UNRUFFLED" RIDE ?

Some car makers say springs make the ride-and so we give every Buick four of the soft, gentle coil springs practically all cars use on front wheels only.

Some say the drive is important how power is transmitted to the rear wheels.

We agree-and use a torque-tube drive, that takes up all the thrust, freeing rear springs of driving pulsation.

Some stress tires - so you'll find low-pressure casings on every Buick, mounted on our own kind of Safety-Ride rims. Some play up shock absorbers - we make ours fast, soft and sure in action, to wash out all "after-bounce."

Then there are frames-and car weight - and engine mountings. which on Buick are a very special kind used nowhere else.

hey're all important-yet the plain truth is no one of these things-or two or three-gives a ride you can truly call "unruffled."

We feel it takes all of them springs, tires, shock absorbers, drive, engine mountings - carefully and precisely brought into balance with each other.

You can see why we think so in any Buick - SPECIAL, SUPER or ROADMASTER.

You can feel it on cobblestones

and car tracks, washboardy gravel and weather-pocked macadam, country lane and city street. You even feel it on boulevards, which grow still smoother when you travel them in a Buick-especially when it has Dynaflow Drive!

So we would like you to try a ride that is truly "unruffled." Free of barshness-undisturbed by jounce and jitter - level - steady-going smooth.

Just ask any Buick dealer for a chance to try out any Buick. You'll find it "the ride of a lifetime"-and the buy of a lifetime too!

• Dynaflow Drive is standard on ROADMANTER. Op-tional at extra cost on SUPER and SPECIAL models.
