Waves of The Earth

A mosquito, perched on a steamship, might tell you how solid and immovable was its resting place. All the while, the ship would be rising and falling in the water.

Men, walking on the earth's surface, think it is solid. Yet the very continents we live on, like floating islands, are riding on a fluid layer below the earth's outer crust. They, like the mosquito's ship, rise and fall on slow waves that take centuries to reach a crest.

Back of the Mississippi valley flood problem, with which scientists have been grappling, lies a thrilling story of a moving continent, writes Myron M. Stearns in the June issue of Popular Science Monthly. Centuries ago, ice, pressing down on the Great Lakes region, as your thumb presses down on a soft tennis ball, pushed it in. Now it is springing back and the whole Mississippi Valley is slowly rising.

This explains why the Missisippi and its tributaries

cause so much trouble.

Geologically speaking, the whole Mississippi Valley is new land. It is still rising from the bottom of the sea. In ten years it may rise an inch; in a hundred a foot, or two. The lower valley, instead of being a true delta, made wholly tion on how to alter a slip pattern, by the mud deposited by the river itself, is a plain raised by great natural forces across what was the river's mouth.

Those present:

The aprons were discuss- club girls all had their aprons finland at the sides of the valley!

Thus hundreds of thousands of homes are ten to thirty feet lower than the river itself when it is in flood. No wonder man has had trouble controlling the Mississippi! To all intents and purposes the river is flowing along a low ridge in the middle of a flat plain!

THIS CURIOUS WORLD By William Ferguson

YOSEMITE NATIONAL PARK is a scenic masterpiece of more than 1100 square miles, but Yosemite Valley is only a glacierscarred crack, seven miles long. Prior to the ice age, it was a V-shaped canyon more than 2000 feet deep, but glaciers ground it into a broad U-shaped valley.

Expert Talks About Screw Worm Control

In a meeting at the courthouse, Eastland, on Friday, May 8, R. R. Reppert, A. & M. insect specialist. gave the following procedure as the latest, most economical and practical control of screw worms in wounds on livestock:

The primary screw worm maggot which lives on livestock tissues only the most destructive, and the fly which produces this maggot lays eggs only in blood.

The secondary screw worm maggot lives only in dead flesh and is not as harmful as the primary worm. To treat a wound, first clean cut with clean cotton. careful not to bruise or cause more blood flow. A small amount of commercial benzol should then be applied with a squirt can to moist-en the inside of the worm. This creates a gas which kills all mag-gots. If the wound has a small opening, put a small wad of cotton saturated with benzol into the stock stolen, but recovered some of

Former Cisco Woman Reported Very III

Mrs. Howard Smithwick of Lambasses, formerly Miss Frances Metcalf of Cisco, is reported to be seriously ill with bloodpoion located in sinus glands. Mrs Smithwick is in the Scott and White hospital Temple. Her condition is criti-

When in Cisco Mrs. Smithwick was employed at the Leach Stores.

While embers glowed the reconstruction started

Before the flames had reached the telephone switch. board in the little Arkansas town-before the swirling wall of smoke had driven operators from their posts -- plans for rebuilding the fire-doomed office were under way.

At a great warehouse in a distant city, men were loading a new switchboard, new telephone cable, new office equipment, into express cars. Nearer to the spot, cable splicers and workmen skilled in telephone construction were being taken from their jobs and rushed toward the office about to be destroyed

While embers still glowed in the fire-twisted skeleton of the old office, the work of reconstruction was under way.

One advantage of the Bell System's far-flung organization is this: When disaster flattens the telephone system, men and money and materials are instantly available for the prompt repair of the
