Friona Farmers **Would Enter Dairy Work** 

According to the Channing Sun, Hartley county farmers are going quite entensively into the dairy business. During the past two weeks six car loads of dairy cows have been shipped into the county and purchased by the farmers.

Three car loads of these were shipped in by E. S. Collins, pres-ident of the First National Bank of Channing, and the other three loads were shipped in by indi-viduals and groups of farmers of the county.

There were approximately 180 cows in the six car loads and the farmers who are in the dairy business there, estimate that each cow will average a revenue of \$10 per month, and according to this estimate these cows will bring \$1,800 into the county

### that tests automobiles

S-P-L-A-S-H through the bath tub goes the General Motors car. Out onto the slip-pery road it dashes. On go the brakes!

What is the reason for such torture of an innocent automobile?

The answer is that the engineers at the General Motors Proving Ground take nothing for granted. They want to know what happens when a car ploughs through water. They insist too on measuring, with special machines which they have built, just how quickly the car can be stopped and just how much pressure of the foot is required to stop it.

Altogether General Motors has 136 different tests by which cars are proved as they never have been proved before; nothing is left in doubt. All of which means that you are buying doubly assured safety, reliability and comfort when you choose a General Motors car.

Or if they are visiting you, or any sickness in your you, or any sickness in your family, tell us about it, or use the phone, and we will gladly publish it. Tell us the news, friends.

'Any fool can tell what ought to be," is an old adage that con-tains food for thought and causes us to wonder if the hucauses us to wonder if the hu-man race has always been both-ered with the pesterous "ought-to-be's." The real problem which confronts us all is how to devise ways and means to make ourselves and our surroundings ourselves and our surroundings more perfect and a little nearer as they "ought to be." Several hundred years ago it was de-cided that men "ought to" fly and many were the attempts, but several generations lived and passed before Lindbergh crossed the Atlantic.

Sometimes it's no easy thing to edit a newspaper, in trying to give folks just the kind of news they want. Occasionally some one is heard to remark, "Oh, well, there's nothing in the paper this week." What they really meant to say was, that there was nothing in the paper that interested them. A news-paper publisher has more than one person to please, and he car not give vent to his spleen in trying to please one or more particular persons. Even at that, in trying to pyblish a paper that will please the people as a whole someone will rush into the office someone will rush into the once and authorize the paper stopped. Somehow the newspaper con-tinues to be issued each week, much to the disappointment of that particular person, who, per-tops thought the prper would haps, thought the priper would have to close down just as soon as his or her name was dropped from the list. ## **Texas Utilities Co.** Makes Reduction in Cooking Rates

Telegram from I. R. Kelso, President of the Texas Utilities Co. dated May 26th, 1927

**Applicable to June Cooking Bills** 

This is a reduction of 20 per cent on our cooking rate, which means if you use the same number of KWH in June that you did in May your cooking bill will be 20 per cent less for June.

This is the fifth substantial reduction in various rates the Texas Utilities Co. has made within the past two years, viz: "1" development rate to municipalities, "2" flat reduction of one cent '1c' per kilowatt hour off of top rate of every lighting customer, "3" flat reduction of ten per cent in power rates, "4" reduction in the power rate under the optional power rate schedule, and '5' flat reducton to twelve per cent in cooking rate applicable to your June bills.

The Texas Utilities Co. management takes pride in the fact that they have been able to keep up building of plants and construction of lines in advance of the rapid growth of the South Plains and at the same time make these reductions in rates.
