A completion of the count will increase Perkins plurality to 22,000 or 25,000, probably, in the city. He will gain on Glenn in the country and, on White during the remainder of the count. All the state ticket will go with the head except justices, which cannot yet be determined. It is now probable the republicans will elect all the congressmen, though the contest will be very close in the city districts. The republicans elect a railroad commissioner in the northern district, the workingmen their's in the city and southern districts. The legislature is still in doubt. Kalloch continues to increase his lead, and is elected beyond a doubt. The workingmen's chances are best for sheriff, anditor, collector and occurt, attorney, and sure for district attorney. The republicans, probably, will get the balance, republicans, probably, will get the balance, except, perhaps, two or three supervisors and school directors. The superior court judges are divided.

And, before I quit the theme of song and singers, let me mention is uplicate that I caught before leaving London on one of the celebrities of the past. On leaving the home of Mme. The house stands back from the street, and a garden that must in summer be a very boefunt for flowers and vendure artunds in front of it. A bust of the great singer, fife vize, and in marble, stands in the large bay window that fronts the garden. A lecture delivered at the Berlin University some three months age, by Frof. Debois Reymond, bears the ominous title, "The End of Our World," and says that every movement upon our planet, with the exception of the ebb and flood, which are caused by the attraction of the moof, is caused by solar heat, As, however, the sun loses over year a pertion of his calorie, science. every year a portion of his caloric, science has lately come to the conclusion that he will not exist as an emitter of warmth longer than for 17,000,000 years. During that space of time our earth will get colder and diminsh. The los will advance from the poles to the equator; the earth's population will gradually recede before the advancing glaciers; the sun will become loss and loss iuminous, until he will present the appearance of a dark red ball, and finally ice will annihilate all vitality on our planet.
