Plans to Accelerate Rural Housing Construction Started

Administrator James V. Smith of the Farmers Home Administration said in a prepared statement: "This Administration has a National objective of building some 3 million homes with public assistance within the next decade. To achieve this we need new concepts in rural home building and new administrative procedures so we can commit more of our agency's resources to the private builders for housing development projects and other types of industrialized rural home building. Our aim is to triple last year's record this coming year."

Farmers Home Administration has been authorized to issue conditional commitments on single-family dwellings in the open country and rural communities up to 5,500 population. The program is designed to encourage the construction or rehabilitation of single-family dwellings in rural areas for sale to low and moderate income families.

Representative Bob Prieg of Texas recently spoke out strongly in favor of the rural housing provisions in the 1969 housing bill. "Through its rural housing program," Representative Prieg said, "the Farmers Home Administration has been making substantial inroads on this problem, and it is vital that this activity not only be continued but accelerated."

Information and applications may be obtained from the Gray County Farmers Home Administration office at the City Hall in McLean on the fourth Thursday, between the hours of 10:00 a.m. and 12:00 noon. The telephone number of the Clarendon office is 874-3431 and the mailing address is P. O. Box 40, in Clarendon.

Now Is Time To Plan For Beautiful Lawn

Beautiful lawns don't happen. They are the product of good planning and management, including the use of the proper grass seed, mowing, watering, and in some instances drainage and disease and insect control. A deadline is at hand, says County Agent Ronald Gooch, and that is a spring application of a complete fertilizer. It should be made about the time the grass begins to grow. The fall application, again of a complete fertilizer, should be made about 30 days before the average date of the first frost. Generally, a ferti-

lizer with a 1-1-0 or a 2-1-0 ratio should be used and applied at the rate of 2 pounds of actual nitrogen per 1,000 square feet of lawn.

Bermuda lawns should also receive 1 pound of actual nitrogen per 1,000 square feet every 30 to 40 days during the growing season to keep them green and vigorously growing, says Gooch.

Nitrogen is the key element in turf production. It produces vegetative growth and gives the plant a deep green color. Phosphorus stimulates development of a good root system and potassium affects the physiological processes of the plant, explains the county agent.

A nitrogen deficiency causes plant growth. The leaves are relatively small, thin and yellowish green to yellow, resulting in a condition often referred to as "firing." Phosphorus deficiency causes slow growth of the entire plant and unhealthy dark green colored leaves. Potassium deficiency causes stunted growth with the entire plant eventually drying up and taking on a brownish color.

Last Week's McLean News carried a good collection of sayings from our all time favorite Will Rogers. We still feel that one of the great needs of this day is for someone of his greatness to bring to us some lasting thoughts on the problems of our day. He had a way of doing this in a way that moved folks to expression and action. Here are a few that the News used; "Take away my ham, take away my eggs, even my chili, but leave my newspaper." "Our investigations have always contributed more to our amusement than they have to our knowledge." "There ain't nothing that breaks up homes, countries and nations like somebody publishing their memoirs." "Breakfast without the newspaper is like a horse without a saddle."

These comments on the newspaper made me say Thank You again for our newspapers, and

this goes doubly strong for our hometown weeklies.

Our old friends and neighbors Mr. and Mrs. Albert Rutherford who have recently moved to 3821 Lakeview Dr. Rt. No. 6 in Topeka, Kansas 66618 sent us some clippings from their paper of The Country Parson. If you remember them drop a note helping us say Thank You. Here are a few; "Quiet prejudices seem more easily heard than sound facts." "Sins are what folks try to hide when they are fresh—and brag about when they are old." "The worst kind of lies come from folks who think they are telling the truth."

"Time is our most important possession—food and wealth and warmth are of little value if your time is up."

"Man may not be discovering new ways to get along with others—but he is finding lots of ways not to."

"The biggest fault you may have is an accumulation of little faults."

Thanks to all our friends for helping us borrow these good thoughts.

Pre-Addressed Label On Tax Forms Help Avoid Many Errors

Many income tax errors, particularly those that delay refunds, can be eliminated by using the pre-addressed label on forms received in the mail. Income tax returns with labels can be quickly identified and processed since they contain necessary identifying information Ellis Campbell, Jr., District Director of Internal Revenue for North Texas said today.

If your name or address has changed, make the necessary corrections on the label and lightly strike through the wrong pre-printed information. If you have a refund due, this will help insure delivery of the check to the correct address.

Taxpayers should also verify that their correct social security number is entered on the return they file.

The filing deadline for 1969 tax returns was April 15, 1970.
