

Weather indications for To-day: Partly cloudy, light variable winds with slight changes in barometer, possibly followed during Sunday or Sunday night by colder northerly winds and rising barometer.

On the second Tuesday in March the election of St. Louis will vote upon thirty-six amendments to their city charter.

Representative Barker proposes to regulate the price of coal and oil at public auction. We are not yet informed whether it is proposed to prevent the price being too high or too low.

The committee on taxation have reported adversely on the petition asking the repeal of the liquor occupation tax, the committee believing the levying of such a tax necessary in the present financial condition of the state.

There is a great variety of county assessors, collectors and treasurers of the state at Austin, to legislate with the state, and the committee believe that the best way to deal with them is to prevent the price being too high or too low.

Hydrophobia has to exist in this state all the closer to Austin it gets just at this time, the better for the state, as every hand which the members are on to get to their boarding houses, a wholesome effect on legislation might result.

The prospects for frontier protection by the state are not encouraging. A few days ago, when a vote was taken on the western members failed to make the members from the other portions of the state place themselves on the record by demanding the year and a day, and we do not even know who are our friends.

Our representative, Hon. C. L. Wurzbach, believes the legislature will be able to afford the expiation of the sixtieth day of the session. If our people continue any amendments to our city charter, they have no time to lose if they desire to see the amendments passed.

It is now estimated by those supposed to be pretty well posted as to the ideas of the governor in connection with the proposed amendment to the city charter, that no election will be held until a successor to the late Mr. Schellenger is named, unless an extra session of congress should be called. This will allow adequate ample opportunity to all in the state during the long heated term of the summer, and only and severely enough to be, for years and form combinations against the day of judgment upon their merits by the people.

Dr. J. H. McLean, the celebrated pill manufacturer, having made one fortune in concocting pills for the regulation of the disordered internal arrangements, now proposes to make another fortune by an apparatus intended to kill a hundred times as many human beings as his pills could cure. It is a torpedo loaded with dynamite, which, being discharged from a cannon like any other projectile, is provided with machinery which will explode by clock-work and make it explode in any given time. Should the engine miss its aim and the engine of death fall in the water, it is provided with a powerful magnet which causes it to attach itself to the bottom of the proper time and thus destroy the enemy without fail. A full description of this terrible engine of war will be found in another column.

The sailing post of Western Texas was a shilling post of a summer's effort of the very worst kind in the country. A prize was placed upon the heads of many of them, and a force of state troops was sent into the territory over which they held almost unopposed sway, and they were routed from the country or forced to change their mode of life, and live in obedience to the law. The rewards offered for their apprehension have been withdrawn, the danger from them has been removed, and they have been in effect invited to return to their homes, where they can earn their bread by the sweat of their brow, and not by the sweat of other people's brows. No doubt the nation of the sixteenth legislature of Texas, and the governor are being read in many a robber's and murderer's hiding place with joy and gladness, for a promise is given of a free and unobstructed range. Any appeal to the brigands coming from the law-abiding citizens of Western Texas would have no effect upon these desperadoes, for they are even enemies, but it may be that they are not so greatly depressed that they would not respect the wishes of their friends. Therefore we hope the legislature, before it adjourns, will adopt a resolution, that the heads of villains and cut-throats be put on a list, and that the names of the persons who are necessary to give them an opportunity to furnish them.

This legislature appears to be making very creditable progress in its work and is proceeding with all its promptness and vigor under the circumstances. Representative Wurzbach writes to the Express in regard to the civil and criminal codes that the criminal code and code of criminal procedure have already passed in the senate, and have been reported to the house and referred to the proper committee. The committee to whom we referred the code of criminal procedure have examined the code and reported it back to the house by a vote of 20 to 10, and it is now in the hands of the committee on the code of criminal procedure.

Why not visit Boston, Mr. Wheeler? And investigate those building regulations which are being passed in that city. A committee of the board of aldermen of Boston are now investigating various charges against the superintendent of streets, a prominent republican, Charles H. Harris. Among other allegations contained in a petition for his removal, signed by several hundred taxpayers, is that he had been guilty of embezzling a large sum of money which he applied to his private use.

On the 21st of about twenty-five days, the committee are making their report, and daily three-fourths of the members will never be heard of after they are reported to the committee.

CORRECTING SENATOR BLAINE

The ship, the "Blaine" and her crew in the Navy of Great Britain and the United States. Correspondence New York Herald. Will you permit me to "correct" the statement of Senator Blaine, in your valuable paper by way of correcting the remarkable statement of Senator Blaine made a few days ago, on the passage of the naval appropriation bill in the senate? To have made the statement that there were over 2,000 officers in the American navy to be discharged by the bill, is to say, in all in the service, while in the British navy there are 4,700 officers, who manage 60,000 men and 400 ships, is not creditable in a senator who has been a member of the navy for so long a time.

In the British navy the number of ships propelled, in part or whole, by steam, was 560. Of these there were on the stocks building, 12; transport ships, 7; small vessels used as tenders, 55; gunboats, 55; 21; out of commission, laid up, 270; in commission and active service, 185. Besides the foregoing there are 185, chiefly sailing ships and generally smaller than the other vessels used for "harbor service." These ships are not generally offered by line officers on the active list of the navy, as assumed by Senator Blaine.

In the British navy on the active list, in July, 1875, there are the following officers of the line: Admirals, 15; vice admirals, 17; rear admirals, 25; captains and staff captains, 184; commanders, 207; staff commanders, 21; lieutenants, 220; navigating lieutenants, 184; sub-lieutenants, 250; master-at-arms, 56; midshipmen and navigating midshipmen, 224; naval cadets who have graduated from training school, 52—making a grand total of 600 officers of the line in the British naval service of 2,500.

Now in the engineer's department there are, of all grades, 426; in the pay department, 406; chaplains, 97; and the number of men are about 31,000, and not 60,000 as Mr. Blaine asserts. This shows one officer of the line to every twelve seamen. In order to make up the 60,000 in the British navy Mr. Blaine had to add all the soldiers and regular military and light infantry, about 16,000 men, and where the remainder of the 60,000 could be obtained (except from the coast guard, which are not sailors at all) it is not easy to see.

THE AMERICAN NAVY. Now the American navy, as shown at same date, has: Admirals, 1; vice admirals, 1; rear admirals, 31; commanders, 25; captains, 107; lieutenants, 200; masters, 100; midshipmen, 44; making a total of 708 officers of the line on the active list, and not 2,000 as Mr. Blaine asserts. At the date we had in the medical department 175 of all ranks; in the pay department, 131; in the engineer department, 277, and chaplains, 10. Of these the greater number are fit for service and propelled in whole or part by steam we have 50, and of sailing vessels officers and manned 37. The "law" limits the number of officers to 700, and the senior officer of the line to every 5 or 10 seamen.

But it must be borne in mind that the American naval officers are detailed to serve in caring for the light-houses on the coast, while in the British navy the British navy is detailed for such duty; and while not more than two line officers are ever on duty at the navy and dock yards in Great Britain, a much greater number of American line officers are so employed. Then the American officers are detailed in larger proportions to the coast guard, and to the service in Great Britain, so that the number of line officers left for active duty on cruising ships is not so large as Mr. Blaine asserts.

Another thing to be noted is the much larger amount of sea service that our officers perform at the same grade, and that found in the British service. It is a usual thing for a captain in the American service to have served more than twenty years at sea, while in the British service the average service of officers of that grade is not more than ten years. Besides the fact that it has always been the policy of our government, in both army and navy, to promote to a higher grade a larger proportion of officers to men than in other countries, in order to be expanded should war occur. It is to be borne in mind that the British navy has a much larger number of officers in the same grade than we have in the same grade.

THE NAVY TABLE. Now, as to the navy yards of the two nations. There is no doubt at present we do not need seven yards, but we have them, and in the future growth of the nation we may need them, and were any of them sold the value of the sale might go far toward the "wooden truth," as did the avails of the Philadelphia yard. But it is true that Great Britain has only two or four yards. She has one of vast capacity at Portsmouth and one at Devonport, one at Chatham, one at Pembroke, and one at Gosport, at home, while she has dock yards where any repairs can be made at Gibraltar, at Malaga, at Halifax, at Bermuda, at Jamaica, at Cape of Good Hope, at Ceylon, at Trincomalee, and at Hong Kong.

So that there is within the reach of every squadron of the British navy in every quarter of the globe the facilities of repairs. So much for a comparison of the two services. And what now is most needed to regain our ancient position on the sea is not so much a larger navy, but a larger navy of vessels, just a suitable appropriation by congress, every year, of money enough to build two or three ships of first rate, or to repair the ships of the navy, and to keep the navy in a state of readiness to meet any emergency that may arise.

Why not visit Boston, Mr. Wheeler? And investigate those building regulations which are being passed in that city. A committee of the board of aldermen of Boston are now investigating various charges against the superintendent of streets, a prominent republican, Charles H. Harris. Among other allegations contained in a petition for his removal, signed by several hundred taxpayers, is that he had been guilty of embezzling a large sum of money which he applied to his private use.

On the 21st of about twenty-five days, the committee are making their report, and daily three-fourths of the members will never be heard of after they are reported to the committee.

On the 21st of about twenty-five days, the committee are making their report, and daily three-fourths of the members will never be heard of after they are reported to the committee.

about the first lady built in this country, and the mansion lately presented by the two brothers, R. L. and A. B. Hunt, is the president's house in America. About \$15,000 worth of books have been added this year to the library. Our two senators, the late Mr. Blaine and Mr. Sherman, have been supplied with most instructive collections of books, and have been very diligent in their study of them. The number of those in Blaine's is now twenty-seven, some of them being very distinguished men, and all of them efficient instructors. The collection of books in Sherman's library has been enlarged many times this year by comparison to graduates who are pursuing advanced studies, three of these amounts to \$1,000, and most of the others \$500. The president and a number of other give instructions to postgraduate classes in such subjects as "Contemporary Philosophy," by Dr. McCosh; "Plato," by Professor Orrin; "Kant," by Professor Shuman; "Phylogeny," by Professor Huxley; "Early English," by Mr. Murray; "Anglo Saxon," by Professor Hunt; "The Elements of Logic," by Professor Huxley; "The Elements of Psychology," by Professor Huxley; "The Elements of Metaphysics," by Professor Huxley; "The Elements of Natural Philosophy," by Professor Huxley; "The Elements of Mathematics," by Professor Huxley; "The Elements of Astronomy," by Professor Huxley; "The Elements of Geology," by Professor Huxley;
