## Big 12 schools devise sportsmanship code

By Angela Timmons/Staff Reporter

Texas Tech's Student Government Association held a brainstorming forum and unofficial drafting of the new Big 12 Sportsmanship Honor Code on Saturday in the United Spirit Arena's City Bank Conference Room.

The forum, part of the Big 12 Leadership Conference hosted by Tech's SGA this weekend, included all Big 12 schools except Texas A&M and Kansas State.

The drafting session began with a speech by Printice Guatt, associate commissioner for the Big 12 Conference. In his speech, Guatt emphasized behavioral standards that should be acknowledged by coaches, ath-

letes, students and administration, such as physical and verbal restraint, respect and courtesy and refraining from critical comments toward officials.

Guatt played a comical film portraying children in good and bad sportsmanship situations. The movie ended with the motto "Give respect, get respect."

Guatt concluded that "responsible, decent people" would mean good sportsmanship among Big 12 lines. He added that the most "paramount" school displaying sportsmanship after implementation of the Honor Code will receive a plaque from the Big 12 Commission.

"Big 12 athletics directors would make the decision on the paramount school,"

Guatt said.

Following Guatt's speech, Tech's Big 12 Leadership Conference Director Stefanie Cervantes made remarks on past examples of bad sportsmanship, including last year's Tech vs. A&M incident at Jones SBC Stadium. She asked the group to focus and brainstorm on suggestions for the Honor Code.

SGA President Kelli Stumbo reminded the group that the Honor Code drafting has full support of the Big 12 Commissioners and athletic directors, with the aim of keeping students safe.

The Honor Code, once passed, will be presented to the Big 12 Conference Commission and administration of schools and

subsequently be communicated to students. Schools will deal individually with those who disobey the code, Cervantes said, adding that respective Big 12 administrators are aware of the drafting of the Code and its intent - to prevent future negative behavior sprung from intense rivalry.

The discussion opened with Nebraska representative Ryan Wilkins stating he thinks "pranks are OK until they cause someone pain; as long as no one gets hurt."

After discussing in small groups, the student government representatives threw out ideas for the mission statement of the honor code, the structure of which will be organized and decided upon after this weekend.

The overall theme behind the ideas were

students' safety mutual respect, respect for traditions, integrity and sportsmanship.

After debate and argument, a mission statement was drafted to begin the Honor Code. In its final form, the statement explains its purpose is:

"To ensure a high standard of safety and sportsmanship in Big 12 athletics by integrating a sense of pride, integrity, respect and competition into a mutual code of honor."

The statement, the format for which was initiated by Blake Shuart of University of Kansas, reflects what the student representatives said they believe are the most important aspects of sportsmanship.

## Celebrating SURVIVORS

JAIME TOMÁS AGUILAR/Staff Photographer

CANCER SURVIVOR RENEE Meadows, left, and her son Sean walk among other participants and cancer survivors in the pink shirts, throughout the Texas Tech campus Saturday morning during the 2002 Race for the Cure.

### Race participants wearing hot pink raise money for research, education

By Heidi Diers/Staff Reporter

About 3,000 people gathered Saturday morning to participate in the 8th Annual Lubbock Susan G. Komen Race for the Cure.

Dozens of women stood out among the sea of people gathered, not for the bright pink clothing they wore, but for what the color signifies - a woman who has beaten breast cancer.

"The people in the pink shirts and caps are the most important people here," said Sue Ann Thompson, the co-registration chairwoman for the event. "They're the ones who've battled breast cancer and survived."

Participants were able to run in memory of a woman who died from breast cancer or in celebration of a woman diagnosed with cancer but beat it, Thompson said.

Two races were held, a 5K run/walk and a 1-mile fun run/walk.

"It's awesome to see all the people in pink," said Karen McNally, a senior merchandising major from Kingwood. "This is just an amazing cause."

Cristi Sanchez, a sophomore architect major from Lubbock, was personally affected by the disease when her mother, Norma Sanchez, was diagnosed with breast cancer in 2001.

"A group of my friends and family all came out here today because we wanted to support my mom,"

Sanchez said. "This just shows that people care and that those fighting breast cancer are supported. It also brings awareness to people to get themselves checked for breast cancer."

The Susan G. Komen Breast Cancer Foundation is a national organization dedicated to eradicating breast cancer.

All of the proceeds from the Race for the Cure event go to fund breast cancer research, with 75 percent of the money staying in Lubbock, said Liz Parke, race coordinator.

"This money will go to fund research and educate women in the community," Parke said. "We're making progress in the fight against breast cancer."

Organizations from Tech got involved in the race by either competing in it or volunteering for it, said Meredith Graham, a sophomore English major from Kingwood who is also a member of Zeta Tau Alpha.

"This is our sorority's main philanthropy and a really good cause," Graham said. "We're all highly encouraged to participate, but we wanted to as well."

The event helps give people a purpose, said Kara Graham, a junior biology major from Kingwood.

"There's so much hurt left over from cancer," said Kara Graham, also a member of Zeta Tau Alpha. "This gives people affected by it something to work toward."

Helping find a cure for breast

JAIME TOMÁS AGUILAR/Staff Photographer

SHARON HENDERSON, AN employee with Distance Learning at Texas Tech, and Norma Sánchez, the assistant director of the Texas Workforce Academy, chat with Norma's daughter Cristi, a sophomore architecture major from Lubbock, as they wait to walk in celebration of Norma, a cancer survivor, in front of the Frazier Pavilion.

cancer was the main reason to take part in the event, but there are personal ones as well, said Shauna Menefee, a senior exercise and sport sciences major from Abernathy.

"I'm doing this in celebration of my mother beating breast cancer and all that she's been through," Menefee said. "I'm also doing this to help give someone else the chance of life."

Participating in the Race for the Cure also gives a person a sense of accomplishment, Parke said.

"You get the first-hand experience of seeing survivors and their

families - it's a really powerful thing. But I'm also doing this for a slightly selfish reason. I get the chance to know I did something good for the community, the people involved and myself," Parke said.

Ultimately, Race for the Cure is an event that helps make people aware of cancer and the fight people are waging against it, Thompson said.

"Breast cancer is a devastating disease that affects millions of people," she said. "We're doing this so that little boys and girls won't have to grow up without a mother."

## Council approves broadcast of sex offender records

By Heidi Toth/Staff Reporter

The Lubbock City Council voted Thursday to broadcast sex offenders' information on the Lubbock Cable Network, said Bob Goodwin, the corporate committee manager for the city.

The referendum, approved in a 4-3 vote, will not be implemented until the city has obtained clearance from the Texas attorney general's office that there are no legal problems with the bill, he said.

Because the information is already being published in newspapers and on the city's Web site, it is already public domain, and there should not be any legal problems with it, Goodwin said. However, broadcasting the information on a public channel is different than publishing it, so clarification from the attorney general's office is necessary.

"We wanted to ensure it was done appropriately," he said.

This was an important step for the city, he said, because right now the Web site with sex offenders' information gets the most hits in the city's site.

There was some resistance from Council members and members of the community. A local health educator spoke to the Council against broadcasting the information, Goodwin said.

She reminded the members and those present that sex offenders have families and their families get punished because they are related to the sex offenders.

There also is a constitutional question of whether having the information broadcast is continual punishment for the same offense, Goodwin said.

In addition to distributing the information, he said, the city also plans to use this as an education process. They will have information about stranger danger and how to remain safe and out of risky situations.

The Council is still looking at related issues. Goodwin said there are certain levels of the danger of sex offenders, and different degrees categorize the level of danger. However, all offenders are published on the Web site, so all of

## Bush says Congress agreement at hand

By Jennifer Loven/  
Associated Press

CRAWFORD — President Bush said Saturday he expects Congress soon to pass a resolution authorizing force against Iraq so that "we will speak with one voice."

"We refuse to live in this future of fear," Bush said in his weekly radio address. "We are determined to build a future of security and peace for ourselves and for the world."

In recent days, as a few Democratic voices have arisen to counsel caution, the president and his aides have sought to portray White House concessions made earlier in the week to limit the resolution's scope as essentially the last word. The vote now is a done deal, the Bush administration is insisting, and will give the president a strong showing on Capitol Hill and aid the more difficult search for international consensus and support.

Aimed at winning crucial support from U.N. Security Council members Russia, France and China, each of which has a veto, a draft of a tough new U.N. resolution from the United States and Britain would give Iraq seven days

to agree to its terms. Iraqi President Saddam Hussein would then have to reveal quickly all weapons of mass destruction in his arsenal and give inspectors from the United Nations total access to verify the information or face use of "all necessary means" against him, officials said.

For his domestic campaign, Bush picked up a new Democratic supporter Saturday, Sen. Max Cleland, D-Ga.

"The time has come for the U.S. Senate to put the debate regarding a resolution supporting the president on Iraq behind us," Cleland said. "The president needs the strongest hand possible in assembling a coalition and pushing the United Nations to remove Iraq's weapons of mass destruction."

Congress hopes to take up a resolution this week that would give the president authority to use whatever means necessary, including military force, to eradicate the Iraqi threat to America.

"By passing this resolution, we will send a clear message to the world community and to the Iraqi

### The Rundown

**Two inmates escape from detention facility**

CORPUS CHRISTI (AP) — Two inmates who escaped from a private jail by kicking in a ceiling and crawling through pipes remained on the loose Sunday.

Juan Guerra and Steven Torres were being held at Brooks County Detention Center pending their trials when they escaped Saturday.

Guerra, a Mexican national, had been jailed on a murder charge. Torres was in custody for a parole violation stemming from an alleged robbery. The men's names and hometowns were not available.

Local authorities were notified along with the Texas Rangers and the U.S. Border Patrol. Search dogs were used, but the escapees had not been found by late Saturday.

The inmates were discovered missing during a 7 a.m. headcount.

Investigators believe the two men had transportation waiting for them outside the center, said Patrick LeBlanc, president of the Louisiana-based LCS Corrections Services, Inc., the company that oversees operations of the detention facility.

"I don't think it was a whim," LeBlanc said in Sunday's edition of the *Corpus Christi Caller-Times*.

LeBlanc said the men kicked through a security ceiling that was welded shut, then climbed into the ceiling and went through some pipes.

The piping leads to a door locked from the outside that opens up to the facility grounds, he said. The two men, wearing detention-center-issued orange uniforms with white T-shirts, then scaled two double fences, each topped with three lines each of razor wire.

**Census report shows number of uninsured up**

WASHINGTON (AP) — About 1.4 million more people were without health insurance last year as the recession increased unemployment and forced businesses to scale back benefits, Census Bureau figures show.

About 41.2 million people, or 14.6 percent of U.S. residents, lacked health coverage for all of 2001, compare with 14.2 percent the previous year, according to bureau estimates being released Monday.

The share of the population covered under private, employment-based plans declined from 64 percent to 63 percent last year. "That was the principal cause of the overall decrease," bureau analyst Robert Mills said.

Reflecting the broad impact of the recession, rates of uninsured rose across all income levels, as well as among full- and part-time workers and U.S.-born residents and immigrants.

Still, the percentage of children without health coverage declined slightly, from 11.9 percent to 11.7 percent, a sign that more lower-income families and children may have picked up coverage through government programs.

The share of people covered under Medicaid rose from 10.6 percent to 11.2 percent.

"The only silver lining in this year's report is that public programs covered more people last year and cushioned the loss of coverage in the private sector," said Ron Pollock, executive director of Families USA, a liberal health advocacy group.

**970 bodies recovered in Africa's ferry disaster**

DAKAR, Senegal (AP) — Divers smashed the windows of the capsized Senegalese ferry MS Joola and hauled out victims of one of Africa's worst ferry disasters. At least 970 bodies have been recovered from among more than 730 people believed dead.

Wailing relatives — some collapsing in grief — cried Saturday for news of the missing.

Barricades held back crowds who stood vigil by the hundreds overnight at the main naval base in Dakar, Senegal's capital — waiting to know, for some, whether whole families had perished.

"I have been waiting 22 hours for information!" Daouda Diot, seeking news of his wife in the ocean ferry's sinking, shouted at military police who were fending off the distraught family members at the base.

The crowds took care of women who fell to the ground in the rising anger, tension and grief. Some dropped in dead faints or shook uncontrollably — sobbing and crying of missing mothers and fathers.

By midafternoon Saturday, divers had pulled at least 180 corpses from the ferry, which turned on its side, then capsized in a fierce Atlantic Ocean gale Thursday night.

Only 62 among the 796 passengers and crew are known to have survived — all rescued by fishing boats in the first hours, after what for some were hours clinging to the overturned hull.

French and Senegalese search planes and vessels converged Saturday in the area of the disaster, in blue seas under hazy skies.

# Cochran heads school as first woman director

By Beth Aaron/Staff Reporter

Nancy Cochran is the new director for Texas Tech's School of Music. Former music director, Garry Owens, now dean of the College of Visual and Performing Arts, made the final decision in appointing Cochran in August.

"She brings a tremendous amount of experience to the position," Owens said. "She did a very good job in the opening of the school year. The faculty was very impressed, as was I."

Owens said the School of Music arranged a search committee and performed a national search for the music director position.

Cochran said she is the first woman to hold the position of music director in Tech's history.

"I have received a very warm welcome," Cochran said. "I would hope that I was chosen because I was the best match, not just because I am a woman."

Owens said he asked the college's chairpersons earlier this year to set their sights on where they would like to have the school go.

In respect to Cochran's plans for her term as director this year,

Cochran said students majoring in music as well as in other areas can expect to be encouraged to attend a variety of concerts presented this year.

"This rich variety of artistic experiences can help to give students majoring in science or medical fields a more comprehensive education and help us all keep in touch with our humanity," Cochran said.

Cochran said there are courses being offered such as songwriting, music appreciation and masterpieces in music, especially designed for nonmusic majors.

Music Department Business Manager Mel Harp said he has seen growth in the music department.

"We are already seeing a lot of communication between art, music, and theater," Harp said. "They are very involved with each other, and it will make for a very strong fine arts curriculum."

Owens said he supports Cochran's plans as music director for this year.

"I am really happy about her plans involving the whole campus," Owens said.

"We've always wanted to accommodate all students."

Before coming to Tech, Cochran taught at the Conservatory of Music of the University of Missouri-Kansas City. Harp said he worked with Cochran on the Conservatory of Music at Missouri-Kansas City for nearly 20 years.

"She has a fine reputation," Harp said. "We have a lot of confidence in her, and we are glad to have her. She brings a lot of professionalism to what ever she does."

Cochran said she has served as president of the International Horn Society for two years.

"I was also the first woman president of the International Horn Society," Cochran said.

Owens is now dean of the College of Visual and Performing Arts. The college was originally lumped together with the College of Arts and Sciences.

Since Sept. 1, however, the College of Visual and Performing Arts has received its own departmental funding, Harp said.

"We're excited to finally realize a college that has been a dream for 30 years," Harp said. "If it wasn't for Garry's energy and persistence, it wouldn't have come to be a reality."

Owens said he likes his new po-

sition. "I am enjoying it very much; it's a great challenge," Owens said. "I love working with the administra-

tion; they are a wonderful group of people. It's fun."

Though he is enjoying his term as dean, Owens said he misses teaching.

"I was a teacher for many years," Owens said. "The part I miss the most is being around faculty and students."

## DRAGGING DELTAS

JENNA HANSEN/ Staff Photography

PLEDGES IN THE SORORITY Delta Delta Delta participate in a game of tug of war at the Fiji Olympics held at Tech Terrace Park on Friday afternoon.

## Honor

CONTINUED FROM PAGE 1

Although the statement may seem simple, it was difficult for the representatives to agree upon the final consensus, with debates over wording, importance of certain aspects and disagreements over the statement's emphasis on sports and not academics.

"This has to happen because of sports rivalries," Stumbo said.

Cervantes added, "This is for unity among all sports. We're trying to bring the sports and schools together."

Several representatives expressed skepticism with the effect and impact the Honor Code is supposed to have, but some recognized the positive possibilities behind the Code.

"I think a lot of people are having or are going to have trouble implementing it," Clint Bullard of Oklahoma State said. "But what we have to remember is it's going to have to start with the students — we're the alumni of tomorrow. This is going to be our code of ethics, and our sense of pride and unity. We're in this together."

## Offenders

CONTINUED FROM PAGE 1

them will probably be broadcast as well.

"If we do one, we do all," he said.

Craig Emmert, an associate professor of political science at Texas Tech, said he is not aware of any Supreme Court rulings or lower court decisions on this topic, but when it is made policy it will be challenged. He does not expect the challenge to be successful.

Emmert said the most likely claim would be invasion of privacy or the individuals being punished beyond what they have already suffered. However, the Supreme Court has upheld other forms of notification, so it will most likely uphold this form as well.

"I would be surprised if this does in fact go through," he said. "But I don't expect a challenge

will be successful."

Rod Schoen, a retired faculty member from the Tech law school, agreed with Emmert's analysis. He said those challenging the statute are already convicted sex offenders and regulations are in place require them to be registered and identified.

This has never been tested, he said, but it was probably legal, at least until someone challenges it.

"I think you could argue if there is an invasion of privacy, it does not run afoul of the Constitution," he said.

However, Schoen said broadcasting the information presents a completely new aspect to the situation. People could live next door to a sex offender for years and never know it and never have a problem, but as soon as they see the picture everything changes.

Councilman Ty Cooke said he voted against the bill because it could ruin peoples' lives.

"I worry about the collateral damage," he said, adding that only

high-risk sex offenders should have their information broadcast.

Councilor T.J. Patterson is in favor of the bill. He said the sex offenders' lives might be ruined by this, but it is necessary to think about the young children who were sexually assaulted and if their lives might also be ruined.

"The victims are the ones I'm concerned about," he said.

For these 4- and 5-year-old children, Patterson said, the memory of what happened never goes away, and they have to live with it and deal with it every day.

These are not alleged offenders; they are convicted offenders, he said, and they need to reap the consequences of their actions. This method is already being used with drug dealers, and Patterson said he sees no reason why it should not be used with sex offenders as well.

The Web site with sex offenders' information is <http://police.ci.lubbock.tx.us/rso.htm> and the city's television Channel is channel 6.

## Resolution

CONTINUED FROM PAGE 1

regime that the demands of the United Nations Security Council must be followed," Bush said Saturday.

"We're making progress, we are nearing agreement, and soon we will speak with one voice," he said.

Negotiations continue on wording of the resolution.

Some Democrats, uncomfortable with giving the president open-ended authority, are seeking to put more emphasis on renewed U.N. inspections first and on requiring sup-

port from allies for any military action.

Top congressional leaders — Senate Minority Leader Trent Lott, R-Miss., House Speaker Dennis Hastert, R-Ill., House Minority Leader Dick Gephardt, D-Mo., and Senate Majority Leader Tom Daschle, D-S.D. — are to confer by Monday afternoon.

Regardless, few doubt the ultimate outcome — a positive vote on an authorization of force from Congress.

Lott predicted the negotiations would produce a measure that would draw a broad bipartisan vote. "In the end, I think we're going to have something that's going to be widely

supported," he said on CNN.

Bush also has begun delivering a much plainer, starker description of the threat posed by a Saddam-ruled Iraq that raises the specter of an alliance with Osama bin Laden's terrorist network: "Each passing day could be the one on which the Iraqi regime gives anthrax or VX nerve gas or someday a nuclear weapon to a terrorist group," he said.

The radio address, taped Thursday before Bush left Washington for a four-day Western trip, did not include references in campaign-style speeches Friday about a willingness to give alternatives to military action a chance first.

# Testing to rule out unruly parents

If there is one thing I cannot stand in this world, it is crazy parents. I'm not talking about your run-of-the-mill, off-the-wall parents; I'm talking about the crazies. The irresponsible, stupid, selfish and just plain mean parents. We see them in the news every day getting caught for doing something dumb at the expense of a child's humility or even a child's life.

Every summer is the same old story. Some poor child is strapped to a car seat, locked in a car with the windows up in the middle of a hot summer day and dies of dehydration, heat stroke or heat exhaustion. And the parents or caretaker's excuse is always either "It was only for a few minutes" or simply "I forgot."

Now, I have forgotten to take out the trash, I have forgotten where I put my keys and I may have even forgotten to call my mother on her birthday (yes, it did happen—sorry mom). But seriously people, you have to be a special kind of stupid to "forget" a child in the back seat of a car. It doesn't matter if they were really quiet or sleeping. You just don't forget important things like that, especially a child. That is absolutely ridiculous! It

breaks my heart when I see animals locked in a hot car, let alone a child. What is more important than that little life in the back seat? Those parents should be strapped in the back seat during July in Texas to sweat it out. I'll only be gone for a few minutes honey.

We all remember last year when 8-year-old Lauren Calhoun was found in a locked closet containing human waste in her parents home in Hutchins. The 3-foot tall child weighed 25 pounds and couldn't even recognize the sun when drawn in a picture. Supposedly she was punished to the closet for "being bad and eating too much." How bad or how much does a kid have to eat to be punished to a closet containing human excretion? After I read the story when it first came out, I was completely disgusted and disturbed. Thank goodness the child was adopted by a normal couple and is recovering from this traumatic experience. I think mom and dad need to be punished to a closet full of poop for about 10 years. We'll see how they like that. But, of course, I'm not running the justice system. Too bad in this case.

Of course the big news lately is Madelyne Gorman Toogood beating the life out of her 4-year-old child in

**Rachel Richmond**  
racheludaily@hotmail.com

*I think there should be a series of tests people must go through before they are allowed to conceive children. If they don't make the cut, then they should be sterilized.*

the parking lot of a Kohl's Department store in Indiana. What a dumb lady. When does a parking lot not have surveillance cameras these days? I've seen that video replay on TV almost every day. She is just wailing on that poor child although she claims she never

punched her. Toogood said she hit her daughter in the head and back and pulled her hair, but did not punch her. First of all, that's enough information right there. Second, pulling hair stops in about first grade when you are fighting with another first-grader. This lady is 25 years old, and she is pulling a 4-year-old's hair.

Her excuse for this behavior seems to be "I lost my temper." Haven't we all lost our cool at least once in our lives? But not everyone beats up a child to relieve tension. She deserves to be strapped in a car seat and have her hair pulled and face slapped. We'll see how she likes that.

This next and last encounter with crazy parents seems to be the most unusual to me. This lady doesn't seem mean, only a little nutty. It's Lynn Stuckey, the Illinois mom who still breast-feeds her 8-year-old child. Now, does this seem odd to anyone else? Stuckey said breast-feeding an 8-year-old is normal, and Americans are just uncomfortable about breast-feeding. Well, I'm an American, and I am fine with breast-feeding; it is a perfectly natural thing... unless the child is old enough to ask for it. That's when I have a problem with it. The child is eight! I will be more than happy to send her a few bucks every month to

buy a gallon of milk at the store. She could even send the child; he'll be driving soon enough. She also said she sees nothing inappropriate about breast-feeding unless the child is "maybe into their teens." What's going to happen when he goes on his first date? "Mom, put your shirt back on, my date's at the door." That can't be good for his action with the ladies. Sick, sick, sick.

I think there should be a series of tests people must go through before they are allowed to conceive children. If they don't make the cut, then they should be sterilized. Seriously, it would cut down on child abuse and neglect among other issues.

Some people who are simply just not fit to be parents pop out babies like it's going out of style. And there are people who would make great parents and are just physically not able to produce children. Strange how life is. If you do plan to one day have a family of your own; please take care of your babies. Don't "forget" them in a car, lock them in a closet, beat them up or breast-feed them until they enroll in college. Children truly are innocent and precious.

The only thing you should be guilty of is loving them too much. And love isn't a bad thing.

# True meaning of love lost in today's world

In the year 1984, Foreigner (A widely popular band of the time) begged the question of the true nature of love with its hit song, "I Want To Know What Love Is (I Want You To Show Me)." This song is as good an example as any of your basic 80s love ballad.

I recommend this perfect specimen of 80s musical genius for download. To those of you so unfortunate as to find yourselves living on campus, I wish you happy Napigating or Kazaa-igating, or the use of whatever means has been devised to circumvent our school's futile attempts to keep you from hearing great music.

Now, in the year 2002, I find myself begging the same question of my fellow students, staff and faculty members, and even up to our chancellor of this fine institution of higher learning.

My response to the original question posed by Foreigner so brilliantly through music is that the world is now void of love and has been for quite some time. Allow me to expand this concept. Soon after the time I could conceive such a notion as love, I began to believe that every member of our human society lacks the capacity to provide unconditional love to one another.

There is evidence of our lack of capacity to provide absolute love to all in every aspect of how we go about living our lives. For the purposes of this discussion that will support my previous claim, I will focus on only three areas of con-

cern, due to space limitations, that I have observed as a member of our "modern and advanced" society.

First: religion. Some have disillusioned themselves with the notion that they have found pure love through religion. In actuality what religion has caused is severe conflict by creating the very divisions amongst us, which has led to a more hateful than loving society. The spread of this wide array of religious belief creates these partitions amongst us leading to conflict despite the fact that most major religions advocate unconditional love for all.

I liken the attainment of a particular religious belief to playing lotto. The choices are near infinite, and the numbers we choose seem to be more dependent on what benefit we can gain as individuals than the attainment of truth.

It is a near universal concept that the belief in any religion fills a human void by providing a source of unconditional love from an outside point of origin (God, if you will).

To sum up this pattern of thought, I state that one of the primary catalysts for the advent of almost all religions is our need to fill the void we all so desperately need which provides for unconditional love from a stable source.

Second: Drugs. For the purposes of argument, it is reasonable to make the assumption that a large percentage of patrons of the 21st century currently use or have used drugs of some form as a means to escape. If only temporarily, from the reality of our overall cold

**Kurt Hunt**  
kuhunt@ttacs.ttu.edu

*Soon after the time I could conceive such a notion as love, I began to feel that every member of our human society lacks the capacity to provide unconditional love to one another.*

societal structure, has developed to this point in time. The drugs I speak of encompass SSRIs (basic antidepressants), alcohol, other psychotropic substances such as marijuana and hard drugs such as cocaine, ecstasy and heroin. People are even going to the extremes of combining drugs to obtain an effect that can only be created with such a blend. For example, when one combines Viagra and ecstasy, the re-

sult will be this new phenomenon of all night sex-tacy.

While some may attribute the use of the aforementioned drugs to strictly their availability, upon closer examination this argument fails to address the fact there is a need by many to fill a void made by the lack of feeling loved that the use of the drugs mentioned does temporarily provide.

Our last topic: Interpersonal Relationships. Now more than any other time in history, there seems to be an ever-growing number of people lacking the capacity to give love than ever. Believe I am perhaps mistaken? Then I simply reference the skyrocketing divorce rates that plague these times as a reason for the folly of your idea.

We find ourselves today members of a society where virtually all inhabitants treat the opposing sex as mere possessions and stepping-stones to fulfill our own self-interests. This is evident in every facet of all levels of romantically involved relationships in our society (gay, straight or miscellaneous).

Given the state of our ever-increasing rates of failed marriages, we could conceivably predict a future society that is numb to the concept of love. This futuristic freak show will regenerate itself through yet to be developed cloning techniques as opposed to our current use of sexual procreation to propagate the species. In 200 years Kurt W. Hunt version eight could be writing a column for *The UD* on the non-existence of love (a view that the original model does not agree with by the way).

I speak not merely of physical love with another in this discussion of relations among the sexes. Contrary to popular belief, the act of making love and the act of mating are two entirely different concepts.

Sometime during the latter half of the 20th century, a shift in providing undying love for that significant other faded away in our own selfishness. The scope of the love as opposing sexes seek from one another is not measurable; however, recently in the course of human development we have placed self-imposed limitations on the love we provide to others.

I must wrap up with the thought there is no simple fix for the pickle our society has created. Perhaps the prevailing love of self infects our society like a mutant bacterium can be cured with a dose of penicillin.

Fellow students, the formidable years of the late teens and early 20s are the greatest test we will endure during our lifetimes. It is at this time we choose our paths. I implore you to not lose the zest for all of life's gifts that seemed to come so easily during childhood.

In order to steer this rotating sphere of gravitational fortitude back in the right direction, all it takes is a proactive effort to petition for positive change. The late Beetle John Lennon stated that sentiment best by simply writing the legendary words, "All you need is love."

I only fear that perhaps we are fast approaching times when the concept of loving one another is nothing more than a long-lost precept.

## Cook-Off produces \$15,000 for charity

CRAIG SWANSON/Staff Photographer

ANGIE PURDUE, LEFT, a senior accounting major from Grand Prairie, and Jenna Barker, middle, a senior marketing major from Austin, grill marinated chicken at their grill during the 27th annual Sigma Alpha Epsilon Chili Cook-Off on Saturday, while Lindsay McManus, a senior design communications major from Austin, looks on. Their sorority, Chi-Omega, was the overall winner in the sorority category for the cook-off.

By Erica Gonzales/Staff Reporter

Blowing dust and long lines did not stop students from attending the 27th Annual Chili Cook-Off Saturday at Buffalo Springs Lake.

Students camped out with tents and lawn chairs and many brought barbecue grills to cook out. The event site was packed with trucks and sport utility vehicles.

Live bands played as students kicked back to relax and chat with friends.

Hosted by the Sigma Alpha Epsilon fraternity, the objective was to raise money for the Muscular Dystrophy Association.

Will Robbins, a senior marketing major from Midland and Chili chairman, said the fraternity raised enough money to give \$15,000 to MDA.

He said the event has been the most successful by far with more than 9,500 in attendance.

The Chi-Omega sorority won the sorority division and will get a \$500 donation to go to their philanthropy, he said.

Kyle Sylvester, a senior management major from Denison and Chili chairman, said they incurred a couple of unexpected problems: blowing dust and long lines to park.

"We thought we were going to be dealing with rain with the hurricane, instead dust became more of a problem," he said.

Toward 2 p.m., winds became very strong causing a dust storm leading everyone to become completely covered in dust, he said.

Another problem, Sylvester said, was the parking situation.

"People waited in line over two

hours," he said.

A big crowd in the early morning hours contributed to the long line wait, Sylvester said.

Another contribution to the long wait was before people could park, each car had to get their coolers checked out by security for glass containers, Sylvester said.

But the long wait did not stop Adam Westcott, a junior business major from Sugarland, from having a good time.

"We waited in line for three hours and 45 minutes, but it was totally worth it," he said. "It was bad ass. I've met so many cool people and there was good food."

Westcott said everyone was having fun.

Fernando Gonzalez, a junior political science major from Grand Prairie, said this is one of the best events for Texas Tech students to attend.

"How else could you ever get 7,000 people to come together from

different fraternities and out of town ... and have fun," he said. "There's no trouble; there's no fuss. Everyone came together to listen to music."

The band line-up included Scott McCurry and the Koozies, Randy Rogers Band, Roger Creager and Gary P. Nunn. Cross Canadian Ragweed and the Robert Earl Keen were the favorites for many as students gathered around the stage, singing to their music.

Richard Knox, a Tech Alumni from Dallas, said he planned on attending the event since last year.

"It's the essence of Texas Tech life," he said.

The band line-up included a favorite musician of his.

"Robert Earl Keen is the best thing," he said. "The live music adds to the atmosphere."

Knox said the best part about the event was the diversity of the people and the atmosphere.

## 'Live from New York' details life of SNL

NEW YORK (AP) — A new season, the 28th, dawns on "Saturday Night Live" this week and, as always, the question is how the pendulum will swing.

Right now, the show is on a high. After a descent into bathroom humor during the mid-1990s, the comedy is now sharp and topical.

The "Saturday Night Live" writing staff, largely together for about seven years, returns to work this week with a new Emmy Award in hand.

But the loss of two performers — Ana Gasteyer and Will Ferrell — may herald a challenging year. Ferrell, in particular, was a valuable utility player in the mold of Dan Aykroyd or Phil

Hartman. Matt Damon is host of Saturday's season-opener, with Sarah Michelle Gellar and Arizona Sen. John McCain on deck the next two weeks.

"Is it a transition year from several good years into one of its lulls?" asked Tom Shales, a television critic for *The Washington Post* and co-author, with James Andrew Miller, of a just-published oral history of the show, "Live From New York."

He's anxious for the answer, and so is Lorne Michaels, the show's founder and executive producer.

"I think it's a big loss," Michaels said. "But the nice part of the show is, having lived through these transitions a lot of times, from the audience's per-

spective, people are patient with it."

Even during the down years, there are still a handful of good shows, he said.

"When a cast is at its peak and the writing staff is solid, you get an evenness," Michaels said. "It never goes below a certain level. You never worry that when people are up there they're going to sort of forget why they're funny."

# 'The Laramie Project' opens tonight on campus

AARON KREISELS, PLAYED by Kim Brownlee, a senior theatre arts major from Spur, gives an account about being the first to find Matthew Shepard after his fatal beating in the play, "The Laramie Project."

By James Eppler/Staff Critic

In 1998 a young college student named Matthew Shepard living in Laramie, Wyo., was found tied to a fencepost and savagely beaten to his eventual death. It was regarded as a hate crime because Shepard was a homosexual. The murder sent the small town into a tailspin, forcing citizens to question themselves and their values. "The Laramie Project," opening tonight at the Texas Tech Lab Theatre, is a play written by Moises Kaufman based on a string of interviews conducted with many of the townspeople following the murder.

"I think Laramie could be any small town community, or this play could happen anywhere," Director Ricky Ramon said. "It's a scary thought, but I think that the likelihood of something like this happening in Lubbock is very high just because some of the people I run into will say some racially or discriminatory things to your face. And it stems from there. Violence starts there. It just plants the seed of a hate crime."

The play also strikes a personal chord for Ramon, who is directing the play as his thesis project.

"I think that one of the central themes of the play is how people deal with homophobia or people who are different in general," he said. "In this case it's homophobia because Matthew Shepard was gay. That hits a

chord with me because I went to a Catholic school, Notre Dame, for four years and it was tough because I came out of the closet while I was there. Someone being gay and something happening to them because of that really touches me because I've experienced things not as bad (as Shepard), but I can relate."

The cast involved in this production also had their own personal reasons for joining the project.

"I just wanted to get out the message that no matter what, hate is hate," said Letecia Bryan, a senior at Tech. "No matter what anyone does, love should overcome hate. I just wanted to be part of that."

The play incorporates testimonies of many different townspeople, but the cast comprises fewer than ten people. There is not one actor with less than eight different roles.

Alan Taylor, a freshman, who plays 14 different people in the production, commented on the difficulty

of playing so many roles. "It's challenging because it would be easy to play 14 characters in a comedy because you can add different things to the characters," he said. "But these are actual people, they actually exist. Their purpose on stage is not to be funny, but serious. You're not just playing a character. You're playing a living person. I just want to be true to who these people are."

The play is being performed in the Lab Theatre, a small venue that seats 99 people. This limits the number of attendees, but it also brings the audience much closer to the action on stage. The production also will include various technical attributes that could have been better suited for a bigger stage, Ramon said.

"I think we'd be able to do a lot more technical wise," said Ramon, "but I think it's better being in the Lab Theatre just because it's more intimate. People can't run away from it. Your focus is on the stage at all times."

Ramon said his main goal for the production was to cause discussion of the issues.

"One of my concepts for the show was to be as unbiased as possible, not to try to persuade anyone," he said. "I pretty much left it on an even playing ground so that people can go away and question, create dialogue, and make up their own minds. I don't want to do that for them."

# Raidernet news broadcast begins Tuesday

By Erica Gonzales/Staff Reporter

Students at Texas Tech have another means of finding out what is going on in the world today and on campus through Raidernet News, a student-based broadcast news program.

Raidernet News begins the season at 11 p.m. on Tuesday on KTX-Channel 5. The news program is progressing with the help of journalism majors and volunteers. Raidernet News originally aired on the mass communications Web site as a five minute news brief in January of 2001.

Dennis Harp, associate producer for Raidernet News, said he did not have high expectations at first.

"We didn't anticipate that the volunteers would be very successful," he said.

But they were successful and the response from students was overwhelming, Harp said. The next semester Raidernet News aired on the Resi-

dence Life Cinema Channel 14.

Harp said it was Executive Producer Tom Barnett who wanted to take Raidernet News beyond cable, and he did.

Raidernet News began airing on KTX-Channel 5 as a 30-minute news program last spring semester, he said.

"I'm always amazed how many people want to volunteer, but they are not all broadcast journalism majors, they just want experience," he said.

The newscast and production department is comprised of mass communication majors required by their course to take part in the program, graduate students and volunteers, Harp said.

The news program consists of local and international news, sports, weather and special news segments on health, entertainment and agriculture.

"The volunteers make the newscast come together," he said.

The news program will continually

get better, and Harp said he has already seen a tremendous change.

"Our expectation was never for it to become what it has," he said.

For now, he said the program is considered hands-on experience and a lab credit for many students.

"This is good, practical experience for students pursuing a career," he said. Suleika Acosta, a junior broadcast journalism major from Lamesa, is an anchorwoman for Raidernet News.

She has been an anchorwoman for three semesters and does it for the valuable learning experience, she said.

"It's enriched my ability to be a good journalist," she said. "I really enjoy being on camera."

She said the experience helps her stand out against any competition for a job.

"I get hands-on experience by putting together news stories and having deadlines," she said.

Tiffany Holsapple, a graduate stu-

dent studying mass communications from Clintwood, Va., is the news director.

She said the actively participating in mass communications is necessary in this particular field of study.

"I feel students graduating need hands-on experience, this is the only way," she said.

She has seen Raidernet News grow over the last few years and enjoys being part of the program because it is Tech oriented.

The program produces as many Tech stories as possible and students will enjoy the program, she said.

"It's always inspiring to see people your own age on television," she said. "It supports fellow students."

Harp said students that miss Raidernet News will still be able to see the Raidernet News on the Internet with Real Player. Raidernet News is open to all majors and accepts volunteers year round.

Raiders pummel Lobos 49-0

ALBUQUERQUE, N.M. (AP) — NCAA passing leader Kliff Kingsbury's final tune-up for the Big 12 battles that await him and his Texas Tech teammates was one for the record book.

Kingsbury threw for a school- and Big 12-record six touchdowns as Texas Tech beat New Mexico 49-0 on Friday night.

"That's a big record; it's one of the records I wanted at Texas Tech," said Kingsbury, who holds 18 conference records for passing and total offense.

Kingsbury also wants a Heisman Trophy, and he said how he plays against Big 12 teams will have a much bigger impact on his chances than his record-setting performance against a New Mexico team riddled by injuries and inexperience.

"We start conference (next week against Texas A&M), and we've got some big games lined up," Kingsbury said. "Depending on how that goes, we'll see what happens."

Kingsbury guided the Red Raiders (3-2) to four straight scores in the first half, including three in the second quarter.

He completed 41 of 59 passes for

a season-high 407 yards.

New Mexico (2-4) lost starting quarterback Casey Kelly, who broke his left arm late in the first quarter. Kelly, who is right-handed, played the rest of the first half and X-rays taken at half-time showed he had a broken forearm. He's expected to be out at least four weeks.

The shut-out ended New Mexico's streak of having scored in 111 straight games, dating to a 35-0 loss to Brigham Young in 1992. It also was the Lobos' worst loss under fifth-year head coach Rocky Long.

Kingsbury played into the fourth quarter, until the Red Raiders had a 42-0 lead. Tech coach Mike Leach said he wasn't trying to run up the score and didn't keep Kingsbury in so he could set the record.

"It's no disrespect to them, but

we've got to get our work done and you only get so many opportunities," Leach said. "It's coaching and improvement throughout the course of a game."

New Mexico coach Rocky Long, however, felt Texas Tech was trying to improve Kingsbury's Heisman resume at the expense of his team.

"They're into stats, they're into how many yards he can throw for," Long said. "They're trying to win him the Heisman Trophy — they'll never win it, but they're trying."

"If you have a Heisman Trophy candidate, and you've got a team down and you're drilling them, you'll try to improve his stats so he looks good on the national wire," Long said.

The Lobos' best scoring chance came early in the second quarter

when they reached the Tech 26, but failed to convert on fourth-and-2.

With his receivers having a decided height advantage on the Lobos' defenders, Kingsbury threw TD passes of 2, 7 and 4 yards to 6-foot-4 Anton Paige, 2 yards to 6-foot-3 Mickey Peters, 20 yards to Carlos Francis and 5 yards to Preston Hartfield.

The scoring pass to Francis came 55 seconds after Kingsbury's second TD pass to Paige late in the second quarter. It was set up when New Mexico's Joe Manning fumbled the kickoff and Tech's Ivory McCann recovered at the Lobos 27.

Kingsbury, who has thrown 17 touchdown passes this season, was sacked twice in the first quarter, but after that had plenty of time to pick apart New Mexico's defense.

In the Raiders' first scoring drive, Kingsbury converted first downs on third-and-16 and fourth-and-19 situations, the latter putting Tech at the New Mexico 2. Two plays later, Kingsbury floated a pass to Paige, who caught the pass over 5-foot-10 Lobo defender David Crockett.

Tech, which came in averaging 43 passes a game, kept throwing till the end. Kingsbury played into the fourth quarter and he and backup B.J. Symons combined to complete 47 of 68 passes as Tech finished with 590 total yards.

The Raiders, who have won nine straight games in the series and hold a 32-5-2 edge overall, drew boos from the partisan New Mexico crowd when, up 28-0 in the third quarter, they went for a fourth-and-one from their own 34-yard line and made it.

Jayhawks sweep Raiders in Kansas

The Texas Tech volleyball team was unsuccessful in its attempt to remain perfect on the road in Big 12 Conference play. Tech (6-6, 1-2 Big 12) lost 3-0 to the Kansas Jayhawks (11-1, 3-1).

The Red Raiders battled back from behind, but could not muster up enough to take the lead in games two or three to force a fourth game.

Kelly Johnson led the Raiders'

attack with 15 kills. Angela Mooney and Ann Romjue both had 10 kills in the match as well.

Josiane Lima, who tallied 18 kills for the day, led the Jayhawk win. Kansas hit .339 as a team.

The loss marks the third time Tech has lost to Kansas.

The Raiders will be back in action Wednesday night on the road in Manhattan, Kan., to face off with the Kansas State Wildcats.

Tech soccer drops seventh straight

The Texas Tech soccer team dropped its seventh straight game, the longest losing streak in school history. The loss came to an undefeated Oklahoma State team Friday night in Stillwater, Okla. The match was both teams' Big 12 Conference opener. The Red Raiders were tied at zero going into halftime, but fell behind the last 30 minutes of the game.

Oklahoma State scored two goals in the 65th and 82nd minutes of the contest, losing 2-0. Freshman goalkeeper Beth Lippert tallied five saves for the Raiders.

The Raiders played Oklahoma Sunday, but the results were unavailable at press time. The Raiders will play next at 7 p.m. Friday at R.P. Fuller Stadium against Missouri. The match will be Tech's Big 12 home opener.
