RAILROADS SWITCH TO OIL FUEL Railroads, which form the backbone of the nation's transportation system, must operate from a fuel which is economical to burn, abundant, and reasonable in price. Oil, which meets these requirements because of the great strides made by oil industry progress, is becoming the primary fuel for railroad operations.

PETROLEUM MOLECULE PROVES WONDER-WORKER OF CHEMISTRY

Petrochemistry, the chemistry of petroleum, may well be the most important industrial development of the past several decades. Yet the hydrocarbon molecule, which gave us the petrochemical industry, was thought to be useless as chemical material for the first 60 years of the petroleum industry. Now, this little wonder-worker has released us from dependence on natural materials for organic chemicals, and has provided us with some very useful materials which do not appear in nature. Research and product development are part of the petrochemical industry in which countless oil and chemical people compete with one another to make useful products for human needs.

OIL INDUSTRY COMPETITION CREATES NEW OILS FOR AUTOMOBILES

New oils to keep automobile engines happy are pouring out of the testing laboratories of oil companies. One oil, with a built-in cleansing action, is said to keep engines free of damaging sludge, carbon deposit and varnish. Another is tailor-made for motorists whose cars balk at starting in 30-degree-below-zero weather. Fortified against evaporation on warmer days, it is designed to work where temperatures hover below 10 degrees Fahrenheit. Hundreds of oil companies in the United States engage in keen competition to discover new and improved oil products such as these for the American consumer.

NEW ALL-WEATHER CHAIR USES OIL IN MANY WAYS
Oil takes the seat of honor in a new chairmaking process. An upholstered chair results when oil-derived vinyl acetate plastic is sprayed on a wrought-iron chair frame. A thick solution forms strands that adhere to each other and to the frame, making a webbed base of the chair's back and arms. A thin solution coats the webbed base of the chair's foam-rubber seat. The chair's legs are sprayed with protective neoprene, another oil product. Besides being usable outdoors or indoors,

the chair can be redecorated merely by applying spray of a different color. Because oil's magical properties constantly are studied and developed by this country's privately managed oil industry, many such innovations result.
