JERROLD TRAP-EASE

Here's the most revolutionary TV filter ever developed for knocking out strong adjacent channel or FM interference. The Jerrold TRAP-EASE, technically known as a "deep-notch" antenna trap (greater than 50 db), completely eliminates beats and herringbone patterns-let's you enjoy clear reception even from weak, distant stations.

The TRAP-EASE is guaranteed to work with any TV receiver and any antenna that would normally bring in pictures from the distant stations if the interfering adjacent channel was not on the air.

SOLUTION: fit SAVINGS into family financing

• It's wise to plan your family financing with an eye to saving a specific sum every payday. Families who "pay themselves first" find that funds are readily available in times of emergency . . . or when some special luxury is wanted. Resolve now to revise your budget and place savings at the head of the list. Then bring those savings here where they earn liberal dividends twice each year . . . are safe and ready when needed.
