

REGIME THAT OF MO RIVERA... LIAM H. LANDER Staff Correspondent... March 20 —

Stories in STAMPS UNCLE SAM ON FOREIGN SOIL

ONE of the curios of philately is the Dominican Republic's 10 centavo special stamp of 1925 and 1927. In design the stamp is almost an exact duplicate of the United States special delivery stamp—to the motorcycle, the colonial architecture, the delivery and even the bushes in front.

Breaks Oar Every Time He Gets One

LONDON, March 20 — Champion oarbreaker of the Oxford crew is P. R. S. Banks, six feet two inches and 173 pounds. Almost every time Banks gets an oar in his grip he breaks it. He already has broken six of them at \$12.50 per, and the Oxford men are beginning to worry if and when it will ever cease, and most worrying of all, whether he will break one in the actual race against Cambridge, April 6.

THE NEW FANGLES (Mom'n Pop) By COWAN.

REPORT SHOWS TEXAS LEADING SOUTH SCHOOL

AUSTIN, March 20 — Presenting for the consideration of the legislature and the people of Texas the record of an institution of proven merit. President Harry Vandell Benedict, appearing before the House Committee on Appropriations, called attention to important facts pertaining to the national rating of the University of Texas.

All CLASSIFIED advertising is payable in advance, but copy MAY be telephoned to the Cisco Daily News office and paid for as soon as collector calls.

CLASSIFIED FOR SALE

Limited amount of four and five week old, Barred Rocks and Rhode Island Reds, Extra Fine. Reasonably priced. 1208, W. 15th.

WANTED

MIDDLE age widow wants position as waitress, practical nurse or companion to old couple. Write Mrs. Alice James, Box 591, Comanche, Texas.

FOR RENT-HOUSES

FOR RENT—Modern 5 room house. Phone 305.

Announcements

The Rotary club meets every Thursday at Laguna Hotel Private Dining Room at 12:15. Visiting Rotarians always welcome.

OLDEST WINE IN WORLD

BREMEN, Germany — In the Rathaus here is the oldest wine in the world, a vintage of 1653, and the 12 famous casks of 1726 wine.

Fewer Commercial Failures of Month

AUSTIN, March 20 — A sharp decline occurred during February in the number and liabilities of Texas commercial failures, according to the University of Texas Bureau of Business Research. There were only nineteen failures during the month, a decline of 21 per cent from the previous month and 41 per cent from February last year.

EX-CALF REAL PROBLEM

NORTHAMPTON, Mass. — A problem of grave importance faced William Dunlap. Last autumn Dunlap put his calf in the cellar until he could build a shed outside. Snow prevented him from doing so. Now that the ground is clear he wants to get it outside. The calf has grown considerably and refuses to walk up the stairs.

Hats Are Termed Wardrobe Mainstay

NEW YORK, March 20 — "You should spend 12 per cent of your wardrobe budget on your hats," says Marion Valle, American designer and stylist.

Miss Valle reached this conclusion after interviewing 1,000 women from New York, Chicago, Boston, Cincinnati, Hartford and other large cities. Only a small percentage of these women looked well groomed, she said, and the fault she claims is that they did not budget their wardrobes intelligently and set aside an adequate percentage for their millinery needs.

Miss Valle supplements her discovery with the explanation that the millinery purchases need not be many. Far better, in fact, is it to have a few good hats of quality wisely and intelligently chosen.

Fish Fail Them So Anglers Disband

GREAT FALLS, Md., March 20 — A "for sale" sign has been tacked on the porch rail of the "Anglers club," famous sporting rendezvous of Washington notables.

The club was organized for fishing on the Potomac river by a group of Washington sportsmen in the early 70's. The fishing, however, is no longer good, and the remaining members have decided to disband.

SEA GULL UNGRATEFUL

SEATTLE — Walter Belshaw saved a sea gull's life, but the bird was ungrateful. Someone caught the bird, tied a bundle of paper to its leg with a long cord and released it. The gull became entangled in eight wires and hung head down until nearly dead. Belshaw climbed a pole and untangled the bird. It bit his finger before he could turn it loose.

CUTS TEETH AT TWO

STUTTGART, Ark. — Mary Helen Brasco, baby daughter of Mr. and Mrs. A. Brasco of Stuttgart, cut two well-formed front teeth when two weeks old. The teeth were almost visible when Mary Helen was born, her parents said.

MEXICAN FOND OF U. S.

SACRAMENTO, Cal. — Alfonso Madrid, 35-year-old Mexican may not be the ideal citizen but he likes the United States so well he's willing to go to prison if he can stay. Three times, Madrid has been deported and three times returned to his native land for illegal entry. For his fourth illegal entry he is serving a jail term.

EARLY SKELETONS IN SPAIN

GERONA, Spain — Several ancient tombs containing human remains have been found at Panitjau near Gerona. The position in which the skeletons lie have led to the belief that they date from the earliest period of Christianity in Spain.

S-T-R-E-T-C-H your dollar

A Dollar Bill will not buy as much as it did a year or so ago. This is all the more reason for making your dollar s-t-r-e-t-c-h to its utmost buying power. To get the biggest value for your money you must keep posted on everything you buy.

Dealer information: ANDY AND JACK ANDERSON, Props., 6th and Ave. D.

DEAD YOUTH'S GLAND HELPS GIRL TO GROW

ROSTOV, Russia, March 20 — Dwarf children may grow to normal height in the future as the result of an experiment by Prof. Nikolai Bogoraz of the Rostov Surgical Clinic.

Recently a girl, who appeared to be four years old, was brought to the clinic. Actually she was 11 and a pupil in the fourth grade. Her abnormal size was due to the under-development of the hypophyse gland, an appendix of the brain which influences growth.

Bogoraz took the hypophyse gland from the head of a young man who had died in an automobile accident an hour and a half earlier. He tested the blood of both bodies to determine their congeniality then transferred the gland into the left shoulder artery of the dwarf girl.

Six months later the child had grown eight centimeters taller.

A second similar transfusion increased her height by six centimeters more. Her growth is still continuing.

Bogoraz was cautious in speaking of the results of his experiment, saying:

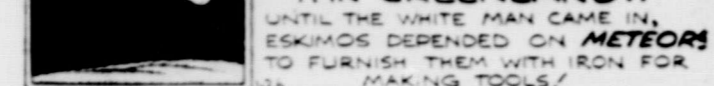

"From the broad viewpoint of medical science of course, a few such successful experiments are not conclusive. But the experiment has exceptional importance."

THIS CURIOUS WORLD

By William Ferguson

GREENLAND has been the landing place of many large meteorites, and from these great boulders the Eskimos pounded bits of metal... mere flakes... which they inserted in the cutting edges of their harpoon points.

Mountain Lions Are Said Disappearing

SACRAMENTO, Cal. — Predatory animal hunters are "getting the best" of mountain lions in California.

Only 215 lion scalps were turned in for bounty last year, compared with an average of 270 for the past several years.

Instead of believing hunters were losing their skin, officials of the state fish and game division said there was reason to believe that in nearly all parts of the lion country, hunters were winning out in their long battle to rid the ranges of the stock killers.

"The best evidence is the increased percentage of females turned in for bounty," one official said. "Last year female lions constituted 77 per cent of the kill."

Firemen's Pet Coon Is Rail Enthusiast

MASON CITY, Ia., March 20 — Joe Coon, pet raccoon of the Mason City fire department is rapidly learning the tricks of the trade. Joe, who should be hibernating this time of year, frolics at station houses instead.

When Joe first became the fire-fighters' official pet, they carried him to bed with them, and in the mornings slid down the brass rail with him.

Recently one of the firemen inadvertently left Joe behind. He peered cautiously from the edge of the floor around the rail, then seized the rail with two paws, and slid down.

Now he goes down the rail like a veteran smoke-eater. Sometimes he does it several times in succession, just for the practise.

FRECKLES and HIS FRIENDS.

Prominent Stables In Arlington Meet

DALLAS, March 20 — Entries from prominent stables throughout the country are arriving here for the opening of the spring meeting at Arlington Downs on March 26.

Opening events of the season is the Inaugural Handicap for three-year-olds and up to be run over the Waggoner course, 150 feet less than six furlongs. The stake is \$2,000 added.

The meeting is to continue for 21 days and will end April 29 in the colorful Texas Derby over a mile and a furlong course for \$15,000 added stake. The event is for three year olds.

Other outstanding events of the spring meeting are the Fort Worth Handicap for three-year-olds and upwards for a \$5,000 purse over a mile and a sixteenth course, the Dallas Handicap for \$5,000 added, a mile and a furlong race for three-year-olds and upward, and the Three-O's Handicap for three-year-olds and upward over a mile and a sixteenth course for \$5,000 added.

Detectives Evolve Work Saving System

FORT WORTH, March 20 — Local detectives have evolved a labor-saving system of law-enforcement. They work in groups of four. No. 1 files the complaint; No. 2 testifies in the preliminary hearing; No. 3 appears before the grand jury, and No. 4 testifies in the court trial.

Political Announcement

This paper is authorized to make the following announcements, subject to the action of the voters at the City election on April 2, 1935.

For Mayor:
J. T. BERRY (re-election)
J. M. WILLIAMSON

For Commissioners:
W. J. FOXWORTH (re-election)
H. A. BIBLE (re-election)
L. F. MENDENHALL
W. W. WALLACE

The DARK BLOND

BEGIN HERE TODAY

MILlicent GRAVES' employer, GEORGE DRIMGOLD, tells her he has a confession to make and warns her against a woman in a black crime.

Millicent leaves the office and sees such a woman. Later she finds her parakeet has been taken and a similar one substituted. In the elevator she meets a distinguished-looking man of middle age.

Returning to the office, Millicent finds Dringold dead. In a hotel under an assumed name, she meets the man in the elevator again. He tells her his name is JARVIS HAPP. Happ sends her to a beauty shop where, to spite of her protest, she is transformed into a brunette.

Happ comes for her in his car and introduces her as MRS. M. H. NOW GO ON WITH THE STORY CHAPTER VI

He stared at Millicent with slow appraisal and slowly nodded.

Keep away from Robert if you want to hold your job. Use your eyes.

"Cynthia's son," she asked.

"Who's Cynthia?"

"My wife."

"Then you're . . ."

"Yes," he interrupted, "I've been married twice. Cynthia is my second wife. Norman's mother died when he was 10."

"But what am I supposed to do? Why did you do this? Why . . .?"

"You're supposed to do secretarial work, and you'll work hard at it. I did it because I wanted to. Now tell me, have you any baggage anywhere? Have you left any anywhere at all?"

"Only the trunk and clothes in my boarding house."

"Those," he said, "arg out of the question. Say nothing about them. I'll have some baggage sent out tomorrow. You can go on a shopping expedition. And now here's Cynthia."

The door opened. Norman, standing slightly to one side, indicated Millicent with a bow.

"Dat's my new secretary," he said.

Cynthia Happ stepped through the door and stood, as coldly polished as the facets of a diamond, staring at Millicent Graves with expressionless appraisal.

"Miss Graves," Happ said. "Miss Graves, this is my wife."

Millicent bowed, muttered her pleasure, and felt strangely ill at ease.

Cynthia Happ stood perfectly still, surveying her as one might look at a picture hung on the wall, then she nodded slowly. Suddenly a smile twisted her lips. She extended her hand.

"My dear girl," she said, "come right in and make yourself at home. I've been trying to get Jarvis to get a secretary for his home work for a long while. I'm glad he's finally found one that suited him."

She turned to her husband.

"It was rather sudden, wasn't it, Jarvis? I mean, finding one who happened to suit you."

THE big car purred smoothly into motion. The chauffeur guided it with deft skill through the traffic.

Jarvis Happ turned to his son and said, by way of explanation, "Miss Graves is the new secretary I have engaged to take care of my work at the house."

Norman surveyed her with interested eyes, and said, "I hope you'll like it, Miss Graves."

Millicent noticed the manner in which Jarvis Happ had given her an alias by simply changing one letter in her name. So she was to be Mr. Happ's secretary—or was she? This man was altogether too smooth, too suave to suit her. He seemed to have carefully planned a detailed campaign, every step of which had been carefully mapped out in advance. This campaign had been laid without consulting Millicent—the person most concerned.

Once more all of her suspicions came to the front. Why was Mr. Happ doing this? What was his interest in her? What did he want?

She stared steadily ahead, saying nothing, but conscious of Norman Happ's approving glance studying her profile.

The young man made her strangely nervous. He had all of the magnetic attraction of his father, coupled with the appeal of a young man of her own age, and there was, moreover, a daring, rolicking something in his eyes—a devil-may-care spirit of adventure which made her feel that sooner or later this man was going to keep her very, very much on the defensive.

The car sped along a boulevard, swung to the right, turned once more into a private driveway. Garage doors slid noiselessly open, manipulated by some mechanical means. The car stopped in front of a portico and the chauffeur jumped down to open the door.

Millicent felt very self-conscious as Jarvis Happ handed her from the car to the pavement. Norman Happ pushed past them into the house, saying, "I'll tell Cynthia."

The chauffeur caught Happ's nod of dismissal, slipped back behind the wheel and drove the car through the open doors of the garage. The door instantly slid shut.

"Why," asked Millicent breathlessly, "are you doing this? What are you after? What . . .?"

HIS voice was vibrant with power. It cut through her quick questions as the prow of a steam boat cuts through water, turning it up on either side in neat, graceful waves.

"There's no time for that now," he said. "Remember, you have given me your references, and I have hired you. Be careful to keep things between us on a strictly business basis. Norman is interested in you. Stay away from him."

We are in A New Automobile Era

Cars built since 1931 have twice the power and speed of ten years ago.

Continental offers you better lubrication for modern cars — an *Alloyed Oil with twice the film strength of other

IT'S hard to realize how improved cars of the '30s are over those we drove ten years ago. We are in a new automobile era! Power and speed have almost doubled in a decade, with little increase in motor size.

Increased power has brought enormous increases in bearing pressures and crankcase temperatures. In making motor parts that will stand up under these severe conditions, car manufacturers have turned to new alloy metals of extra strength and durability. For the same reason, you must have oil with enough *oiliness and film strength* to protect your motor under extreme pressures!

Yet motor oils generally have no more oiliness and film strength now than they had ten years ago. New refining methods have recently come into use to make oils free from carbon and sludge. But these new refining processes have actually lowered instead of increased oiliness and film strength!

There is one exception—Conoco Germ Processed Motor Oil. It, too, is free from carbon and sludge troubles, as its users know millions of trouble-free miles of driving more important, Timken machine tests show that the new Germ Process* puts into your oil *2 to 4 times the film strength* of any standard oil! That extra film strength protects your motor under the most extreme pressures and temperatures.

Germ Processing gives other valuable advantages. Because Germ Processed Oil contains and combines with metal surfaces, "Hidden Quartz" stays up in your motor, cuts down starting wear. Germ Processed Oil gives longer mileage with greater protection, as proved by the famous Indian Destruction Test.

Plain mineral oils were all right ten years ago—today they are becoming obsolete. "O.K.—Drain"—fill with Conoco Germ Processed Motor Oil and drive with the confidence that your oil meets your needs!

* Alloyed by the Patented Germ Process

Just as the metallurgist adds small amounts of other metals to make special alloy steels, so we add small quantities of concentrated oiliness to highly-refined, paraffin-base motor oil. This Germ Processing, discovered and patented by Continental scientists, gives Conoco Germ Processed Motor Oil lubricating qualities no other oil has.

CONOCO GERM PROCESSED MOTOR OIL

From the diary of a couple who had a grand time—

"The Conoco Travel Bureau at Denver sent us a complete plan of our trip—everything we needed and all of it free."

"There were road maps of every state with road conditions and best routes marked, and booklets on scenic and historic points. Hotel and camp directories, too."

"Friendly Conoco service stopped made it a grand trip. Free Travel Bureau service."

ANIMAL BREADLINE
WESTPORT, Mass.—The animal kingdom has definitely established its winter residence on Medeiros farm. All the heifers, birds and animals, including starlings, gulls, small animals, are well kept one-skunks, Mole's daughter, Mary, started "feed" when she scattered grain, meat and other things went smoothly as unwanted brothers made peacocks.

SISTER MARY'S RECIPES

BY MARY E. DAGUE
NEA Service Staff Writer
THERE are laws to keep people with colds from spreading germs in kitchens where food is cooked for the public, but the home kitchen and pantry are more or less at the mercy of the elements, or at least, the housekeeper's wisdom and caution.

Of course, it's usually impossible for the woman who does her own work and has "just a cold" to keep out of the kitchen. The funny ones must be fed. But if women will take the simple precaution of covering the nose and mouth with several thicknesses of cheesecloth—mask fashion—while she's baking and cooking, she can safeguard the precious health of her family.

The silver and dishes used by anybody who has a cold should be covered with boiling water and allowed to stand at least five minutes before washing with the rest of the dishes.

Scalding Dishes Helps
At all times dishes, glassware and silver should be washed in sudsy water as hot as the dishwasher can stand and rinsed in scalding water. Glassware will stand very hot water if it is placed flat in a pan and hot water poured into the pan, but not on the glass until the glass is covered with water. A pair of strong kitchen tongs allows for the removal of scalding water without burning the fingers.

A well-ventilated kitchen with a sunny exposure is an essential of health-giving meals.

The refrigerator in which food is stored should receive careful and frequent cleaning. Milk, cream and butter have a special place provided for them in modern refrigerators, and should be kept covered wherever they are. Left-over foods should be cooled before putting into the ice-box.

Always wash off milk bottles before placing in the refrigerator. Hold the top at an angle under running water if it is not protected by a paper cap.

Wash Vegetables Carefully
All fruits and vegetables that are to be served raw should be washed through many waters. The ideal way to wash leaf vegetables is under running water with the leaf held at a sharp angle.

If there is any trace of dirt on the shells of eggs, wash and dry. Dish cloths should be hung in a sunny, airy place to dry between each soaping of dish-washing and no other purpose. Dish towels should be immaculate.

Cooking utensils should be well washed and scalded and wiped dry with a dish towel.

BRITISH SEE AMERICANS IN SEMI-FINALS

By ROBERT C. DOWSON
United Press Staff Correspondent
LONDON, March 20—The United States and Australia are seen here as the two lawn tennis nations who will fight out the inter-zone final for the right to challenge Britain for the Davis Cup.

It will be recalled that these two countries waged a similar battle in the 1934 competition, and the majority of British experts believe that history will repeat itself.

European Drawing
The draw for the European zone of this year's tournament worked out rather unevenly among the 11 countries entered in the first round. In this section Australia is opposed to her Antipodean neighbor, New Zealand, in the first round, while France, Germany and Italy receive byes. In the top half Poland and South Africa receive byes, while Czechoslovakia plays Yugoslavia and Japan plays the Netherlands.

Australia's path to Wimbledon and the inter-zone final is likely to be smooth with the possible exception of two obstacles—Germany and South Africa. These, it is generally believed, will be negotiated comparatively easily, although it is conceded that Baron Gottfried von Cramm is capable of winning a couple of points from any nation.

Japan's two-man team, consisting of Hideo Nishimura and Jiro Yamagishi, is credited in some circles with being capable of removing South Africa from Australia's path, but it is noteworthy that South Africa's men are much more familiar with European conditions than are the Japanese.

In the North American zone, in which the United States opposes Canada, and Mexico plays Cuba in the first round, nobody here would bet against the United States coming out on top. Similar opinions are expressed regarding the United States' chances against Brazil or Uruguay—whichever emerges victorious from the battle between the

only two countries entered for the South American zone. Thus, it is concluded that the same two countries which fought for the right to challenge Britain last year will do so again.

Surgeons Sew Up Wounds Of Heart

ATLANTA, Ga., March 20—Eleven times surgeons at the Grady Hospital here have performed operations on the heart of victims of stabbing trays, and ten times the operations have been successful.

Six of the cases still are alive, one died during the operation, and the death of the other four came from infection caused by the use of dirty knives by their attackers.

In each of the cases the subject has been a Negro. Negroes as a rule are involved in perhaps 25 per cent more stabbing cases than are white people.

The first case in which a cut in the heart was sutured was in 1923. There have been six cases in the last four months.

The instruments which are used for this operation are kept in a special container, ready for use whenever the diagnosis is a cut of the heart.

The symptoms nearly always are the same. The victim feels no especial pain and may continue whatever he is doing for perhaps ten minutes, at the end of which time he usually is overcome. Consciousness is restored by the use of adrenalin and other heart stimulants. The patient remains conscious, feeling little pain, until given anesthetic.

A piece of the rib just above the heart must be removed to enable the surgeon to reach the vital organ.

Maybe a Pal of Alley Oop's Dinny

A cousin, perhaps, or maybe even a brother, of Alley Oop's dinosaur was this man, who seems to be eating frantically up at Walter Granger, as much as to say, 'I'm certainly glad you're putting me back in shape after all these years.' Granger is re-assembling the prehistoric monster for exhibition in the American Museum of Natural History in New York City.

Plan Shown To Curb Soil And Water Loss

DALLAS, March 20—A vast plan to control soil and water losses throughout Texas, embracing the expenditure of \$100,000,000 over a period 10 years, was announced by Dr. H. V. Geib, regional director of the federal soil erosion service.

The plan is based upon figures showing that there is a \$30,000,000 loss annually resulting from water loss and soil erosion in Texas.

The object of the plan will be to check erosion, conserve moisture and control floods. All sections of the state, including the East Texas hard lands, the redlands, the West Cross Timbers, western ranges, the prairie sections and the blacklands, are included in the program.

Immediate work is recommended in the southern division of the south plains, in the ranching country of the northwestern and southwestern division, and in the Rio Grande Plains section.
