and could reach 800,000 barrels per day by 1982. At the same time, he said, a study has shown that the northern and midwestern

states will have a shortfall of 600,000 barrels per day by 1982 if the Northern Tier line is not built.

Anticipating this situation, Northern Tier Pipeline Co. was formed in 1975 and had completed its preliminary engineering work by 1977. More than a year ago applications were filed for the various permits required, and the U.S. Bureau of Land Manawas engaged, for a fee of \$3.6 million, to make the necessary environmental impact studies.

Applications also are pending for the tanker port facilities at Port Angeles, and before the appropriate regulatory agencies in Washington, Idaho, Montana, North Dakota and Minnesota, and hearings have been held by some of these agencies.

Total cost to the company for the environmental and permitting activities will be more than \$5 million, Kryzer estimated, and the total cost of constructing the pipeline will be about \$1.4 billion.

If all permits are secured on schedule, actual construction can begin in the latter part of 1979 and the line can be in operation by the summer of 1981, with an initial capacity of 709,000 barrels per day. The line will transport both Alaskan crude and oil from the Middle East.

Summarizing the advantages of the Northern Tier system, Kryzer said that it will provide the lowest costs for movement of Alaskan or offshore crude oil from the West Coast to Northern Tier and inland refineries, will stimulate further development of Alaskan and West Coast producing capacity by providing a needed market, will reduce our balance of payments deficit by substituting domestic crude for foreign, and will provide the inland states with a secure source of petroleum not subject to embargo or interference by any foreign coun-

nly one word for 'spy ship'-big

only one word for the Glomar Explorer, the former Hughes "spy ship" that attempted to raise a sunken Russian submarine a few years ago in the North Pacific Ocean.

That word is "BIG. Now docked at the Bethlehem Steel Co. shipyards here, the ship makes a massive impression as it is being re-tooled to the more benign purposes of gathering mineral-rich managanese nodules from the deep ocean

The Glomar Explorer is equivalent in size to a full-scale World War II aircraft carrier. With its soaring tower, designed to lift objects from the deep sea, it is incapable of passing under the San Francisco Bay

Not only that, but it has a big technological job in front of it -- dragging up the valuable manganese nodules from a depth of up to 15,000 feet, some of the deepest parts of the world's oceans.

Glomar Explorer also represents one heck of a big gamble.

In terms of mere money, just getting the ship ready to do the job will cost more than \$500 million. And that's with no guarantees on return. It's a bet that would make Las Vegas blush. Nonetheless, the backers of this ambitious program express con-

SAN PEDRO, CALIF. --- There's fidence that the gamble is well worth

the taking. "There's no question that the resource is there," according to James G. Wenzel, president and chairman of the board of the Ocean Minerals Co. "And," he said, "we are very confi-

dent of the technologies.' The mining of manganese nodules

They include the basic manganese plus cobalt (the United States depends on more than 50 percent of its supply from Zaire), copper (becoming increasingly hard to get) and

Wenzel is essentially an officer of the Lockheed Space and Missiles Co. of Sunnyvale, Calif. He has poineered

The Glomar Explorer is equivalent in size to a full-scale World War II Navy aircraft carrier. It is incapable of passing under the San Francisco Bay Bridge.

from the ocean floor has always been confronted withtwo major problems: can the nodules be harvested and their valuable minerals extracted in an economical manner?

After studying the problem since 1965, Wenzel said in an interview the answer to both questions is a definite, "Yes."

The potential is tremendous, Wenzel said. Right now, he said, there are more than 400 sites in a zone between Southern California and Hawaii. Each of these sites, he said, has enough material in the form of manganese nodules to produce 5,000 tons a day for over 50 years.

This prospect is given added stress by the fact that the minerals contained in these strange nodules (scientists still aren't really sure of how they were formed) are among those becoming very scarce on land.

technology into the oceans.

Wnezel said that much of the research and development work was done out of pocket by Lockheed. But now, he admitted, with the advent of oceangoing trials and the leasing of the Glomar Explorer from Glomar Marine Co., a Hughes subsidiary, the costs involved were simply too much

his firm's efforts to expand space

for one company to handle. The result, he said, has been the dreation of a new company, Ocean

Minerals, with the backing of a pertnerhsip involving several large and international firms.

One arm of the partnerhsip involves the Standard Oil Co. of Indiana, through a subsidiary known as Amoco

The second arm, Ocean Minerals, has three major stockholders -Lockhed, the Royal Dutch Shell Co. (through another subsidiary, Billiton International Metals), and BosKalis-Westminster, a large dredging firm in

Already, Wenzel said, Lockheed has spent more than \$60 million in developing the technology of the ocean mining system.

This involves, he said, the development of an "ocean miner" and a system of extracting valuable minerals from the nodules.

Although Ocean Minerals expects to complete its first sea trials of the total system by the end of this year, Wenzel said, full ocean mining operations aren't expectd to begin before the 1986-90 period.

il show in hands

cessful operation of the Odessa

land, president of the neck." Gene Clark, show, said the committees are in the hands of outstanding chairmen who have had years of experience with the huge four-day show

The Building and Grounds Committee is under the chairmanship of W. I. Allen, with Amoco Production Co. in with Mission Well Service, also of Odessa.

Allen estimates his committee has had more than 200 workers involved in getting the grounds ready for the show. F. C. Ratcliff, with Hughes Tool Co. in Midland in the executive committee member working with the Buildings and Grounds Committee.

Long before th oil show ever starts, a letter from the Building and **Grounds Committee goes** out to oil companies in the Permian Basin asking them to donate workes for service on the committee. Allen said the companies responded without questiong this year as they have in past

years. Throughout the show. from four to six workers from the B&G committee will be stationed in each of the nine buildings at the Coliseum complex and the two outside areas.

The Registration Committe is chaired by Cecil Smith of Midland, with Land and Marine Rentals. The executive committee member of this committee is another Midland, Joe Wamack Texas Pacific Oil Co.

This committee draws most of its workers from members of the show's board of directors and gets a big boost from the Desk & Derrick Clubs of Midland and Odessa.

Drilco Division to show one-stop assembly plan

ODESSA-Drilco Division of Smith International, Inc., will introduce the petroleum drilling industry to its "one-stop" concept of drill pipe assembly service at the Permian Basin Oil Show this week in the Ector County Coliseum in Odessa.

Drilco soon will become the first company to offer the drilling industry this "one-stop" concept by consoli-dating all drill pipe assembly opera-

tions at one location. Its new 165,380-square-foot drill pipe services facility is scheduled for completion late this year on a 20-acre site at the company's Hardy Street headquarters in Houston.

SERVICES OFFERED From this facility, Drilco will offer pipe inspection, tool joint manufacture and attachment, and internal plastic coating. The consolidation of these operations at one location will result in savings in transportation and pipe handling time and costs to

the end users. Drilco manufactures and installs tool joints on customer supplied drill pipe. The tool joints are inertia welded to the drill pipe, using appropriate preweld and postweld heat treatments. All sizes meet the mechanical property requirements specified by American Petroleum Institute (API) Spec 7, and all joint markings are in accordance with API recommenda-

PHENOLIC BASE

Drilco's pipe coating is composed of a phenolic base and an epoxy-phenolic top coat for optimum protection.

Its "straight flow through" coating system eliminates co-mingling orders during the coating process. This system allows for straight gravity and single layer conveying.

Every length of pipe moves in one direction at all times, and each order stays together since back-and-forth movement and elevation of pipe are

LESS HANDLING

The "straight flow through" system involves less handling of pipe than other methods, and consequently minimizes the possibility of connection damage and saves time and en-

Drilco has installed the latest fourfunction electronic SPECTALOG inspection equipment as an optional part of its tool-joining procedures, to find any defects caused either from milling or from shipping and handling. Finding these defectes before the pipe is put in service can help

Drilco's pipe coating is composed of a phenolic base and an epoxy-phenolic top coat for optimum protec-

prevent costly downhole failures.

MAGNETIC CHECK

In addition to the four-function electronic inspection, Drilco offers a magnetic particle inspection of the critical end area of the new drill pipe

In-plant inspections are performed to API Spec 5A or other applicable standards. Full inspection consists of longitudinal defect identification, transverse defect identification, wall thickness measurement, grade comparison, and end area defect identification. A permanent record of the inspection is available.

MAJOR LINK

The Houston drill pipe service facil-

ity is a major link in Drilco's worldwide network of technology and service. At each Drilco location is a team of well-trained, qualified personnel ready to discuss drilling needs and problems, and to perform the tasks necessary to help the driller cut expenses through careful planning

Drilco's Permian Basin operations are centered in Odessa, where it operates a complete, fully-equipped manufacturing and service center. The company has additional Permian Basin area offices and service outlets in Hobbs, N. M.; Sonora, San Angelo and Abilene.

HOUSTON HEADQUARTERS Drilco is headquartered in Houston and designs, manufactures, markets and services a variety of downhole drilling tools and equipment.

Smith International, Inc., Newport Beach, Calif., is one of the world's leading manufacturers and suppliers of a broad range of drilling tools, equipment and related services for the energy industries.

The company is also a leader in the technical development of oil and gas well drilling and mining tools and equipment.

The industries and markets served include oil, gas, geothermal, water well drilling, and mining and con-

Lynes to feature quartz at Basin oil show

loped to help NASA reach the moon has become directly applicable in the petroleum indus-

Quartz crystals originally used to monitor Gforces on the various manned capsules are now downhole-measuring temperature and

pressure. Traditional tools for gauging these parameters are somewhat less sophisticated. At best, the trusted mechanical gauges of the pastcan be relied on only when run in multiples of two or more. This allows the reservoir engineer to average error out and, with the aid of a microscope, develop a graph indicating reservoir conditions.

With government agencies demanding better reserves assessment, the pressure is on the industry to develop more accurate methods for reservoir evaluation.

Several manufacturers are now offering vastly improved pressure survey instrumentation. Suppliers include Hewlett-Packard, a newcomer to the oil field; Sperry Sun, a traditional supplier of downhole instrumentation, and Lynes, Inc., a manufacturer and marketer of pressure survey tion, in addition to its well known-line of inflatable packers.

gauges suffer from sev-

Soviets struggle to expand nuclear power

By ROBERT GILLETTE The Los Angeles Times

MOSCOW - Twenty-four years after it opened the world's first atomic power station, the Soviet Union is struggling to expand a still-modest supply of nuclear electric power as its resources of cheap oil, coal and natural gas diminish at a quickening

Despite the Soviet leadership's assignment of high priority to develop-ing commercial nuclear power, construction of new power reactor installations appears to be lagging far behind the ambitious schedule set out in the five-year plan that will end in

Compounding the problem, there is evidence that the industrialized European third of the Soviet Union already suffers from a shortage of electric generating capacity. This shortage is likely to intensify if the Soviets fail to unplug the industrial bottlenecks that Western experts say are responsible for the lag in nuclear power.

According to a variety of Western analysts, the RSoviet Union now seems likely to fall 5,000 to 6,000 megawatts short of its 1980 goal of 19,400 megawatts of nuclear generating capacity or 7 percent of its total power supply (Total Soviet electric capacity in 1975 w8as 218,000 megawatts or about half that of the United states.) During recent conversations with

cision-tooled steel parts of nuclear

The Soviet Union started up its first atomic power plant, an enriched-uranium-and-graphite reactor, in June 1954, three years before the first American commercial reactor came on line at Shippingport, Pa. The original Soviet power reactor still runs today as an "operating museum," turning out 5,000 kilowatts of electricity at the huge Obninsk nuclear research center 60 miles southwest of Moscow in pleasant dairylands along the road to Kiev.

Unlike most Western research facilities, Obninsk is both a place of employment for some 6,000 persons and a thriving community, where laboratories and administrative buildings share groves of birch and mountain ash with high-rise apartments, stores and a few cafes.

After the initial success at Obninsk, civilian nuclear power evolved more slowly in the Soviet Union than in the United States and other major Western European countries. During the rest of the 1950s the only other Soviet power reactors to start operation were at a secret 330-megawatt station identified by the Russians only as "Siberian.

U.S. intelligence authorities have said the complex is at Troitsk (the only town by that name on the maps is in the urals) where the plant produces

Western analysts say Russia seems likely to fall 5,000 to ,000 megawatts short of its 1980 goal of 19,400 megawatts of generating capacity.

American science writers, Soviet nuclear experts declined to discuss this prospective shortfall and referred instead to the Five Year Plan as "the law." When talking about delays suffered by severall specific power plants, however, they most often cited late deliveries of key components and a scarcity of skilled labor as the underlying causes.

The conversations occurred during a tour arranged by the AtomicNIndustrial Forum, the U.S. nuclear industry's trade association.

The Soviet Union's troubles are ironic, for the Soviet Union is one of the few industrialized countries where nuclear power development has not been curtailed during the past few years by public opposition, regulatory conflicts and shrinking estimates of future demand for electrici-

Mainly as a result of these factors, according to the International Energy Agency in Paris, the combined nuclear power output of Western Europe, North America and Japan by 1985 will probably be no more than 253,000 megawatts - less than half the generating capacity forecast by that year in the early 1970s. Some authorities regard even this figure as optimis-

Diminished expectations for nuclear power in the West have left nuclear reactor manufacturers with worrisome levels of idle production capacity and have stirred fears in the United States that one or more of the four major so-called vendors com-panies may be forced out of the mar-

The Soviet Union's problems are precisely the opposite. Western analysts attribute the Soviet nuclear lag to pervasive inefficiencies in its ma-chinery industry, shortages of skilled labor, and a scarcity of such equipment as large casting furnaces, heavy lathes and other machines eded to turn out the massive, preelectricity and plutonium for weap-

During the 1960s, as utilities in the United States and Western Europe began investing billions of dollars in nuclear plants, the Soviet Union started up only six small reactors totaling 937 megawatts. By 1975 5,500 megawatts of nuclear power provided 2.5 percent of Soviet generating ca-

(By comparison, the United States has 71 operating power reactors producing 51,400 megawatts or 13 percent of the nation's needs. One-thousand megawatts is enough for the average daily needs of an American city of 500,000 people.)

The Kremlin's decision in 1975 to press ahead with nuclear energy as a major priority in the new Five Year Plan came amid gathering signs of an energy crunch in the industrialized European U.S.S.R. The aging Urals-Volga oil fields, long the Soviet Union's major source of petroleum, had begun to peak out and coal mines of the Moscow basin were showing increasing evidence of exhaustion.

To be sure, vast resources of fossil fuels remained to be tapped, but Soviet energy planners faced a gargantuan geographic disparity: roughly 70 Union is consumed on the western side of the urals whereas 70 percent of the known resources are east of the Urals, in Siberia and the Far North. Exploitation of Siberian and Arctic fuels is also a high priority but that involves enormous transportation and environmental challenges.

In official publications, Soviet energy planners have consistently indicated a belief that nuclear energy was the most promising and economical way of bridging the resource gap to power the country's industrial heart-

Under the 10th Five Year Plan an-nounced at the end of 1975, between 13,000 and 14,000 megawatts of nuclear power were to be placed in operation, constituting one-fifth of all new generating plants. All the new atomic power plants were to be built west of

Western diplomatic and intelligence sources believe it is unlikely, however, that more than about half of this planned addition will be accomplished by 1980 and that total Soviet nuclear capacity will probably be more like 13,000 to 14,000 megawatts than the planned 19,400. Even this will represent a significant increase from the present nuclear generating capacity of about 8,000 megawatts.

The estimate of probable shortfall coincides with a generally gloomy assessment of the Soviet economy published last August by the U.S. Central Intelligence Agency. The CIA

said that since 1971 consumption of electricity has been rising faster in the Soviet Union than installation of new generating capacity, thereby eating into reserves. In 1976 the Ministry of Power and Electrification was said to have noted that reserve capacity had been reduced and the reliability of the Soviet power supply system lowered.

The 20-page report added that despite the high priority placed on nuclear development to reverse this erosion and ease the strain on the electrical system, "The nuclear program is lagging badly. The Soviet machinery industry has not yet been able to supply the planned volume of components, and attempts to purchase nuclear equipment from Western countries have borne no fruit."

During the past decade, the Soviet government has taken sometimes drastic steps to circumvent its industrial deficiencies and put the nuclear program back on the track. One such step was the interim adoption of a power-reactor technology the government knew to be relatively uneconomical but which Soviet industry was capable of producing

In 1971 an official delegation of American nuclear experts was startled to find during a visit to the Soviet Union that the Russians were veering away from Western reactor technology and were instead building huge new power plants of a unique design.

Essentially modernized versions of the first small station at Obninsk, these huge, 1,000-megawatt units used graphite rather than water to slow or

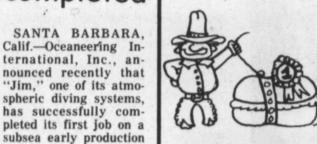

"moderate" the neutrons released by fissioning uranium fuel, thereby sustaining a heat-generating chain reaction. Thousands of tubes embedded in the graphite along with the slightly enriched uranium fuel carried cooling water to draw off the heat to produce steam for the plants' turbine-powered

These novel reactors - more than twice the power of any others in the Soviet Union but about equal to the largest in the West - have since been built near Leningrad, Kursk (to help power a new \$1 billion steel complex) and near Kiev. They are also under construction or planned near Smo-lensk and in Lithuania.

Western visitors found this a curi-

No. 14 Oak Ridge Square

Littlefield serious about eliminating oil field thefts

"When we had to measure our losses in millions of dollars annually, we had hit the bottom lime!" This was Baker Littlefield's reason for structuring the "Littlefield Plan" to combat oil thefts.

Littlefield, chairman of the International Association of Drilling Contractors chapter in Lafayette, La., and vice president of the Southeast Coast Division of the association, mounted his drive in Louisiana last April when Southwest Louisiana alone was losing about \$10 million annually from oil-related thefts.

However, this is not a problem confined to one area or region. Nationwide theft losses are estimated to be \$500 million annually.

This is Littlefield's second run-in with thieves in the oil industry. In 1975, he headed a drive to combat a similar situation. That effort, confined to Louisiana, was in response to a theft situation that was resulting in approximately \$5 million in losses in his area. It resulted in several indictments and convictions-with a corresponding decrease in the amount of stealing.

However, because scarcity of equipment led to an unbalanced supply-and-demand situation, thefts began to dramatically increase about a year ago. They have been spreading over the nation like an epidemic as oil activity increases in an effort to supply the country's energy needs.

"As our situation existed seven months ago, thefts included everything from truck tires to pipe taken off trucks stopped for coffee on interstate highways to Christmas trees from producing wells...and there was no end in sight. We had to do something or be brought to our knees by a bunch of thieves," comments Littlefield. The result was the "Littlefield Plan.

In March and April Littlefield mobilized Louisiana's IADC members and other interested companies in a new approach to that state's theft problem.

His drive has attracted national attention and has produced outstanding results. Since the plan was put into operation, oil thefts among Louisiana members have decreased a dramatic 80 to 85 percent. At the same time, arrests have increased appreciably. It is too early for any report concerning convictions, but indications are that charges are solid and convictions can be expected.

Because of its success, the "Littlefield Plan" has been adopted by the Oklahoma-Texas Panhandle area as well as Louisiana. The rest of Texas was expected to join before the end of September (this article was written just before the end of that month.) Several other areas have also expressed strong interest and have indicated a desire to develop this into a nationwide effort.

Littlefield's approach is as simple as it is effective. Basically, it calls for a three-pronged approach: 1. oil companies pulling together and establishing a sizeable fund to aid in the apprehension and conviction of theives while, at the same time. speedily reporting any thefts to the proper authorities. 2. Close cooperation between the oil industry and local, state, and national law enforcement officials. 3. Use of the media to educate the public while simultaneously frightening the thieves by focusing the spotlight on the theft prob-

An 80 percent reduction in thefts would represent ultimate success to most people, but Littlefield is adamant in his conviction that this, alone, is not enough. He makes it clear that he is not interested in partial measurers, and if his name is going to head a program he intends for it to represent

responsibility that is rightfully theirs. In too many of our compnies the boss has abdicated his basic responsibility and his workers have gotten lazy. Many of our employees don't feel any loyalty and don't have any sense of pride because they don't have a goal to work for or manaagement that motivates them. 'We aren't going to lick this thing

as long as the boss isn't on top of his own company. We surely aren't going to solve the theft problem if the top man is on the golf course or at the country club. In too many companies the boss doesn't know how bad things are until the well is dry. That is a sorry statement to have to make, but

Even with our current reduction in thefts, there is enough stolen from each rig every day to pay for one crew. Our reports indicate that we are losing about \$200 per day per rig. The thieves now are our own employees. They are taking everything from paint to rings to drill bits...you name

"They are stealing anything they can haul off in a car. If we can afford that kind of loss, then we should shut our mouths and take our lumps. If not, then the boss had better get on

"Every man has to chase his own rabbit and clean his own backyard. We can stop the outsiders and we have, thanks to media, police and public support. Of course, we have paved the way for the success we have had by banding together and establishing jour reward funds, and in working with the police and the pub-

"Now is decision time. We need to finish the job and we are the only people who can do it. If we don't take care of our own internal security we might as well publicly admit that we are our own worst enemies.

"The plan we have developed works. We have proven that.HHowever, until every single company involved takes that one last step and cleans up its own backyard we will not be able to truly eliminate the problem of oil field thefts. Until that time comes, I won't feel the 'Littlefield Plan' is truly a success.

The choice is ours and I can't believe we won't make the right decision. My faith lies with our industry and its management any day of the

Average increases

HOUSTON-U. S. Domestic oil production continued to reflect the additional utput of Alaska North Slope with a daily average of 8.92 million barrels in June, 10.9 percent larger

During the firt six months of 1978, the U.S. produced 8.70 million barrels of oil per day., contrasted with 8 million the same time in 1977.

Russians struggling for additional power

ous diversion, for the United States and other countries had long since all but abandoned graphite reactors as too costly and complex for power production. Western countries had opted instead for so-called "pres-surized water reactors" or PWRs, developed originally for submarines, in which a dense core of fissioning uranium is bathed in cooling water inside a massive steel pressure vessel weighing hundreds of tons. The water also serves to slow the neutrons so they can interact with uranium atoms and maintain a chain reaction.

In retrospect, it appears that Soviet nuclear experts also considered their graphite behemoths to be undesirabley expensive and complicated but built them anyway because nuclear power was needed and Soviet industry was not capable of turning out pressure vessels for large conven-

tional reactors. "The pressurized water reactor is more economical and simpler to control," Dr. Valery Legasov, a deputy director of the Kurchatov nuclear research institute in Moscow, said.

Noting the requirements for massive, precision-made pressure vessels, he added: "At present the Soviet Union feels limitations in constructing such vessels. Therefore to be able to produce the necessary electricity we used the second type of reactor, the uranium-graphite.

The Russians also pursued development of PWRs, first for nuclear si marines and later for icebreakers and small electric power plants. By the early 1970s they had managed to scale up the technology to a medium-sized 440-megawatt reactor that has become a standard export item to Eastern Europe. Cuba and Libya also have ordered them, and in Finland, the only Western country thus far to import a Soviet nuclear power plant, one of these units is working successfully and a second is near comple-

American technical delegations to the Soviet Union over the past 10 years have almost invariably come away impressed by the quality of Soviet engineering — but also by Soviet industry's difficulty in turning blueprints into working plants. This mismatch of capabilities seems inevitable, though, in a country where vestiges of the primitive past appear daily in jarring juxtaposition with

modern technology. For example, in the bathroom of the late and revered physicist Igor Kurchatov; who led the Soviet atomic bomb project and whose home is preserved as a museum in Moscow, there stands a device that looks like a chrome-plated samovar. The man who, more than anyone else, made the Soviet Union a superpower had a coal-fired water heated for his bath-

Rolling south from Moscow in a modern, comfortable passenger train (imported from East Germany) the traveller is still passed in the night by an ancient steam engine or two. Three hundred miles south of Moscow on the

> Classified Advertising

outskirts of Voronezh, a city of 900,000 and a center of the Soviet aviation industry, one still sees rustic villages with rutted mud streets and an occasional thatch-roofed bungalow.

The Soviet Union's largest nuclear power plant is about 25 miles from Voronezh at a scenic bend in the Don, where plumes of steam from seven huge cooling towers dominate the skyline. A few miles from the plant is the new town of Novovoronezh, a community of 25,000 created when the plant was begun in 1957 to provide a labor force for construction as well as living accomodations for technicians and administrators at the power

Eventually, according to construction director Dmitri V. Prosorovskiy, the town - a neat and compact community whose central square is dominated by the universal symbol of the atom - will grow to 50,000 and will have a factory for making spare parts for reactors.

Four pressurized water reactors ranging from 210 to 440 megawatts have come on line at Novovoronezh since 1964 and a fifth unit - the nation's first 1000-megawatt PWR is scheduled to start operating next year. (About a dozen PWRs of this size or larger have begun operating in the United States since 1973 and 43 others up to 1250 megawatts capacity are under construction.)

Currently running about three years behind its originally announced startup date of December 1975, this big new unit is the prototype of dozens of main-line power reactors the government says it plans to build in the

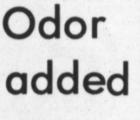

In a bold effort to circumvent the bottlenecks that have plagued its nuclear industry in the 1970s, the Soviet Union is building a mammoth, 1,600acre factory complex for 1000-megawatt PWRs near Volgadonsk, a city in southern Russia where the Volga and the Don rivers bend toward each other like the neck of an hourglass.

Here, three parallel assembly lines are expected to turn out the pressure vessels, steam generators, turbines and other components of whole power plant "packages" and ship them out by river barge like so many automo-

As might be expected in an undertaking of this scale, schedules have slipped somewhat, although not seriously. Soviet press reports say that the first components rolled off the line this summer, six months ahead of schedule, but Western observers say these appear to be relatively modest items - not the crucial presure vessels - and that part of the first asembly line is probably still devoted to building the rest of Atommash, rather than power reactors.

Some U.S. officials suggest that a little delay may be beneficial. As it is, the Soviet Union will probably have no more than two years' operating experience with a large pressurized water reactor before the first of a mass-produced version of the Novovoronezh comes off the assembly line

Barring any mishaps, however, the Kremlin clearly intends to press Atommash into full production as rapidly as possible, for it will play a key role in the Soviet Union's strenuous efforts to maintain energy self-sufficiency over the next several dec-

HOBBS, N.M.-The gas which is sold to homes and businesses is mostly methane with a small amount of added mercaptan for "smell".

Because the natural gas coming from the field usually contains other ingredients, processing plants have been built to separate out the varuous paraffinic hydrocarbons and to remove the carbon dioxide, hydrogen sulfide, mercaptans, and water. This type of plant is referred to as a natural gas processing plant or gasoline

The 41 natural gas processing plants in New Mexico processed almost a trillion cubic feet of gas during 1977, producing 50.7 million barrels of butane, propane, natrual gas and other products.

Field compressors are used to "send" the field or natural gs to the processing plant if natural field pressures are low. Upon arrival at the plant, the gas is first "scrubbed" to remove any liquids.

Scrubbing is usually accomplished by routing the gas over baffles. The liquids then drop out. In order to safely compress the gas, it must be free of any liquids. Liquids from the scrubbers may be sent to the oil separator or to waste prods.

After the gas foes through several stages of compression with cooling and scrubbing occurring in between, the "cleanup" and separation processes begin. Recovered liquids are futher processed to obtain propanes, butanes, motor fuel and other products.

The New Mexico plants are located in Lea, Eddy, and Roosevelt counties in the southeast part of the state, and McKinley, San Juan, and Rio Arriba in the northwest.

The 50.7 million barrels of production from the plants in 1977 included 21.9 million barrels of natural gasoline, 7.3 barrels of butane, 9.5 barrels of propane and 12 barrels of composite liquids.

Trained oil industry personnel dwindling

world's dwindling oil re- companies make deci- specialized petroleum serves become more and more important, so will the men trained to find it,

dig and develop it. Even though the oil ifself is getting scarcer and scarcer, the oil industry is booming. Careers in petroleum engineering remain plentiful, ciety of Petroleum Engineers (SPE).

The SPE estimates that about 30,000 persons are employed as petroleum engineers. They work to develop oil and natural gas reserves, and then to maximize "profitable recovery" of the oil, according to the booklet "Careers in Petroleum Engineering.'

In adition to the opportunities for engineers to supervise the selection and use of drilling equipment and methods, the field requires evaluative and economic skills to produce oil efficiently.

Engineers estimate the value of the supply based on its position and the ease of recovery. That role, as an accountant-advisor, makes the engineer valuable as an oil company employee, or as an independent consultant.

Oil research is a \$600 million operation in the U.S. alone, the booklet relates. The work to improve production and the recovery methods takes place in oil company research centers, universities and private insutitutions. Such research is essential in order to better the current 60 percent recovery rate, and to en-

deeper for reserviors. Petroleum engineering serves per foot of explor-

Texas goes further than producing crude

By H. B. HARKINS **Texas Midcontinent** Oil & Gas Association

DALLAS-Texas long has been famous as a producer of petroleum energy. Fortunately, its involvement with crude oil and natural gas does not end with production of these resources in their raw state.

Petroleum refining and processing, including the manufacture of pet-

Petrochemical industry creates about 60,000 direct jobs in Texas and necessitates an additional 300,000

rochemicals, strengthen the state's economy as Texas plants upgrade raw petroleum to finished commodities or feedstocks.

Although this industry is highly automated, it accounts for one of every four jobs and \$1 of every \$3 in wages paid by Texas manufacturers. The U.S. Interior Department notes that in 1977, the mineral refining and processing industry in Texas employed an average of 195,000 workers. Texas refiners and processors paid these workers wages totalling approximately \$3.2 billion.

The petrochemical industry alone creates about 60,000 direct jobs. It necessitates an additional 300,000 jobs in supporting trades and services in

Texas refinery workers last year numbered approximately 41,250. They earned wages amounting to \$844

Texas' 52 refineries have a daily capacity of approximately 4.6 million barrels. This represents 27.2 percent of U.S. capacity; 5.9 percent of worldwide capacity.

During the four years between 1973 and 1978, Texas' capacity to refine crude oil increased 23.2 percent. But, refining capacity in several other states and foreign countries have increased at a faster rate since the 1973

cesses have been deve-

Middle East oil embargo. The rest of the United States increased its capacity 26 percent; countries in the Middle East and Africa increased their capacity 25.1 percent.

As a result, Texas' share of the market is in jeopardy of declining. Increase capacity elsewhere means more competition for available

However, the Texas refining industry holds the promise of continuing as a processing center for imported crude oil. Since 1972, a predictable but basic shift has occurred. Prior to that time, Texas refiners refined crude oil from Texas fields almost exclusively.

By last year, that percentage had dropped to 49.6 percent. Some 8.9 percent came from other states, with approximately 41.5 percent from other countries.

DALLAS-Executive changes in Sun Gas Co.'s Tulsa-headquartered Natural Gas Liquids Group include the promotion of W. C. Lunsford to manager of Wholesale LPG Marketing, replacing G. L. Stephens, who becomes manager of NGL Supply and Distribution.

Lunsford, formerly manager of Planning and Analysis for the North Central Division of Sunmark Industries in St. Louis, is now responsible for the wholesale marketing of domestic and imported liquified petroleum gas, of which Sun sold more than 420 million gallons in 1977.

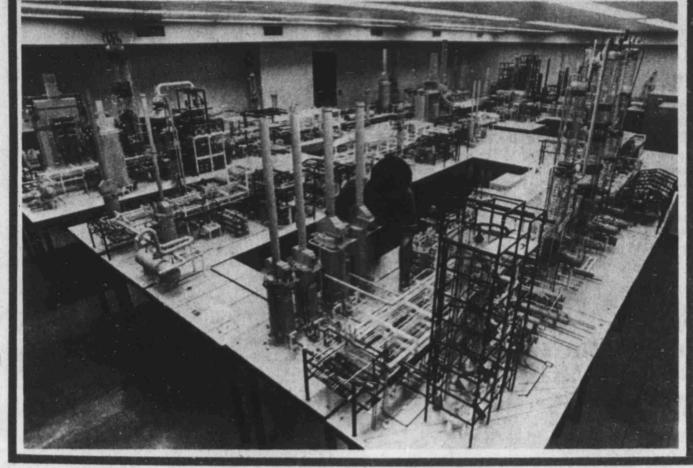

Lunsford joined the Sun organization in 1968 as an administrative trainee in Tulsa after earning an MBA degree from the University of Oklahoma. He progressed through the Sun retail marketing structure until Jan. 1975, when he became manager of Financial Analysis in the Financial Administration Department of Sun Oil Co. (Delaware) in Dallas. Lunsford was named manager of Planning and Analysis for Sunmark in Feb. 1976.

Stephens, a 27-year marketing professional, now directs the supply and distribution function for Sun's natural gas liquids and serves as the over-all manager of the company's NGL terminaling and storage ventures, including the recently completed facilities at Marcus Hook, Pa., and Hattisburg, Miss.

Stephens, a graduate of Oklahoma State University, began his gas industry career as an LPG sales representative for the Universal Petroleum Co. in 1951. He joined Sunray DX in 1966 as LPG wholesale sales manager. He was named manager of Wholesale LPG Marketing upon the formation of the Sun Gas Co., following the Sun-Sunray DX merger.

With operations in 32 state, Sun Gas serves customers ranging from independent retailers to multi-state-marketers to large industries and utilities.

Stephens replaces Guy W. Howell Jr., who retired in early August after 32 years with the Sun organization. Lunsford and Stephens report to Robert C. Zuehlke, vice-president, Sun Gas Co., Natural Gas Liquids Group, in Tulsa. Sun Gas Co. is a unit of Sun Co., Inc. of Radno, Pa.

More than a model, this scale replica of Marathon Oil Co.'s Robinson, Ill., refinery, built in 1968 as a construction guide during an expansion pro-

gram, still is in use as a trouble-shooting tool for engineers. The model is 27 feet by 50 feet and cost one-quarter of a million dollars to build.

10 percent slug of carbon dioxide gas pushed by nitrogen ups yield

AUSTIN-Using only a 10 percent slug of carbon dioxide gas pushed by pure cryogenic nitrogen, oil recoveries of more than 95 percent have been obtained in the laboratory, the Texas Petroleum Research Committee reported.

Dr. Paul B. Crawford, professor of petroleum engineering at Texas A&M University and assistant director of the committee, said the tests were made on stock tank oil samples from the Wasson field of West Texas. The linear tube was 100 feet long; pressure 1,250 pounds per square inch, and the temperature 107 degrees Farenheit.

The Wasson oil reservoir has more than 600 million barrels of crude oil which remains as a target for successful tertiary oil recovery process, Crawford said.

There are three to four billion barrels of oil located in the rock of the

Permian Basin which provide the target for the nitrogen-carbon dioxide slug process, he related, observing that oil recoveries in the field would only be about half that observed in the laboratory because of irregularities in the rock

TPRC is sponsored by the Railroad Commission of Texas, The University of Texas and Texas A&M.

Using all the carbon dioxide from New Mexico, Colorado and Utah it had previously been thought that only one-third as much carbon dioxide was available as would be required to recover the three to four billion barrels of oil. However, by using small slugs of carbon dioxide pushed by nitrogen, it appears there may be sufficient amounts of carbon dioxide to do the job.

The reservoir cost of pure nitrogen will only be about 15 percent of the cost of piped-in carbon dioxide, Dr.

Crawford reported. One thousand cubic feet of cryogenic nitrogen will cost less than half the cost of \$1.25 per thousand cubic feet cost of carbon dioxide, but one cubic feet of nitrogen will occupy three times as much space in the reservoir as carbon dioxide, he concluded.

Winkler figures told

AUSTIN—Oil fields in Winkler County produced 9,447,430 barrels of oil in 1977 and the value of the production was \$85,404,767. The county also produced 224,836,-

844 thousand cubic feet of gas per day with a value of \$202,836,667. The total value of the counties production last year was \$288,241,434.

Dependence spotlights need for more drilling

TULSA, OKLA.—Recent news reports indicate the U.S. oil-gas industry will drill more wells in 1978 than in any year since 1959.

Concern over increased dependence on foreign imports has spotlighted the need to expand domestic production. Improved price incentives for exploration and recovery apparently are encouraging companies to become more incolved in this risky business.

U.S. operators are expected to complete 48,615 wells this year, according to the Oil and Gas Journal (July 31). The total footage drilled probably will pass the 235-million-foot mark, the highest in histroy. The previous record was 283 million feet of hole in 1956. The cost also is expected to set a record.

The International Association of Drilling Contractors reported in July that the number of rotary drilling rigs in use around the country was running above 2,300 for the first time since December 1958.

The United States will be dependent on petroleum sources to satisfy most of its energy needs for the remainder of this century.

Government price controls have made it difficult for Americans to compete with foreign oil producers in recent years. The American public is paying an average of \$9 per barrels for domestic oil and about \$14 for landed imported oil. In a sense, the country has been subsidizing imported oil.

Industry spokesmen say government restrictions have prevented U.S. oil prices from keeping pace with inflation and have discouraged the kinds of costly exploration and special recovery procedures needed to make maximum use of our reserves.

Although proven oil reserves.

Although proven oil reserves in the U.S. have declined to about 29.5 billion barrels, many scientists estimated that the remaining economically recoverable petroleum supplies are really about four times that amount. The problem of recovery is an economic one.

To reach maximum production levels, the industry will have to try to squeeze more oil and gas from existing fields; drill deeper and in less promising areas, and search in offshore waters and frontier regions.

The American petroleum Institute says these reserves can be developed if (1) prices of domestic liquid and gaseous petroleum are permitted to reflect the full cost of replacing those resources; (2) Federal onshore and offshore lands are made available for exploration by the private sector on a

timely and adequate schedule; and (3) the government acts to assure a stabel economic climate that will attract investment in petroleum and other energy sources.

Each of these activities will involve high costs and serious risks. More competitive prices will enable producers to recover the huge investments required for exploration and development

The United States is by far the largest energy user of any nation on earth. In recent years it has used more energy than the Soviet Union, Japan, great Britain and West Germany combined. Each person in the U.S. consumes six times as much energy as the world average.

Present U.S. oil reserves represent only 5 percent of established world reserves. It would last about four and a half years if there were no imports available and no new major discoveries made.

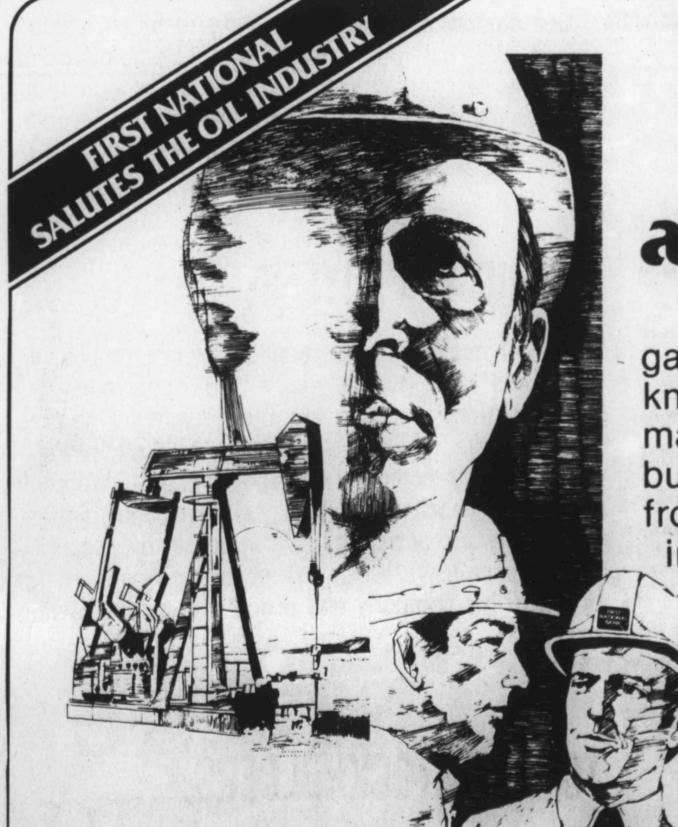

The real cost of replacing the oil and gas reserves being used up will be much greater than the original cost of existing reserves. The new supplies will have to come from deeper wells and from more remote and costly frontier areas.

Transportation costs will be higher because of longer hauls and changing logistical patterns. In addition, the impact of inflation on the petroleum industry has been particularly severe in recent years.

Members of the financil community have pointed out the enormous size of the petroleum industry's long-term capital requirements. Analysis of 35 leading U.S. oil companies showed that while oil company net income increased by some \$5.8 billion between 1971 and 1976, capital expenditures increased by \$14.7 billion, or some two and one-half times more than net income.

For the past several years the nation has been producing more than three billion barrels of oil a year and replacing that with only two billion barrels in new proved reserves. Just to stay even, the U.S. willohave to increase its reserve addition rate by 50 percent. The next 10 years will be critical, industry spokesmen note, because it takes at least that long to make any major changes in an inergy system as large as America's.

That's why reports of record drilling activity are so important.

Our Oil Men are also Bankers...

Because today's complex oil and gas financing requires experience and know-how, our Oil Department staff is made up of men who know the oil business. Their experience comes from working with oil companies and in the oil fields. They know and understand the business, and their expertise is called on frequently to serve the industry. May we help you?

A great bank to call your own.

WHAT IS WPC-CASING BOND

WPC-Casing Bond, Inc. is the worldwide licensing agent for the Conco RUFF-COTE patent RUFF-COTE process increases the bondability of cement to pipe thus decreasing the amount of remedial cement work and squeeze jobs necessary in the producing oil field. The ap-plication is used worldwide with well over three million feet of coated pipe in service. The process is applied by licensed applicators throughout the world.

WHAT IS WPC-PETROLEUM ANALYTICAL LABORATORY SERVICE?

WPC-Petroleum Analytical Laboratory Service is an independent testing laboratory which has been serving the PERMIAN BASIN since 1958. PALS offers complete analytical, consulting, and research services. Incorporating all phases of industrial analysis of hydrocarbons, water minerals and solids, as well as complete air pollution control services. PALS skilled and experienced chemists provide consultation and special services in studies and surveys. These services are offered to fit the requirements of

WHAT IS WPC-PETROLEUM ANALYTICAL LABORATORY SUPPLY?

WPC-Petroleum Analytical Laboratory Supply provides clientele throughout the Permian Basin, New Mexico Areas with a complete line of reagent grade chemicals, standardized solutions, laboratory hardware and glassware, all types of containers, and sepcialized testing equipment. PALS Supply provides these with service second to none.

WHAT IS WPC-BELL RUBBER COMPANY?

WPC-Bell Rubber Company manufactures, and through distributors sells rubber and metal products to the well servicing industries. These products include swabs, swab cups, pipe wipers, line flags, STRIP MASTER oil savers, and many other rubber products related to the well service industry. WPC-Bell Rubber has over 30 years experience in research, develop-ment, and application of rubber and metal goods related to the well service industries.

WHAT IS **VPC ENGINEERING?**

WPC Engineering was formed in 1970 with its primary objective being to provide the oil and gas industry with capable, experienced per-sonnel qualified to plan, engineer, and supervise drilling, completion, and production operations regardless of depth or abnormal conditions encountered. Since its inception, this organization has successfully provided these services to oil and gas operating companies engaged in drilling deep, high-pressure wells, as well as normal pressure well.

WHAT IS **WPC-WORTH WELL SURVEYS?**

WPC-Worth Well Surveys has been operating in the Permian Basin since 1950. We perform a multitude of electric wire line services such as perforating, gama ray neutron logging, computer caliper, temperature horizontal and vertical spinners, tracer surveys, fluid density logs, etc. Warth's ariginality and development of production logging techniques include frac and acid evaluation logs (FEL, AEL), horizontal spinner, and multiple production logs. The past 15 years of experience logging deep high pressure hot holes (to a record depth of 26,465') has made WPC-Worth Well Surveys the leading company in this particular field.

WPC-Worth Systems manufactures special hightemp-high pressure logging tools and complete logging trucks for the wire line industry at large as well as for our own use. We count most of the major wire line companies and many of the major oil company research and development groups among our customers. In addition to our domestic customers, WPC-worth Systems has sold equipment to operate in Europe and South America.

THE OBJECTIVES OF

Our objective to our customers is to provide them with quality products and services which will best assist them in accomplishing their goals. We will always stand ready to serve with honest effort, creative ideas and highest business ethics. We shall always strive to adjust our methods and procedures to fit those of our customers.

TO OUR COMMUNITY:

Our objective to our community is to be a good citizen. We want our company and its employees to earn the respect of their community through their good work in community activities and through their exemplary standards of behavior.

TO OUR EMPLOYEES:

Our objectives to our employees are to provide each man and woman with the opportunity to develop their abilities to the maximum and to utilize these abilities to the maximum mutual benefit of the company and the employee. We shall strive for each employee to have the highest possible work satisfaction, compensation, security and opportunity. We want each employee to be proud of his company and proud of his contribution to it.

TO OUR STOCKHOLDERS

Our objectives to our stockholders are to protect the safety of their investment in our company, to make their investment increase in value and to earn them a fair return on this value.

Oil Show Edition

Edmonton sits pretty

The Los Angeles Times

EDMONTON, Canada-Estimates of the petroleum reserves beneath a giant new Canadian field called West Pembina are edging upward.

At hearings in Calgary before the National Energy Board, Amoco Canada Ltd., a subsidiary of Standard Oil Co. of Indiana, projected the area's potential at 1.5 billion barrels over the

That compares with total proved reserves of 6.25 billion barrels throughout Canada. And Amoco production vice president Tony Neidermayer added that those estimates could easily grow larger as exploration continues.

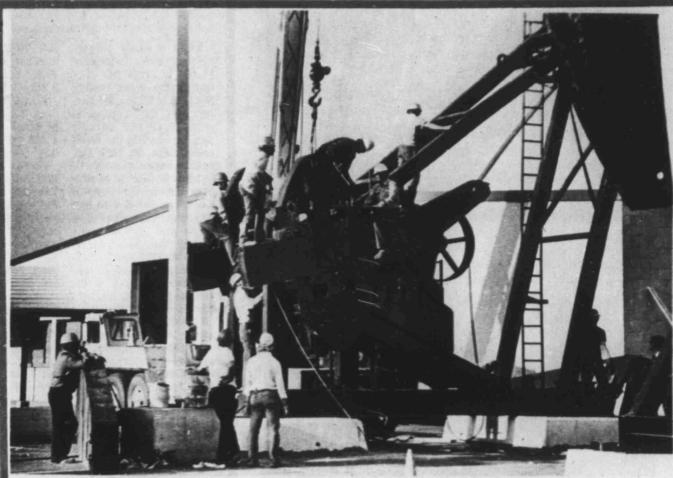

Industry officials say that areaabout 900 square miles located 85 miles southwest of Edmonton in the eastern foothills of the Rocky Mountains-may be the most important new petroleum discovery in Canada during the past decade. It may be even bigger than the adjoining Pembina field, Canada's largest, where remaining reserves total 650 million

Speculation about the size of West Pembina has swirled throughout the petroleum industry for the past year and a half, ever since Standard Oil Co. of California drilled the discovery well that kicked off the search.

The only previous official estimate came from the Alberta Energy Resources Conservation Board, which set reserves at 500 million barrels.

At the Calgary hearings, Chevron Standard Ltd., the Canadian subsidiary of Cal Standard, said it would not confirm any number. "We are very encouraged with what we see to date," said president A. B. Bristow, "but I can't say there are 2 billion barrels of oil there. I hope so, but I can't say it's so."

Drilling and seismic crews from Canadian and U.S. companies have been pouring into West Pembina, reminding oil officials of the scene in Alaska after the North Slope discovery in 1968. North Slope reserves total about 9 billion barrels.

tion at the Permian Basin Oil Show grounds in Odessa. The oil show gets underway Wednesday and will continue through Saturday, with more than 500,000 persons expected to walk through the Photo by Ed Todd) turnstiles. The first two days of the show will be for

Company restructuring revealed

LOS ANGELES-Directors of Atlantic Richfield Co. have approved a restructuring of the operating units of the company and elected three senior vice presidents.

Effective next Jan. 2, eight units will be renamed and reorganized as companies that will be divisions of Atlantic Richfield or its subsidiary, the Anaconda company. The president of each company will also be a senior vice president of Atlantic Rich-

Chairman Robert O. Anderson said the changes "will shift greater authority and responsibility to individual operating units and help develop a deeper reservoir of management talent for the future in light of the company's broadened operations. Our long-term objective is to assign maximun profit accountability to each

function and its manager. The newly designated companies and their activities are:

ARCO Petroleum Products, J.W. Simmons, president-refining and marketing of fuels, lubricants and waxes worldwide, including supply and distribution.

ARCO Chemical, R.M. Bressler, president-manufacture and marketing of chemicals and plastics world-

ARCO Oil & Gas, B.J. Lancaster, president-exploration for and production of oil and gas on the North American continent, headquartered

ARCO Transportation, L.M. Cook, president-management of pipeline and tanker transportation and representation of Trans Alaska Pipeline

ARCO International Oil & Gas, Paul Ravesies, president-exploration for and production of oil, gas and coal in, foreign countries.

Seismic crews continue to increase worldwide

TULSA, Okla.-The number of seismic land crews and marine vessels searching for oil and gas worldwide continued to increase during the second quarter of this year, according to data released by the Society of Ex-

ploration Geophysicists.

Although there were declines in activity in several geographical re-gions, those were offset by a sizeable increase in seismic exploration in the

Ector again top oil area

ODESSA-Historically, Ector County is one of the top oil and gas producing counties in Texas, and in 1977 the county again was among the top five, finishing the year as the fourth best in the state.

The Ector County yield was 62,364,428 barrels of oil, plus 134,590,133 thousand cubic feet of gas.

The oil was valued at a little more than half a billion dollars-\$563,774,-429. The gas was valued at another \$121,669,480

The state reaped a real harvest in taxes from the production, \$35,058,-835. Of that total, \$25,933,624 was paid on the oil and \$9,125,211 was paid on

Although wildcat activity in the county was light, 219 field and wildcat tests were drilled in 1977. Only four were wildcats, and half of those completed to open new oil pools. Seven of the 217 field projects were dry holes. Two were completed as gas wells and 208 were completed as oil producers and two as gas wells

There is one oil refinery and four petrochemical plants in Ector County to go with that area's eight natural gasoline processing plants.

The oil refinery has a capacity of 32,000 barrels of oil per day. The gasoline plants process 793.2 million cubic feet of gas daily.

The oil industry is the biggest employer in Ector County. In 1977 there were 7,089 persons with jobs in the industry and they were paid \$101,754,-

United States during the period, although there was a slight decrease in activity in the U.S. in August, the first such decline since January.

PAGE 1CC

The worldwide total of seismic crews and vessels active at the end of June (second quarter) was 738, an increase of eight vessels since the end of March (first quarter) total of 730. Totals for previous quarter are as follows: Third quarter 1976, 621; fourth quarter 1976, 621; first quarter 1977, 635; second quarter 1977, 626; third quarter 1977, 650 and fourth

quarter 1977, 686. The international survey reflects data reported on seismic oil exploration activity by 90 private and governmental crew operators around the world. Special significance is attached to the figures since seismic crew activity is recognized as the leading indicator of all petroleum exploration activity.

In the United states, the number of land crews and marine vessels active during August was 365, down two from the July total of 367. The July total was the highest since the second half of 1961. This August represents a 12 percent gain over August 1977, a 33 percent increase over August 1976, a 26 percent increase over August 1975 and a 14 percent gain over the same

New office now open

PEARLAND-Chance Collar Co., manufacturer of drill collars, subs, and stabilizers, has opened a new manufacturing facility in Pearland,

Located on a 50-acre site in the heart of the Gulf Coast producing area, Chance's plant is fully equipped with modern machine shop facilities for primary manufacturing and repair work. Chance's new plant is also conveniently situated to serve world markets through the ports of Galveston or Houston.

Petroleum accounts for many products

(EDITOR'S NOTE: The following story was written by a member of the staff of the New Mexcio Oil & Gas Association.)

SANTA FE-At the turn of the century the petroleum industry's principal product was kerosene and the marketing process was fairly simple and direct.

The refineries delivered it to hardware and grocery stores in wooden barrels. Homeowners came by the stores with their own containers to pick up the quantities they needed. In some areas door-to-door peddlers made deliveries in small amounts from wooden tanks, mounted on hor-

However, as time went by, science and industry found more uses for oil products. The demand increased and the task of supplying the myriad needs of oil consumers became more

Today there are more than 3,000 different products made from petroleum requiring a variety of processes, machinery and facilities for handling,

distribution, and storage. The most familiar outlet is the service station.

But the service station is just one of many marketing places for products ranging from greases to liquefied gases. Airlines consume huge quantities of jet fuel. Petroleum-based liquid fertilizers are a necessity today. Waxes and asphalts and industrial oils, such as those for metal working, hydraulic systems, and transformers, all represent large markets for petro-

Petroleum marketing in the United States involves the delivery of about 16.5 million barrels each day of a wide range of oil products from refineries and storage points to consumers across the land.

The procedure for distributing gasoline and fuel oils, which are the industry's volume products, demonstrates the basic petroleum marketing channels. They involve facilities such as petroleum terminals and bulk plants, and personnel such as refinermarketers and distributors.

A refiner-marketer generally sells his products under his brand name to distributors, fuel oil dealers, service station dealers and consumers. He may, however, sell unbranded products to distributors, fuel oil dealers and service station dealers who then market the products under their own

Petroleum terminals are large distribution centers where petroleum products are received, generally by pipeline, marine tankers or barge. In some remote parts of the country, gasoline and fuel oil are transported to terminals by railroad tank cars or truck transports. Petroleum marketing has some

rather unique characteristics. First, oil products are almost constantly on the move. The crude oil first moves from producing fields to refineries. From refineries oil products move to distribution and storage

points, and then quickly to consumers. The flow generally must continually if the ultimate customers are to be served effectively. Second, except for the relatively small percentage of the crude oil that

is used to make such products as fibers, plastics, waxes and asphalts, consumers seldom see the petroleum products they use.

Homeowners have their heating oil tanks filled, motoists buy gasoline, and truckers fill up with diesel fuel without ovserving the product they are purchasiing. The customer has faith in the ability of the manufacturer and supplier to provide products that will satisfy his requirements.

Finally, the demand for fuel oil, which is one of the industry's principal products, is highly seasonal. Marketers must plan ahead, storing up fuel oil in the summer to take care of peak levels of demand during the winter months.

Each of the many hundreds of petroleum products has its own flow pattern from refinery to customer.

The methods for marketing the variety of petroleum products are almost as varied as the products themselves. Motor oils and greases are packaged in drums and smaller containers which are then shipped in trucks and boxcars to customers or intermediate storage facilities. Industrial oils are sometimes shipped in bulk or in very large containers, as well as in drums.

Terminals store and redistribute products to petroleum bulk plants, wholesale distributors, fuel oil dealers, service stateions and large consumer accounts.

Shipments out of terminals are mostly by truck transports (8,000 to 10,000 gallons), tank trucks (1,500 to 3,000 gallons) or railroad tank cars. Occasionally a very large consumer account, such as an airport, is served directly by a pipeline from the termi-

Bulk plants are smaller than terminals. They receive shipments of petroleum products by truck transport or rail either from refineries or terminals. Bulk plant operators redistribute these products by tank trucks to large commercial accounts, homeowners, farms, and gasoline service stations.

DISCOVERY BEGAN IN 1920 AT A MITCHELL COUNTY-WELL NEXT CAME THE 1923 BIG LAKE STRIKE, THEN THE WILD 1925 BOOM IN UPTON COUNTY, FOLLOWED BY PRODUCTION IN ANDREWS, CRANE, ECTOR, MARTIN, MIDLAND, PEGOS, WARD, WINKLER AND 24 OTHER COUNTIES IN SOME YEARS NEW WELLS AVERAGED 38 A WEEK FORTUNES WERE MADE LOST THEN REGAINED ALL WITHIN MONTHS SO GREAT WERE YIELDS THAT OIL BROUGHT SO CENTS A BARREL, WHILE DRILLERS PAID \$5.00 A BARREL FOR DRINKING WATER AREA IS 88,610 SQUARE MILES WITH CENTER HERE AT ODESSA EXTENDS ACROSS A DEEPLY BURIED PREHISTORIC SEA THAT MORE THAN 250 MILLION YEARS AGO CONTAINED MUCH FISH AND REPTILE LIFE INCLUDING DINOSAURS SHORES AND ISLANDS LATER GREW GIANT VEGETATION.

UNTIL EARTH CHANGES BURIED ANIMALS AND PLANTS IN POCKETS THAT TURNED HYDROCARBONS INTO PETROLEUM IN 40 YEARS FROM ITS DISCOVERY, THE PERMIAN BASIN WAS PRODUCING 53% OF TOTAL OIL IN TEXAS AND 20% OF U.S CRUDE OIL IT IS ONE OF THE WORLD'S LARGEST PRODUCERS OF CHANNEL CARBON BLACK OTHER BY PRODUCTS ARE SULPHUR ASPHALT, SYNTHETIC RUBBER INGREDIENTS

This historical marker, put up by the State Historical Survey Committee, can be found on the Permian Basin Oil Show Grounds in Odessa. It traces the history of oil in the Basin from the first commercial strike in Mitchell County.

Oil refinery work to start

SAN ANTONIO-Gulf Energy & Development Corp. and Metaloil Corp. of Houston have announced plans to build a 10,000-barrel-per-day oil refinery at the Port of Brownsville.

The refined product slate will be naptha, kerosene, and catalytic cracker feedstock.

Gulf Energy Refining Corp. of San Antonio (a wholly-owned subidiary) will own 65 percent of the refinery and will be the operator and Metaloil Corp. of Houston will own 35 percent. James L. Walker is the owner and president of Metaloil.

T. H. Russell & Co. of Tulsa, Okla., is the contractor for the construction which is scheduled to commence in November.

The tankage and most of the site improvements already are in place; therefore, the erection time has been reduced substantially.

The refinery is scheduled to be completed and in production by March 1979.

Intrastate Gathering Corp., another wholly-owned subsidiary of Gulf Energy & Development, will deliver and sell natural gas to the refinery to provide the necessary fuel.

Processing unit imput shows per day climb

Input to crude oil pre- late fuel oil during the cessing units increased 51,000 barrels per day during the week ending Sept. 29 to 15,305,000 barrels per day compared with 15,318,000 barrels per day during the week ended Sept. 30, 1977. Operable capacity was utilized at a rate of 90 percent during the current week compared with 89.9 percent the previous week and 92.7 percent during the week ended Sept. 30, 1977.

Production of motor gasoline in the U.S. increased 103,000 barrels per day during the week to 7,332,000 barrels per day. During the week ended Sept. 30, 1977, production of motor gasoline was 6,990,000 barrels per oil into the U.S. in- barrels in District 1 and 4 day. Production of distil- creased 83,000 barrels combined.

current week decreased 49,000 barrels per day to 3,242,000 barrels per day. During the week ended Sept. 30, 1977, production of distillate fuel oil was 3,278,000 barrels per Stocks of motor gaso-

line in the U.S. increased 1.069,000 barrels during the week to 218,748,000 barrels. On Sept. 30, 1977, stocks of motor gasoline were 248,181,000 barrels. Stocks of distillate fuel in the U.S. increased 3,799,-000 barrels during the current week to 210,920,- cation increased 1,008,-000 barrels. On Sept. 30, 1977, stocks of distillate and 1,085,000 barrels in fuel oil were 245,795,000 District 3. Stocks de-

barrels. Total imports of crude in District 5 and 710,000

per day during the week to 6,444,000 barrels per day. Crude oil imports into Districts 1-4 increased 213,000 barrels per day while receipts into District 5 (West Coast) decreased 130,000 barrels per day.

University research vessell returns home

AUSTIN-A Universithy of Texas geophysical research vessel has returned from a four-month cruise with data that could provide some fundamental answers to questions about the structure, origin and development of the earth's Middle America area.

That region, which stretches about 2,000 miles north-south along the western coast of Central America, is an area of controversy in the current concepts of plate tectonics and continental drift.

The 135-foot research vessel Ida Green of UT's Marine Science Institute Geophysics Laboratory at Galveston conducted its cruise in the western Caribbean and off the west coast of Central America as far north as Acapulco, Mexico.

Results from the cruise will be analyzed and published in the coming year, according to Dr. J. Lamar Worzel, one of the five chief scientists for the voyage and director at the Galveston laboratory.

The research work included seismic acoustic measurements and meassurements of the earth's magnetic field which are the geophysicists "Xrays" for observing the earth's crustal structure.

Researchers aboard the Ida Green also collected coring and dredging specimens for detailed geologic investigations of the ocean floor.

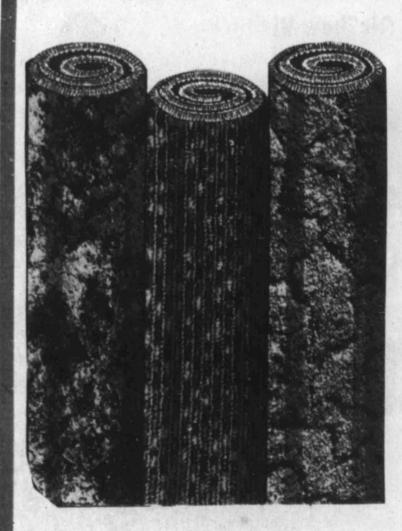

Another portion of the cruise was a six-week investigation of drill sites off Guatemala and Oaxaca, Mexico, for the International Project of Ocean Drilling.

Other chief scientists for the various portions of the voyage were Drs. John L. Ladd, Thomas H. Shipley, Kenneth McMillen and Mark H. Houston of the Galveston Geophysics Laboratory. Five UT students and six staff members also participated.

Arizona's time near

PHOENIX, Ariz.—It could be that Arizona's time to really enter the realm of oil producing states is nearer. If leasing activity in 1977and early 1978 is any criterion, the time IS

Anschutz Corp. has acquired 5 million plus acres of oil and gas leases in 11 of Arizona's 14 counties.

uired 5 milgas leases in Containment dome catches USSR visitor's eye

By THOMAS O'TOOLE The Washington Post

NOVOVORONEZH, U.S.S.R. - The first thing visitors notice about the largest nuclear power complex in the Soviet Union is a containment dome taking its final shape around the fifth nuclear power reactor to be built here, 300 miles south of Moscow on the banks of the River Don.

Made of steel and concrete and standing almost 250 feet high, the containment dome will be completed next month in time for the December commissioning ceremonies for the 1 million kilowatt nuclear plant it en-

That will make it the largest nuclear power plant of its kind in the Soviet Union. But what really makes it unique is that it is the first to be built with containment to isolate any dangerous radioactivity that might escape from the reactor in the event of a serious accident.

Never before in the 24 years the Soviet Union has been building nuclear power stations did they put a containment dome round a single one of the 29 previous reactors.

Almost all the 151 nuclear stations operating in 20 countries around the world operate inside containments. All 71 of the nuclear plants in the United States were built with containments. Without them, they could not have obtained a license to operate from the Nuclear Regulatory Com-

If nothing else, the lack of containments illustrates the Soviet approach to nuclear safety which might best be described as "different."

None of the workers in Soviet nuclear plants wear the dosimeters so familiar elsewhere in the world to measure accidental exposure to radiation. Visitors are routinely brought into the rooms housing Soviet reactors. A touring group of American journalists last week was taken to the top of a small reactor in Moscow's Kurchatov Institute, where the only thing that stood between them and the eerily beautiful blue glow of the reactor's burning uranium was 15 feet of water.

The tour was arranged by the Atomic Institute Forum, a Washington trade association made up of major nuclear suppliers including Westinghouse and General Electric.

The worst possible accident the Soviets equip their nuclear plants to expect is a single break in the largest pipe carrying cooling water to the reactor. U.S. plants are built with complete emergency cooling systems to handle simultaneous breaks at both ends of the same pipe, a remote accident, to be sure, but one that could result in such a sudden loss of cooling water that the uranium fuel might overheat and even melt its way through the floor of the reactor.

A melting of the core is considered 'impossible" in the Soviet Union, where the approach to safety is to take the utmost care in construction and to back up pumps and valves with redundant spares and emergency generators to supply power if the main electrical system fails.

The Soviets are proud of their nuclear safety record. They have run four small nuclear plants under difficult conditions without an accident at Bilibinska, in the permafrost region of Magadan. Two months ago, they kept running a much larger plant in Armenia without damage during an earthquake. Soviet safety experts claim they now have the euivalent of 2,000 years of nuclear operating experience without a "single major fail-

When they built the reactor for the first nuclear icebreaker Lenin, Soviet engineers tested it out in the shipyard where the icebreaker was being built to convince the workers and crew

members of its safety.
"How save was it?" asked chief nuclear safety engineer Yuri Sivintsev at theKurchatov Institute in Moscow. "In 1969, the Lenin collided at full speed with an iceberg that tore a hole in the ship one meter wide. Plates and dishes broke and I suffered a bad bruise on my head but the reactor went right on working."

Here at Novovoronezh the other day, plant director Vitaly Sedov told the American journalists that the plant was that day celebrating the 14th anniversary of its first reactor, a 210,000-kilowatt unit started up in 1964. Later reactors were built in 1969. 1971 and 1972 that together generate another 1,240,000 kilotwatts. Sedov said there has not been a single fuel leak in any of the four reactors.

"The worst experience we have had here happened to a turbine, not the nuclear reactor," Sedov said. "We had to shut down one of the units for one month but it was to fix the tur-

bine, not the reactors.' Nevertheless, the Sovietrs are feeling a little sensitive about not having containments anywhere else but the fifth reactor at Novovoronezh. Plant director Sedov led the visiting journalists on a tour of the turbines in the older parts of the plant but did not offer them entrance to the reactor room right next door.

Why are the Soviets building a containment around the fifth reactor at Novovoronezh? Why did they add \$30 million and six months construction time to a project that has alrady taken six years? Sedov and construcion director Dmitri Vprosorovski say simply that the order to add a containment to the fifth reactor came from Moscow

American observers think the containment was built at the fifth Novovoronezh unit because of the its size. At 1 million kilowatts, it will be the biggest pressurized water reactor in the Soviet Union and the prototype for many plants still to be built. The turbines, the pumps, the valves, the steam generators and the cooling pipes are all bigger than the machinery built for smaller plants.

Another reason, according to Western experts, is that the Soviets want a larger share of the export market. They have exported plants to Finland

and most of the East Bloc countries but lost bids in Yugoslavia and Romania because those two countries would only buy plants with con-

kilometers from town instead of two. Soviet fishermen represent the only group in the country that has successfully put pressure on nuclear plan-

The Soviets are proud of their nucler safety record. They have run four small nuclear plants under difficult conditions without an accident at Bilibinska, in the permafrost region of Magadan.

The Novovoronezh complex lies less than 2 kilometers (1.2 miles) from the town of Novovoronezh, whose population is now 25,000 and on its way to doubling. There is a story told here that the mayor of Belyoyarsk in the Ural Mountains asked the authorities to locate their first nuclear plant further out of town than they planned and they obliged. The plant is four

ners. The first two plants built at Novovoronezh took their cooling water right from the river Don but a regulation was immediately made that the discharge water could heat up the river by no more than 9 degrees Fahrenheit at the point of discharge and no more than 6 degrees half a kilometer downstream to protect the

Salaries of workers highest uncovered

DALLAS—The average annual compensation for the lowest paid helper in the oilfield as surveyed by A.S. Hansen, Inc., is higher than that paid entry level accountants in the energy industry.

The findings were part of the unexpected results of the study completed for the fourth year for participants by Hansen, international compensation and benefits consultants.

Philip G. Henderson, vice president for compensation, released a few comparisons from offices in Dallas. he stated that the study indicated a "utility helper B" is paid an annual base rate of \$13,460 (\$6.47 per hour) while recently hired college graduate "accountant I" makes \$12,000.

Fifty-seven companies prticipated in the confidential survey on salary, incentive and perquisite and benefits information covering 100 different po-

Mr. Henderson noted no significant differences in geographical ares for most positions, although the survey covered companies in New York. Maryland, West Virginia, Michigan, Illinois, Florida, Montana, California and of course all of the Southwestern

The Oil and Ga Survey indicated other entry level positions for energy specialists fared better than the accountants, with entry level production engineers earning a base salary of \$20,600, landman, \$17,450 and geologist, \$18,900.

Participants are able to compare elements of their own compensation packages to industry norms, using data analyzed by company size, location and scope criteria relevant to each position.

Companies surveyed ranged in size from les than \$5 million in annual sales to serveral billion.

Tax rates hold steady

oline tax rate increases over the last 10 years, 11 states have maintained a constant gas tax rate during the same period, according to Commerce Clearing House (CCH).

CHICAGO, Ill.-Al- nia, Nevada, New Mexi- from 7 to 8.5 cents per gallon; the tax in Utah went from 7 to 9 cents per gallon, and the rate in West Virginia rose from 8.5 to 10.5 cents per gallon. Washington continued its 11 cent rate through December.

Washington and Connecticut have the highest gasoline tax, 11 cents per gallon.

The next three plants were built with enormous and expensive cooling towers, that recycle their own water, which they get from wells. The fifth and largest plant nearing completion is being built with its own artificial lake, whose surface measures five square kilometers (two square

The Soviets do not think the disposal of atomic wastes is anywhere near as serious a problem as it is made out to be in the United States, though they appear no closer to a permanent solu-

They refuel their nuclear plants once a year, then place the removed spent fuel in "swimming pools" filled with water where they are kept for three years to cool off. The spent fuel is then placed in steel casks and taken on railroad cars to what is apparently an away-from-reactor storage site at an unidentified location.

At Armyansk and Dimitrovbgrad, liquid wastes are being pumped into

layers of clay 1,500 to 6,000 feet in the ground. The Soviets say there is no water in clay to leach the wastes away from their burial sites but also admit the wastes they are pumping into the earth are not the "hot" wastes containing the most dangerous or long-lasting levels of radioactivity.

Where and how they will dispose of the hot wastes is still under discussion at places like the Kurchatov Institute, where most questions of nuclear safety are resolved. Just as in Europe, American and Japan, abandoned coal and salt mines are among the prime candidates for the permanent burial of waste. The Soviets insist they see no inherent danger in the burial of nuclear waste if it is done right.

"There is a uranium lode in Gabon in Africa that has conducted its own natural chain reaction for almost 2 million years," Sivintsev told the visiting journalists. "None of the radioactive wastes from that natural reactor has harmed anybody in that

With CIT Financing it's easy to bring NEW working capital into your business.

CIT can provide you with new working capital repayable over a long term, secured by your existing free and clear machinery and equipment. And we'll even consolidate unpaid balances And, you might not need a cash on existing equipment into your working capital loan.

If it's new equipment you're planning to buy, try CIT's "In-Advance" Financing/Leasing which gives you a 90-day credit line so you can select the equipment you need, when you need it.

"In-Advance" Financing/Leasing makes equipment acquisition easier because your financing or leasing arrangements are out of the way,

down payment because you can use existing acceptable machinery and

equipment as a down payment

To find out how easy it is to bring new working capital into your business, call Doug Smith in Odessa at 915-332-6761 or Ron Stevens in Lubbock at 806-763-9467. You can also call 214-748-0361 in Dallas or 713-626-4830 in Houston.

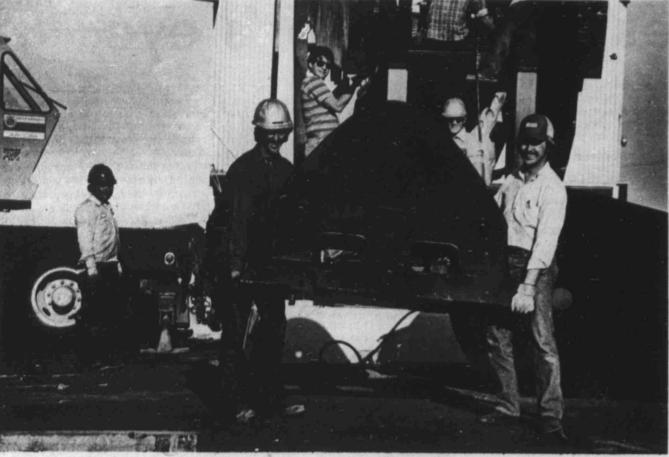

Don't let a shortage of working capital stunt your growth.

Visit Booth E-6 at the Permian Basin Oil Show October 18-21

Welcome Oil Show Visitors

Oil field hands may be tough 'n' rough. But, contrary to what seems to be, they are not Supermen. Dean Cox, left, and Keith Walters, both of Odessa, handily lift a light-weight (about 100 pounds) wooden model of a 4,000-pound counterweight for a Lufkin Industries pumping unit at the Permian Basin Oil Show and Exposition. Cox

works for Ruthco, which sets up oil field pumping units. Walters is a service representative of the Lufkin-based pumping unit manufacturer. In the background is an air-balanced unit, which reaches to 50 feet at peak of the horsehead's swing. (Staff Photo by Ed Todd)

API supports alcohol for fuel use

WASHINGTON, D.C.—The American Petroleum Institute has reiterated its support for further research into the production and use of alcohol fuels in written testimony submitted to the Senate Energy Committee's Subcommittee on Research and Development

velopment.

Alcohols are versatile chemicals that have a wide variety of potential uses as fuel and chemical feedstocks," the API statement said. "As fuel, alcohols have desirable properties such as high thermal efficiency and high octane. As chemicals, alcohols made from coal and agricultural and forestry products could replace alcohols made from petroleum, thus releasing the petroleum to fuel markets."

Petroleum companies, the statement said, have been interested in alcohols since the 1920s, but have not marketed them as motor fuels, "because they have been and continue to be more costly than the available alternatives relative to their advantages as motor fuels.

"Each time companies have become seriously interested in the advantages of ethanol or methanol as gasoline blending components, less expensive octane improvers or improved processing techniques, such as catalytic reforming, have been developed."

veloped."
The API said various technical problems associated with the production and use of alcohols as components of gasoline have also been a factor, and that while these problems may not be insurmountable, the cost of their solutions would be reflected in the price of motor fuel.

The API testimony included preliminary results of industry-contracted research, confirming a number of non-industry studies, showing that the production of alcohols from grain creates a negative energy balance.

ates a negative energy balance.

"It already seems clear that almost two energy units must be invested to yield one in the form of ethanol from grain sources, while ethanol from sugar cane looks like a break-even energy balance," the API reported.

"We are concerned that these processes as they now exist are highly energy intensive, and the energy supplied (at least in most cases in the United States) comes from petroleum and natural gas, those very resources the nation is trying to conserve."

The API statement emphasized that the petroleum industry does not oppose the development and use of alcohols as motor fuels. It said that the most efficient uses of alcohols may be for purposes other than in blends with gasoline.

For example, the use of straight alcohols in stationary gas turbines or in specially designed vehicle fleets would make optimum use of alcohol's inherent combustion advantages, the

Institute said, and direct burning of biomass such as agricultural wastes for boiler fules may be a possibility.

The API said it does oppose govern-

The API said it does oppose governmental mandating of the sale and/or use of alcohols as fuels.
"Under current conditions, man-

"Under current conditions, mandating would force a higher-priced product on consumers without taking into consideration the best and most economical uses of alcohols and other fuel options.

If and when ethanol and methanol become cost competitive as motor fuels, petroleum companies will market them."

Mud will have little effect on sea areas

ATLANTIC CITY, N.J.—Drilling mud used in Atlantic Ocean offshore oil and gas drilling operations and then dumped into the sea will have little or no adverse effect on the marine environment, a geologist said.

Testifying before a Bureau of Land Management hearing on proposed oil and gas leasing in the Baltimore Canyon region of the Mid-Atlantic, Dr. Richard P. Zingula, senior exploration geologist, Exxon Co. U.S.A., described the effect on the marine environment drilling mud, a mixture of clay, water and chemical additives which is circulated through the drill pipe to cool the rapidly rotating bit and also serves as a plaster to prevent the wall of the bore hole from collaps-

Dr. Zingula said he has been bringing together data from more than 125 published and unpublished reports on the effects of offhsore drilling on the marine environment and has been studying the subject in depth for the past year.

past year.

"The conclusion which must be drawn from these data is that normal drilling operations will hve little or no short of long term adverse effect on the marine environment in the Balti-

more Canyon area," he said.

Dr. Zingula explained that when a drill hole is prepared for either production or abandonment, the drilling

Land of oil, gas also has abundance of coal

EDITOR'S NOTE: The following story was prepared by the League News Service of the League of Women Voters of Texas Education Fund as a public service to promote an informed citizenry in Texas.

Texas is known as the land of oil and gas.

But did you know it also has healthy deposits of coal?
Indeed, by 1985, Texas could be the

Indeed, by 1985, Texas could be the 8th largest coal-producing state in the nation.

Although oil and natural gas cur-

rently supply more than 95 percent of the state's energy needs, Texas has begun a rapid conversion to coal in the face of the ever-present energy crunch.

Under Texas' soil lies an estimated 10 billion tons of lignite coal at depths recoverable by strip mining techniques.

Those deposits extend from South Texas, northeasterly across the state, and into Arkansas and Louisiana. Much of this natural resource is thus close to the energy demand centers of the Gulf Coast and Central and North Texas.

This proximity is important. Be-

This proximity is important. Because it takes more lignite than other types of coal to produce the same amount of energy and because lignite is quite volatile, the distance over which it is economically feasible to transport this natural resource is limited.

The nearness of Texas' lignite deposits to demand centers means mine-mouth conversion facilities and short-distance transportation are possible.

Several other factors in the location of the state's deposits favor the mining of lignite in Texas. Gently rolling topography, adequate rainfall, and the overlying soil type all lead to easy strip mining and minimize the difficulty and cost of land reclamation.

In addition, although lignite deposits do not form a continuous band throughout the state and although seams are 4 to 8 feet thick compared to 60-foot seams in Western coal deposits, there are individual deposits in excess of 200 million tons. This will support the economic life of a 1,000 megawatt power plant.

That is the bright side.

Although they are outweighed by the positive, some problems do exist in using lignite coal as a boiler fuel.

Transportation costs are high. The lower heat content of lignite necessitates the use of a large boiler and handling equipment which ups the cost of building generator facilities.

And pollution has not been totally

In addition, the chemical makeup of the fly ash from burning lignite resists the usual means of controlling this type of pollution. Continuing experiments at Texas Utilities' Monticelly Plant may overcome this difficulty.

The energy industry is optimistic about solutions to these problems. As early as 1954, Alcoa opened a lignite mine near Rockdale for generating electricity for use in aluminum processing. The Sandow Plant was the first major mine-mouth power plant in Texas and has a capacity of 360 megawatts.

In 1971, Texas Utilities inaugurated the Big Brown Plant near Fairfield, consisting of two 575-megawatt units supplied with lignite from a company-owned and operated surface mine near the plant. Texas Utilities has subsequently opened the Monticello Plant near Mt. Pleasant.

Lignite has other uses, too. It has significant potential as a feedstock for the chemical industry, replacing oil and natural gas. Lignite gasification is also a distinct possibility in the near future.

It is estimated that as much as 60 percent of the state's future coal demand can be met by Texas lignite.

Texas is known as the land of oil and gas. Before long it may also be

known as the land of coal.

Council announces Gas Sources body

WASHINGTON—National Petroleum Council Chairman Collis P. Chandler Jr., announced the appointment of the NPC Committee on Unconventional Gas Sources. The committee, formed in response to a request from Secretary of Energy James R. Schlesinger, will prepare a draft report for consideration by the membership of the National Petroleum Council

leum Council.

Secretary Schlesinger requested that the study include an assessment of the resource base and state-of-the-art of recovery technology for the following unconventional gas sources: deep geopressurized zones, Devonian shale, tight gas sands and coal seams. It will also include an examination of potential costs and recovery and the impact of government policy on these potentials.

John F. Bookout, president and chief executive officer, Shell Oil Co., Houston, Texas, will chair the committee. Honorable Robert D. Thorne, assistant secretary of energy for Energy Technology, will serve as government cochairman of the group. Meetins of the committee are announced in the Federal Register and are open to the public. The first meeting of the committee was held on Tuesday, Sept. 26, 1978, at 9:00 a.m. in the Columns Auditorium, Two Houston Center, 909 Fannin Street, Houston, Texas.

The National Petroleum Council is a federal advisory committee to the Secretary of Energy. From 1946 until the implementation of the Department of Energy Organization Act of 1977, the council served as an advisory group to the Secretary of the Interior.

The committee members are:

Howard W. Blauvelt, chairman and chief executive officer, Continental Oil Co., High Ridge Park, Stamford, Conn.

Howard Boyd, chairman of the board, The El Paso Co., Houston,

Europeans recovering slowly from price hikes

LONDON-Europeans are recovering slowly but painfully from the increases in oil prices that followed the 1973 Middle East War. But the lives and standards of millions of them have been transformed

An Associated Press survey of 13 countries from the Atlantic to the Urals shows:

-Europeans are living and working in colder homes, offices and factories to save fuel. France and Italy, for instance, have imposed temperature limits of 68 to 70 degrees in homes and offices while the Dutch government has urged its citizens to wear sweaters rather than turn up the

-Sales of automobiles slumped in most European countries from 1974 to about 1977 but now are beginning to rebound in better-off regions. This was because prices of buying and running new cars soared.

-In some countries people garaged their autos and took bicycles to work, saving their gasoline for weekends and vacations. That was mainly because gasoline prices skyrocketed almost everywhere after 1973. In West Germany, for example, a gallon of gasoline rose 23 percent, to about \$1.87, while in Britian it went up 104 percent, to about \$1.25 per U.S. gallon. By contrast, Americans, whose gasoline prices also went up, now pay 62.5 cents to 69 cents a gallon.

-The hike in oil prices produced a global recession that hit industrialized Europe especially hard. Key industries slowed output because of fuel shortages and high costs. Small firms went out of business. Money lost its value as world trade suffered. Millions of Europeans were thrown out of work. In the nine-nation Common Market, unemployment rose from 2.5 million in 1973 to 5.8 million last

-Europeans also have had to contend with inflation that, in countries such as Britain and Spain, at times hit an unnual rate of 25 percent. This meant people had to dip into savings or take second jobs to cover the costs of food, housing, clothing and transportation. The jobless filed for welfare, obliging most governments to divert funds from defence, schools, roads, hospitals and public works.

-Just about every country outside the Soviet Union cut back on oil imports. the Soviets export fuel and have brought their prices more or less into line with those charged by the 13-member Organization of Petroleum Exporting countries, even to their East European allies. This is because

earlier predictions that

1978 may be the first 50,-

000 well year since the

late Fifties remain rea-

to the petroleum and re-

Moscow needs the foreign exchange to pay for Western technology to develop resources in Siberia and elsewhere. Britain and Norway, enjoying the bonanza of North Sea oil and gas, were able to reduce imports by 50 percent and 42 percent, respectively.

The hike in oil prices produced global recession that hit industrialized Europe especially hard. Money lost its value as world trade suffered. Millions of Europeans were thrown out of work.

All of that began with the outbreak of the Yom Kippur was Oct. 6, 1973. Middle East oil producers reduced output as a way of compelling Western nations to refrain from helping Israel. The U.S. and Dutch governments, considered by the Arabs to nurse pro-Israeli sympathies, were denied supplies completely. A series of price increases beginning Oct. 16, 1973, through to last year, raised the cost per barrel of oil from \$2.90 to

Major economic and political developments followed affecting the lifestyles not only of Europeans but of people elsewhere.

Developing countries dependent on

the export of raw materials, for instance, tried to copy OPEC. Costs of such primary products, especially minerals and foods, went up.

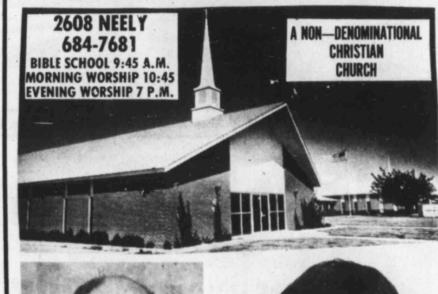

With costs of imports rising Europeans had to pay more for just about everything. But then the costs of their goods shot up, too. Today London, Paris, Bonn, Brussels, Rome, Stockholm, Copenhagen, and Amsterdam are among the most expensive capitals in the world.

Exonomic difficulties generated by the oil price hike produced political upheavals that also affected the way Europeans now live.

In Italy, the economic crisis forced the long-governing Christian Domocrats into a pact with the Communists. In Denmark and Sweden, disputes over energy policy changed governments. Across Europe, environmentalists opposed state plans to switch to nuclear power.

From changing food habits to lower speed limits, Europeans today are inundated by their governments with schemes and subsidies to save fuel. A whole range of research projects designed to develop alternative energy sources are in train. Britain is spending nearly \$900 million in such research and development and in conservation programs.

OIL

Quarterly active-rig totals through the first half of this year in non-Communist areas show the trend is continuing and is strong enough to carry into the future.

Well completions in the non-Communist world shot to 52,136 in 1976 from 28,582 in 1973. For several years prior to 1973, well-completion totals were comparatively stable at 33,300-

Well completions in the U.S. and Canada have continued to increase at least through August. And the Hughes Tool Co. non-Communist active-rig count has increased during each of the last nine quarters, rising to 3,655 last June from 2,655 in March 1976.

Since 1973, wildcat wells-wells drilled to depths or in areas where hydrocarbons are not already known to exist--accounted for 25 to 30 percent of total wells drilled each year, but the trend is downward.

Exploration is likely to remain heavy for at least the next several years in the U.S. and Canada, which together have accounted for about 90 percent of the wells drilled and 70

percent of the active rigs in recent

But some of the major producing countries of the Eastern Hemisphere are shifting the focus to development and extension drilling.

In the U.S. much attention is focused on exploratory drilling off the East Coast. Drilling in the Baltimore Canyon off New Jersey has turned up a gas discovery that is undergoing delineation. Several other offshore areas remain to be leased.

Near-future exploratory drilling is expected to be heavy in the Williston basin and Overthrust Belt in the western U.S., and in many other areas. Drilling in California has ebbed.

Canadian drilling is concentrated in the West Pembina area of Alberta and in the Deep basin along the British Columbia border. drilling in Canada's offshore frontier areas will accelerate next summer, the Journal says. Action will be in the Beaufort Sea and off Canada's East coast.

Mexico has become one of the hottest exploration arenas in the world with major discoveries in the states of Chiapas and Tabasco and the Gulf of Campeche Drilling is increasing, but results

have been mixed in South America,

where several countries are opening their doors to foreign operators. Despite a shift in Eastern Hemisphere emphasis to development, there have been some important dis-

Norway's state-owned Statoil has a discovery near Statfjord field in the North Sea that may be in the giant class. And the Nido field discovery off Palawan Island in the Philippines has opened a new exploration arena in the

South China Sea. In the U.K. North Sea, wildcat drill-

ing has declined and may fall futher, due to stiff lease terms, higher taxes, and limited new acreage. Most of the larger structures on present leases have been drilled.

Middle East producing countries continue to concentrate on development drilling, and African exploration has produced mixed results. The two major Communist coun-

tries have taken diverse courses in their drilling programs. Remote wildcatting in the Soviet

Union is giving way to deep drilling in producing areas or development drilling, with action concentrating more and more in the prolific oil and gas regions of western Siberia.

In China, exploration is fanning out, and the nation is increasingly turning to other countries for equipment and technology, especially for offshore exploration.

Meeting to focus on energy hunt

SAN FRANCISCO, Calif.-How to find new energy resources and meet the world's growing demand provides the primary focus of an international conference which convenes in San

Francisco Oct. 29. Earth scientists from around the world will deliver 274 technical papers during the four-day meeting of the Society of Exploration Geophysicists, examining dozens of techniques for finding oil, natural gas, coal, uranium as well as geothermal energy

sources and other mineral deposits. More than 6,000 delegates and spouses, representing 30 counties, are expected to attend the meeting which was six years in planning. It will be the 48th annual meeting of the 11,000member SEG, whose members are in the vanguard of exploration, and the first time the meeting has been held

in San Francisco. 'All indications are this will be one of the largest SEG meetings in history," L. C. Lawyer, general meeting chairman, said. "We have already set records in the number of exhibitors and speakers. Thirty-three tech-

nical sessions are scheduled covering

virtually every aspect of geophyscial exploration.

He pointed out the meeting theme, "Geophysics-Diversifying for Progress'is characterized by the broad scope of the technical program organized by Walter R. Fillippone, with Union Oil Co. of Calif., technical

program chairman. Lawyer, a geophysicisgt with Chevron U.S.A., heads the San Franciscobased steering committee for the conference. He explained the technology exhibition includes 170 participating companies displaying the latest equipment and techdniques available to energy explorationists.

Another San Francisco geophysicist, E. John Northwood, with Chevron Overseas Petroleu, is president of the Society of Exploration Geophysicisgts and will present a keynote address at the meeting's kickoff lun-

Beyond the strictly technical program, a special Public Affairs Session follows the Oct. 30 luncheon to evaluate the relationship between the energy industry and the media and the public perspective of explora-

Sandi Carrouth, on telephone, answers one of the many questions concerning the Permian Basin Oil Show. The show headquarters have been set up on the grounds of the Ector Coliseum for the duration of the show which

opens Wednesday and ends Saturday. With her, from left, are Sandi Chesshir and Donna Trout. Ms. Carrouth is the oil show secretary. More than a score of workers will be on hand

in the office on opening day. The office force will field dozens of questions and pass out multitudes of advice before the big four-day event gets underway.

Geologist gives report on Austin formation

EDITOR'S NOTE: The following summary of the geological and pro-duction history of the Austin Chalk Trend of Texas was prepared by Bruce W. Fox of Tyler, a petroleum geologist. It was used by the Energy Consumers and Producers Association of Seminole, Okla., in September in making a request to the Department of Energy for price relief for future wells drilled in the trend.

SEMINOLE, Okla.-The Austin Chalk is a limestone formation of upper Cretaceous age. The rock itself is dense, with very low porosities and permeabilities.

Production is encountered in natural fractures which occur with varying frequencies throughout the producing trend.

The producing and potentially proicing area covers a band of 10 to 15 miles in width that extends from the Rio Grande just south of Eagle Pass, east-northeast 20 to 30 miles south of San Antonio, 50 miles east of Austin and north of Bryan. This is a producing trend of approximately 350 miles in length. The updip limits of production are defined by a termination of the fracturing. The downdip limits are not as yet defined and probably will be determined as they are now by the cost of drilling as it increases with depth, versus the price of oil. The fractures in the Austin Chalk

are vertical and occur along this trend which acted as the hinge line as the Gulf of Mexico subsided. The stresses set up by the subsidence were relieved by the fracturing of the Austin Chalk. These fractures were then filled with oil which either migrated in from the underlying Eagleford or

The area had received intermittent drilling in the 1930s through the 1950s, with the best production being

the Austin itself.

oil price and new fracturing or stimulation techniques.

The present activity in the area was started in 1974 when the price of new oil began to rise. It was felt that with the increase in the price of oil the Austin Chalk was an economical venture. The wells could be drilled in 1974 and the early part of 1975 for approximatelly \$185,000 to \$200,000, including a fracture treatment.

The average well would come in

The area had received intermittent drilling in the 1930s through the 1950s, with the best production in the Pearsall

found in the Pearsall area and, therefore, more wells were drilled during this time in that area.

However most of the be artificially stimulated before they would produce commercially for any length of time. Back in the 1930s this involved shooting them with nitro and then, in the late 1940s and 1950s treating them with acid.

Since the wells dropped off rather quickly after the initial flush production, and even at that time were not cheap for the depth drilled, the major companies pulled out of the area in the early 1940s. The drilling activity was very sporadic until the recent drilling, which was prompted by the

flowing, after fracture, between 80 and 120 barrels a day, then would drop off over a period of six to eight months to approximately 30 to 40 barrels a day.

At the end of one and one-half years, the well would be making between 15 and 20 barrels a day, and then would experience a long period of producing between 6 to 10 barrels a

They would have to be placed on pump either immediately or shortly after fracturing. The development in the area in 1975 and 1976 was very rapid. Somewhere in the neighborhood of 40 rigs were operating in the trend, primarily in the Pearsall and

The average well now costs between \$250,000 and \$300,000 to complete, and the price of oil is controlled to where the operator is getting less than he was in 1975; therefore, interest in the area has decreased and many of the of field supply and service companies which moved into Pearsall and other towns within the trend are now moving or have moved out as the operators have turned their attention to more economical areas.

Since pipe has to be set on these wells in order to evaluate them, a completion attempt is almost invariably tried. Therefore, the poor wells must be lumped with the good ones and the increased cost plus the decrease in production price, as well as changes in our tax structure, have effectively nut a damper on the

Assuming the area to be approximately 350 miles long by 12 miles wide, this covers 4,200 square miles and, with 80-acre spacing, allows for 33,600 wells if completely drilled up. Since the entire area will not be productive, it could conservatively be said that 75 per cent of the area or 25,200 wells, would be drilled if the economics so dictated. Allocating a recovery factor of 80,000 barrels a well, which is a reasonable estimate, this figures 2.016,000 barrels of oil.

Too much oil in test

VA.—Eight months after of 100 barrels coming Col. Edwin L. Drake from what was called the drilled his famous Pennsylvania oil well, West Virginia could boast of a producer that flowed 100 barrels of oil daily from 303 feet.

The well was drilled by the Rathbone brothers near the mouth of a Burning Springs Run in nearby. But the boom Wirt County

The stream had been given its colorful name by settlers who had found two springs along its banks which bubbled with natural gas in such quantities that it could be set on fire.

The Rathbone brothers were in the salt business. Experience had showed them that salt often was found in areas where gas springs were located. In 1842, they bought a 1,000acre tract of land in Wirt County, including the area where the springs were bubbling. They began drilling for

salt brine. But one well, at a depth of 250 feet, produced so much oil the Rathbones had to abandon attempts to get sal water. For years, the Rathbones skimmed the oil as it rose to the top of the well and sold it in the locality as a lubricant. When news of Drake's well reached Wirt County, the Rathbones put their well on a pump and produced several barrels of oil daily.

And late in 1895, they began drilling a well for oil. It came in May 1

CHARLESTON, W. 1860, its daily production was short-lived. In 1863, Gen. William E. Jones 3,000 Confederate calvarymen rode into camp. Cow Run sand. Later in Derricks, boats, barrels, the year, a second well came in, flowing 40 to 50 tanks and 300,000 barrels of oil were were ablaze barrels per day. when they rode out.

The news of the second well brought the boomers on the run. The field grew and a village of several thousand insmall stream called habitants sprang up

It was quite a setback to the growing industry. More than 20 years passed before other significant fields were found in West Virginia.

SUITE 102

Little letup in Michigan oil, gas exploration

LANSING, Mich .-Most observers will probably agree that Michigan's oil and gas drilling activites showed little sign of letup during 1977, Arthur E. Slaughter, state geologist and assistant supervisor of wells,

Now in the ninth year, Silurian reef exploration continues to dominate virtually all other reservoir objectives.

The greatest concentration of drilling is still scattered along the northern reef trend in the northern part of the Southern Peninsula, Slaughter said. The leader in this ex-

ploratory effort is Shell Oil Co., followed next by the Amoco Production Co. Independents are also in the play but do not have the acreage spread as do the majors. There were 301 explor-

atory wells considered as

results were 35 new oil pools, 36 new gas pools and 230 dry holes. It is likely that a few of the 1977 dry holes will be reworked, probably by directional drilling from the same hole, Slaughter

predicted. Annual oil and gas production continued to climb in 1977 as more reef reservoirs were found and the wells put on production.

Michigan's no-flare order, put into effect in April 1973, has helped to boost gas production by requiring the gathering of millions of cubic feet of gas, much of which might have been wasted by flaring or excessive

The no-flare order, mainly applicable to reef reservoirs since few other types are being discovered, results in wells being shut-in until pipelines and market connec-

tions are made. But regardless of these shut-in wells, the state's total gas production in 1977 amounted to 133,215,-2089 thousand cubic feet, a new record exceeding the previous high of 120,-

250,528 set in 1976. The importance of the northern reef development is magnified by the fact that 108,623,379 thousand of the 1977 gas production came from nothern Michigan reef oil reservoirs or gas

Oil production also increased in 1977, most of it directly related to nothern reef develoment. Tital oil production in

1977, including stabilized

condensate, amounted to 32,964,583 barrels compared with 30,421,533 barrels produced in

It is of interest to note that of the total 1977 production, 20,106,466 barrels of oil and 1,991,330 barrels of stabilized condensate from gas wells came from northern reef trend wells, Slaughter

The Albion-Scipio trend oil pool, a frac-tured and dolomitized reservoir of Middle Ordovician age, is still the state's most prolific single field. Oil production amounted to 1,912,628 barrels in 1977 and gas production amounted to

9,784,250

Oil, gas exploration showed increase in Ohio during '77

COLUMBUS, Ohio- for oil and gas in 49 of 88 The Division of Oil and Gas of Ohio, during 1977, issued 4,610 permits to drill new wells, 47 permits to reopen old wells and 441 permits to plug and abandon wells which ceased to be productive, Theodore A. DeBrosse, assistant chief of the division reports.

A total of 5,098 permits issued represent an increase of 18.8 percent when compared with the previous year's total, he

A total of 2,737 drilling operations were reported in Ohio during 1977. When compared with the previous year's reported activity, this figure reflects an increase of 759 drilling operations or

This figure also reflects the highest level of activity that has been recoreded in Ohio since 1964 when 2,835 drilling opertions were reported. New wells were drilled compared with 7,675,114

counties of the state. DeBrosse said. The most active counties were Coshocton, Tuscarawas,

Muskingum, Washington, Oerry, Guernsey, Portage, Knox, Mahoning, Trumbull and Car-

The total reported new wells drilled for oil and gas during the year is 2,624, of which 2,453 were productive (83.48 percent) and 171 were failures, the division chief said.

The productive wells consisted of 844 gas wells, 372 oil wells and 1,237 combination wells. A total of 1,560 or 59.45 percent of these new wells were drilled with rotary tools and 1,064 or drilled with cable tools.

A total of 142 new wells drilled were classified as exploratory wells. The total new well footage drilled was 9,640,162 feet feet during 1976.

The average depth per well is 3,674 feet, a decrease of 290 feet per well when compared with the 1976 average. By far, the largest

number of wells were drilled to the Silurian Clinton-Medina sandstone. There was 2,081 new wells drilled to this stratigraphic sequence, 1,977 of which were productive. The success ratio of 95 percent is slightlyhigher than the 94.11 percent success achieved the previous year. These wells accounted for 79.31 percent of the new wells

The second most popular target of the drill was the lower Mississip pian Berea sandstone. A 40.55 percent were total of 389 new wells year's total, there is an were drilled to this reservoir, 368 of which were productive. The 94.60

Operators drilled 514 projects last year, resulting in the discovery of four new fields, three re-discoveries, and six new pools. The footage drilled during the year was 2,553,669 feet for an average of 4,968 feet per well.

Of the 514 tests drilled, 257 were completed as oil wells, 44 as gas wells. 16 as service wells and 197 as dry

The depth record of 16,611 feet set in 1967 by Humble Oil & Refining Co.'s No. 1 Georgia-Pacific in Ashley County, was not threatened last year. And, the W. H. Hunt No. 1 Harold Nations in the Welcome field of Columbia County continues to hold the producing depth record-11,149-11,195 feet in the Smackover lime.

In 1977, there were 184 oil fields in south Arkansas. The 7,756 wells in these fields produced 20,201,812 barrels of oil and 36,781,024 mcT of gas, an increase of 2,104,609 barrels of oil and 6,632,550 mcf of gas over that produced in 1976.

The 67 dry gas fields in northwest Arkansas had 1,253 gas wells that produced 86,645,507 mcf of gas during the year, a decrease of 5,640,400 mcf from the 1976 production

Glasscock

GARDEN CITY-Glasscock County, a farming and ranching area east Midland County, also made its mark in oil production during 1977, although its production was such that the county ranked 80th in recovery of petrochemicals for the year.

The county's fields gave up 4,640,-785 barrels of oil and 6,971,616 thousand cubic feet of gas.

There were no permanent residents in the county listed on oil company payrolls during the year, although one natural gasoline processing plant operates in the county with a capacity of 50 million cubic feet of gas per

Operators drilled five wildcats and 84 field wells in the county in 1977, with four of the wildcats coming in dry and 73 of the field tests being completed as oil producers and eight as

Manpower Requirements committee announced

WASHINGTON-The National Petroleum Council announced the appointment of the NPC Committee on Materials and Manpower Requirements. The committee, formed in response to å request from Secretary of Energy James R. Schlesinger, will prepare a draft report for consideration by the membership of the National Petroleum Council.

In requesting the study Secretary Schlesinger recognized that as the pace of oil and gas exploration and production increases, constraints may develop from shortages of critical materials and trained personnel.

The study will examin the materials and manpower requirements of the domestic exploration and production segments of the oil and gas industries. The primary focus of the study will be on the period 1979-1981 but the longer term (1985-1990) will also be discussed. The impact of laws and regulations will be reviewed to identify possible constraints.

The study will update the council's 1974 report, Availability of Materials, Manpower and Equipment for the Explorationn, Drilling and Production of Oil-1974-1976, but will also examin the requirements associated with geological and geophysical services. John P. Harbin, chairman of the

board, Halliburton Co., Dallas, Tex., will chair the committee. Meetings of the committee are announced in the Federal Register and are open to the public.

The National Petroleum Council is a federal advisory committee to the Secretary of Energy. From 1946 until the implementation of the Department of Energy Organization Act of 1977 the council served as an advisory group to the Secretary of the Interi-

William Barnsdall built first refinery in U.S.

TITUSVILLE, Pa.-William Barnsdall, an Englishman, came to the United State in 1852 and founded a shoe factory in Titusville, Pa. Eight years later he bacme the world's first refiner.

Before becoming a refineryman, Barnsdall found success as a pioneer producer.

Stirred by the highpitched oil fever that spread following Col. Edwin L. Drake's 69.5foot oil discovery well in 1859. Barnsdall pinned his money and hopes on an oil well just a stone's throw from the Drake well. Spring-pole drilling started in late 1959.

In February, 1860, the well produced 50 barrels of oil after the first day of pumping. During the first three months it produced 56,000 gallons of oil which sold for \$16,000 after an initial investment of \$3,000.

It was the industry's first big producer.

The success story spread and almost overnight wooden derricks pipped up around the Titusville area. It was a nervous era. Each day brought news of success, failure, wealth and lost fortunes.

apparent success of his drilling venture, Barnsdall mapped plans to build the world's first refinery. He was aware of young America's need for a better fuel to light the lamps of homes, farms, schools and in-

He needed \$10,000 capital, in addition to what money he had, to build the plant. Ten thousand dollars was an enormous amount of money in Titusville. A six-room brick country home cost less than \$8,000 and beef was selling for 10 cents a

pound. Barnsdall sold a oneeighth interest in the refinery to William H. Ab- how to utilize the byprod- of a run. bott for \$10,000 and start- ucts, the operators ed building the refinery dumped tar and naptha on the banks of Oil Creek into Oil Creek or burned

in the fall of 1860. Much of the refinery equipment was made in Pittsburgh and had to be transported up the Allegheny river and then up under one roof. Stills Oil Creek. Acids used in

were encased in brick the refinery process masonry from top to botwere shipped from Cin- tom to conserve heat and William Barnsdall was aware of young America's need for a better fuel to light the lamps of homes, farms, schools and

industry, so he got busy and built the world's first refinery.

The plant was completed in a few months. On Jan. 22, 1861, the first run of oil was made through the refinery. The objective was to produce kerosene for lamp fuel.

'The first yield didn't exceed 50 percent of the crude oil. Not knowing

prevent fires. The condensing of copper pipe, tapering from 4 inches to 21/4-inches, immersed in cold water for cooling.

The world's first refin-

ery included six stills

and bleachers with all

the fixtures and tanks

A manhole in the dome of the plant permitted stillmen to climb down into the unit to clean out

No detailed records of the refinery's later oper-

ations are available The plant eventually was replaced by improved facilities. But William Barnsdall never stopped his pioneering

work in the infant oil in-

dustry. Four years after putting the refinery on stream, he was one of the leaders in the "Pit Hole" excitement of 1865-67. He opened up what had been called the "one and only sure thing" among oil fields-the Bradford Field-where a dry hole

was never drilled. Barnsdall's son, T.N. Barnsdall, was just 10 years old when the world's first refinery was completed. Five years later he was working as a pumper on his father's well. Young T.N. the tarry left-overs after added fuel to his father's the stills cooled at the surging oil operations.

Pecos County reports Not content with the good production year

Pecos County was Texas' No. 1 oil and gas producing area in 1977 from the standpoint of value of the hydro-

carbons recovered. The oil yield was 43,076,484 barrels, while gas production hit 601,356,054 thousand cubic feet.

The county, location for one of the most prolific oil fields in Texas-the Yates pool—is one of the nation's top deep drilling areas.

Operators drilled 181 projects in Pecos County last year, 24 wildcats and 157 field operations.

Operators spent a whopping \$82,-881,973 in that exploration program. Dry holes cost the operators \$12,189, 480. The quest for oil was successful in five wildcats and 71 field projects. Eight gas discoveries were completed and 57 gas wells were potentialed.

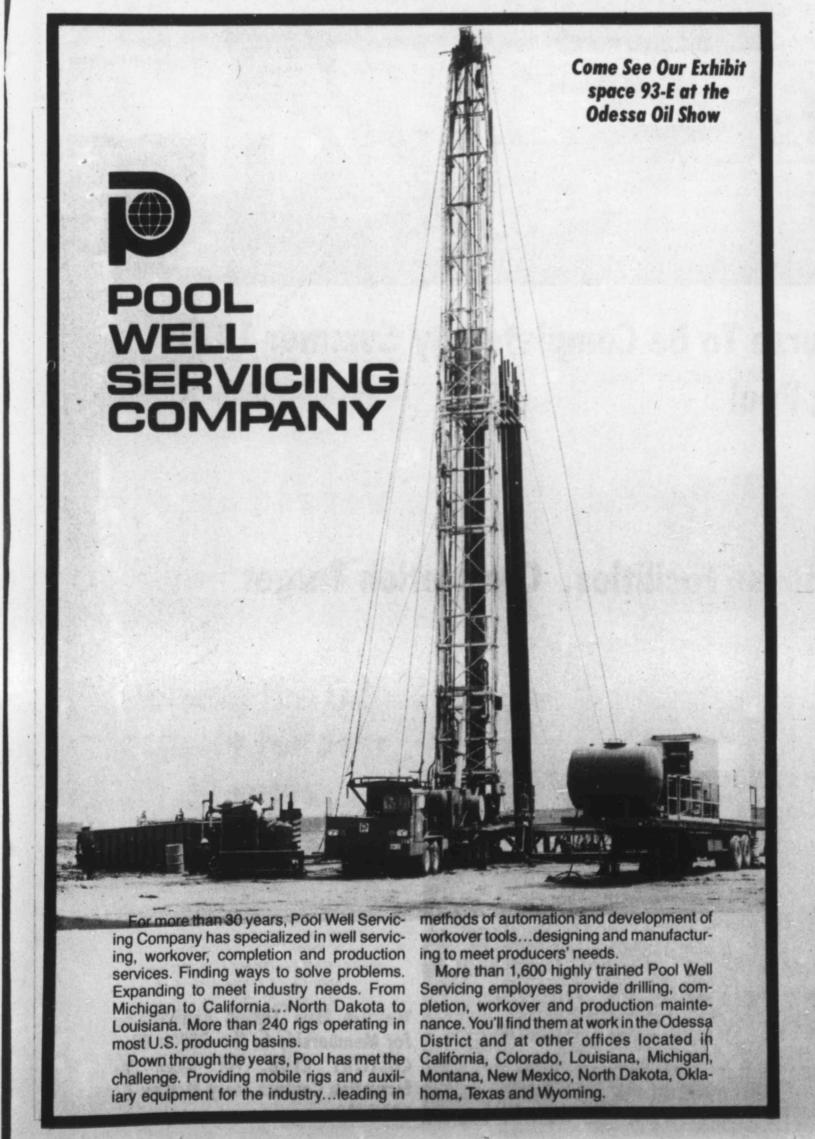

Twenty-nine field dprojects were dry and 11 wildcats failed to find commercial oil or gas production.

The value of the oil produced in Pecos County last year was \$389,411,-415, while the value of the gas was \$543,625,873 for a whopping total hydrocarbons yield of \$933,037,288.

The county's oil production brought the state \$17,912,925 in taxes, and taxes of \$40,771,940 were paid on the gas recovery.

The oil and gas industry worked 1,178 persons in Pecos County in 1977 and paid them \$15,857,468.

One petrochemical plant operates in Pecos County, along with seven natural gasoline plants, with a total capacity of 1,137.5 million cubic feet of gas per day.

Independent operator needs to possess bulldog tenacity

to be an independent oil operator, a report from The University of Texas

In a study of 16 independent oil perators in Midland and Dallas, a ident in UT's Graduate School of iness found that the mean number of consecutively drilled dry boles among those interviewed was 21. And, dry hules are not the only hurdle, the report reveals.

The cost of drilling a well can range from \$150,000 to more than \$1 million. Furthermore, the chances of hitting oil by "wildcatting" (drilling for oil in areas where productivity has not been formed)) runs from one in seven to one in ten, while the figure for making a strike in developmental wells is in the 60-65 percent range.

The professional report was prepared by John B. Gunn Jr. of Dallas (4077 University) as part of a series on entrepreneurship (company formation)) conducted under the supervision of Prof. Albert Shaperio of the ceived his Master of Business Administration degree Way 20.

Professor Shapero observes from Gunn's study tiffat the Texas independent oilmen can be considered "super

tive failures "they still came back and started over-it was like starting a new company each time."

In interviews running from 30 minutes to four hours, Gunn found that drilled their first well, 60 percent perceived it to be a low-risk venture. Today, however, only 27 percent of the men feel the drilling of a well can be considered as "low risk" while 53 percent think it "high risk" and 20 percent see it as "medium risk."

due to the acquisition of a better understanding of the probabilities embedded in the search for oil," Gunn writes, noting that the odds of finding oil for any given prospect "can be narrowed only so much." "Axiomiatic with being a successful

The shift in perception of risk is

independent," he says, "involves exposure to these risks each time be drills a well. As one independent put it, "You have to get out where lightming can strike you."

Gum notes that the independents, on average, feel that the future for the productive search for oil and gas is limited to 20 years of further develop-

fact that while prices on oil and gas have risen, they are controlled, but labor and material costs are not controlled. Also, he continues, "as more and more of the oil lying relatively close to the surface is found, the search for new finds is concentrating today on oil lying deeper in the ground and within geological formations from which it is more difficult to

Drilling in California takes downward turn

Bill Ingram, administrative officer for the Division of Oil and Gas of California's Department of Conservation, reported that 2,831 notices to drill or service wells were approved in California in 1977.

That figure represents a 10 percent decrease from the 3,138 notices approved in 1976. He said that total footage drilled in new tests was 6,314,-097 feet, seven percent less than the 6,771,761 in the prior year.

Ingram reported that six gas fields were discovery in northern California in 1977 and that seven new gas pools were found in six established gas

Many things change, but Odessa gang stays same

ODESSA—Someone doing for years. once said, "The more The Odessa things change, the more they stay the same."
That can be considered true in the case of the Permain Basin Oil

During its 30 years of existence, the show has grown from 38 exhibitors to dish up its now worldin 1940 to approximately 500 this year.

Oil show officials have witnessed a change in the way the equipment is displayed and the crowds have swelled-an estimated 500,000 will attend this year's show.

But a few things haven't changed. There is still the friendly atmosphere that is found in any oilfield of the Permian Basin. And there is the old rig area of the oil show grounds where oilmen from another age gather to hash over old imes and watch the Pop Harrison No. 1 making hole just as it has been the most famous cater-

The Odessa Chuch Wagon Gang is another tradition of the Permian Basin Oil Show that hasn't changed. Almost from the very beginning the Chuck Wagon Gang has been on hand for the final day of the oil show

famous barbecue, beans and cole slaw. The Chuck Wagon Gang is made up of 250 members, half of them being inactive, and most

of those men are en-

gaged in some type of

oilfield business. Come the final day of this year's oil show, those men who are members of the Chuck Wagon Gang will desert their jobs and show booth to turn to the task of feeding their barbecue to approximately 15,000 visi-

tors from 5 to 7 p.m. The Gang is probably

Williston Basin surge predicted

drilling and the success In particular, he connow being enjoyed in the Williston Basin in western North Dakota and may find statistical analeastern Montana was predictable by analysis of computerized drilling of twelve counties in the statistics, according to Dr. Phillip H. Stark, vice president Petroleum Imformation Corporation.

Dr. Stark presented a ease history of such studies done several years ago to the opening session of the Williston Basin Symposium in Billings on Monday.

Reagan area still factor

BIG LAKE-Reagan County, the area that started the Permian Basin on the road to oil riches when the fabulous Big Lake field was discovered in 1923, continues to be a factor in West Texas oil and gas explora-

Although the county is far down the list in rank among Texas' producing have been regarded as history is available, areas, 47th, the areas pools did re-, cover 6.912.744 barrels of oil in 1977 and 31,534,039 thousand cubic feet of

> The oil industry still is the biggest employer in the county, with 418 persons drawing paychecks that totaled \$5,192,320

Five natural gasoline plants in the county processed 192.7 million cubic feet of gas per day last year.

In the drilling program, two wildcat failures were recorded and 108 field wells were completed, mostly in the Spraberry Trend Area. Only three field attempts failed to find production. The total number of projects, both wildcat and field, in 1977 was 113.

Reagan's 1977 oil production was valued at \$62,491,206, while the gas was valued at \$128,506,771.

The oil production gained the state \$2,874,595 in taxes, and taxes of \$2,-138,008 was paid on the gas yield.

Offshore LOOP project under construction

LA.—The first U.S. deepwater port is now under construction 22 miles offshore from Grand Ilse. ble transition from sur-La. The \$500 million Louisiana Offshore Oil Post (LOOP) project. SOFCE is an eight-year-old Houston company which specialized in the design and construction of Single Point Moorings (SPMs) for offhsore oil terminals and early production systems.

The SALM system is an advanced design of early Single Point Mooring Systems. Some of these systems have been in continuous service around the world for more than 20 years.

The SALM concept was originated by a major oil company in the early 1960. During the ensuing development period, more than 1,000 model testss were conducted in irregular seas with tankers as large as 500,000 DWT, and in wate depth up to 590 feet. Following rthe conceptual phase, SOFEC was selected as a licensee and since has designed SALM terminals for water depths to 530 feet, operating seas to 39 feet, survival seas sizes to 750,000 DWT.

The basic concept of SPM design is to provide mooring for tankers which is sufficently elastic to minimize hawser loads, yet adequately stiff to control tanker motions. SALM's, the advanced type of SPM's, usually consist of five basic parts - the bouy, mooring base, hose system, single anchor leg and fluid swevels. The SOFEC SALM

bouy serves only to moor the vessel and is not used to transfer cargo. Therefore, integral parts of the cargo transfer system the fluid swivels and hose are - are not mounted on the bouy, but rather are submerged below form the basic structure the maximum draft of of the SALM system. Dethese critical components from the bouty virtually eliminates the possibility of demage to these parts, the bouy or the vessel, should the tanker ride up onto the mooring.

The hose system in the SOFEC design is allowed to follow the motions of the sea and is connected

GRAND ISLAND, to the fluid swivel sh through a length of submerged hose which serves as an ideal flexiface wave zone to a depth where wave action is re-

The mooring base for a SOFEC SALM can be anchored to the sea floor by either piling or gravity, depending upon soil conditions. In each case, the base is floated or barged to the installation site and sunk. The gravityanchored base is flooded with water and then filled with gravel and quarry for stability while the pile anchored base is fixed to the sea bottom with pilings.

The fourth component of the SOFEC SALM is the single anchor leg, from which the terminal gets its name. This part consists of the short length of huge six-inch diameter anchor chain mounted between two universal joints which connect the bouy to the mooring base. An anchor chain swivel permits full 360 degrees rotation of the bouy, allowing the moored vesel to weathervane freely. SOFEC fluid swivels

to 96 feet and tanker are precision mechanisms specifically de-signed for long term service under submerged conditions without the need for periodic maintenance. The assemblies utilize multiple seals internally and externally and are lubricated during manufacture. Maintenance on fluid swivels, unversal joints and other mechanical parts has been nonexistant, and hose replacement requirements have been minimal. In fact, no maintenance or servicing has ever been required on a SOFEC SALM fluid swivel, the oldest of which has been in service since 1969.

These five components the tankers. Removal of pending upon specific needs and water depths, SALMs differ in design but perform the same function - provide mooring and offloading facilities for deep-water tankers too large for the shallow waters near the

Welcome To Midland

pipeline connection. The Illinois Pipe Line Co. had a small line connecting with a loading rack at McCamey.

The Operators soon saw it would be necessary to limit production in the field.

What developed was the first successful voluntary proration plan with citizens of Iraan playing an important role in its formation.

A Yates Pool Advisory Committee was organized Sept. 2, 1927, with a representative from each of the operators.

The panel was formed to recommend the most efficient methods of drilling, completing and producing wells.

Later, a Pool Engineering Co. was formed to recommend practices for the conservation of oil and gas. It completed the first fieldwide reservior pressure survey on record and initiated many oil field conservation practices still in use

Now, after 50 years of production, most of the Yates wells are still flowing, with the aid of a recently installed flood program.

Tripplehorn brothers find first Andrew County oil

ANDREWS-Although Andrews County was not organized until 1910, its history dates as far back

At that time, the area embracing Andrews and Gaines counties was a favorite retreat of the wild Indian tribes who infested the Plains country. It was their last stronghold, to which they retreated during the Indian campaign of 1874-75.

This area was the scene of many skirmishes fought by Co. R. S. McKenzie's 4th U.S. Calvary and Colonel Blue and elements of the 11th U.S. Infantry against the hostil red-

Long before the advent of the white man upon these naked plains, this trail was used by the Apache Indians in their frequent raids upon the settlements of the Texas border. Later, the same trail was used by General Shafter in his military expedition into this region, and the trail is known today as Shafter's Trail.

The large salt lake located about eight miles northwest of Andrews also was named for the same general, who later became famous during the Spanish-American N.M., trail.

War. In 1876 in Austin, the state legislature passed an act creating 54 new counties out of the vast territory lying within the Panhandle and at that time known as part of Bexar County.

One of the newlycreated counties was named Andrews in honor of Rjchard Andrews, the first hero to fall in the war for Texas Independence.

After the county was created, things rocked on until 1900 with a few ranchers coming in and settling big ranches.

Among the early day pioneers settling in Andrews County were the Will Craddocks. They came to Andrews County in 1902 and Craddock was manager of Brennand's Steeple O Ranch, with headquarters about where the Block 12 oil field was discovered.

Other pioneers settling tion. in the county were the Bill Howells, who settled at Florey; George Ratliffs, Charley Harts, S. E. Unbertsons and the J. W.

Underwoods.

Spraberry yields oil

STANTON-Martin County, with hundreds of wells producing from the Spraberry zone in the Spraberry Trend area field, had 10,267,527 barrels of oil production in 1977, making it the 42nd most productive county in out as the year of all Texas.

Operator produced 16,160,549 thousand cubic feet of gas from Martin County fields. The county's oil production was valued at \$92,818,444, while the gas brought \$14,609,136.

The oil industry paid taxes of \$4, 269,649 on the oil and \$1,095,685 on the gas. Royalty payments totaled \$13,-

Exploration in the county, including three wildcat operations and 73 field projects, accounted for an expenditure of \$13,340,876.

Of the three wildcats drilled, one was completed as an ail discovery and the other two as dry holes. Sixty-three field wells were completed as oilers and 10 were finaled as dusters.

Three natural gassiline plants pro cess 13.9 million cubic feet of gas per day. The oil industry payroll included 196 persons who received \$31. 565,808 digring 19877

One strike during '77

CRANE-Crane County, one of the top oil producing areas in the Permian Basin, was the scene of 145 oil or gas tests in 1977.

Four of the tests were wildcats, with one being completed as an oil discovery. The other three were dry

Seven natural gasoline processing plants help extract various products from some of the 169,536,276 thousand cubic feet produced within the county's boundaries, however all the all produced in the county is pipelined to other areas for refining.

The oil production totaled 35,262,109

barrels in 1977. That oil was valued at \$318,769,465, on which taxes totaling \$14,663,396 was paid to the state.

Taxes on the gas totaled \$11,494,560. The take by the state in taxes from the oil and gas was \$26,157,956. The 1,072 persons on the oil industry

payroll received \$15,020,228 in 1977. Operators completed 144 oil producers in field areas and one gas well. Seven of the field develo were dry holes.

The estimated drilling expenditu in Crane County in 1977 was \$25,898, 412. Of that, \$3,047,370 was used in

Your Kind of Oil Bank.

We can work with you in the development of oil properties, in the purchase of producing properties or leases, or in financing related oil field facilities. There are four petroleum engineers on the staff in our Oil and Gas Division-engineers who know the ail business, know the language and know your problems. Wilson company explodes into large manufacturing concern

garage shop operation has, within the last year, exploded into a large manufacturing company serving West Texas pipe inspection companies and the world!

The Wm. B. Wilson Manufacturing Co., formerly Inspection Equipment Manufacturing 51/2 inch, and in-plant or Corp. (IEMCO), began in 1969 with ambitions of becoming the world's foremost manufacturer of nondestructive testing equipment-and they are getting there.

Owned by William B. Wilson of Midland, the company now has sales offices in San Antonio, Houston, Lafayette, La., and one soon to open in Odessa. The manufacturing facility is located in San Antonio. The Wilson Company,

now entering its 10th year of business, sells electronic inspection equipment for oil field tubular products to such far away places as Vene-zuela, Trinidad, Calgary, Canada, and Aberdeen, **Scotland**

History of deep producing region dates back to 1943

The Pegasus field the application of geolowhich spreads across the Midland and Upton county line was one of the pioneer deep fields in West Texas.

In fact, when the Ellenburger discovery well in the multipay field was discovered in 1949 it was the deepest oil producer in West Texas.

Today, the Ellenburger zone still produces and seven other pay horizons have been found in the area. In 1976, the Ellen-

burger alone made 1,059,-148 barrels of oil. The cumulative production from the deep zone at the end of that year was 83,-090,000 barrels of oil. Other zones found to be

productive in the Midland-Upton county pool are Devonian, Fusselman, Pennsylvanian, San Andres, Spraberry, Wolfcamp and Bend. The field is 32 miles southwest of Midland.

The story of finding the Pegasus field, named for the familiar trademark structure indications in of its discoverer-Mag- areas already found to nolia Petroleum Co. Humble well opened first Midland field

Humble Oil & Refining Co.'s No. 1 Mrs. O.P. Buchanan and others was completed in November 1945 as the firsst oil producer in Midland Coun-

This well was completed from the Pennsylvanian zone 8½ miles southeast of Midland at a depth of 10,330 feet. The total depth of the well is 12,574 feet.

On first test, the well produced 270 barrels of oil and 32 barrels of water per day, through a 11/32-inch choke.

The discovery was abandoned in 1947, but additional exploration and discoveries have made Midland County a substantial producing area in the vast Permian Basin Empire.

Humble's venture followed by more than 20 years the first wildcat try in Midland County. The previous tests failed, but No. 1 Buchanan, which became a one-well field, produced until July 1947. Its production totaled 20,005 barrels.

At the time it was plugged, the well was making 13.35 barrels of oil per day and a "considerable water." The only other test drilled in the original Midland field was Humble's No. 1 Pio Crespi, which proved dry and was abandoned at 11,620 feet in June.

The original Midland County producer had an average gravity of 45.7 and a gas-oil ratio of 4,350-1. It was located in section 32, William Baldridge survey

Spudding date was Sept. 14, 1944, and date of completion was Nov. 6,

Little accomplished 5 years after embargo

D.C.-Five years after use of electricty is held to the Arab oil embargo the nation has accomplished little toward alleviating the effects of a possible new one, the head of the nation's largest oil industry organization said.

To be sure, there have been some efforts toward conservation of energy, Frank N. Ikard, president of the American Petroleudm Institute, said. "Many people are now seeing to it that their homes are better insulatstats are kept lower in bargo. But this plan is than ever," he warned.

WASHINGTON, the wintertime, and that a minimum," he added.

> "But they are using more gasoline than ever. They are buying smaller cars, but they are buying more of thom, and driving them more. Add to that the rise in population, and the total use of energy keeps rising.

"There is an an attempt on the part of the Department of Energy to

going slowly. Though it has been in effect for three years, as yet there is only six days supply in the ground," the API president said.

Ikard pointed out that although the oil companies' search for petroleum is more intensive than ever, our reserves are continuting to fall.

"Thus, we must import more oil to fill the gap." "To put it bluntstore enough oil in the ly, should an embargo ground to last 90 days in occur tomorrow, we ed, that their thermo- the event of another em- could be more vulnerable

MIDLAND, TEXAS

DAVIS PAYNE • CHICK SMITH

For thousands of Americans with kidney disease, these are the threads of life.

Hollow fibers that are part of an artificial kidney made with a chemical developed by Phillips Petroleum.

Most doctors agree, the best treatment for a patient with severe and permanent kidney failure is the surgical transplant of a healthy kidney from a donor.

But some patients are just not suited for a transplant. Others may need time to recover from the trauma of their kidney failure before they are ready for surgery. Or they must be maintained until a suitable donor is found.

So for thousands of people whose kidneys have failed. an artificial kidney machine is the only hope for survival. At the heart of these remarkable

machines is a unique, disposable "kidney", that's made with a chemical developed by Phillips Petroleum. It consists of thousands of fine, hollow fibers, specially designed to remove excess fluid and impurities from the blood stream. These fibers are so effective, a patient's

entire blood supply can be purified by spending just a few hours on an artificial kidney machine, two or three times a week. So thousands of hospital-based outpatients

who are waiting for a healthy kidney from a donor can now lead full and productive lives. Developing lifesaving chemicals while we make fine products for your car. That's per-

formance. From Phillips Petroleum. The Performance Company

This is neither a re-enactment of the Iwo Jima flagraising nor training for destruction of football goal posts. But there is just as much excitement as Crosbyton officials and

employees erect a sign designating a 10-acre test site for the 65-foot diameter, spherical-shaped solar energy collector to be built in the West Texas farm community.

Fixed mirror distributor focus solar collector being installed

Energy Technology struction of the"solar Center (ETC) of Garland gridiron" of 10 200-foot has received a \$1.4 diameter bowls. That million subcontract for final phase would cost an addiotnal study and con- estimated \$22 million. struction of a fixed mirror distributed focus farm community of (FMDF) solar collector about 2,500 persons has at Crosbyton.

The funds are part of a \$2.5 million contract from the U.S. Department of Energy to Texas Tech University-the prime contractor-for the last study and prototype phase before construction of the proposed 5-megawatt solar power system.

Current work, expected to require 20 months, calls for construction of a 65-foot diameter mirrored spherical shaped bowl to support the feasibility of the system.

The city of Crosbyton has deeded 25 acres to Texas Tech for the test site, which fronts FM 651, across from the Crosbyton Municipal Airport and south of the city. Additional acreage has been reserved for the

DALLAS-Systems proposed future con-

The Northwest Texas zealously pursued and promoted the solar demonstration project for 21/2 years. Local power costs have risen more than 300 percent in recent years, biting into farm income, since irrigation is tied to electrical pumps drawing water from deep wells.

In past years, Crosbyton has never used more than 3.2 megawatts of electricity. The solar plant, with a 5-megawatt capacity, would handle future town growth as well as electricity for irrigation. About 166,535 acres-cotton, soybeans, wheat and sorghum-in the county are depen-

dent on irrigation. Dr. Walter Hesse, vice president and general manager of ETC, said the FMDF solar thermal

Alabama's oil search making great strides

MONTGOMERY, Ala.-Oil and gas activity in Alabama has grown

rapidly in recent years. In 1967, there were only 10 producing oil and gas fields in the state. By 1977, the number of fields or pools had increased to 55: 31 in south Alabama, and 34 in the northern half of the state.

During 1977, 129 tests were permitted by the Oil and Gas Board, 70 were completed as pro-ducers and 51 were dry

A major milestone in Alabama's petroleum industry was reached during 1977 with the completion of pipelines servicing gas fields in the Warrior Basin in north Alabama. This basin rapidly is developing into a significant gas producing area.

Eighteen new fields or pools began producing in 1977, bringing the total number of fields to 24. At the beginning of that year, only seven gas wells and 12 oil wells were producing in the Warrior Basin. By the

NKK inks contract

HOUSTON-NKK (Nippon Kokan K.K.) has signed a \$17-million contract to build a jackup rig in Japan for JFP Well Service, Inc., Texas, for delivery by September 1979.

The rig, to be used for offhsore oil development, will work in water depths of up to 250 feet and will have a drilling capaciaty of over 20,-000 feet. NKK will use the BMC electro-hydraulic jack on the rig.

Last month, NKK acquired rights for the manufacture and marketing of Baker Marine Corp. (BMC) jack-up drilling rigs in Japan on an exclusive basis for

Oil, gas projects show decline from last year

AUSTIN-Applications for permits to drill oil and gas tests in Texas totaled 14,123 in the first eight and a half months of 1978, compared with 17,427 in the same period of 1977.

Applications to drill, deepen, plug back and for service wells in the 1978 period amounted to 16,758 against 19,-209 in the year-earlier period, the Railroad Commission's Oil & Gas Division reported in a preliminary sum-

The report showed 854 applications to drill new oil and gas tests were filed from Sept. 1 through Sept. 15, 1978. Applications to drill oil and gas tests

totaled 993 in the year-earlier period. The report also showed 17 oil discoveries and 61 gas discoveries were completed in Texas in the Sept. 1-15 period.

Oil discoveries included seven in West Central Texas, two each in deep South Texas and North Texas, and one each in Southeast Texas, the Refugio area, East Central Texas, Midland San Angelo and Panhandle areass.

Gas discoveries included 23 in deep South Texas, 13 in West Central Texas, nine in the Refugio area, five in Southeast Texas, two each in the San Antonio, Panhandle, East Central and East Texas areas, and one each in the San Angelo, Midland and North Texas areas.

The Oil and Gas Division listed 10,251 oil, gas or service well completions in the first eight and a half months of 1978, up from 9,146 a year

There were 286 oil completions in the first half of September 1978 against 276 in the same period last year. There were 268 gas completions in the 1978 period against 125 in the

year-ago month. In the Sept. 1-15 period, 85 exploratory and field tests wound up as dry

Scouts plan 'check' meet

W. C. Kimble of Midland announces that the Permian Basin Pioneer Oil Scouts Association will meet Tuesday in the Elks Lodge, 711 W. Indiana Ave. in Midland.

The event is the annual "check" held by the organization in conjunction with the Permian Basin Oil Show and the Petroleum Pioneers Celebra-

The meeeting will begin at 7 p. m. Membership is restricted to all persons who attended an organized check meeting in West Texas or Southeast New Mexico at any time, including the present.

"If you think you are eligible, you are," Kimball said.

One solitary factor affects the economy of the entire Permian Basin — the price of oil and gas. The history of the Basin has been a series of booms and busts. When the price of oil dropped to 10° a barrel in 1930, activity came to a standstill. "When it went to \$1.00 there was a boom with standing lines in the cafes.

When cheap imported oil knocked the bottom out of the domestic oil and gas industry, you could buy a two bedroom house in Midland for \$1,000. Today, with a boom in the making, the same house sells for \$20,000.

Oil industry can keep clean environment

WASHINGTON—The petroleum industry believes this country can meet its energy goals and still have a clean environment.

However, "that is not the same as saying we can meet our energy goals and still adhere to the standards of the Clean Air Act," the American Petroleum Institute (API) noted in a recent report.

The API says the public favors balanced solutions to environmental, energy, and employment problems. A recent series of Lou Harris polls found that people do not want growth without clean air or clean air without growth. "They are convinced we can do both," Harris said.

"The emphasis on a cleaner environment over the past decade has been essentially constructive and in the public interest," the API said, but recent amendments to the Clean Air Act set unreasonable standards which will handicap national efforts to increase employment and to break the country's growing dependence on foreign oil.

Standard Oil Co. of Ohio (Sohio) wants to build a tanker terminal in Long Beach, California, and pipe Alaskan oil from there to Midland, Texas.

Sohio has agreed to use the best available technology on the new facilities, including the oil tankers, which will burn clean fuel long before reaching port. The company has offered to pave some dusty roads and buy pollution-control equipment for several nearby businesses to compensate for emissions from the terminal.

After two years of intensive negotiation and \$25 million spent by Sohio on planning, state and local air pollution officials were still negotiating with the company over which facilities owned by others Sohiomust clean up. The officials wanted Sohio to add a nearby power plant to

that the total clean-up should cost more than \$100 million

DuPont says 30 percent of its capital spending over the next decade will be for pollution control of all kinds, but that only one-fourth of this expense will produce significant environmental

The \$3 billion that will go for pollution control would otherwise mean 27 new plants, 20,000 jobs in DuPont, and more jobs in related customer industries. When spent on unnecessary controls, it means fewer jobs and higher prices.

The measure of the problem is not one of plants closed by the Clean Air Act compared with plants built to manufacture anti-pollution equipment. The problem is plants that cannot be built and jobs that cannot be created, the API

The Clean Air Act ignores inflation and unemployment. The list of blocked and threatened projects is growing.

The Hampton Roads Energy Co. has been trying for eight years to build a refinery in Portsmouth, Virginia. It would provide 3,000 construction jobs and 500 permanent jobs, plus hundreds more supporting jobs outside the refinery.

It is backed by organized labor groups. It would be the cleanest plant that modern technology can build and would produce low-sulfur fuel-an environmental plus. It has received all necessary permits except one, and EPA had given preliminary approval

But the area-without the refinery-exceeds the air quality standards, and EPA announced two years ago that the refinery was "environmentally unacceptable:" Then, in June of this year, the federal government formed a ferent departments to study alternate sites for the refinery, despite several existing technical studies that led to the original site selection.

Attend the 1978 Permian Basin Oil Show and see hundreds of products of one of the largest, most exciting industries in the world today. Much of the technology is directed toward increasing the recoverable amounts of oil and gas.

We are proud to be in commercial and residential construction of new and existing properties in the dynamic Permian Basin. Jeff Carter Construction and Designs has surpassed \$2,000,000.00 to date this year and we are looking forward to a brighter future in this expanding and progressive market.

Railroad Commission of Texas 'plugging' experts have

run into some mighty interesting situations when someone

sounds the alarm that an old abandoned oil or gas test has

suddenly sprung a leak. Once they were called to a hat

factory, and on another occassion plugged a hole far below

'Plugging' just doesn't have that exciting sound

(EDITOR'S NOTE: The following story, reprinted from Texas Today, publication of the Railroad Commission of Texas, was written by Robert Ochoa, associate editor of the magazine.)

AUSTIN—The term "well plugging" certainly doesn't have an exciting ring, but what it means to the Railroad Commission does carry a tremendous impact on efforts to maintain a clean Texas environment.

If properly completed, a well plugging is supposed to permanently close off an oil or gas well so that residual hydrocarbons or salt water deep inside the well cannot rise to the top and leak out, or worse, spill below the surface into a fresh water zone where the leak is harder to detect.

"Just as an example, if 1,200 wells were leaking 10 barrels of salt water a day into a creek, that amounts to an enormous pollution potential."

Those are the words of Director Phil Russell of the Oil and Gas Division's Field Operations Section. Russell, together with 199 hard working men and women dispersed throughout 10 sprawling RRC districts, oversees just about every aspect of an oil and gas well drilling operation—from the clearing of a well site to checking the quality of hydrostatic pressure balancing muds—and then some.

Monitoring and supervision of well pluggings represents just a fraction of Field Operation's responsibilities. But that fraction measures up to mighty important proportions. When Russell speaks of 1,200 wells leaking 10 full barrels (that is 12,000 barrels) into a creek each day, the point is there are approximately that many wells which the commission alone has had to plug all over the state since 1968 with special funds provided by the state legislature. Twelve thousand barrels of salt water is 12,000 barrels more of salt water than our fresh water creeks need.

Some of the now-plugged wells were salt water gushers—dry of oil or gas—left uncapped and abandoned by disheartened operators. Others just trickled salt water or leftover oil that formed unsightly pools and smothered surrounding vegetation.

ered surrounding vegetation.

"We had one well out there in Mills County which after we had cleaned it out started spouting 1,500 barrels of salt water a day. It liked to have cleaned us up," recalls Russell. He can also remember a well in the Wichita Falls area which was found leaking up to 20 barrels of salt water daily into a tributary of the Wichita River until the commission was finally authorized to plug it.

There's some real odd places, too, where unplugged wells have turned up. Try on for size an old hat factory in Corsicana. "Oil started coming up through the floor in the hat factory." recalls the Field Operations chief.

"We used some of our engineering dexterity to plug that well without tearing up the building. We got to it through a window with all the equipment right outside by running in all the hoses and everything else through flexible pipe."

As an example of the lengths the commission's field operations task force goes through to protect our state's environment, leaking wells have been plugged under 46 feet of water in an East Texas lake. A north-Central Texas drought once dropped the level of Lake Brownwood enough to expose three abandoned and uncapped wells there that were leaking small amounts of oil and gas. "We got in there and plugged them before the

next rain," Russel said. How's that for commission re-

sponse time!
Plugging wells and making sure they don't pollute is a serious business of the commissions, particularly in an oil and gas rich state like Texas where there are currently more than 180,000 active and producing wells. No one really knows the total count of wells in the state's producing history which goes back to the mid-1800s. There could be abandoned wells out there lost in the brush country, under river

the well and migrate all over the countryside."

Each day brings news of a landowner's or operator's discovery of yet another leaking well that either wasn't capped properly by the operator or was just left behind. A habit of some frustrated operators is to dump every conceivable oilfield tool, including the drill bits down a dry hole. If it's not plugged and later discovered, all of that junk has to be pulled out, and the well properly plugged.

In order to get a better feel for plugging operation, Texas Today arranged to be on the scene of a commission-supervised plugged in Van Zandt County, just outside Grand Saline. It seemed ironic witnessing the plugging of a well drilled back in 1936 which probably could never cause as much pollution as that comming from the mining operation leaking more than a quart of salt water a day nearby a town that sits on top of one of the largest salt deposits in the coun-

ble has made Clements pert-near an expert historian on the district's 47-county region.

Clements roves a chunk of territory that equals about one-sixth the size of Texas. Digging through old court records and such turns up many interesting pieces of information.

Since 1968 when the legislature approved \$300,000 annual appropriations to the commission for emergency well pluggings, Clements has personally supervised a good portion of nearly 300 pluggings in his districts.

The one outside of Grand Saline would be a routine one. Cost to the state of Texas would run about \$5,000. That is cheap compared to the one that cost \$25,000 to plug.

Often times, oil companies which are found responsible for the plugging will pay for it or may even contribute to plugging a well on an adjacent lease

Landowners where the well is located are second in line for cost liability under Texas law. If an emergency is

declared or no one will help defray the cost, tax dollars become the sole financier.

ancier.
The commission's plugging rule (Rule 14B2) requires that a well be plugged within 90 days after drilling

"Sometimes we find that at the end of that time we can no longer find those responsible for plugging it," says Russell. "If we have reason to believe that this may happen, we require a bond or letter of credit covering cost of plugging in case of default." Violators can be fined up to \$1,000 a day.

Clements surveyed the old well site awhile when a massive diesel truck with a portable drilling rig rumbled up the narrow country road leading to the property. Clements had already cleared the area for the trucks to set up their equipment. The private company which specializes in plugging would enter the well bore to clean it out of any debris (some discarded equipment is salvagable and any sale proceeds to to the commission.)

SHENANIGANS

Shenanigans 3330 West Illinois 697-3216 bottoms, in the middle of a cotton field or watermelon patch or buried somewhere in the East Texas piney

In all pracrticality, the take-themas-they-come approach seems to be the best way to cover it, thus far. If signs of pollution are detected, go in

and plug the well.

As Russell explains, there are some areas in the state where even a bad plugging job by an operator will suffice because the characteristics of the substrata permit it. But other areas like the San Angelo and Abilene producing provinces there exist subsurface zones from 800 feet to 2,300 feet which are saturated with salt water and with enough pressure to flow at the surface.

"Drilling into it, you're asking for trouble," Russell notes. "A lorg time ago, operators who drilled in the region did not cope with the zone by casing their holes. They drilled through the zone without properly mudding the wells which could have led to blowouts. If not properly plugged, the salt water will creep up

Grand Saline gets its name from the salt that is everywheré. A building made out of solid salt blocks sits smack in the middle of Grand Sa-

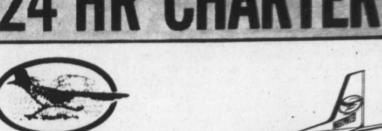

A big name salt refining company operates on the town's fringes. That is where the irony came to mind. Evidence of surface salt runoff was everywhere, even in a creekbed that cuts across the company's grounds.

But off we went to plug a well drilled 42 years ago that couldn't be reached until three feet of topsoil was bulldozed away. The landowner had complained to

the landowner had complained to the commission of chalk-colored salt residue that had accumulted on the surface after four decades of leaking from the well. Vegetation was dying around the spot.

Don Clements plugging expert in the commission's Districts 5 and 6 headquartered in Kilgore, was on the scene.

His thorough and months-long investigations on these unplugged wells to get to the bottom of who's responsi-
