Will Rogers and Wiley Post Crash to Death in Alaska

Pictured above are Will Rogers, left, Mr. and Mrs. Wiley Post and famous airplane, Winnie which Post circled the globe in eight days, 15 hours and 51 minutes in June, 1931, in comh Harold Gatty. In July, 1933, while flying alone he flew around the world in seven days, and 49 minutes in the same plane. The plane in which the two famous Americans crashed had just recently been secured by Post to replace the Winnie Mae. When the sun is blazing hot, your motor heat goes up, too!

To protect your motor, use Germ Processed Oil, which has 2 to 4 times greater film strength and is less affected by extreme motor heat!

JOUR MOTOR runs lots hotter in Summer. That's why you must have oil that maintains high film strength under extreme temperatures to get safe lubrication. Otherwise, the lubricating film ruptures and the bearings and cylinders suffer damaging wear.

Plain mineral oils have little film strength and oils over-refined by new cleansing methods have even less. As motor heat goes up, these oils rapidly lose film strength.

You'll get better motor protection with Conoco Germ Processed Motor Oil. Timken machine tests prove that it has 2 to 4 times greater film strength than any plain mineral oil and that heat above 225° does not lessen

this advantage. More proof-supervised road tests were made in identical cars fitted with the new alloy metal bearings used in many 1935 cars. The bearings lubricated with a high-quality plain mineral oil showed 45% more wear than those lubricated with Conoco Germ Processed, the first

alloyed oil. You'll be certain your motor is safely lubricated even at high temperatures if you say "O. K .- Drain" and fill with Conoco Germ Processed Motor Oil-the oil with the "Hidden Quart" that stays up in your motor and never drains away.
