It's a happy spring with Terración Super-X soil fungicide

Happy days are here for sure when your cotton makes a stand. Seedling rot . . . damping off ... sore shin ... Rhizoctonia ... Pythium ... Fusarium ... they're all controlled by

Terraclor Super-X soil fungicide. No need to let these killers cloud your rainbow. For even when the weather's wet and cold, Terraclor Super-X gives your seedlings a fighting chance for a profitable stand.

Terraclor Super-X is applied in the furrow as you plant. Cotton seed, emerging roots and stems

are protected. Killer fungi are held off to help you get a vigorous, healthy stand.

Terraclor Super-X is available in granular, liquid, or dust forms. Most popular is the granule form impregnated with DiSyston® soil systemic insecticide. Once over as you plant takes care of both the fungi and early season insects. See your Olin Dealer or

Distributor for all the details. Make your spring a happy one, with the

Sign of Good **Breeding**

Pioneer brand grain sorghum varieties have bred-in yield potential to help farmers get the most from their good management even in the face of adverse weather, insects, or plant disease. Also, the genetic inheritance of every Pioneer hybrid is unique. Each variety is bred to bring out the special traits necessary for maximum performance in the area where it is to be grown

Your Pioneer dealer has many varieties bred to help farmers on the Plains turn in top yields. Some of these varieties are:

Pioneer Brand 820: shows its potential on irrigated land - performs well under stress — excellent standability — MDM resistant — 144-day

Pioneer Brand 828: outstanding yielder — stands and threshes well even after freeze or snow — hard grain holds quality — MDM resistant - 144-day maturity

Pioneer Brand 846: excellent drouth resistance - consistent high yields - MDM resistant - 134-day maturity

Pioneer Brand 833: yields along with 820 — excellent thresher —

Pioneer Brand 8417: new yellow endosperm variety — full, open heads — good standability — easy thresher — MDM resistant — 135-day maturity

Days to maturity is an averaged figure, which is affected by weather

GOOD YEAR OR BAD YEAR, YOU'RE BETTER OFF WITH PIONEER.

J. C. MILLS, raised Pioneer brand 820 on five farms near Abernathy last year. His highest yield was 6403 pounds of grain per acre on one farm while his lowest was 4433 pounds. Dry weather early in the season coupled with wet harvest conditions could have meant trouble, but good management and Pioneer brand 820 came through for Mr. Mills. He likes the yield and standability of 820 and plans to plant it again this year on 497
