**HADN'T HEARD OF EGGLESTON**

Small Wonder That Ignorance of Tourists Excited Indignation of Indiana Official.

The town of Vevay snugly nestling in picturesque hills along the Ohio river in Switzerland county, has two show places of which it is particularly proud, according to Jim Wright, Vevay's postmaster.

The two special features of interest to which Vevay folk point with pride is an unusual view of a stretch of the Ohio river and the old home of Edward Eggleston, author of "The Hoosier Schoolmaster." Now and then the pride of the citizen who points out these two places gets a jolt, Mr. Wright said. One was delivered the other day at the Vevay library where tourists asked the librarian whether the town had anything of historic interest.

"We have, indeed," replied the librarian. "We have the old home of Edward Eggleston."

"Eggleston, Eggleston," remarked one of the tourists, "and who was he?"

"The stinging part of it," Wright said, "was that these tourists were from Cincinnati, where our women do some of their shopping when they go out of town. Think of it—such ignorance."

Mr. Wright tells of a woman from the arid Southwest visiting Vevay not long ago with her little daughter. The child came from a land where irrigation ditches contain most of the water.

Filled with amazement on her first view of the Ohio river the youngster cried excitedly to her mother: "Mamma, wherever in the world did they get such a big ditch?"—Indianapolis News.

**BREAKFAST OF TODAY SIMPLE**

Yale Professor Tells Students Habits Have Radically Changed in Recent Years.

Food fads are as common as clothing fads, according to Dr. Lafayette B. Mendel, professor of chemistry at Yale, who lectured at the University of Washington recently.

Habits, not fundamental principles, have undergone radical changes within ten years, he said. The breakfast once demanded comprised cereal, pork chops, eggs or steak (occasionally two of these protein foods), hot breads, coffee, flapjacks and sometimes pie or cake. Today's morning meal, Doctor Mendel pointed out, begins with fruit, rings many changes on cereals, counts hard toast especially beneficial if made from entire wheat, substitutes a codded, soft-boiled or poached egg for the one-time fried product, and ends more often than not with milk or cocoa.

Professor Mendel attributed some of these changes to altered economic conditions, and improved methods of food transportation and preservation. Most important, he explained, are changes in views as to what constitutes food. He said that animal husbandry experiments conducted in this country 12 years ago have been vital influences in the study of human nutrition. In other words, balanced rations for cows, hogs and chickens preceded knowledge of proper foods for human beings.

**Wire Span a Mile Long.**

In its course through Pennsylvania the Susquehanna river cuts directly through several mountains, forming what are known as water gaps. One of the most marked of these is found between Millersburg and McClellan stations on the Northern Central railroad. The river at this point is about one mile wide, and stretched across the river from one mountain to the other is what is probably the longest span of telephone wire in the United States.

The wires, four of them, form two talking circuits. They are three-eighths-inch twisted wire cables, 5,900 feet long, and have a dip of 400 feet. The cables are held by insulated iron fastenings, cemented into the rock of the mountain side.

**Curious Musical Instrument.**

The ordinary hand saw has appeared as a musical instrument. One seeker after novelties uses a saw as a violin. After long experiment and untiring practice he has actually succeeded in getting an agreeable music from the tool.

He holds the saw handle between his legs, holds the tip of the saw in one other hand and works the usual violin bow with the other. The vibrating steel blade emits soft, appealing notes, the pitch of which is varied by changing the curvature of the blade. All sorts of queer effects can be got by adept manipulation of the blade. Sometimes the music resembles the human voice; again, it has the weird wail of the Hawaiian ukulele.

**Celluloid Eyes.**

By the use of celluloid eyes the blind may be made to see, is the claim made by Professor Katz of the government hospital in Petrograd. It is necessary for the success of the operation that the light-perception nerves shall be intact, as is the case in 50 per cent of cases of blindness. Professor Katz' operation consists in cutting away the withered front part of the eye, setting in the socket a celluloid cup, and allowing the light-perception nerves at the back of the eye to function through this cup. Professor Katz states that he is working on an optophone, by means of which light may be transformed into sound when a patient's optic nerves are dead.
