

# E-B 12-20 Tractor

Made by far the best showing of any tractor in its rated class at the Pampa, Texas, Demonstration this spring. All the land in the demonstration plot was splendid for plowing except that it had recently been burned off and a heavy wind raised a great amount of dust and dirt which made looking on difficult.

The E-B was the only tractor which did not boil its water when the tractors were coming down the side with the wind. When the E-B finished the radiator was as cool as it was after it had been run the first ten minutes. Plowing was done to a depth of more than six inches.

The E-B was first to finish its acreage. The 12-20 was used, plowing 3 acres in 2 hours flat, using kerosene, the cost per acre being 49 cents.

Have a shipment of them in FLOYDADA NOW. If you are interested in a tractor call around and let us show you this machine.

We can also make immediate deliveries on Emerson Brantingham Plows. Tandems and Drills of any size to fit tandems.

Also the E-B line of tractors in larger sizes.

## O. A. Gamble

TEMPORARY LOCATION DAY & NIGHT GARAGE

Ford Delivery Cars are used in fleets by many of the largest business firms of the country. This is because the Ford Delivery Car has solved the problem of safe and quick delivery with the smallest possible expense. Easy to understand, easy to drive, and durable. A faithful servant giving years of faithful service. We can give you any style of body you want. One thing is sure—every retail merchant will make money by having a Ford Delivery Car. Come in. Let's talk it over. We assure you genuine Ford service with genuine Ford parts.

### SHOP MADE BOOTS

For the man who wants real ALL LEATHER and a fit that is a FIT.

Harness making, harness, boot and shoe repairing.

**BEN BOBERTS, Boot Maker**

South Side Square  
Floydada, Texas

Owing to the pressing need of granaries to take care of this year's wheat crop and the shortage of carpenters I will not get to see many of the voters in Precincts 1 and 4 and solicit your votes in my race for Public Weightr. However, I will appreciate your votes and influence as I am in the race to win.

Yours truly,  
W. A. GOUND,

#### TO THE VOTERS OF COMMISSIONERS PRECINCT NO. 1

Two years ago you elected me commissioner of your precinct. I am now a candidate for a second term. If you think I have made good I will appreciate your vote. If I have fell down on the job it is your duty to say so by your vote on the 24th and there will be no hard feelings toward anyone on my part as there are several things that I can do that will be worth as much to me from a financial standpoint.

In my opinion, there is not a county site in the state of Texas with as many good roads leading from it as Floydada, and please remember we have not voted a bond issue, which is food for thought. When you hear the calamity howler mention about the indebtedness of the county remember it takes money to buy road machinery and build roads. Also it takes money to maintain and care for these roads I have built and if I am re-elected I certainly intend to maintain and properly keep them up.

I am indeed proud of the Commissioners' Court of this county, that they have got along as well as they have through the trying times of the last few years. I am proud of our courthouse and lawn surrounding it. Not many days ago there was a noted gentleman through our county who had been over a great part of this state. He said, "You have the most beautiful court yard I have seen." It will take some money to care for it and keep it beautiful, and which I intend to help do if re-elected. And in conclusion will say I am for any and everything for the upbuilding of the best county in the state, and while doing this I will handle the finances of the county as economically as possible.

It will be a great pleasure to me if you again nominate me on the 24th for the important office of Commissioner. However, if you think best not to do so, it will not leave me grouchy, and my successor will have my sympathy, and after the August term of the Commissioners' Court I will step down and out, and if there should be at any time anything in any way that I could be of assistance to him I certainly will be Johnny on the spot.

Yours for the development of Floyd County,

CHAS. TROWBRIDGE.  
(Political Advt.—19-2tc)

#### POLITICAL ANNOUNCEMENTS

The following named persons have authorized The Hesperian to make the announcement of their respective candidacies for the office indicated over their names, subject to the action of the Democratic Primary in July, 1920:

- For County Judge:  
TOM W. DEEN.  
J. W. HOWARD.  
W. B. CLARK.
- For Sheriff and Tax Collector:  
J. A. GRIGSBY.  
WATT GRIFFITH
- For County Treasurer:  
MRS. LILLIE BRITTON.
- For County and District Clerk:  
MISS LOLA WALLING.
- For Tax Assessor:  
D. I. BOLDING.  
HADEN HARRIS.  
W. I. ALLEN.  
FLOYD EWING.
- For County Attorney:  
A. P. MCKINNON.
- For County Surveyor:  
GEO. A. LIDER.
- For District Attorney 64th Judicial District:  
CHARLES CLEMENTS, of Plainview.  
AUSTIN C. HATCHELL.
- For Commissioner Precinct No. 1:  
CHAS. TROWBRIDGE.  
J. L. KING.
- For Constable Precinct No. 1:  
JNO. A. FAWVER.  
J. T. HOWARD.
- For Public Weigher Precincts 1 and 4:  
S. B. McCLESKEY.
- For Commissioner Precinct No. 4:  
G. L. FAWVER.  
O. F. BATTEY.  
EARL RAINER.

#### REFUSES TO GIVE AGE; NOT ALLOWED TO REGISTER

Topeka, Kan., July 15.—Rather than give her age when she went to the city hall yesterday to register, Mrs. Margaret Hill McCarter, well known authoress and club woman, left without registering. Mrs. McCarter, who spoke before the recent Republican national convention, was credited with being the first woman to address a national convention of the party.

Mrs. McCarter insisted "over 21" was sufficient in recording her age but was informed by the clerk that a rule had been established this year that women must give their age or they cannot register.

Walter James, of Williamson County, has been in Floydada the past two weeks looking after his farming interests here. Mr. James has owned his Floyd County land for eight years.

#### SURVEY OF CHILDREN'S DEFECTS REPORTED BY NURSE

Austin, Texas—A survey of school children's health, which the public health nurse declares to be typical of the entire state and other states, has recently been completed by Miss Pearl N. Hyer, R. N., public health nurse of the Texas Public Health Association.

Miss Hyer made examinations, assisted by local physicians, of 729 children in a certain North Texas town. Among these 729 school children, 1,656 defects were found—over two defects per child. The number with enlarged tonsils were 297, 31 with submerged tonsils, 122 that needed eyelids treated, 97 that had adenoids, 150 who needed glasses badly; 136 with defective hearing, 385 that needed teeth treated, 119 who needed gums treated, 20 who were over 10 pounds overweight, and 299 who were five pounds or more underweight.

"This survey seems typical of conditions throughout the greater part of Texas," said Miss Hyer, "and examinations show that over fifty percent of the children have defective teeth, and more than that percentage have bad tonsils, while a large number have defective hearing or eyesight.

"Every community needs a public health nurse, so that these defects may be discovered and corrected in youth, and so that the children may grow up into strong, healthy, happy men and women. It is the duty of the people of Texas to provide 'health insurance' for the citizens of the future."

In three cities of Texas Miss Hyer has recently completed school examinations and demonstrations, and in these three places public health nurses will be secured immediately.

J. G. Martin left Monday of this week for New York City, where he will spend an indefinite period in the markets buying fall and winter merchandise for the Martin Dry Goods Company.

harvester-thresher made a good record in the handling of their crops during the season just closed,—a record which Mr. Cope is inclined to believe is the best in the county. Between the two they had 640 acres in wheat, in eight tracts, which they cut in 19 days counting moves from one to another, the total crop being 12,000 bushels. Their average was slightly under 20 bushels per acre, but the crop included 110 acres late planted wheat.

Messrs. Cope and Wilson made their own crew on the machine, pulling the combine and wheat wagon with a tractor. Three wagons were used to haul the wheat from the machine to the granaries.

Mr. Wilson's crop considerably exceeded his expectations and it was necessary for him to build additional bins to hold his crop.

Foreign Advertising Representative THE AMERICAN PRESS ASSOCIATION

The Amarillo Daily News has been making of itself an "organ" during the past forty-five days for the promotion of the candidacy of Pat M. Neff, of Waco, for governor of the state. Even to the Neff sympathizer, who sees in him a capable and efficient man, the News' antics are amusing. Mr. Neff or a Neff supporter comes to town and makes a talk, The News carries the story in detail, but Thompson and Looney and Bailey speaking dates do well to get honorable mention.

A twentieth amendment to the Constitution is "in the process of creation," we learn from the New York dispatch. Its purpose is to prohibit divorce, and its sponsor is the Society for the Upholding of the Sanctity of Marriages. This may well start us wondering and guessing what the next ten amendments will be. Indeed, it may be advisable to get out a "ticket" early, since there are so many eager "amenders" in the country. The following has been suggested: Amendment No. 21, Against Smoking; No. 22, Against Chewing; No. 23, Against Swearing; No. 24, abolishing mules, golf balls and telephones (this measure having been found necessary for the enforcement of Amendment No. 23); No. 25, abolishing one-piece bathing suits (on which the feminine vote splits along lines of personal endowments); No. 26, abolishing evening gowns; No. 27, abolishing evenings (a brilliant idea, suggested, perhaps, by the old "daylight-saving" statute and advocated by the Society for Combating the Seductions of Moonlight at first as a practical measure for enforcing Amendment No. 26, but later on its own merits, on the ground that nine-tenths of the frivolous, unseemly conduct of which the Nation is guilty occurs in the evening.); No. 28, against riding three on the front seat of an automobile; No. 29, against spending vacations in foreign parts where any of the above amendments is not in force; No. 30, against making fun of the above amendments, or any of them, or their authors.—Dallas News.

USING COMBINE MACHINE TO THRESH SHOCKED WHEAT

H. A. Krause is using this week a combine harvesting machine to thresh and wheat from the shock, a procedure not contemplated by the manufacturers, doubtless,—but nevertheless successful. Mr. Krause was unable to reach all the wheat while running his machine and had 40 or 50 acres cut with the combine. He is now using a little platform around the shock and his thresher the wheat shock is thrown onto the platform and threshed out in the same manner as a stationary machine. He drives up to a shock and out and moves on to the next one, threshing about 30 acres in this manner and the combine is unnecessary.

THE NINTH CASE OF BEAUMONT

The ninth case of Beaumont death was reported. The patient was in a serious condition and died, aged 597 years. The cause of death was not determined.

BEAUMONT DEATH

The patient was in a serious condition and died, aged 597 years. The cause of death was not determined.

BEAUMONT DEATH

The patient was in a serious condition and died, aged 597 years. The cause of death was not determined.

Strikes That Are Meant to Fail

In times past strikes were called to protest against definite underpayment of ill-treatment. Some are still called for those reasons, but others are not. Those others are not meant to succeed, but to fail. They are not intended to bring about conditions more satisfactory to the worker, but to widen the breach between employer and employee, to fan class hatred to prepare the ground for a social revolution.

The men who are concerned in this business are no longer trying to conceal their plans. They are insolently frank. One of them, who is organizer for the "One Big Union" and an officer of one the large labor organizations said to a newspaper reporter: "There are already two millions enrolled in the One Big Union which is to accomplish the revolution. Daily our numbers grow as unsuccessful strike follows unsuccessful strike. We of the vision encourage strikes—that they may fail. Meanwhile, we fan class hatred; that is our mission. We must teach the American laborer that his employer is his natural enemy."

Americans, with the easy optimism that refuses to recognize a danger until it hangs immediately over their heads, have not taken the revolutionary agitator seriously. They have known that he existed, but they have taken for granted that he would never be able to insinuate his false and malicious doctrines into the minds of the American workingman, who has a political and economic freedom that he ought to appreciate.

A great many workingmen are too sensible to believe that a man who organizes and builds up an industry is the enemy of the men to whom the industry gives employment. A great many are too sane to believe that a nation can profit by hatred and savagery and civil war among its people, or that a despotism controlled by the officers of labor unions would be any more tolerable than a despotism controlled by courtiers or soldiers or industrial magnates.

But, unless the boasts of the agitators are quite false, two millions are already persuaded, and more will be as the strikes that are meant to fail do fail and leave behind them a legacy of irritation and anger and of baffled helplessness; We must find a new way of dealing with strikes, if we are to escape the machinations of the revolutionary. The public must take a hand in the matter. It must have a way of finding out the truth about each strike as it comes along, of enforcing a just and honorable settlement of strikes that have an honest purpose, and of exposing those that are merely disguised revolutionary propaganda. Perhaps the Court of Industrial Relations that Gov. Allen has instituted in Kansas is the answer to the problem. It is at all events the most hopeful step in that direction that has yet been taken anywhere.—Exchange.

CENTER NEWS

Center, July 12.—We are having some fine cotton showers that are helping the feed, too. It retards the threshing but we are not worrying much about that.

The Workers' Meeting met with this church last Tuesday. We enjoyed it very much and think our church received a great spiritual uplift. It goes to Roseland in October. We skip till then on account of the protracted meeting season.

Mr. and Mrs. Lee, of Plainview, came down yesterday and spent the day at the D. I. Bolding home.

We were real glad to have Mrs. Tubbs and Miss Clara out with us at the Workers' Meeting. Hope they won't wait so long to come again.

Quite a number went from this place to Fairview yesterday, expecting to hear Dr. Atwood, but for some reason he was not there and we heard their new pastor for the first time.

C. T. Warren and family spent Sunday with Russell Warren and family.

Mr. Parrish, of Hunt County, is here visiting his uncles, the Messrs. Warren, having arrived aSturday.

We are expecting to entertain the thresher crew to dinner so must stop and get to work.

LIVE STOCK REPORT

Kansas City Stock Yards, July 19.—Continued light receipts here sent hog prices up sharply today, and the general position of the market was within 10 cents of the high point in the past two weeks and within 25 cents of the high point this year. Top \$15.90, was paid by both packers and shippers today. Good cattle both men and grass fat were steady, other 10 to 15 cents lower. Sheep and hogs were in active demand at high prices.

Receipts today were 15,000 cattle, 14,000 sheep, and 7,000 hogs, compared with 14,000 cattle, 6,500 sheep, and 22,500 cattle, 7,900 sheep a year ago.

Mr. and Mrs. D. I. Dye, of Center, are here visiting their daughter.

CHEAPER FEEDS FOR SWINE

Pork Production Is Not Always Profitable—Grain Sorghums More Economical Than Corn

(By John W. Wilkinson in The Duroc Digest.)

Pork production, which is one of the chief industries on many farms, is not always profitable. That was the experience of many farmers in Kansas, Oklahoma, Missouri, Nebraska, Iowa and other states last year. In a survey made by the Iowa State Agricultural college in the spring of 1919 in the southwest part of the state, it was found on 312 farms that 100 pounds of pork cost \$16.30 and sold for \$14.50, or at a loss to the average farmer of \$1.80 a hundred-weight. Conditions for feeding hogs in Iowa were much more favorable than in Kansas and other states farther west where feeds were higher and more difficult to obtain.

In estimating the Iowa cost of production, corn was charged at \$1.50 a bushel, oats at 66 cents a bushel, tankage at \$110 a ton, skim milk at 50 cents per 100 pounds, pasture at \$8.70 an acre, man labor at 40 cents an hour. All feeds were charged on the home market basis and the hogs were sold on the home market basis in order to have a fair comparison.

Some Interesting Experiments

Prices of feeds and pastures in states farther west were much higher and consequently the losses of farmers who fed hogs were consequently greater. So discouraging were the results in Kansas that many farmers have declared that they will feed no hogs for the market this year. Considerable interest this spring has been shown in the feeding experiments being made with hogs at the Kansas experiment station in Manhattan. The high price of corn has made the question of finding, if possible, a substitute for it one of the important feed problems, because much less corn is grown locally in Kansas than is needed for feeding livestock. Every hog feeder and farmer who attended the livestock feeders' convention at the Kansas state agricultural college Saturday, March 20, went there feeling that if the experiments showed that other grains could be satisfactorily substituted for corn it would prove a big help in hog raising. Three different experiments along that line were conducted at the Kansas experiment station during the past nine months under the direction of Prof. E. F. Ferrin, who is in charge of the swine investigations for the animal husbandry department of the Kansas state agricultural college.

"The first experiment," said Professor Ferrin, in his talk to the stockmen at the livestock feeders' convention, "was a trial comparing shelled corn with barley prepared in three different ways. Tankage was fed as the protein supplement with both corn and barley and the pigs had good alfalfa pasture at the rate of 15 pigs an acre. Dry, whole barley has not proved a satisfactory feed for growing pigs in many experiments already completed. Accordingly dry ground barley, soaked ground barley and soaked whole barley were fed each to a lot of ten pigs. Dry shelled corn was used in feeding another lot which served as a standard or check for the gains made from the barley. In many cases where barley and corn have been compared the barley proved relatively more valuable than in this particular experiment. This is accounted for by the fact that we used younger pigs than the average fed on barley in trials elsewhere. The high fiber content of the grain is a disadvantage most pronounced in the case of small pigs. These pigs were fed by hand night and morning as much feed as they would clean up readily. They made good use of the alfalfa pasture which provided splendid feed until September, when, due to the continued dry weather, pasture was a little short.

"Soaking whole barley is the method of preparation costing least but our results indicate a considerable saving by grinding the grain as contrasted with soaking it. Eighty-one pounds less of ground barley than of soaked whole barley produced 100 pounds of gain. At 2 1-2 cents a pound the difference in cost of grain for these two lots was \$2.02 less for 100 pounds grain on dry ground barley than for whole soaked barley. At this rate the grinding could be done, leaving a large profit over preparation of the whole grain by soaking. Apparently soaking ground barley does not improve the grain under the conditions as used here. It may be that the barley, already a bulky feed for pigs this age, is actually of less value after soaking than before because of the smaller amount the pigs can consume.

"Based upon the results of this trial what is a feeder justified in paying for barley as compared with corn? Taking an average price for corn at 2 1-2 cents a pound or \$1.40 a bushel, dry ground barley to make 100 pounds gain at the same cost as the corn should be valued at \$2.18 a hundred

or \$1.05 a bushel. Soaked ground barley \$1.85 a hundred or 89 cents a bushel, while soaked whole barley would be worth still less, or \$1.77 a hundred or 85 cents a bushel. Corn at prices prevailing the past season has been a cheaper feed for young growing pigs than barley but since the commercial demand for barley has been reduced much more than that for corn by prohibition, it may become an economical substitute for corn.

"In another experiment pigs that were mostly of May farrowing were in several ways fed shrunken wheat purchased at \$1.80 a bushel. Included in this test were lots receiving ground wheat and tankage whole wheat and tankage, ground wheat without other feeds, and a mixture of 50 per cent of wheat and 50 per cent of rye.

Wheat Better Than Corn

"All of the lots getting what make more efficient gains than the lots receiving corn. Even the ground wheat and ground rye without tankage make slightly better gains than ground corn and tankage. Whole wheat and tankage did slightly better than ground wheat and tankage. It was found that tankage added to wheat made a better ration than wheat alone. Combined with corn, wheat gives from 5 to 10 per cent greater gains when fed to pigs.

"A mixture of ground wheat and ground rye when 50 per cent of each was used gave slightly better gains than ground corn and tankage. This was the best return given by any lot fed rye in spite of the fact that tankage was not included in the ration. Wheat and rye seem to supplement each other better than do corn and rye as greater gains were made on this combination than on a mixture of ground corn and rye even with tankage added. Ground rye plus tankage ranked just below ground corn and tankage as it took more of both the grain and the protein feed to make 100 pounds of gain.

"Deductions we are able to make from this experimental feeding of rye are: First, wheat and rye seem to make a much better combination than either corn and rye or rye and wheat shorts. Second, ground rye and tankage from a fairly good ration so far as gains are concerned but the rough coats of the pigs indicate that they were not in as good health as lots receiving either corn or wheat. Third, rye is a grain quite inferior to other

grains for feeding hogs in dry lots.

"In testing our different feeds as substitutes for corn the grain sorghums have not been neglected. An experiment is now in progress comparing corn with kaffir, milo with feterita. Each grain is ground and supplemented with tankage. The free choice system of self-feeding is followed in all cases. Previous to this time we have had no experiment giving a direct comparison between different ages of pigs fed upon grain sorghums. In this case summer pigs of 150 pounds average weight were fed in one series of lots and fall pigs averaging 100 pounds in a second series. They received the same feeds under similar conditions. Thirty days is not sufficient time to get accurate averages of what pigs will do on varying rations, but it is long enough time to get a good estimate of the values of different combinations of feeds.

"For 150-pound summer pigs the following amounts of each kind of feed were required for 100 pounds of gain: Ground corn, 374.5 pounds with 11.24 pounds of tankage; ground kaffir 337.08 pounds with 11.95 pounds of tankage; ground milo, 3.86 pounds with 12.59 pounds of tankage; and ground feterita, 373.83 pounds with 12.84 pounds of tankage.

"For 100-pound fall pigs the following amounts of each kind of feed were required for 100 pounds of gain: Ground corn, 463.42 and 18.29 pounds of tankage ground kaffir, 528.93 pounds with 24.79 pounds of tankage; ground milo, 435.37 pounds with 20.41 pounds of tankage; ground feterita, 493.56 pounds with 20.82 pounds of tankage.

"It was found that there was very little difference in the amounts of the different kinds of grains needed to make 100 pounds of pork. It should be emphasized that grinding is a necessary operation in feeding the sorghum grains while it is not often needed in feeding corn. More sorghums and less corn will help to solve the feed problem for farmers in western Kansas, western Oklahoma and western Nebraska."—Kansas Farmer and Mail and Breeze.

J. W. LeMay and wife returned Saturday from Hot Springs, New Mexico, and points in Arizona, where they had been some weeks for Mrs. LeMay's health.

A. B. Clark has been spending the past ten days on a vacation at Bentonville, Ark., where is the guest of the Puryear boys. He is expected home the latter part of this week or the first of next.

Henry Hinson returned last week from Seymour, where he has been living the past year.

South Plains Grain Co.

In introducing ourselves to the people of this trade territory we wish to say that we have every confidence in the future of this section and accordingly have built here one of the largest elevators in the county with every modern appliance to make the movement of grain through it easy and to make it worth your while to do business with us.

Our New Elevator was Finished Last Week

The wheels were started running in a try-out Saturday and we are now handling grain through it. Just at this time our trouble, in common with everybody in this section, is getting cars to haul the grain we get. We are doing all in our power to help get cars and hope that by this means we shall be enabled to continue accepting wheat right along.

When in Floydada we will be glad to have you come around to see us, get acquainted and make our elevator your headquarters.

South Plains Grain Co.

**LIFE JACKET FROM LUSITANIA FOUND ON COAST**

Philadelphia, July 16.—A life jacket, silent remembrance of the tragic sinking of the Lusitania five years ago, and bearing a strand of faded blond hair, was picked up Wednesday in the Delaware river.

The name of the ship the Germans torpedoed still remained clear and distinct on the wave-beaten canvas, which has been adrift on the seas throughout three years of war and two of peace.

**HELEN TAFT MARRIED**

Montreal, July 16.—Miss Helen Taft, daughter of former President Taft, and Mrs. Taft, president Byrn Mawr College, yesterday became the wife of Frederick Johnson Manning, instructor in history of Yale University.

The ceremony took place in the Union Church at Murray Bay. The bride, who was given away by her father, wore a gown of white taffeta, trimmed with old Brussels lace.

**PROVIDENCE**

Providence, July 20.—Mr. and Mrs. Will Palmer left for home after a week's visit with I. C. Nations. They went to California to visit relatives and from there to their home in Washington.

Mr. and Mrs. Cleve Hartman visited at Kress last Sunday.

Mr. and Mrs. Carthel and Mr. and Mrs. Rains, of Lockney, visited at the Sammaan home last Sunday.

Mrs. Henry Kirsh, of Marlin, arrived last Sunday to visit her husband.

BORN—To Mr. and Mrs. A. O. Kirkland, July 19th, a daughter.

**JELLY OF UNUSUAL FLAVOR MADE FROM GREEN TOMATOES**

By adding lemon or orange, or both, a jelly can be made from green tomatoes which is of an attractive color and of pleasant, though unusual, flavor. The pectin substances and acids of lemon and orange, which confer jelly-making properties upon the tomato juice, are found in both juice and white peel, but especially in the latter. The bitter taste of the uncooked white peel will not interfere with the flavor of the cooked product.

3 pounds green tomatoes.  
 2 pints water.  
 1 1-2 lemons (7 ounces).  
 2 oranges (15 ounces).  
 2 cups sugar (about 14 ounces).  
 2 cups sirup (nearly 2 pounds).

Cut tomatoes into small pieces, cook in 1 pint of water for half an hour. At the same time cook the orange rind, cut up small or put through a meat chopper, in a pint of water, slightly salted so as to keep the peel tender, in case it is to be used later in making a relish. Combine these two mixtures, and drain through a jelly bag in the usual way. Squeeze the bag gently, in order not to waste the juice which remains behind. You will find that in this case squeezing does not greatly affect even the appearance of the jelly. There should be a quart of juice, more or less, according to the rate at which the water may have boiled down. Boil the juice for 10 minutes to render it in bulk and concentrate its solids. At the end of the boiling period, measure the juice; for each cupful of juice, add one-half cup of sugar and one-half cup sirup. Boil until a good jelly test is secured—that is, until it begins to jelly as the last drippings come from the spoon or when a drop stands on a cold plate. The amount of jelly secured will be at least 3 glasses or somewhat more than 1 pint. It may under favorable circumstances be almost twice this.

If the juice when poured into glasses shows signs of jelling, but does not set at once, set it away, lightly covered with cloth, for several days;

you may secure a fine, firm jelly at the end of a week. It should then be covered with hot paraffin as usual.

In our own experience, the jellies made with a large proportion of corn sirup will be satisfactory if served within an hour or two after turning out of the glass, but do not "hold up" perfectly if left to stand for a day or two, even though quite firm in the beginning.

In case oranges are high in price, a larger amount of lemon may be used. Two lemons may ordinarily be substituted for one orange, but the flavor will be a decidedly different one.

Use pulp left after draining for sweet spiced green tomato relish.

BORN—To Mr. and Mrs. W. T. Beasley, July 16th, a daughter.

**METHODIST NEWS NOTES**

215 in attendance at Sunday School Sunday morning last at the Methodist Church. The collection was \$31.00.

The theme for Sunday morning's church service will be "Home." Come in time for Sunday School. The evening theme will be "The Sick Man and the Doctor." The evening service will begin promptly at 8 p. m.

**TEXAS RANGERS TO MEET IN AUGUST AT WEATHERFORD**

A. T. Ritchie, a former Texas Ranger, with Company D, Frontier Battalion, 1874, is sending out an announcement to Texas Rangers in which he calls attention to a reunion to be held at Weatherford, August 9th and 10th, and to which all Texas Rangers are invited.

The announcement is being sent broadcast over the state in the hope of reaching all ex-rangers.

A. V. Raley and family, of Jones county, have been visiting in Lakeview Community the past week with his brother, J. C. Raley.

O. B. Olson is salesman now with the Price-Goen Dry Goods Company, having begun work there last week.

## Catechism or What Everybody Should Know About Flies

Bulletin No. 5.—Texas State Board of Health.

the house fly known as a pest because it has been the cause of much of typhoid fever. It means of spreading disease also distributed in other parts of the world. The house fly is sometimes called the "kitchen fly" because it has been the cause of much of typhoid fever. It means of spreading disease also distributed in other parts of the world. The house fly is sometimes called the "kitchen fly" because it has been the cause of much of typhoid fever. It means of spreading disease also distributed in other parts of the world.

great change from a worm-like maggot to a winged insect. It then comes out a full-sized fly. "Little flies" do not grow into big flies. The little flies we sometimes see are a different kind from the typhoid fly.

Q. How old is a floy before it begins to lay eggs?

A. After coming out as a fly, it feeds and flies about for about two weeks before it matures its first batch of eggs. This is very important, because if every fly gets caught during this two weeks, no eggs will be laid, and the pest will disappear.

Q. Does every neighborhood raise its own flies?

A. Yes. The number of flies found in each neighborhood is an excellent index to the sanitary conditions of that neighborhood.

Q. How much and how often do flies eat?

A. It is not unusual for a fly to swallow half of its own weight of food at one meal, and it is almost continuously feeding, if food is abundant.

Q. How does a fly eat solid food?

A. The house or typhoid fly has no teeth, but is provided with a sucking tube or proboscis with which it laps up liquids. The flies which bite are stable flies, and these have sharp, piercing probosces, with which they suck the blood of animals. In eating solid food, like cake or candy, the house fly first puts out a drop of saliva, and sucks it back and forth with its proboscis until the dry substance is dissolved, and then it laps it up. Nice things to eat after, are they not?

Q. How do flies carry diseases?

A. They feed upon filth containing disease germs, and carry the germs on their feet and probosces to our food. The germs may pass through the body of a fly unharmed, and may distribute in the fly specks.

Q. Where do disease germs come from?

A. From the bodies of sick people.

Q. Then flies should not be allowed in the sick room?

A. No, and all discharges from the sick should be placed where flies cannot get at them.

Q. Can a fly carry many disease germs?

A. Yes. Over 6,600,000 germs have been found on the body of a single fly.

Q. Do flies always carry disease germs when they alight upon our food?

A. Not always, but they are always disgusting because they carry filth to our food. They are dangerous to health only when they have access to disease germs.

Q. Can a family escape the dangers from flies by screening them out of the house?

A. To a large extent; but there is always danger if we buy food over which flies crawled and deposited specks and filth.

Q. Do flies carry sickness and death to many people in Texas?

A. Yes. There were about 13,859 cases of typhoid fever and about 1,535 deaths from typhoid in Texas last year, as well as about 2,834 deaths from enteritis or "summer complaint" and a great many other unnecessary deaths; and the germs carried by flies cause a great part of these deaths. Flies are now known to be the most deadly enemy of man. They kill more people every year than are killed by lightning, murderers, snakes, wild animals, fires, and floods combined.

Q. Have flies always been such an enemy to mankind?

A. They have always carried disease, even in Bible times. Their power to do harm has increased with the increasing number of people.

Q. How many people have lived in spite of flies?

five years of age die every year. Many of these deaths are due to flies carrying disease germs to babies' food.

Q. Why not apply disinfectants to manure piles and other fly-breeding materials?

A. Thus far, disinfectants have not been found to be very effective. Furthermore, they are very expensive and difficult to apply. Removing the manure is many times cheaper. Trying to disinfect filth and still leave it around is like sprinkling on perfume when you need a bath.

Q. How is it possible to have more protection against flies than we already have?

A. In five ways: (a) By screening every door and window in the house. (b) By killing all the flies that have been hiding in buildings through the winter as fast as they come out. (c) By cleaning up all manure and filth in which flies may breed. (d) By keeping traps set in covers of garbage cans and on porches where the flies are thickest, to catch them before they can enter our homes. (e) By placing saucers of fly poison around barns and stables, or where there are many flies. The best and cheapest fly poison is made by adding two tablespoonful of formalin to a mixture of half-pint of milk and a half pint of water. Drop pieces of bread in the saucers for landing places for flies. Flies will not drink this poison if they can find any other liquid to drink.

Q. If we did clean up all the manure and filth from the neighborhood, would not flies swarm in from other parts?

A. A fly seldom travels over five hundred yards from its breeding place.

Q. Has anyone ever succeeded in keeping his house free from flies without using screens?

A. Yes. A number of people have used the method above indicated and have done away with screens. But be sure you have no flies before dispensing with screens.

Q. Will any Texas city ever be free from flies?

A. Yes; just as soon as every one does his part in his own house and yard, you will have a city of flyless stores, markets, and homes. (Teachers are requested to drill their pupils in this catechism and to inaugurate fly-eliminating campaigns in the homes of their pupils.)

### SUDAN GRASS

One of the greatest feed crops ever introduced into the semi-arid regions of Texas, as well as into more northern climates, is Sudan grass. This plant was introduced into the United States from north Africa in about 1910 and first brought to Texas about 1911.

The plant is well adapted to the semi-arid belt and very dependable yields are secured with little rain. The writer was in Ohio in the fall of 1918 and a prominent farmer told him that he had had wonderful success with his test plot and that every farmer should have a few acres of it on his place. Ohio is not semi-arid. This shows its wide adaptability.

It is planted for both hay and seed and it makes an excellent quality of hay and is relished by all stock. It can usually be mowed twice a year for hay. In sections where grown extensively, one crop of hay is cut and the second crop used for seed. Where sowed broadcast a yield of three tons per acre may be realized in a season.

Sudan grass belongs to the sorghum family. Where sowed broadcast about 15 to 20 pounds per acre of seed are used, and where drilled about eight pounds of seed are used.

When it was first realized what an important and dependable crop Sudan grass was, the seed reached an

# Case Tractors and Separators

Many Case Tractors and Separators have been sold in this territory this season and we are glad to say that their owners are having little trouble with them.

We have more of them coming and suggest that you let us have your order now in order to get your machine early and get it into operation.

We also order parts for the Case and can get you quick service in this respect.

U. S. L. BATTERIES are good batteries. We have them in stock for all makes of automobiles and give first class re-charging, repairing and rebuilding service.

enormous price, but the average price for the past five years, has been from 10 to 15 cents per pound. Higher yields of both hay and seed are realized when the seed are planted with drills and the grass cultivated as other row crops.

Care should be taken in purchasing seed. Buy only from the best seed houses using pure seed.

Farmers in regions of less than 25 inches of rainfall should plant some Sudan grass for pasture and hay since it will furnish much pasture in a dry season when other grasses are killed by lack of water.—R. L. Walker, in The Progressive Farmer.

### 81 ACRES OATS MAKES AVERAGE OF NEARLY 50 BUSHELS

The 81-acre field of oats of R. N. Burgett & Sons, southeast of Floydada, is one of the oat fields reported recently with a good yield. This field yielded slightly over 4,000 bushels of oats over the buyers scales,—an average of just a fraction under 50 bushels per acre.

THE POULTRY INDUSTRY

(Missouri Poultry Association Year Book.)

The past year, 1919 has been a profitable year for most all breeders of poultry. The breeders of high-class exhibition birds had ready sale for most all their surplus stock at a good price; the hatcheries selling day old chicks have done a good business; as the demand never was as great for this part of the industry; and the egg farmer has been rewarded with fair prices for all fresh eggs that could be produced. Although feed prices were high, where scientific methods of feeding were put into use, the profits were satisfactory. And while the price of stock and eggs will probably be somewhat lower this year than last we have the assurance that feed also will be reduced in price, and no doubt the profits will be equally as great.

Whether poultry is raised for a profit or a pleasure, the time has long past to fear being called a "Poultry Crank" for the poultry industry of our state is regarded as one of the leading industries of today. It is no longer considered a job for the woman only, but for the man as well, and if he will give the poultry the attention that he should there is no livestock on the farm that will pay the dividends the hen will for the amount invested.

Provide the hens with a comfortable dry, well-ventilated house; a good mash hopper filled with a well balanced mash, clean litter for them to scratch in, a variety of cracked grains to scratch for, oyster shell and grit, and a clean vessel full of water at all times, and you are on the road to success in the poultry business.

Failures in the Poultry Business

There is no reason for anyone to fail in the poultry business if he will be contented to begin with small profits, to start in a small way, and to increase the plant gradually and until he has all the birds that can be handled successfully.

Failures in the poultry business are not usually made by people who have had some experience, but are made by men who have spent a great part of their lives at some other trade, perhaps working as apprentices for several years in order to prepare themselves for success in that particular trade. Knowing nothing whatever about the work connected with the poultry business they start in for poultry farming. They figure from a business standpoint, as they say, that if a dozen hens will lay a certain number of eggs, then one thousand hens will lay a correspondingly greater number and the profits will multiply proportionately. In other words, they have more money than chicken sense. They spend large sums of money in needless equipment, expensive houses, a large number of birds for immediate profits, and then hire some man at cheap price, who does not know anything about the poultry business.

What are the results? The inexperienced help is looking for pay day and as little work as possible, rather than the success of the owner. The owner, not having had experience, does not know whether the hens are getting the proper feed and care, becomes discouraged over the high cost of feed and small profits at first, and a "Poultry Farm for Sale," is the next and final step of the unthinking poultryman.

It is a more logical policy to begin with a few birds and allow the business to increase with the acquired knowledge of poultry, and it will soon be necessary to construct additional buildings and equipment for future development. Unless a poultryman likes the work, has a love for the birds, and is willing to work longer hours than some are calling for today, it is advisable for him to embark in some other business, as the poultry business will not stand neglect and prove profitable.

POULTRY ASSOCIATION SECRETARY VISITS LOCKNEY

Oliver Allen Secretary of the Floyd County Poultry Association was a Lockney visitor Tuesday afternoon, and paid this office an appreciative visit. Mr. Allen says the prospects for a splendid poultry show this fall is flattering. It is contemplated to hold the show during the county fair. Several of the officers of the association live in this end of the county.

Floyd County Poultry Association can be made the best on the Plains and the Panhandle and do a great deal of constructive work along lines of poultry raising if those interested in the business will join the association and take an interest in its affairs.—Lockney Beacon.

Wm. HIGGINS DIES EAST OF LOCKNEY

Mr. Wm. Higgins, age 60 years, died at the home of his son, Lewis Higgins in the Eastern part of the county Tuesday. His remains were laid to rest in Lockney cemetery Wednesday.—Lockney Beacon.

SELLS 80-ARE FARM TO SIDER MAN FOR \$125

L. H. Dorr last week closed a sale contract with H. Fondy, of Snyder, Texas, selling his 80-acre improved tract south town one mile to the latter for a consideration of \$125 per acre.

Mr. Fondy gets possession of the place January 1st.

SNYDER MAN GETS PRIZE IN RODEO

Snyder, Texas, July 16.—Jim Massey of Snyder has written his father, J. W. Massey, here that he finished up a nine days rodeo engagement in Chicago last week and was declared the world champion bulldogger and was awarded a solid gold belt and \$750. prize money.

ICE IS HIGH IN FORT WORTH; 10 CENT ADVANCE

Ice in Fort Worth one day last week advanced 10 cents on the hundred pounds.

BORN—To Mr. and Mrs. W. P. Hawkins, July 18th, a son.

Having a rare beauty of tone,

distinguished by charming design, and possessing unique, important and exclusive features,

SONORA

is famous as being THE HIGHEST CLASS TALKING MACHINE in the world.

If the best is none too good for you, your choice will be the SONORA.

The Martin Dry Goods Co.

FLOYDADA, TEXAS

Particular Women

HAND LAUNDRY THE DELICATE GARMENTS they will not trust to the washboard. Dip—squeeze—dip—squeeze—gently, insistently cleaning without strain or wear.

THE THOR WASHES EVERYTHING IN JUST THIS WAY.

Round and round turns the cylinder. Round, round and round—then reverse. Drop, drop, drop, fall the clothes. Up out of the swirling suds—splash back again, coaxing out the dirt from dainty pieces or heavy blankets.

Out through the holes of the revolving cylinder sifts the sediment, which settles on the bottom. It does not remix with the washing water, nor flush back through the clothes. Thus the washing is done in a constant flow of clean, active water.

Call in any day and let us demonstrate the THOR to you.

The THOR sells for cash at \$150.00, or on terms by which you can use the machine as you pay at \$155.00.

FORD MOVIE LABORATORY FULL SIZED INDUSTRY

While the production of motion pictures by the Ford Motor Company is only a side line, yet the studio and laboratory which produce the "Ford Educational Weekly" are amongst the country's finest and most completely equipped. Everything needed to convert raw film into finished pictures by expert motion picture men may be found there.

From this effectively organized picture-producing plant, one hundred fifty some odd thousand feet of film weekly starts its long journey through the theatres of America, Mexico, Brazil, Chile, Argentine, South Africa, Spain, France, Russia, Scandinavia, Japan, China and Alaska. Each week, ten million people see "The Ford Educational Weekly".

It is shown in seven thousand—nearly half—the moving picture theaters in the United States; and has gained for the Ford Motor Company the distinction of having the largest circulation of motion pictures in the world.

A staff of camera men are employed continuously to provide pictures for the laboratory.

One of the most recent films portrays scenes from Henry Ford's life. It shows something of his early life on the farm where he tinkered with machinery when his other work permitted, gives one a glimmering of his early mechanical genius, shows him at work on the first car, and later shows all of the Ford industries in Detroit. The last scene, taken last fall pictures Mr. and Mrs. Ford riding on their farm near Dearborn, Michigan in the First Ford car, which, incidentally is still in very good running condition.

Among the Floydada people who have been in Colorado Springs for a vacation the past few weeks are Miss Lula Rushing, and Mrs. J. M. Massie and Miss Della Trowbridge.

**HISTORY TOLD IN FLOWERS**

Writer Regrets Changes That Have Been Made in Names So Thoroughly Expressive.

Just the old names that nurses used to call them, often not the real names, but reminding one that a whole history of old England lies wrapped up in the petals of a lily, and it is well to record them before they are forgotten or corrupted. Nurse's idea of the pronunciation of "ivy" was not exact. If anyone had rumbled his hair after her careful and sometimes painful ministrations, she would declare he looked "like an owl in an ivory bush." And so with gilly-flower, and many other names; just a little turn of rhetoric and the meaning is lost, for every flower should paint a picture, in words, as it does by its perfume and beauty. Love-in-a-mist, Mary's-gold, codlins-and-cream, and the prettiest of them all, shepherd's-purse, and the seed-pods of honesty. The little pimpernel, the poor-man's-weather-glass, with its long name—John-go-to-bed-at-noon—is a prettier name than barometer, and traveler's-joy tells the tale of a cottage in sight and home at last. Lady's-smock or milk-maids, or cuckoo-pint all belong to the bitter-cream, and lords-and-ladies to the wild arum, though Jack-in-the-pulpit is more descriptive, if not so picturesque.—Christian Science Monitor.

**INDEFINITE**

"These poets are so indefinite." "How now?" "Why, the poet tells us that Lars Porsena of Clusium sat in his ivory car. Stalled somewhere, of course. But we never learn whether he was hung up on account of tire trouble or lack of gasoline."

**HAVE UP-TO-DATE NAMES.**

There is a town of Pickford in North America. An announcement stating that the city of Grand Rapids, Wis., was contemplating changing its name to that of "Pickford," brought forth a letter from northern Alberta showing that on the railway between Edmonton and the Athabaska Landing was a little town called "Pickford." The station agent's wife wrote that it was but a small place near an Indian village, but that it had been there for several years, and that sometimes twice a month they had moving pictures. Curiously enough, the next town is "Chaplin," also another trading post, and, according to the map, Fairbanks is not so far away.

**STEEL WOOL FOR ALUMINUM.**

The manufacturers of a cleanser for aluminum utensils comment on a recently published advice to use a mixture of ammonia and borax, if one must polish it, that this mixture, unless used very carefully, has a tendency to eat into the metal, especially when used constantly. The best way to keep it bright is to clean it with steel wool and soap. The cleanser made by these manufacturers is a combination of these.

**WILD BOAR PRIZE ENOUGH.**

The French ministry of agriculture had a prize of fifty francs for a very wild boar weighing over thirty kilograms that was killed and of ten francs for every little one. It has been withdrawn this, giving as the reason that, with all meat at such prices, the flesh of a wild boar would be quite sufficient reward for it.

**HON. R. A. BALDWIN ASKS RE-ELECTION AS REPRESENTATIVE 122ND DISTRICT**

Hon. R. A. Baldwin, of Slaton, Texas, is our present Representative in the Legislature from the 122nd District, having been elected last August for the unexpired term of W. H. Bledsoe, resigned, and is seeking reelection. We point with pride to his splendid record during the recent special session. Mr. Baldwin has the ability and the determination to represent all the people in all parts of this district faithfully and honestly. If anyone can secure laws favorable to our agricultural, financial and industrial interests, and secure for West Texas a square deal in the important work of redistricting our state next year, we believe Mr. Baldwin is that man. The work to come before the Texas Legislature the next two years demands men of sound judgment and genuine ability. We therefore commend Mr. Baldwin to your favorable consideration at the Primary election, July 24th. A vote for him is a vote for the best interests of West Texas. Very sincerely yours, Baldwin Campaign Committee. (Political Advt.)

W. A. Gound this week began the construction of a pretty little residence on West Virginia Street for T. H. Benton.

Mrs. Will Burgett left the sanitarium Wednesday, following an operation for appendicitis. She is recovering rapidly.

Dell Hatch, of Big Springs, Texas, and Chas. Evans, of Lorena, Texas, were here Monday night visiting Justice J. C. Gaither and family.

C. R. McAfee and family, of Amarillo, and A. C. McAfee, of Corsicana, cousin and uncle of P. M. Felton, were here visiting the Felton family Saturday to Monday.

J. J. Davis and family, of Gorman, Texas, are here this week on a visit with friends and relatives. Mr. Davis is returning home this mid-week.

R. T. Stribling and family and Mrs. S. D. Bishop and son, Tom, and daughter, Bernice, returned Wednesday from a vacation trip visiting with relatives and friends in Coryell and other central Texas counties.

J. F. McCarty returned Saturday from a three week stay in Kansas City where he had been under treatment of a specialist.

Mrs. J. A. Whitney, daughter and son, Miss Lorena and Frank, of Cleburne, Texas, have been visiting here the past ten days with Mrs. Whitney's brother, Rev. C. J. Menefee and family. Mrs. Whitney during the early nineties lived in Floydada and this is her first visit back here in a number of years.

Mr. and Mrs. Arthur Turner and two children left Monday returning to their home at Coleman, Texas, after a week's visit with Mrs. Turner's sister, Mrs. Geo. Dickey. The Turners are greatly impressed with Floydada and Floyd County and may return here to make this their home.

**TAUGHT NEW SINGING METHOD**

Guido Aretinus, Benedictine Monk, is Credited With the Invention of "Do, Re, Mi."

What is the origin of these syllables—Do, Re, Mi, Fa, Sol, La and Si, as names for the seven notes of the scale?

The tale which one meets in histories of music goes back to Guido d'Arezzo or Guido Aretinus, a Benedictine monk of Pomposa, not far from Ferrara and Ravenna. His period was in the first half of the eleventh century, and a great many inventions and improvements were ascribed to him. As a monk of the Pomposa monastery, compelled by the imperfection of the existing teaching of music, he was credited with the production of a method which, according to him, gave immediate results in singing which formerly could scarcely be attained in ten years. The practical merit of this method awakened the jealousy of the abbot and his brother monks, so that he had to leave the cloister.

He was called by the pope of that time, John XIX or XX, to Rome to explain his method. His journey was a complete success. In the first lesson the pope was able to find the tone of an antiphon and to sing it. There is a portrait of Guido in the refectory of the monastery at Avelana bearing "Beatus Guido inventor musicae" as an inscription. His system, which was called solmisation, consisted, in part, of the use of six syllables, Ut, re, mi, fa, sol, la.—From John o' London's Weekly.

**AGED COUPLE ED**

John Knerim, age 8 years, and Mrs. Fannie Palmer, age 71, were married by Justice of the Peace H. R. Airheart in his office at the court house Sunday afternoon at 3 o'clock. Many friends were present to witness the ceremony. They will make their home at 305 West Fifth street.

Mr. Knerim has six children, eight grand children and four great grand children, while his wife is two daughters, eight grand children and 15 great grand children.—Aarillo News

**HOW MANY TEASPOONS IN A POUND?**

Five cubic centimeters, what the Bureau of Standards has set as the theoretical quantity a teaspoon holds, but all spoons do not conform to this. The housekeeper measure with a teaspoon and should fill it "level" not "heaping." How many does a pound of baking powder contain? Apparently the number depends on yourself, upon the spoon used, upon the brand of baking powder you buy, upon the can in the lot which you happen to get, and upon a few other factors which though seemingly inconsequential do enter into the problem.

A pound of baking powder lasts longer with some cooks than it does with others. In an endeavor to learn where the difference is made the experimental kitchen in the Office of Home Economics of the United States Department of Agriculture recently conducted a series of experiments.

Various types of cooking teaspoons were first experimented with to determine the exact amount held in each case. Both the ordinary teaspoon and those "measuring spoons" which are linked together in sets were tested. A variation of from 116 to 150 teaspoons was found in the same pound can when different teaspoons were used.

The personal equation also enters into the amounts which I called a teaspoonful. It was found the difference due to individual manipulation ranged from 10 per cent to 30 per cent, a wider range of variation than those due to the different capacities of different teaspoons.

**BOOZE MADE NEAR CHILDRESS**

Tuesday morning Sheriff J. C. Gambill and Bill Hendrick made a trip to the northwest corner of this county and found two stills, which they took possession of and brought to Hollis. They are at the court house for your inspection if you are interested in stills.

Bill Hendrick is not an officer and did not go with Sheriff Gambill for the purpose of assistance. In fact, Bill didn't know where he was going until they were near the booze making spot.

Near Carl, Dee Thompson, deputy, joined Mr. Gambill and they proceeded to a cave 2 miles west and 5 miles north of Carl. This cave is on the Meeler and Diggins ranch just a mile south of the Beckhan County line and one mile east of the Texas line.

This cave has but one opening. A hole about four feet in circumference leads nearly straight into the earth for a few feet, then opens into a nice, large room with solid rock floor and walls. In this cave was found two stills, one an old one that probably had been laid aside. The other was a nice 10 gallon copper still, practically new and from appearances seems to be in perfect working order.

Besides the still there was a four-burner oil stove and a twenty-gallon keg of mash, a zinc tub, 5-gallon oil can, several jugs and fruit jars, 12 or 15 empty syrup cans.

"No one at home," at this distillery, so Sheriff Gambill destroyed the mash and brought the paraphernalia home.

J. C. Has captured several stills of late.—Harmon County Tribune.

Mrs. N. A. Armstrong, Mrs. J. B. Jenkins, Ora Slaughter all of Floydada, Texas, are spending several weeks in the Pikes Peak Cottage City in Colorado Springs. The Cottage City has just been completed and is rapidly filling up with visitors to the Pikes Peak region who plan to stay here for the season or for just overnight. The Cottage City is patterned after the English and Swiss Garden Cities.

**KING-KINSEY**

Mrs. Cora King, and B. P. Kinsey of this city, were married in the reception room of the Methodist Parsonage Wednesday evening of last week at 7:30, Rev. S. Huckabee officiating.

Mrs. King has moved here the past year, having moved from New Mexico to this place. She is a daughter of Mr. and Mrs. A. J. Hookerham.

Mr. Kinsey is a former service man, who saw service in France with the A. E. F.

L. H. Earthman is putting material on the ground for the construction of a residence on West California Street.

**W. H. SEALE, Dry Goods**  
"The Price Is The Thing"

**An Unusual Opportunity**

We are placing before our customers an opportunity of securing farms in what is known as "The PRICE BROTHERS Land," located northwest of Plainview, in the Whitfield neighborhood.

For FORTY-FIVE YEARS, no one has been able to buy any portion of this land, though it has been eagerly sought by many homeseekers. It has been held intact with the hope that the owners might have the pleasure and profit of developing the whole tract as a magnificent wheat farm, but business connections will not permit of carrying out that plan, and with the wish to in no way retard the general development of the country that is now so well in evidence, the owners have concluded to place a portion of their holding on the market so that they may be developed with the balance of the country. We have entered into a contract by which we are now ready for business.

We will sell the sections mentioned below in tracts of 160, 320 and 640 acre tracts, according to the needs of the homeseeker. A good portion of land is already under cultivation, and splendid wheat yields have been secured, and row crops are coming on nicely.

The soil is equal to any in the state of Texas for the raising of wheat, alfalfa, cotton and all row crops, together with every variety of fruit and vegetable that can be grown in the temperate zone.

We can offer good terms, and with the present system of wheat farming, any one who knows the business and is willing to apply the up-to-date scientific methods of farming is very likely to pay for the land out of one crop of wheat.

We are prepared to show the land and make contracts in accordance with your needs. Do not let the opportunity pass you by. Take any county map and check up on the sections, or come to us and let us show you the details. The lands are SECTIONS 73, 75, 77, 79, 83, 85, 87, 89, 91, 93, 95, 97, and 99.

We still have a few choice homes in Plainview, but will mention the following: A dandy new five room bungalow, with all conveniences. Close in. Come quick if you want it. Immediate possession.

A fine home on West 7th, 100 ft. front, fine lawn, 8 room house, bath, toilet, lights, etc. Good garage. Fine shade trees, lawn and berry.

Fine home of 5 rooms, 100 ft. front, fine lawn, lots of trees and berry, \$3,300. Fine suburban home, 20 acres of land. Dandy. 40 acres, improved, outside corporate limits. Fine.

**Perry & Cram**

116 West 7th Street. PLAINVIEW, TEXAS
