The building is a year old and is modern in every respect. The auditorium will seat about 2.000, and the stage has the lighting, electric grand piano, and stage properties that all schools dream of having. The band and chorus rooms are built with the seats in tiers so that all may see the director. The home economics department has several little kitchens within itself. The sewing room is large and very bright with many mirrors. The living room has modern furniture of grey, red and lime green colors.

After a tour of the building, they were ushered into the auditorium where the meeting began. The meeting was called to order by the president and reports were given by the various girls. The Government Experiment Station at Spur. Texas, has conducted all kinds of experiments on mesquite eradication and think they have as much as 95 per cent TOP KILL and 75 per cent OR MORE ROOT KILL with the new formula "245T."

We have complete equipment for spraying with airplane (tank truck, etc.) and have had experience with different field crops. This tree spraying with 245T will be new with everybody, and the real test of the "245T" at Spur will be to what extent the mesquites (sprayed last spring and summer) green up this spring. We are very interested in this, and are watching these experiments closely, and plan to PUSH OUR TREE SPRAYING ACCORDINGLY.

For further details and latest developments, keep in touch with me.
